Editor's address in the summer months, W. Falmouth, Mass.

"I Will Rebuke the Devourer for Your Sakes."

The purpose of this periodical is to persuade men.

It belongs to men, by Divine invitation, to persuade God.

Abiding under an indwelling exercise of soul before the Source of All-Sufficiency, which at seasons rises into a wrestling for the blessing, men are in the place where true "prayer is wont to be made." This exercise of a receptive and submissive heart before the Father of all our sure mercies alone deserves the name of prayer, such as we are asked by the apostle to "pray without ceasing." Prayer is a state—the craving of faith, the prostration of dependence. It is not a recitation. So the Father "would that all men pray everywhere."

In this wrestling of spirit—in the cry of faith with the Spirit that "maketh intercession for us, with groanings which cannot be uttered," is not the "All-power in heaven and in earth" effectually laid hold on, and his loving compassion moved, "like as a Father pitieth his children"? He permits unseen spiritual forces of his infinite power to be laid hold on by fervent prayer, and He moves the prayers that shall move his love and power, that men may know that Holy Help is placed within the reach of their holy appeal.

Have Friends been availing themselves of this mighty enginery in heavenly places to overcome the spirit of war that is stalking over the earth? Have they satisfied rather themselves with official protests and documents of their Yearly Meetings as clearing their own spirits, and then looked on as idle spectators to see the "potsdethers strive with the potsdethers of the earth," saying "Now they are doing it, and we are clear; we issued our protest?"

And so have we passed on, sorry indeed, but in a sort of spiritual indifference before the throne of grace, as if our part against the Destroyer was discharged?

It is high time that we should see that all this atrocity must be overcome from above! Vain is the help of man against the sin of man, except through God. We work on too low a plane when we accuse men, and motives, and policies; for we are merely taunting them as ourselves on their own level. We must fight down war from the heavenly places in Christ Jesus, and with the heavenly powers. The Lamb and "they that are with Him" shall overcome those that "receive power as kings one hour with the Beast," and "have one mind, and give their strength and power to the Beast." The Spirit of the Prince of Peace, we believe, yearns for the co-operation of the living members of the Society of Friends in living prayer, that the remainder of wrath may be restrained. The weapons of our warfare are to be found in this great and effectual department of spiritual exercise. "They are not carnal but mighty through God to the pulling down of strongholds," even to cause "wars to cease unto the ends of the earth."

FOR "THE FRIEND."

Predestination and Presbyterians.

BY CHARLES RHODES.

The late session of the Presbyterian General Assembly in Philadelphia, has been an event of public interest to others, arising from a proposition within that body to modify some of the articles of faith known as the "Westminster Confession of Faith," which has been supposed to define the belief of the Presbyterian Church for the past two hundred and fifty years. The specific paragraphs which have become obnoxious to many members of this religious body relate chiefly to the doctrine of unconditional election and reprobation.

It is interesting to the Society of Friends to recur to the fact that these views formed an important subject of dissent by the early Friends from the doctrines of the established Church in England during the Commonwealth under Cromwell, and the dominance of the Presbyterian party.

In 1643 an act of the Parliament of Great Britain was passed "for the calling of an Assembly of learned and godly Divines and others to be consulted with by the Parliament for the settlement of the government and liturgy of the Church of England; and for vindicating and clearing of the doctrine of the said Church from false aspersions and interpretations."

This body convened in that year, and after

spending three years in formulating a confession of faith and the longer and shorter catechisms, these documents were confirmed and adopted by the Parliament in 1649.

Among the articles of belief put forth by this convocate we find the following:

Chapter 3rd "Of God's Eternal Decree." "By the Decree of God for the manifestation of his glory, some men and angels are predestinated unto everlasting life, and others fore-ordained to everlasting death." "Neither are any others redeemed by Christ, effectually called, justified, adopted, sanctified and saved, but the elect only." "The rest of mankind God was pleased . . . to pass by, and to ordain them to dishonor and wrath for their sin, to the praise of his glorious justice."

Chapter 10 "Of Effectual Calling." "All those whom God hath predestinated unto life, and those only, He is pleased in his appointed and accepted time, effectually to call by his Word and Spirit out of that state of sin and death in which they are by nature, to grace and salvation by Jesus Christ." "Elect infants, dying in infancy are regenerated and saved by Christ through the Spirit."

"Others not elected, although they may be called by the ministry of the Word, and may have some common operations of the Spirit, yet they never truly come to Christ, and therefore, cannot be saved;" much less can men not professing the Christian religion be saved in any other way whatever, be they never so diligent to frame their lives according to the light of nature and the law of that religion they do profess; and to assert and maintain that they may be very pernicious, and to be detested." In the larger catechism, question sixty-eight reads, "Are the elect only effectually called?" The answer is thus stated, "All the elect, and they only are effectually called."

It is not surprising that members of the Presbyterian Church should shrink from subscriptions to dogma like the above, which seem to exclude a part of mankind from the universal love and design of our heavenly Father toward the whole human race in sending his only begotten Son into the world "that whosoever believeth in Him should not perish, but have everlasting life;" and whom the Apostle John declares "is the propitiation for the sins of the whole world."

Such views are founded upon certain portions of Scripture written for particular conditions of people, as in the ninth chapter of Paul's epistle to the Romans, wherein he treats of the state of the unbelieving Israelites, and the choice of Jacob over Esau, as the progenitor of Christ the true seed, citing the case of Pharaoh in his refusal to liberate the Israelites in Egypt, and God hardening his heart in order that "He might show his power in him, and that the Almighty name might be declared throughout all the earth." If we examine

the context of these Scriptures we may observe that in the case of Pharaoh he had acted very unjustly, and indeed cruelly, toward the Israelites by the slavery in which he had kept them before the Lord hardened his heart; so that his condemnation was the result of his own sin rather than that of the foreordination of God, and his irrevocable decree to destroy Pharaoh. There was nothing unjust in the Almighty preferring Jacob to Esau before their birth, as the ancestor of the Israelites. Esau was favored afterwards in an outward point of view to become a wealthy and powerful chief among his people.

The reprobate Israelites in Paul's age who "had not attained to the law of righteousness," he asserts had failed because "they sought it not by faith;" "they stumbled at that stumbling stone" Christ Jesus. In the eleventh chapter of this epistle, Paul confidently states that these broken branches may be grafted in again," if they abide not still in unbelief;" and triumphantly concludes that "so all Israel shall be saved!"

There are undoubtedly many passages in the New Testament that speak of "God's elect," and "the election" of believers; indicating a choice by Him of some as the recipients of his favor, and the final condemnation of others, but it may be confidently asserted that none of the reprobate have become so by any antecedent and irrevocable decree of the Creator prior to their wilful rejection of his laws. The history of the Hebrew race is a standing proof of the long suffering mercy of God to mankind. Their repeated rebellion against his commands after such signal favors shown them, was forgiven times without number, upon their repentance and return to his service again. That it has pleased the Most High in his wisdom to bestow more abundant grace and gifts upon portions of mankind or particular individuals than upon others, in the economy of his administration of earthly affairs, in no wise derogates from that universal grace and favor through his beloved Son, whereby He "would have all men to be saved and to come to the knowledge of the Truth." Robert Barclay in his Apology, V and VI, Propositions on "Universal and Saving Light" comments upon Predestination in these words, "As for that doctrine which these propositions chiefly strike at, to wit, absolute reprobation, according to which some are not afraid to assert, that God, by an eternal and immutable decree, hath predestinated to eternal damnation the far greater part of mankind, not considered as made, much less as fallen, without any respect to their disobedience or sin, but only for the demonstrating of the glory of his justice; and that for the bringing this about He hath appointed these miserable souls necessarily to walk in their wicked ways, that so his justice may lay hold upon them, . . . I say, as to this horrible and blasphemous doctrine, our cause is common with many others, who have both wisely and learnedly, according to Scripture, reason, and antiquity, refuted it. . . . We may safely call this doctrine a novelty, seeing the first four hundred years after Christ, there is no mention made of it. The first foundations of it were laid in the later writings of Augustine, who in his heat against Pelagius let fall some expressions which some have unhappily gleaned up to the establishing

of this error. Afterwards was this doctrine fomented by Dominicus, a friar, and the monks of his order; and at last, unhappily taken up by John Calvin, otherwise a man in divers respects to be commended, to the great staining of his reputation, and defamation of the Protestant and Christian religion."

"It is highly injurious to God, because it makes Him the Author of sin, which of all things is most contrary to his nature. . . .

"For if God has decreed that the reprobated ones shall perish, without respect to their evil deeds, but only of his own pleasure, and if He hath decreed also long before they were in being, or in a capacity to do good or evil, that they should walk in those wicked ways, by which, as a secondary means, they are led to that end; who, I pray, is the first author and cause thereof but God, who so willed and decreed?"

"These are Calvin's expressions 'I say that by the ordination and will of God, Adam fell. God would have man to fall. Man is blinded by the will and commandment of God.'"

"'God,' saith Beza, 'hath predestinated not only to damnation but also unto the causes of it, whomsoever he saw meet.' 'Reprobate persons,' saith Piscator, 'are absolutely ordained to this two-fold end, to undergo everlasting punishment, and necessarily to sin.'"

"If these sayings," resumes Barclay, "do not plainly and evidently import that God is the author of sin, we must not then seek these men's opinions from their words, but some way else. This doctrine is injurious to God, because it makes Him delight in the death of sinners, yea, and to will many to die in their sins contrary to these Scriptures, 'Say unto them as I live, saith the Lord God, I have no pleasure in the death of the wicked but, that the wicked turn from his way and live; turn ye, turn ye, from your evil ways, for why will ye die, O house of Israel?' (Ezk. xxxiii: 11.) 'God our Saviour will have all men to be saved, and to come unto the knowledge of the truth.' (1 Tim ii: 4). The Lord . . . is long-suffering to us-ward, not willing that any should perish, but that all should come to repentance" (2 Peter iii: 9). It makes the preaching of the gospel a mere mock and illusion, if many of these to whom it is preached be, by an irrevocable decree, excluded from being benefited by it." R. Barclay then cites his fifth thesis in opposition to the foregoing views of unconditional reprobation, which is in these words, viz: "God out of his infinite love, who delighteth not in the death of a sinner, but that all should live and be saved, hath so loved the world that He hath given his only Son a Light, that whosoever believeth in Him shall be saved (John iii: 16), who enlighteneth every man that cometh into the world (John i: 9), and maketh manifest everything that is reprobable (Eph. v: 13), and teacheth all temperance, righteousness and godliness: and this Light enlighteneth the hearts of all for a time in order to salvation; and this it is that improves the sin of all individuals, and would work out the salvation of all if not resisted. Nor is it less universal than the seed of sin, being the purchase of his death who tasted death for every man; for, 'as in Adam all die, even so in Christ, shall all be made alive' (1 Cor. xv: 22).

The action of the late General Assembly of

the Presbyterian Church respecting the Westminster Confession consists in the acceptance and adoption of a Report by the Revision Committee in which they recommend that a Committee be appointed by the Assembly, and "that this Committee be instructed to prepare and to submit to the next General Assembly for such disposition as may be judged to be wise, a brief statement of the reformed faith expressed as far as possible in untechnical terms. The said statement is to be prepared with a view to its being employed to give information and a better understanding of our doctrinal beliefs, and not with a view to its becoming a substitute for, or an alternative of our Confession of Faith." The Report further recommends that such Committee prepare amendments to certain chapters of the creed therein specified "either by modification of the text or by declaratory statement, so as more clearly to express the mind of the church, with additional statements concerning the love of God for all men, missions and the Holy Spirit; it being understood that the revisions shall in no way impair the integrity of the system of doctrine set forth in our Confession and taught in the Holy Scriptures."

It seems to those not connected with the Presbyterian Church impossible to reconcile the instructions given to their Committee by the above resolutions with the obvious uneasiness long felt by a portion of that denomination with the expressions in their ancient creed quoted in the antecedent part of this article. If the "system of doctrine set forth in their Confession" is to be maintained in its integrity, any declaratory statements concerning election and reprobation and the perdition of infants which have so exercised the malcontents must be excluded by the Committee. The New York Independent in commenting on the subject, uses this language, "If the Revision Committee work along the lines indicated in the resolutions, we may look for a new Calvinism." "If they build on an arbitrary Divine election, and a 'limited elective purpose on the part of God,' it is to be feared that all the new cloth which they may sew on this old garment will only make matters worse. 'The love of God for all men' would poorly join with such a principle. It is doubtful if even the determination of the Assembly to save the babies from damnation could be consistently maintained. For if God might of his own good pleasure elect any one to be damned, there is no assignable reason why babies should not be among the non-elect. There would be no greater injustice in the one case than in the other. Of course the Confession has never specifically taught the damnation of infants; but its possibility is so manifestly a logical implication of the scheme, that in the good old times it was no uncommon thing to hear Calvinistic preachers of rigor and vigor setting forth the existence of non-elect babies in hell as a specimen of Divine justice. Whether this is the Calvinism which is to be maintained in its integrity, or whether the logic of the doctrine is to be set aside by a resolution that all who die in infancy are of the number of the elect, we are not able to say."

"What the Revision Committee will report and what the next Assembly will do is matter

for uncertain prophecy; but in any case the prominent features of Calvinism, as it has been historically held are obsolescent, and largely obsolete even in the Presbyterian Church."

FOR "THE FRIEND."

Canada Yearly Meeting.

Canada Yearly Meeting of Friends began its sittings on the twenty-first of Sixth Month, ending on Third-day, the 26th of the same.

From beginning to end, Friends conducted the business coming before them in unity and love, believing it is only as we abide in the truth which is the foundation of true fellowship, and communion with God and one another, and are obedient thereto, in its every requiring, that we can rightly lay claim as being those to whom the Lord Jesus said, "Ye are my friends if ye do whatsoever I command you."

The whole of the meeting was conducted after the ancient and true gospel order of Friends, acknowledging no other Leader in the various exercises of the meeting than He who of God is made Head over all things to His Church, directing each and every member in their approaches to the mercy seat. And we know that whatsoever He aforesaid by the teachings of His Spirit of judgment condemned and brought his people out of, giving to them a testimony against it, is never to be rebuilt by any who are true Friends, and lovers of the truth as it is in Jesus. Our true liberty, both individually and collectively, is that no one is called to offer any thing publicly to God, except by the promptings of the spirit of Christ, the Head, and no one has a right to mar this liberty in Christ, by offering any thing not so called for, much less to call upon others to join with him.

The various testimonies for Truth which the Lord gave to our forefathers, and which they so faithfully bore suffering, for so doing, we find no less laid upon us to bear; for we believe there is a wide departure in the world from the meek, lowly, humble and prayerful walk of the Christian, as it ever will be found in him who walks with his Lord; and no other walk will avail anyone, for they alone are sons of God who are led by His Spirit.

Reduced greatly in number, compared with what Friends once were in these parts, we were yet made to rejoice that the Lord had mercifully preserved a remnant to himself to whom the Truth with its testimonies was dear; or was He whom we serve forgetful of us in directing the steps of his servants to labor in this part of his vineyard; whose labors proved comforting and confirmatory to our faith.

Eli Harvey, of Western; Thomas A. Crawford, of Ohio, also Abraham Fisher, of North Carolina, were very acceptable with us, with several other Friends without minutes.

But above all, God's promise was graciously fulfilled, "Ask ye of the Lord rain in the time if the latter rain; so the Lord shall make bright clouds, and give them showers of rain, to every green grass in the field" (Zach. x: 1). Thus averted by the crook of the Good Shepherd, led them into pastures of life, satisfying many hungry souls.

Yonge Street Quarterly was, by request of that meeting, changed into a Four Months' Meeting, and a few minor changes were made, as will be seen in the printed minutes.

Benjamin W. Wood, a minister of the gospel amongst Friends, believing himself called to labor in Great Britain and Ireland amongst Friends and others, and also to visit in the constraining love of Christ, the meetings of Friends in the south of France, Germany and Norway, and to other labor thereabouts, as way may be opened, and having laid his concern before Picking Monthly and Yonge St. Quarterly Meeting, his prospect of labor was laid before the Yearly Meeting of Ministers and Elders; when, after solemn consideration, seeking counsel from above, Friends unanimously concurred therewith, and with prayer on his behalf, he was finally liberated therefor, and commended to the care and guidance of the Good Shepherd of Israel, and to the kindness of Friends abroad.

Epistles from the five sister Yearly Meetings in correspondence with us were read, we sweetly realizing our unity in the faith, and oneness of concern for the welfare of the Truth, and that the glory of the Lord may cover the earth as the waters cover the sea.

Words fall to express the sweet fellowship and love in the gospel experienced in our gathering together, time and again wherein we sat, as it were, under the canopy of Him who, over the same, abode above and within the tabernacle in the wilderness; to Him and to Him alone be all the glory.

A general letter to all lovers of the Truth from a body of Friends in England was laid on the clerk's table and a small committee reporting favorably as to its contents, it was read in both men's and women's Yearly Meeting.

We all united with the principles of truth embodied therein, as being those of Friends since their first rise; and a hope was expressed that true Friends the world over might come into oneness in the Truth, knowing Christ and Christ Jesus alone to be their one Head and we one body, baptized by one spirit, being led and guided thereby, and knowing each other therein. For one of the last of the fervent prayers of the Lord Jesus was that the children of the one true God, the world over, might be, with Him, one, of whom "Jesus is the first-born among many brethren" (Rom. viii: 29).

George Pollard, once an Ackworth scholar, was appointed clerk in place of George Rorke, a Canadian Friend, the latter being in failing health.

Do Not Worry.

Nature, reason and Scripture all coincide in this command. It should be written in letters of light. It contains within itself the blessing of health, morality and religion. There are few things more closely connected with happiness, or practically of greater importance, than strict obedience to this mandate. No Christian character can be considered complete if this is left out or but partially included. And tried by this test, it must be admitted that nearly all are incomplete. "Sufficient unto the day is the evil thereof," said Jesus. Seemingly very few believe Him or proceed on that principle. Anxiety is manifestly and demonstrably useless. More than that, it is so positively harmful that both soul and body are made to suffer by it immeasurably.

It is very, very far better to let the morrow take care of itself, better to bear the troubles simply as they come, by which process we es-

cape that large number of troubles which never really come, but which are borne in advance by the average mortal who thus robs himself ruthlessly and needlessly of very much peace. To be quiet and tranquil, bright and cheerful, seem to many people a luxury unattainable. It is on the contrary, an imperative duty for all, wholly within their reach.—*Times-Herald.*

FOR "THE FRIEND."

An Exercise for the Truth.

What need there is in our hour day for a secret exercise and travail of spirit by Zion's travellers? Not only for their own preservation, but for the preservation of those who not having seen or known perhaps so much, are not so able to apprehend so quickly the tendency of things, by which they or the Church may be tempted. Assailed it seems sometimes on each side, tempting, alluring aside from the path of truth or hindering from entering into it. Ought we to be satisfied to go along as a door on the hinges and not know a progress? There is a growth in the blessed Truth. This cannot be obtained in mixtures, but by coming out of contamination. "Ye are not of the world but I have chosen you out of the world." Now if we are not of the world, being chosen, (if we are known to labor for the truth or in the Church in any wise it is an evidence of something), how can we safely mix?

True we are in the world; the prayer was not for us to be taken out, but preserved from the evil. The spirit of the world is evil. That which is entered into in the spirit of the world is of evil tendency. Can we join hands with any enemy of the Lord or their works and be clear? I feel to ask those candidly who seem concerned for the welfare of Truth, and who fill appointments therein, is there a concern to examine if we are building up in all that we may feel liberty to enter into? What better preaching is there than example? We might think we felt a liberty, when if we considered our brother, we must refrain, and this might often be unconsciously our preservation.

I have had before me the Exposition in New York, as I have been writing, and feel concerned that we should know of that travail of spirit for ourselves, our wives and households, as well as for Zion, that would not permit of a thirst for such things. We may be concerned for those who have a thirst for strong drink. Is not a thirst for such things somewhat of the same kind, is not anything which would disqualify us for the worship of our heavenly Father, restricted by the spirit of Truth? Ought it not to be prohibited from the life of the sincere traveler of Zion? Some may say we are not such. All ought to be. Then if any are not, how much more important to keep clear of anything that may hinder us from the right condition, to honor and glorify our Creator, in everything give thanks. Let none of us give just cause for any to be stumbled. Let us examine ourselves if we be in the faith. That which is not of faith is sin.

It is time for Zion to arise and shake herself from the dust of the earth, her garments are polluted. A watchful daily walk, thereby preserved from all contamination, will result in the cleansing, that there may be a shining forth, bright as the sun, fair as the moon, and an unspoken power against all evil. May it be so, sayeth my soul. CYRUS COOPER.

THE CHILD.

The world was dark with care and woe,
With brawl and pleasure wild,
When in the midst, his love to show,
God set a Child.

The sages frowned, their beards they shook,
For pride their heart beguiled;
They said, each looking on his book:
"We want no child."

The merchants turned towards their scales,
Around their wealth lay piled;
Said they: "Tis gold alone prevails;
We want no child."

The soldiers rose in noisy sport,
Disdainfully they smiled,
And said: "Can babes the shield support?
We want no child."

The merry sinners laughed or blushed;
Alas! and some reviled;
All cried as to the dance they rushed:
"We want no child."

The old, the afflicted and the poor,
With voices harsh or mild,
Said: "Hope to us returns no more;
We want no child."

And men of grave and moral word,
With consciences defiled,
Said: "Let the old truth still be heard;
We want no child."

Then said the Lord, "O world of care,
So blinded and beguiled,
Thou must become, for thy repair,
A holy child.

"And unto thee a Son is born,
Thy second hope has smiled;
Thou mayst, though sin and trouble-worn,
Be made a child."
—From "The Rituel," by T. T. Lynch.

THE MEETING.

Dream not, O friend, because I seek
This quiet shelter twice a week,
I better deem its pine-laid floor
Than breezy hill or sea-sand shore;
But nature is not solitude:
She crowds us with her thronging wood;
Her many hands reach out to us,
Her many tongues are garrulous;
Perpetual riddles of surprise
She offers to our ears and eyes;
She will not leave our senses still,
But drags them captive at her will:
And, making earth too great for heaven,
She hides the Giver in the given.

And so I find it well to come
For deeper rest to this still room,
For here the habit of the soul
Feels less the outer world's control;
The strength of mutual purpose pleads
More earnestly our common needs;
And from the silence multiplied
By these still forms on either side,
The world that time and sense have known
Falls off and leaves us God alone.

—Whittier.
FOR "THE FRIEND,"

LET US TRUST THEE.

Dear Father, let us ever trust
Thy love to guide our souls aright,
Then we need have no cause to fear,
If we will follow in thy light.

Thou wilt protect us through our trials,
And thy sweet consolation lend,
And when we place all trust in thee,
We shall find blessings without end.
MARTHA SHEPARD LIPPINCOTT.

Death of Joseph Cook.

The passing of Joseph Cook closes the career of one of the most notable men of the last half century. For years he was easily the monarch of the American lecture platform. His career may have been meteoric, as one newspaper describes it, but while it filled the heavens with its brilliance after the manner of meteors, it yielded a substantial and permanent contribution to humanity. The Boston Monday lectureship marked the highest point of his course, but it was so high that after the lapse of years men marvel at the intellectual achievements which it produced. Week after week Tremont Temple was crowded beyond its capacity by busy, earnest people, who were willing to give up the most important hour of the day to hear this remarkable man discourse on a vast variety of subjects; and while thousands in Boston heard him gladly, millions throughout the world read him with the same eagerness. While his one supreme theme was the relation of science to religion, he discussed, as preludes to his lectures, questions of public interest, especially in their bearings upon politics and morals.

He was born in Ticonderoga, N. Y., in 1838, and died in the same place on the twenty-fourth ultimo. His father was a farmer. Being a lad of studious habits, he was encouraged in his ambitions for a thorough intellectual training. To this the country school, Phillips Andover Academy, Yale and Harvard Universities, Andover Theological Seminary and several of the leading German universities contributed. He graduated from Harvard in 1865, and after four years at Andover prosecuting his studies in theology, he was licensed to preach, and for two years he hid his light under a bushel at Andover and Lynn; then followed his tour of the German universities. In 1874, upon his return from Europe, being then but thirty-six years old, the "Boston Monday lectureship" was instituted, and from the beginning the scheme was successful; and when the Park Street Church building became too small to hold the multitudes that clamored to hear him, the old Tremont Temple was opened. Upon the conclusion of his courses of lectures in Boston he delivered them to vast audiences throughout the country, and the popular interest was unabated, in spite of the fact that the lectures had been scattered broadcast by the daily papers upon their first production. This was in itself a remarkable tribute to his personality. In 1880-82 Joseph Cook engaged in a lecture tour of the world, and wherever he went in Great Britain, on the Continent, or in Australia he was welcomed by great crowds of eager listeners. In 1895, while on a lecture trip in Australia, the first serious symptoms of a physical breakdown appeared. He immediately returned to his home and enjoyed a period of rest and recuperation, and when he seemed to be in good physical condition, again he resumed the "Monday lecture," the last and two hundred and fifty-third of which he delivered in Boston on [Third Month 4th.] of this year.

Joseph Cook was possessed of prodigious intellectual strength, and of a physique which constituted an admirable complement to it. Of heavy build, with a large head, a powerful voice and, in the days of his prime, a full, thick beard, a nervous temperament, and a

rare genius for rhetorical statement, he delivered himself always with a dogmatic positiveness that made what he said seem like the message of a prophet, and to the popular mind it had all the force of unquestioned and unquestionable authority. It was as if the lecturer had introduced his theme with a solemn "Thus saith the Lord." While he had a remarkably strong hold on the popular mind, he failed to receive the fullest measure of respect from a certain class of scholars, who regarded him as an ultra conservative, especially on matters relating to biblical criticism. Nevertheless, his sincerity was no more questioned than his courageous tenacity. He proclaimed the truth as he believed it; he believed it with all the strength of his marvelous intellectual powers, and in the proclamation of it he was undaunted.—*Christian Advocate.*

Counsel to Members.

BY PHILADELPHIA YEARLY MEETING, 1901.

A lively concern spread over us, not only that diligence be observed in the attendance of all our meetings, but that these shall bear evidence they are held as George Fox exhorted they should be, "in the power of God." When this is the condition, the true worshipper finds the grace of the inspeaking Word and quickening Spirit sufficient for him, and satisfied therein, craves no voice of man to supersede the precious communion of the Spirit of Life.

If an authorized vocal ministry is brought forth, it must be on the condition of a silent in-gathering of Spirit to understand the voice of the true Shepherd thus putting forth of his own for the hearing of men. We can hardly overestimate the value of such anointed ministry in our meetings.

In considering the state of our Society as portrayed in the reports from its various branches, the Yearly Meeting was favored earnestly to travail for an increase of spiritual life in the hearts of its members. This increase must depend in large measure on the prevalence of Divine love over those propensities of human nature, which lead into an inordinate attachment to the pursuit of gain and pleasure. As worldliness displaces Heavenly-mindedness, a distaste for religious retirement and introversion increases, the attendance of public worship becomes irksome, and the time of silence which characterize our observance of this incumbent duty, prove unprofitable. Roving thoughts unchecked, debar the entrance of Him who stands at the door and knocks his reproofs of instruction are unheeded; neither is there a partaking of the heavenly bread which his presence brings. This course, if pursued, must result in the withholding of spiritual gifts, and consequent unfruitfulness.

The first duty of the gathered church is that of worship. This implies an offering to our Father in Heaven of that which He hath given us, and includes our whole being as a sacrifice to Him.

A desire has been strongly felt that belief in God as Father, Son and Holy Spirit, may be possessed as a gift from above. That which has been revealed to men in the giving of the Son of God for the life of the world may be ours through faith, and that our reliance for the forgiveness of sins may be in sacrifice, "whom God has set forth to be propitiation through faith in his blood, to d.

re his righteousness for the remission of sins that are past through the forbearance of God—that He might be just, and the justifier of him who believeth in Jesus.”

Watching for a call to service, and diligence the occupancy of spiritual gifts, were pressed on our attention. The zeal and fervor of the young working in conjunction with the experience of the elder, will strengthen the church and tend to the extension of the deemer's kingdom.

Attendance on a paid and stated ministry is deprecated because of its weakening effect on our testimony to the immediate supply from Christ Jesus as Head of his church, of grace and wisdom to utter counsel and comfort for help of his disciples and for the publication of his gospel. To seek entertainment in eloquent sermons and the melody of so-called sacred music is an indulgence beneath the standard of those who realize the pure worship which is in Spirit and in Truth.

These outward and audible attractions proved for occasions of public worship are practically attractions to the outward; and as diversions of the mind from inward communion with the Father of Spirits tend to defeat the very purpose of Divine worship.

Robert Barclay says of his experience, “When I came into the silent assemblies of the people I felt a secret power among them which touched my heart; and as I gave way to it I found the evil weakening in me and good raised up.”

The temptations to which our young people are exposed; who leave their homes and friends to find employment or business, were dwelt on with tender solicitude. They are encouraged when thus circumstanced to seek the society of their religious friends; and those who have homes in places where such young persons may come are encouraged to use an open hospitality toward them, while thus dissociated from the shelter of parental care. The prompting of certificates of removal in many instances is recommended as a means of intruding sojourners to the knowledge and notice the meetings and Friends where they may

have been cheered and comforted by the attendance of our dear young Friends throughout the sittings of the Yearly Meeting. Their manifest interest in its proceedings we have trusted is a token for the good both to themselves and the future of the body which they are members. As all classes are preserved in singleness of heart to the Lord, and devotion to his service, we have cause to believe a revival of spiritual life and power will be known amongst us, and the blessed Head of the Church will be exalted for all.

BY THE WOMEN'S MEETING.

In consideration of deficiencies in regard to attendance of our meetings for worship discipline, the desire was expressed that effect might be to stimulate us to greater faithfulness in little things, and that we might use our strength to serve Him who hath redeemed us for purposes of his own glory, and to serve ourselves.

Inviting sympathy was given to members of small meetings, that they might be faithful in their attendance, and by their faithfulness would not be sent empty away, but strength

would be given whereby they would be found growing in the knowledge of best things. There would be a coming forth in the beauty of holiness, and the name of Israel's God would be praised.

We were reminded of the language of king David, as he was preparing to build an altar unto the Lord, “Neither will I offer burnt offerings unto the Lord my God of that which doth cost me nothing.” Should we not willingly press through a crowd of difficulties in our desire to serve our loving Father in Heaven, who daily loadeth us with benefits?

The situation of mothers was feelingly alluded to—those having the care of young children—they being encouraged to do the duty that lies nearest to them. As they cannot leave their precious charge to attend to these religious duties, that they commit themselves and their all unto Him who watcheth over them in their homes. Then as the children are older, that they take them to meeting, bearing the same language upon their hearts, “Here are we, Lord, and the children thou hast given us.”

The encouraging language was revived, “Hast thou not known, hast thou not heard, that the everlasting God the, Lord, “the Creator of the ends of the earth fainteth not, neither is weary? There is no searching of his understanding. He giveth power to the faint and to them that have no might He increaseth strength. Even the youths shall faint and be weary, and the young men shall utterly fall; but they that wait upon the Lord shall renew their strength.”

A lively exercise spread over the meeting on account of exceptions in the several reports, regarding a paid ministry. Where we gather in our meetings with true living desires to the Head of all rightly gathered assemblies, that He will be in our midst, we believe that He will dispense to the needs of each condition. Friends were exhorted not to turn to this and to that one for instruction in the way of salvation, but to learn more and more to depend upon our blessed Saviour, and in humility to come and sit at his feet, as Mary did, and He will teach us the mysteries of his kingdom as we are able to receive them.

There is encouragement in the promise that if we be not weary in well doing, “in due season we shall reap if ye faint not.”

Much excellent counsel was extended for the help and encouragement of our members.

Our desire is that we may treasure this deep instruction in our hearts, take it with us to our homes, there in the quiet, meditate upon it, as that upon which our souls may feed.

REPENTANCE is not merely a little twinge of remorse over some wrong thing. It is not simply a gush of tears at the recollection of some wickedness. It is not mere shame at being found out in some meanness or uncleanness or dishonesty. It is the revolution of the whole life. Sins wept over must be forsaken forever. Repentance is a change of heart, a turning of the face just the other way. It is well for us to make diligent quest to be sure that we always abandon the wrongdoing which we deplore, that we quit the evil course which we regret, that we turn away from the sin which we confess. A good many people get only half the gospel. They talk a

great deal about believing, but very little about repenting. It needs to be remembered that a faith which does not lead to genuine repentance is not a faith that saves.—J. R. Miller.

Geology and the Deluge.

Geological conditions in Central Asia are such as can be explained only on the theory of extensive submergence of the region where the Scriptures and tradition locate the Flood. This is the conclusion which has been reached by Prof. G. F. Wright, of Oberlin College, the well-known geologist, in a recent journey through Mongolia and Siberia, and stated by him in an article in *McClure's Magazine* (Sixth Month). Dr. Wright asserts that the evidences of a deluge are not one, but several, and extend from Mongolia to the western borders of Russia. In the first place, he tells us, there is no evidence in this region of a glacial period such as once existed in Europe and North America. He writes:

“On the contrary, throughout this entire region, we were confronted with the evidence of a great subsidence of the land which had taken place in recent geological time, and which, in date, would correspond roughly with that of the glacial period in North America. For several hundred miles, while driving through the region south of Lake Balkash and the Aral Sea, we were evidently upon a terrace of the fine loam which is called loess, about two thousand five hundred feet above sea-level. Indeed, at different elevations this loess extends continuously in a broad shelf along the base of the mountains, from the Irtysh River to the Caspian Sea, and is found in extensive level areas over various portions of the Caucasus and Northern Persia around the base of Mount Ararat; while the so called ‘black earth’ of Southern Russia is a deposit of the same material, and probably of the same age, one hundred or more feet in thickness. The distribution of this loess is the key to the whole situation.”

That these deposits are the result of submergence and are not wind-transported as some travelers have maintained, Dr. Wright is convinced. To quote again:

“On coming around to the northwestern side of the great Asiatic plateau, in Turkestan, which is in almost the exact centre of the continent, the wind hypothesis became entirely incredible, and the evidence accumulated that the land had lately been depressed to such an extent that the water of the ocean reached the base of the bordering mountains, rising to a height, certainly, of about 3,000 feet; for, at this level, south and southwest of Lake Balkash, we found the loess spread out in such an extensive terrace that the wind would be entirely incompetent to produce the results. We were interested to find, upon visiting St. Petersburg, that the chief Russian geologists had arrived at substantially the same conclusions which we had formed.”

The recent depression of Central Asia, Dr. Wright holds, is also proved by the fact that Lake Baikal and the Aral Sea are fresh. We should expect both to be salt, like the Dead Sea and our own Salt Lake, as they have no outlets. Says the writer:

“The only explanation of the freshness of the water in these two great seas is that there

have recently been great changes both in the climate and in the level of that region Salt is washed into such inclosed basins so rapidly that it would take no prolonged period of evaporation to render them saltier than the ocean. In general, such seas may be compared to enormous saltvats which are approaching nearer and nearer the point of saturation. In the case of Great Salt Lake and the Dead Sea this point was long since reached; but in the case of the Aral and Caspian seas little progress has been made.

"It is therefore clear that this region has lately emerged from below sea-level, and, in consequence, rapidly passed through climatic changes which have transformed it from a recently well-watered region to one that is now a desert. During this transition stage, the rivers coming into the Aral Sea were so much larger than now that the sea overflowed the rim of the basin in such volumes that nearly all of its salt was carried into the Caspian, and the sea thus became practically fresh."

This submergence took place after the creation of man. Says Dr. Wright:

"The crowning point of interest is reached in the discovery by Professor Armashovok, at Kief, of flint implements and burnt stones in connection with the bones of extinct animals fifty-seven feet below the undisturbed surface of this soil. The discovery was made in the bluff of loess, bordering the river Dnieper, whose general surface is six hundred and thirty-three feet above the sea, and three hundred and forty feet above the present stream and totally unconnected with any deposits that may have been made by it. In this discovery we have the link connecting the recent geological changes in the east with those in the west. The flint implements of glacial man found in France, England and the United States indicate the same stage of culture as that attained by the men who were overwhelmed in the great subsidence of Central Asia and South-eastern Russia, and of the region about the base of Mount Ararat."

In the opinion of the writer, the Biblical story of the Deluge is shown by these facts to be in substantial harmony with geological history. He says:

"If . . . we may be permitted briefly and provisionally to summarize the facts as they appear probable, both from the Biblical story and the illustrative geological facts, the completed narrative might be made to read something as follows:

"Some time during the prevalence of glacial ice over Northern America and Northwest Europe man came into existence in Central Asia, where the climate was still congenial. From this point he spread as far west as the Atlantic seaboard in Europe, and eastward to the Pacific coast, whence he succeeded in reaching, by way of the Behring Sea and Alaska, the western coast of North America, and thence migrated to the Atlantic coast, where his remains are found in the glacial gravels of Trenton, N. J. But the extreme and rapid changes incident to the closing stages of the glacial period naturally, and very likely, exterminated man in company with many of the animals accompanying him, both in America and in Europe. The destruction of many of the species of animals accompanying man at the close of the glacial period is a well-known fact. It also

seems probable, from scientific evidence, that man shared largely in the destruction. There is everywhere a sharp line of distinction between Paleolithic and Neolithic man, i. e., between the men who were limited to the use of flaked or rough stone implements and those who used smoothed stone implements. It is Paleolithic implements only which are found in the glacial gravels of America and Northwestern Europe, and beneath the loess at Kief and at three or four other localities in Southern Russia. The Paleolithic man of science may well be the antediluvian man of Genesis.

"In Asia the rapidity of the subsidence spoken of, though so great that man could not adjust himself to it, might still have been so slow as to be almost imperceptible. But toward the close of this period there were one hundred and twenty years (specially mentioned in the Bible as a time of warning) in which the movement was accelerated ["the fountains of the great deep were broken up"] to such a degree that the rising waters gave point to the preaching of Noah. During the last three hundred and seventy-one days of this period the catastrophe culminated in the facts specifically related in the Book of Genesis, when the reverse movement began and cleared a space near Mount Ararat on which the ark could rest, and where the race could make a new start under more favorable conditions.—*Literary Digest*.

THE PEACE OF GOD.

FOR "THE FRIEND."

I hear of others who rejoice in this peace. I read in the Holy Scriptures how that it is spoken of as of inestimable value. Can this then be mine? Undoubtedly, without money and without price, for it is God's free gift to all who obey Him, to all who come unto Him, in the way He has appointed. Nor is there any other than the one way to God, even through Him the one appointed Mediator, the Lord Jesus Christ, who himself the Truth, declared "I am the way, the truth and the life. No man cometh unto the Father but by Me."

The Lord Jesus, when about to offer up himself as a sacrifice for the sin of the world, when about to leave his beloved disciples, told them in order to comfort them, "My peace I leave with you. My peace I give unto you, not as the world giveth, give I unto you." God his Father is called "The God of love and peace," and Christ Jesus, the Son of God, is the "Prince of Peace."

When the Lord destroyed the old world by a flood, there were but two classes of men in the world those within and those without the Ark, wherein Noah and his family found safety. Even now none but these two classes are found among men, those who are in Christ, walking in obedience to his Spirit, in the fear and love of God, and those who have not yet found safety therein.

Every man will be judged according to his works. The Holy Spirit which is Christ's spirit, reproveth and now judgeth the world.

Those whose works are not in accordance with Christ's spirit are evil. From such the Lord withdraws his peace, that man may feel his need of reconciliation and exhort, "Accquaint now thyself with God, and be at peace," for "there is no peace to the wicked, saith my God."

Whosoever in obedience to the reproof of

God's spirit ceases from any evil made manifest by that spirit to him, comes into the path of obedience, the way of the cross; this is the path that leads to righteousness, whose crown and evidence is the peace of God that passeth all understanding. "Great peace have those that do thy will." As we thus hearken to the voice of the Lord by his spirit speaking to our hearts, and by his power bestowed on us, obey Him and keep his commandments, then his promise is fulfilled to all such, "thy peace shall flow as a river, and thy righteousness as the waves of the sea."

God through Christ calleth all, him that far off and him that is near, offering free forgiveness and mercy to every man, irrespective of the magnitude of his sins, as hearkeneth to God's spirit, he through true repentance toward God and looking in faith to Jesus, as receiving power from Him, forsakes the evil present with him and made manifest to him for, this sin is the stumbling block of his iniquity. As other sins are brought to light these are brought to judgment, and as they are forsaken, the soul is brought nearer God. Thus is the power of sin weakened in us and we become stronger in the faith that overcomes, stronger in Christ by whose power alone any sin is overcome. And though this fight of faith the soul may at times suffered to be sorely tempted and tried as the battle sore, like Israel's under Joshua the valley of Gibeon, the Lord gives repose as the blessings of peace, to the faithful one and the effect of this righteousness is rest and assurance forever, that rest to which I call all. "Come unto me all ye who labor and are heavy laden and I will give you rest. Deny self, "take my yoke upon you and ye shall have peace."

Those who obey do come. Whoever obe receives of Christ's Spirit. With the spirit He receives somewhat of Christ's nature, with power to overcome sin. This is all and more to those who continue in his word, in the way of the cross, doing his will as made manifest to them. The rest of God is enjoyed while doing the Divine will, abiding under the cross. It is as the ladder of Jacob, whose foot rest on earth, and on whose top the Son of Man did sit; it is the path of the cross that leads to the crown of life and peace, glory and mortality.

Man of himself has no power to climb the ladder, neither to walk in this path, but God's angels are near to help, and the angel of God's presence goes before, and God's will on earth is done. He translates his servants from kingdom below to his kingdom above in the realms of peace and joy and love, to see Him forever and ever. W. W. B.

"SHE hath done what she could," I would very much rather have that said over my grave if it could be honestly said, that to have the wealth of the Rothschilds. Christ raised a monument to Mary that is more lasting than the monuments raised to Caesar or Napoleon. Their monuments crumble away, but her's endures. Her name never appeared in print while she was on earth, but to-day it is famous in three hundred and fifty languages. Mary may never be great, we may never be known outside our circle of friends; but we may, Mary, do what we can. May God help e

of us to do what we can. Life will soon
over; it is short at the longest. Let us
and follow in the footsteps of Mary of
many.—*D. L. Moody.*

These Trouble an Example of a Mohammedan Christendom.

our silence in presence of the appalling and
unnamable atrocities recently perpetrated
China by the nations calling themselves
Christian, is a terrible blow dealt to the faith
common men in a religion whose professors
allow its fundamental principles to be
trampled under foot without a word of protest
reprobation; and if the faith of our laboring
people in the ethical ideals of Christianity is
destroyed by its professors here, as its
efforts destroyed it among the laboring
people of France a hundred years ago, there
will be lost one of the most valuable and con-
servative influences we possess—an influence
which it is not too much to say may yet prove
absolutely indispensable to the preserva-
tion of that respect for law and order upon
which, in the last resort, American society
depends for its peace. Let us therefore
earnestly hope that the true American ideal
of peace on earth and good will to men will
not take possession of our hearts and enable
clergymen and laymen alike, to believe
it is not robbery or conquest, or slaughter,
expansion, or even wealth, but righteousness
only, which exalteth a nation; for if in
the state like ours you substitute the Mo-
hammedan ideal, which is now so popular,
of peace on earth and the subjection of the weak
to the strong you help to undermine the very
ground upon which respect for private prop-
erty when gathered in great masses in few
s, and often displayed in vulgar and offen-
sive forms, must ultimately rest. If fighting
and killing are to be encouraged; if those who
oppose them are to be especially honored,
if oppression of the weak is to be cherished,
it will be difficult to prevent the class of the
contented from familiarizing themselves too
thoroughly with fighting and killing, and from
beginning to cherish in their hearts a desire to
oppress the weaker but more wealthy fellow-
men. It seems to me quite too plain for
words that no single member of a weaker
race can be killed, no hut of such a race, how-
ever humble, can be burned, no one can be
executed for special honor for his part in such
civil warfare, without its helping to light
the torch which starts the fire by which some
of our Negro is to be burned at the stake in
his own country, not only in defiance but in
pursuit of law, and all such acts must be
followed by greater insecurity for the
weak and wealthier than the contented class pos-
sess.

We all read the other day that in a
community almost within sight of Wall street,
there was the cruel plot for killing the king of
the plots as cruel as ever hatching for the
king of more crowned heads of the Old
World, and I beg you to believe that insensate
against the sense of inequality and of
undue superiority to their fellows which
maddened members of the working classes
traverse to crowned heads to-day may easily
be transferred to-morrow to those of our citi-
zens whose distinction rests upon the posses-
sion of too abundant riches; and for that rea-
son while the Mohammedan ideal of war on

earth and the subjection of the weak to the
strong must always lessen the security of pri-
vate property in America, the Christian ideal
of peace on earth and good will to men will
always increase it.—*Wayne Mac Veagh.*

FIRST LESSON IN OBEEDIENCE.—Ruskin, who
wrote so many famous books, said that the
first lesson he learned was to be obedient.

"One evening," he says, "when I was yet
in my nurse's arms, I wanted to touch the tea-
urn, which was boiling merrily. It was an
early taste for bronzes, I suppose, but I was
resolute about it. My mother bade me keep
my fingers back. I insisted on putting them
forward. My nurse would have taken me away
from the urn, but my mother said, 'Let him
touch it, I suppose.'"

"So I touched it, and that was my first lesson
in the meaning of the word liberty. It was the
first piece of liberty I got, and the last that
for sometime I asked."—*Presbyterian.*

A TESTIMONY TO THE WORTH OF THE SCRIP-
TURES.—"Nowhere are there more noble
prayers and more exalted praise; nowhere are
the varied phrases of human life and of spiri-
tual feeling more divinely expressed; nowhere
are the high motives of life so loftily thrown
into form; nowhere are more splendid exam-
ples given of the beautiful and holy way of life;
nowhere is there such a character revealed as
that of Jesus Christ, and with Him are a
host of men and women who have well earned
the admiration and imitation of all those who
wish to live in heaven while they move on
earth. To read, mark, learn, and inwardly
digest them, is one of our highest duties—a
guard, a strength in life, and an impelling
power. Let them be a daily companion and
friend whose voice, in a hundred recollected
texts, comes to you in hours of temptation, in
the days of desperate crisis, in trials that
seem too much for human weakness; to inspire
patience, to give you an immortal strength, to
comfort you with hope of eternal joy. God
speaks through them to your soul, and mighty
as his love is the power of his Spirit in them."
—*Stopford A. Brooke.*

Notes from Others.

No earnest minister would call upon an unre-
newed man and one indifferent to spiritual truth
to pray, and how shall we justify the frequent in-
vitations from the pulpit for "every one in the
congregation to sing?" How can an unrepentant
sinner participate when such words of adoration,
worship or praise are employed, as in the hymns
"Jesus, Lord of My Soul," and "Jesus, My Cross
have Taken?" And does not this inquiry suggest
the question whether a great deal of church singing,
especially at prayer meetings and in Sunday-schools
is not mainly for entertainment and to enliven the
occasion? I do not recall that I have ever heard a
warning from the pulpit when a hymn is given
out, that singing does not honor God unless it is
with the spirit and with the understanding. Need
we wonder at the comparative inefficiency of church
services and of increasing worldliness, in view of
the misapprehension upon this subject, both by
ministers and attendants at the churches?—*J. C.
Havenmeyer, in The Evangelist.*

There is great danger that men will first give up
the Bible in order to fall back on Christ, and then
give up Christ in order to fall back on ethics, and
then give up obligatory ethics until it comes down
to this, that, with the decadence of sin, it turns
out that good form is a more cogent argument
with people than the law of God.—*President Patton.*

The problem of church union, a difficulty pre-
sented by rival sects, seems to be solved in the
Philippines, by an association of all the Protestant
denominations represented in those islands, calling
itself indeed simply the Evangelical Union, but
presenting itself to the people of the islands as a
Church, which indeed it is: the *Iglesia Evangelica*,
or Evangelical Church, of the Philippines. While
each Protestant denomination there represented,
Presbyterian, Methodist, Baptist, Episcopal, Dis-
ciples, retains its distinguishing characteristics by
doctrine or polity, and its original relations with
the home Church, these distinctions must present
themselves to the native peoples of the islands in
very much the same light as the various orders in
the Roman Catholic Church: and Protestantism
thus stands before them as one Church.

Items Concerning the Society.

Readers will notice in the account of Canada
Yearly Meeting with which we have been fur-
nished, that a minute was granted to our friend
Benjamin W. Wood, a minister (and not infrequent
contributor to our columns), for religious labor in
Great Britain and Ireland, in the south of France,
in Germany and in Norway. May the kingdom of
Christ be increased and the churches strengthened.

It is a matter of more than a passing interest,
that we observe in a daily paper a simple men-
tion of the decease of the daughter of Stephen
Grellet, which occurred on the fourth of Seventh
Month. Doubtless many others besides the present
writer have thus been awakened to a realization of
the fact that such a link to an important figure
and permanently historic character in the Society
of Friends has been so long abiding among us since
her memorable father passed away. Living in se-
clusion for many years past in the town of Med-
ford, N. J., in the tender care of relatives and
friends, Rachel Grellet was as one much shut off
from the knowledge of her fellow-members by
reason of her delicate health and difficulty of hear-
ing. She fondly cherished the memory of her
father, devotedly treasuring all that could be gathered
concerning his life and extended labors, and
distributing copies of his biography whenever she
apprehended there would be a service in presenting
the opportunity to read it. She believed this to
be, as indeed it was, no small mission of her life,
so long protracted, even to the age of ninety-one
years. Some of us feel a sense of personal loss in
not having seen so interesting a relic of one who
was known in Europe as a "modern Quaker apostle,"
when in several years past we might, but for pro-
crastination, have visited her.

We note also the decease of our friend Parvin
Masters, whom Friends from a wide area of our
country have known as long the faithful caretaker
of Arch Street Meeting-house, in which Philadel-
phia Yearly Meeting is held.

The Library and Printing Committee of the Meet-
ing for Sufferings (London), has reprinted an ar-
ticle from *THE FRIEND* (Philadelphia), which gives
some sound and pertinent advice as to the preserva-
tion of old documents and other data for the future
historians of such societies as our own. It has
pointed out that very often most valuable papers,
such as letters, pamphlets, minute books, and the
like, are thoughtlessly burnt or thrown away. The
appeal is made, and it is one that we heartily en-
dorse, that such material should be preserved and
sent to some suitable centre.—*British Friend.*

In accounts given of the late Hannah Wallis, of
Southport, England, it is stated that as one intimate
with the Bright family, she was present the first
time that John Bright spoke in public, the only
time that he ever committed his speech to mem-
ory, and the only time that he ever broke down!

The Commercialism of Our Times.

Hear this, all ye people give ear, all ye
habitants of the world: both low and high,
rich and poor together.

They that trust in their wealth, and boast
themselves in the multitude of their riches;
none of them can by any means redeem his
other, nor give to God a ransom for him:
neither the redemption of their soul is precious,
nor do they cease to fear: that he should still
be forever and not see corruption. For he
saith that wise men die, likewise the fool
and the brutish person perish, and leave their wealth
to others.

Their inward thought is that their houses
shall continue forever, and their dwellings
unto all generations; they call their lands
after their own names. Nevertheless man
beholdeth in honor abideth not: he is like the
beast that perisheth. Their way is their folly;
yet they posterity approve their sayings.

Like sheep they are laid in the grave; death
shall feed on them; and the upright shall have
dominion over them in the morning; their
aunt shall consume in the grave from their
ravelling. But God will redeem my soul from
the power of the grave: for he shall receive
me.

Be not thou afraid when one is made rich,
when the glory of his house is increased. For
when he dieth he shall carry nothing away;
his glory shall not descend after him. Though
while he lived he blessed his soul (and men will
praise thee when thou doest well to thyself,) yet
thou shalt go to the generation of his fathers;
they shall never see light.

Man that is in honor, and understandeth not,
like the beasts that perish (Psalm xlix).

The Solitary and the Social Meal.

In an article entitled "The Indigestion of
Loneliness" a writer in *The Lancet* tells us
that one of the reasons why it is "not good for
man to be alone" is that lack of company at
dinner will cause his food to disagree with
him. He says:

"There are some few happily disposed individuals who can dine alone and not eat too fast nor too much nor too little. With the majority it is different. The average man puts his novel or his paper before him and thinks that he will lengthen out the meal with due deliberation by reading a little with, and more between, the courses. He will just employ his mind enough to help, and too little to interfere with, digestion. In fact, he will provide that gentle mental accompaniment which with happier people conversation gives to a meal. This is your solitary's idea. In reality he becomes engrossed in what he is reading till suddenly finding his chop cold he demolishes it in a few mouthfuls; or else he finds that he is hungry, and, paying no attention to the book which he flings aside, he rushes through his food as fast as possible, to plunge into his arm chair and literature afterward. In either case the lonely man must digest at a disadvantage. For due and easy nutrition food should be slowly taken and the mind should not be intensely exercised during the process. Every one knows that violent bodily exercise is bad just after meals, and mental exertion is equally so. Wise people do not even argue during or just after dinner and observation of after-dinner speeches will convince any one that most speakers neither endure themselves nor excite in their hearers any severe intellectual effort. In fact, the experience of countless generations, from the Red Indian of the woods to the white-shirted diner of a modern party, has perpetuated the lesson that a man should not eat alone, nor think much at this time, but should talk and be talked to while he feeds. Most people do not think much when they talk, and talking is a natural accompaniment of eating and drinking."

Women, we are told, fare even worse than men when obliged to make a solitary meal. A man may generally be trusted to take food enough, even if alone; but a woman "is less inclined to realize the gross necessities of existence, therefore when doomed to dine alone she often does not dine at all." Says the writer further:

"She gets dyspepsia because her digestion has not sufficient practice; a man gets it because his functions practise it too often in the wrong way. Worst of all, perhaps, is the case of the solitary cook. In the myriads of small flats in London there are thousands of women 'doing' for their solitary masters or mistresses. These women whose main occupation is to prepare food for others find it impossible

to enjoy or even to take food, themselves. As confectioners are said to give their apprentices a free run of the stock of the shop for the first few days, knowing that it will effectively cure appetite afterward, so the women who are always occupied with buying and preparing food grow unable to use it for themselves. These people suffer from dyspepsia which is cured if somebody else manages their kitchen for a week allowing them to make meals without preparing them. It needs no moralist to declare the evils of solitariness. Man or woman is a gregarious animal. Physically and intellectually we improve with companionship. Certainly it is not good to eat and to drink alone. It is a sad fact of our big cities that they hold hundreds of men and women who in the day are too busy and at night too lonely to feed with profit, much less with any pleasure."

Whether the social or the family meal be more wholesome than the solitary repast, depends on the tempers, dispositions and moral or spiritual atmosphere one has to swallow with the company of others. Evil communications corrupt good food as well as manners. And the communion table of fault-finding, complaining of members present, or insidious slurs on absent acquaintances, is certainly a school of sin for children to sit at, and an imbibing-place of spiritual poison for all who participate. Said the apostle, "Ye cannot be partakers of the Lord's table and of the table of devils" (1 Cor. x: 21). And table-companions by the savor of their spirits seldom escape making their meal-time rather the one or the other. "Christ at the daily meal," is a suggestive title of a recent book. And we are as responsible for bringing the savor of his spirit with us to the meeting about the table, as to the meeting on benches or pew-seats.

Insanity from War.

Less is said about insanity as a part of the harvest brought home to us by war, than of intemperance and other vice. But, as the Friend in Nebraska who sends us the following extract from the *New Republic Patriot* says, "Insanity among soldiers is no new thing. Everybody that reads the events of the soldiers expects that many of them will go crazy. But the fact of their being so is generally concealed from their friends, if they are dangerous, until recovery or death. The concealment from their friends as to where they are, horrid as it is, seems politically needful."

One of the saddest results of war but comparatively unknown to the nation at large,

and entirely unreckoned in the glories of expansion, is the large number of once promising young men made hopelessly crazy by it, who are now worse than drivelling idiots compelled to spend the remainder of their ruined lives in close confinement, says the Washington correspondent of the *Indianapolis Sentinel*. A great many of them—just how many is a secret carefully kept by the powers that be—are incarcerated in the government asylum for the insane, called "St. Elizabeth's," which is situated just inside the District line between the river and the Maryland hills. On last Decoration day the graves of more than one thousand eight hundred insane soldiers, most of whom died at St. Elizabeth's since the beginning of the war in China, were strewn with flowers; and if tears were shed, heaven knows they were not for the poor fellows at rest beneath the sod, but for their infinitely less fortunate comrades, whose living tragedies are hidden within the gloomy walls of the asylum. The little God's acre with its rows of plank-marked graves occupies a shady dell at the foot of the hospital grounds. There a speaker's stand had been erected, festooned with bunting conspicuous among which were the flags of Cuba and the Philippines. About four hundred of the less dangerous soldier patients took part in the proceedings with veterans from the Washington Grand Army of the Republic post named "John A. Logan." There was a choir composed of employees of the institution and inmates who have their "lucid intervals," besides the St. Elizabeth's home band of fifteen pieces, which may generally be depended upon to do excellent work, though now and then some daff performer forgets his score, and goes off on a rag-time air of his own.

The asylum authorities, by the way, encourage music at all times among the patients, believing that it has a beneficial effect upon the mentally unbalanced. The strange choir has many excellent voices, especially among the females and it was noticeable that the most restless became quiet while the singing was going on. But oh! it was pitiful. Meanwhile at barred windows pallid faces overlooked the scene with gibbering lips and eyes that had "no speculation" in them. Wild yells were occasionally heard, subdued by the thick walls of padded cells, and the keepers watched with the eyes of hawks every movement of those at temporary liberty. It seemed like a horrible travesty when the speaker thanked the Lord that so few had been removed by death, and the band played "He Giveth His Beloved Sleep."

There is no doubt that everything possible is being done to relieve the condition of the wretched wearers of Uncle Samuel's army and navy uniforms who are imprisoned in the various government asylums, but their grim walls conceal horrors of which the world knows absolutely nothing, and besides which Dante's hypochondriacal visions of Inferno fade to insignificance. It is said that to St. Elizabeth alone upward of one thousand crazy soldiers have been sent from the Philippines, but for some unknown reason the exact number is withheld by the authorities and a complete list of them cannot be obtained. Even their names and real condition are carefully concealed from the public. People who have relatives and friends in the asylum and have

tried to find out something about them, say they might as well be dead and buried for all the information they can gain. Thus men drop out and are forgotten while yet in the land of the living.

Trying to Make the Anti-Canteen Law Odious.

A letter from Manila has come to our place of sojourn in the East, from which we reprint the following extracts:

From the very first there was a determination among the drinkers and those desirous of perpetuating the canteen to make the law expelling it odious. There was evidently boasting in more than one regiment that people would find out that there was more drunkenness and more court martials without the canteen than with; and soldiers seem to have purposely gone on drunks and been most promptly arrested that the boast might be made true. It also appears as though during the canteen days a soldier under the influence of liquor was quietly taken care of and sobered off who in anti-canteen days is put under arrest thereby purposely swelling the number of arrests.

Last evening I listened to a talk by Captain Stewart of the Twenty-fifth Infantry (all colored troops). This regiment is stationed in the province of Zambales. The colonel said to the chaplain as pay day came around after the canteen was abolished that he now would see such drunkenness and vice as had never been before. Six days passed, the soldiers having usual freedom and everything was orderly and quiet. When the chaplain showed the colonel the figures and statements, comparing that pay day with others and the colonel had, and did acknowledge that it was the most orderly and best time they had ever had.

My belief is that wherever excessive drinking and bad conduct have followed on the pay days after the abolishing of the canteen, it is because it was deliberately determined that it should be so. There is much complaint because of the loss of the canteen fund, and cutting down to army rations, and many of the boys do not look beyond to the evil of making men drunkards in order that the mess-table be better supplied, for it inevitably followed that the greater the canteen fund, the greater the amount of liquor consumed.

In a recent report of "Fragments of a Symposium" the editor found himself injecting comments of his own, with the apologetic remark that if the conversation was "hastily yet he hoped not imperintently interrupted, and not without sympathy, as groping after the same end" (which we hold dear—the development and propagation of our spiritual principles). The urgency of mail time in a distant place prevented a desired revision which would have made the spirit of this remark more manifest.

In attempting to turn the mind a little deeper we would by no means discourage those who have the welfare of any portions of our profession at heart and are well aware that it is unfair to judge a speaker by his detached sentences. All personality, however, was

eliminated, and no reflection made (for lack of acquaintance) on the *Quarterly Examiner*.

The Light by Lonely Rock.

That is a very tender story concerning faithfulness in humble places, which Jean Ingelow has related for us. It was in one of the Orkney Islands, far beyond the north of Scotland. On the coast of this island there stood out a rock, called the Lonely Rock, very dangerous to navigators. One night, long ago, there sat in a fisherman's hut ashore, a young girl, toiling at her spinning-wheel, looking out upon the dark and driving clouds, and listening anxiously to the wind and sea. At last the morning came; and one boat, that should have been riding on the waves, was missing. It was her father's boat. And half a mile from the cottage her father's body was found, washed upon the shore. He had been wrecked against this Lonely Rock.

That was more than fifty years ago. The girl watched her father's body, according to the custom of her people, till it was laid in the grave; then she lay down on her bed and slept. When the night came she arose and set a candle in her casement, as a beacon to the fisherman, and a guide. All night long she sat by the candle, trimmed it when it flickered down, and spun. So many hanks of yarn as she had spun before, for her daily bread, she spun still, and one hank over to pay for her nightly candle. And from that time to the time of the telling of this story, for fifty years—through youth, maturity, into old age—she turned night into day. And in the snow-storms of winter, in the serene calms of summer, through driving mists, deceptive moonlight and solemn darkness, that northern harbor was never once without the light of that small candle. However far the fisherman might be standing out to sea, he had only to bear down straight for that lighted window, and he was sure of safe entrance into the harbor. And so for all these fifty years that tiny light flaming thus out of devotion and self-sacrifice, helped, and cheered and saved.

Surely this was finding chance for service in a humble place. Surely this was lowliness glorified by faithfulness. Surely the smile of the Lord Christ must have followed along the beams of that poor candle, glimmering from that humble window, as they went wandering forth to bless and to guide the fishermen tossing in their little boats upon the sea. "Let your light so shine before men that they may see your good works and glorify your Father which is in heaven."

We long to do the great deed, to strike the mighty blow, in the sight of the world and we are apt to fail when life makes its severest demands upon us, and calls us to do our work patiently and well, however humble it may be. Arthur Hugh Clough has well put it:

We ask action,
And dream of arms and conflict:
And strung up
All self-devotion's muscles,
And are set
To fold up papers.

But it is the folding up of papers that most of us have got to do in this life; and the real test of life is, not whether we fight battles and slay enemies, but whether we fold up our papers well.—*Henry L. Schaub.*

FOR "THE FRIEND."

Historical Sketch of the Friends' Meeting-house at London Grove, Chester Co., Pa.

In the year 1714 several Friends, having settled in the western part of Marlborough township, held a meeting for worship, by common consent, at the house of John Smith, one of their number.

Ten years later, in 1724, a meeting was settled there by Chester Quarterly Meeting (now Concord), and Friends were given leave to build a meeting-house near by on the northly corner of London Grove Township. We are not informed as to the character of this building, but it was presumably a temporary structure, perhaps of logs, as we find Friends concerned to build a new and larger house in 1743, less than twenty years after. There is reason to believe that the latter was of bricks, but the record does not reveal its dimensions, though it was doubtless large enough to accommodate the Western Quarterly Meeting, which was established in 1758, and held at London Grove. However, in the Second Mo., 1775, New Garden Monthly Meeting suggested to the Quarter that the house be enlarged, the better to accommodate this large Quarterly Meeting," and offered a subscription of £175 towards defraying the expense.

A committee was appointed by the Quarter to confer with New Garden Friends, and the result was that the other Monthly Meetings were asked to raise £125 (making a total of £300), which they did promptly; and the addition was made by putting an extension to one end of the old building, leaving the brick wall standing between the old and new apartments. This arrangement, however, does not appear to have been satisfactory, as the records occasionally refer to the "inconvenience of this house."

Being floored with bricks, steps were taken in 1782 to substitute one of boards. "The Friends appointed in Fifth Month last to procure a boarded floor for this house, having performed the service, now inform the amount of expense to be £28, 5s, 3d, of which the several Monthly Meetings are desired to pay their quotas at or before next Quarter to Joseph Ennock."

But Friends were not yet satisfied, and after seven years of patient endurance the Quarterly Meeting makes this minute, Fifth Month, 1792, viz: "On consideration of the inconvenient construction of this house, Benjamin Mason (and others) are appointed to inspect the same, and, if a profitable alteration can be made, report accordingly." At next meeting the committee recommended "that the middle wall which divides the two houses, be taken down, and falling partitions substituted in their room; that the galleries in the large house for elderly Friends be taken away, and a gallery be placed along the west side of both houses for their use; that a part of the youth's gallery in the west of the house be taken down, and the upper windows glazed; which, with two stoves for the large house, and some other small alterations, we think will for the present remove the inconvenience Friends have so long labored under, all of which we submit to the Quarterly Meeting." The proposition was adopted by the Quarter and carried out substantially as outlined by the committee, at a cost of about sixteen hundred dollars. So far

as a meeting place was concerned, Friends now evidently enjoyed a good degree of tranquillity for eighteen years; but in 1810 their minds were again disturbed by the announcement that the house was unsafe, as is frequently the case where walls have been tampered with. A committee of inspection reported that, in their opinion, a few inexpensive repairs would suffice for the present; which were ordered made. But only one year later (1811), the building was pronounced too small to accommodate "the large number of Friends who generally attend this meeting." A committee was appointed to consider the subject. After considering the proposition for nine months they reported in Fifth Month, 1812, that "no way opened with clearness to move forward in the case." Thus the matter would appear to have closed; but it is not yet abandoned, for one year later we find it revived by London Grove Monthly Meeting, and as usual, a committee was appointed. At the next meeting, Fifth Month, 1813, instead of a report of the committee, the following brief minute appears, "The further consideration of altering or rebuilding the house occupied by this meeting is discontinued."

It would seem as if the case was now almost consigned to oblivion. However, four years later, Fifth Mo., 1817, London Grove Monthly Meeting again comes forward, but this time with a definite and business-like proposition, as follows, viz: "This meeting, in view of the incommodious and decaying state of what is called the old meeting-house at London Grove, has taken into consideration the expediency of building a new one, of nearly the following dimensions, to wit: Ninety feet long, by forty-five feet wide and twenty feet high from floor to ceiling, with a youth's gallery in front to contain five benches, and a sliding partition across the middle of the building for the accommodation of the Quarterly Meeting; and such other arrangements as may be found necessary for the use of this Monthly Meeting; also a cellar or wood-house underneath, fifteen by twenty-five feet, and the building to be roofed with cedar. The members of London Grove Monthly Meeting have subscribed three thousand dollars towards the expense of the said building; provided the rest of the Monthly Meetings of the Quarter should approve of the proposition, also the plan of the house, and should conclude to make up the remainder of the money required to complete the same." Which being read in this meeting "the further consideration of the subject is referred to the following committee, viz: Thomas Berry [and thirty-four other Friends].

At the next meeting the committee reported that "having twice generally met in free conference, and deliberately considered the subject, we agree in judgment that it would be right, if agreeable to the Quarterly Meeting, to adopt the proposition of London Grove Monthly Meeting, with a little change in the plan, viz: To take down both the present houses and erect a new one, ninety-five feet long by forty-three feet wide, of the height, and with a gallery for youth as suggested; the cellar to be twelve by fifteen feet; the front and back of building to each contain two doors and ten windows, and the ends one door and five windows each. A double sliding partition is to divide the house into nearly equal parts,

and a single one to run across one of these apartments; with an adjoining building for the reception of wet clothes. The cost has been estimated at five thousand five hundred dollars—all of which we submit to the Quarterly Meeting. Eighteenth of Eighth Month, 1817." Which being approved, it is recommended to the constituent Monthly Meetings to promote subscriptions among themselves for the purpose of carrying the proposal into effect; and transmit to next meeting an account of the several sums subscribed. In the Eleventh Month the Quarter records, "that the Monthly Meetings inform the following sums have been subscribed toward the erection of a meeting-house at London Grove, viz: Centre Monthly Meeting, four hundred and eighty-seven dollars; Kennett, seven hundred and fifty dollars; New Garden, eight hundred and nine dollars; Fallowfield, five hundred and eight dollars; amounting in all to two thousand five hundred and fifty-four dollars," and with London Grove's contribution the sum reaches five thousand five hundred and fifty-four dollars, "which, claiming our attention, the following Friends are appointed to receive the money subscribed and proceed, when the season will admit of it, to provide materials and procure the erection of the house according to the plan already decided upon, viz: William Elliott [and fifteen other Friends].

The work now proceeded without interruption, or change of plan, except that five feet were added to the width, making it forty-eight long by ninety-five feet. The Quarterly Meeting in the Fifth and Eighth Months, 1818, were held at Nottingham, but the new house was ready by the Eleventh Month, the first Quarterly Meeting being held the eighteenth of that month.

And now, after a lapse of eighty-three years, the substantial stone walls of this house seem to be as solid as ever, and good, apparently, for another eighty or one hundred years.

THOMPSON FRAME.

TOO EASY.—Earth's garden spots—the places where the air is most balmy and the skies most sunny, where the ground brings forth abundantly with but little cultivation, and food can be had for the plucking—would seem at first thought to be the most desirable places in which to live. So much of time, toil and worry, might be saved in such a paradise. But ease brings degeneracy, and these places where the soil is richest and the climate kindest do not produce the highest type of manhood. The place where nature simply opens her hand and pours out her bounty with no demand for an equivalent in labor, is not the one where man develops in intellect or enterprise.

Something to battle with, something to conquer—something that opposes his progress and calls out his strength, man must have, or he ceases to grow. As it is in the natural and physical world, so it is in the mental and moral. Ease and what we call prosperity are not the material out of which strong and noble characters are wrought. The treasures dropped at our feet are not the ones which really enrich us, but those for which we must toil and strive with all that is best and noblest of our being.—Selected.

"To have wrong done to us is never so expensive as to do wrong"

MY PRAYER.

Father, lead me day by day,
Ever in thine own sweet way;
Teach me to be pure and true,
Show me what I ought to do.

When in danger, make me brave;
Make me know that thou canst save;
Keep me safe by thy dear side;
Let me in thy love abide.

When I'm tempted to do wrong,
Make me steadfast, wise and strong;
And when all alone I stand
Shield me with thy mighty hand.

When my heart is full of glee,
Help me to remember thee—
Happy most of all to know
That my Father loves me so.

May I see the good and bright
When they pass before my sight;
May I hear the heavenly voice
When the pure and wise rejoice.

May I do the good I know,
Be thy loving child below,
Then at last go home to thee,
Evermore thy child to be.

—The Child's Companion.

Mohammed Instead of Christianity.

I observe with especial sorrow that many Protestant clergymen mistakenly suppose that they can safely substitute at this day and in our country the teaching of Mohammed for the teaching of Christ. We all know the temptations to which such clergymen are exposed. It is so much more comfortable to "swim with the tide," and it is so much more certain that the incomes on which themselves and their families are dependent for the comforts and luxuries of life will share in the commercial prosperity of the country if the doctrines preached by them and advocated in their religious journals recognize that the making of money is the first duty of man in the new century, and that keeping one's self unspotted from the world, so far from being, as was formerly supposed, true religion and undefiled, is a foolish and sentimental expression, incapable of application in the rough world in which we live, where each man's duty is to take care of himself. Knowing the despotism the practical men in the pews exercise over the pulpit in such matters, we ought to think with great charity, not only of the clergymen who fail to preach Christianity and who substitute Mohammedanism in its place, but also of the missionaries who, in distant lands and surrounded by traders and soldiers, have persuaded themselves that the robbery and murder of weaker peoples, with their attendant horrors, cannot really be helped in an age so practical as ours and so determined to pursue only practical ends, and that therefore such crimes are no longer to be unsparsingly condemned; but, after making all the allowance the most abundant charity can suggest, it will still remain a grave and menacing peril to American respect for the moral law if clergymen are permitted without rebuke to preach the righteousness of unnecessary or aggressive warfare, the killing of weaker peoples in order to reduce them to subjection and the robbing them of their possessions.—Wayne MacVeagh, *Oration at Cambridge.*

Captain Mahan on Christianity.

"Captain Mahan must be awarded the honor of applying the 'higher criticism' to Christianity in order to make out a pious defense for war. At the Episcopal Congress in Providence, R. I., he argued that war is not antagonistic to good old Christian doctrine. To be sure, there is an 'uneasy feeling' that war is never just right, but, says the captain, 'this feeling is not of Christian origin, but has rather been imported into and imposed upon Christianity by those alien to its beliefs.' And this is where the captain's 'higher criticism' comes in. He proceeds to show that the anti-war feeling finds its extremest exemplars now-a-days in persons who are not Christian believers at all, such as the agnostic philosophers and humanitarians, like Herbert Spencer, Frederic Harrison and John Morley. Those wicked men have attempted to ingraft their alien anti-war principle upon the main body of Christian doctrine, but the captain is too smart for them, and has now learnedly exposed their ungodly exegesis. As a higher critic the captain seems to be a stunning success, yet the triumphant reception of his ideas by the bulk of Christian scholars and teachers may prove rather disastrous in the end to Christianity."

The foregoing from the *Springfield Republican* is very interesting. Captain Mahan's contention that the "uneasy feeling" that war is never just right "is not of Christian origin, but has rather been imported into and imposed upon Christianity by those alien to its beliefs," will make some persons who have tried to understand and be ruled by the spirit of Christ, rub their eyes. The first witness of that spirit in the heart of man was declared by a pretty good Christian authority to be "joy, love, peace." Supposing that a man had "joy, love, peace" in his heart, how could he go into war except under the direst compulsion of necessity. And if he did go into it, to what extent would "joy, love and peace" remain with him? General Sherman, as good an authority on war as Captain Mahan, said, "War is hell." According to Sherman, then, a man being in war would be metaphorically "in hell." Could he be in that condition and yet have "joy, love and peace" in his heart? Another good Christian authority, of higher standing than Captain Mahan in things spiritual, said, "Unless a man have the spirit of Christ he is none of his." But how could a man in the spirit of Christ do those things, for example, which have been done during that war which Dr. Lyman Abbott told us was more unselfish and noble even than our Revolution—roast Spaniards to death in the iron hull of a stranded ship or deliberately shoot one in the back as he was running away, and then record the exploit in a magazine article? Or how could he have the spirit of Christ and yet directly or indirectly kill eighty odd Filipinos in a single town because one Filipino in that town killed one American? Or, how could he have "the spirit of Christ" and yet directly or indirectly fill his enemy with gallons of water, and then torture him by stamping on his stomach and chest until agony compelled the victim to tell where he hid his gun? Christ, it is true, said, "If thine enemy hunger, feed him; if he thirst, give him drink," but it is evident He did not mean by that to sanction the "water cure" torture. To most frank minds there is ghastly contrast between

the spirit of Christ and the actual deeds of war. We are not now saying that these things are in any way wrong from another point of view than that of the Christian, but they are clearly so from that. Captain Mahan, it would seem, has not quite caught the idea of the New Testament. He need not blame poor Herbert Spencer or Frederic Harrison or any other agnostic for adulterating Christian doctrine with modern humanitarianism. The Founder of Christianity himself is to blame for the troublesome peace notion which they have taken up with. Captain Mahan must first get rid of the Sermon on the Mount and the preaching of it before he is driven to the necessity of laying this sin at the agnostic's door. After disposing of the agnostics as being beyond the pale, what will Captain Mahan do with the Prince of Peace? He has explained to the world the significance of Lord Nelson's career and the influence of sea power on history. Will he likewise tell us what is the significance of Christ's accepting the cross rather than be saved from it by the sword? who declared that He had power to summon to his defense the legions of angels, but who said to his disciple who struck the first feeble blow in his defense: "My kingdom is not of this world, for then would my servants fight;" and "put up thy sword within the sheath, for all they that take the sword shall perish by the sword." The whole tenor of Christ's teaching, as was his personal example, was toward peace and not toward war. While it is perfectly true that He never specifically said war is wrong any more than slavery is wrong, He gave the most impressive sanction to the command, "Thou shalt love thy neighbor as thyself." A growing comprehension of what the power of that commandment is ultimately makes human slavery impossible. It is equally true that it makes war impossible: for as "love worketh no ill to his neighbor," a deep and true love for men is ordinarily inconsistent with slaughter of them. The man who really loves his neighbor (and the nation is but man "writ large") will certainly exhaust every expedient to avoid killing him. So far in the world's history it seems to have been impossible to wage even the holiest of holy wars, like that with Spain for example without stirring up the most ferocious passions without adding enormously to violations of those commandments on an observance of which Christ founded his Church. Greed is let loose and runs from heart to heart like a prairie-fire; adultery and fornication enormously increase falsehood is exchanged for that truth which every man should speak with his neighbor stealing, great and small, is rife and meet with no rebuke; murder is frequently committed under indifferent eyes. Finally, bad runs to worse until that extreme contradiction is reached in which the chief magistrate of a great nation orders a war of extermination or men fighting for their liberty—just such a war as Weyler waged under the Spanish flag in Cuba, and which led us, in a spirit of righteous indignation to begin war to stop it. This is the sequel of a war begun for humanity. What man in the face of such awful facts as these dares to stand up and justify war and claim for it the sanction of the Founder of Christianity? One is equally stupefied by the intellectual folly and by the impiety of such an attempt. Every word of Christ and every ac-

his, from birth in the humility of the man to death in the shame of the cross, contradicts such a claim. Let men claim, if they will, that war may be demanded for the satisfaction of lusts they have not learned to curb, that it may be the outcome of a hard police policy, but they will try in vain to reconcile with the ideals of Christ. From the instant they abandon their lives to the utter self-surrender of the teaching of Jesus Christ they will know that an irrepressible conflict exists between his Spirit and that of war. War exists in the world as slavery existed, in spite of Christianity; but as the calm light of Christian love and self-denial spreads over the troubled and suffering earth, the lurid glow, the passions, and the anguish of war inevitably recede. The kingdom of Christ is within not without, and its weapons of conquest are spiritual not carnal. At least this is the gospel according to the four evangelists and St. Paul, though evidently it contradicts that according to Captain Mahan. The process by which war is driven out as a discarded agency in human affairs is analogous to that which has excluded torture from judicial procedure or slavery from among the institutions of civilized countries. It will become at once so shocking to the enlightened mind and so great a check to real progress that men will turn in earnest to the cultivation of those higher motives and resort to those practical expedients that will loosen the hold of this disease on humanity. The simple principles of action that Christ taught, a rational consideration for the rights and the welfare of others, these are the motives which, gradually extending from the individual to national conduct, will win the victory. The practical expedient which will accompany and act in obedience to the higher motive is judicial arbitration in some form. In advance, while comparatively slight in proportion to the final result to be gained, is great comparison to the barbarism of past centuries. It looks now as though the world were approaching one of those great critical periods as though all nations were descending into the "valley of decision"—in which it is to be determined whether we are to move backward a fresh and destructive reign of blind force, of passionate, conscienceless rule, or forward as we shall emerge toward a larger assurance of truly democratic and therefore successful sway. The men and women who would render any real service in having a verdict rendered in favor of democracy and peace must be prepared to sacrifice lower interests to the higher. Their function is to hold the error up to the base nature of war, to show its fallacies and sophistries, its cruelties and moralization, its false glory; to expose as it is, whether it is waged, the falsehood and deceit by which its advocates and promoters seek to justify it. This work means martyrdom, petty or great, but those who see the splendid final victory to be achieved, who will not hesitate on that account. They will fully, enthusiastically continue their work they have caught the spirit of that Leader on Captain Mahan seems to us to misinterpret, and who, with an infinitely severer trial undergo than can threaten them, said that the work in the world was to bear "witness to the truth."—*City and State.*

Maxims from "The Interior Life."

BY T. C. UPHAM.

The value of a thing is known by what it takes to preserve it, as well as by what it originally costs. Men may steal your diamonds who would not trouble things of less value. The cost of holiness was the blood of the Son of God; and greatly does he mistake who supposes it can be preserved by anything short of eternal vigilance.

It is of the nature of holiness to unite with whatever is like itself. It flies on eagles wings to meet its own image. Accordingly, the soul, so long as it is stained with sin, has an affinity with what is sinful. But when it is purified from iniquity it ascends bodily upward and rests by the impulse of its own being in the bosom of God. The element of separation is taken away and a union, strong as the universe and lasting as eternity, necessarily takes place. "He that is joined unto the Lord is one spirit."

A fixed, inflexible will is of great importance in a holy life. Satan will suggest a thousand reasons, why we should yield a little to the temptations by which we are surrounded, but let us ever stand fast in our purpose. A good degree of decision and tenacity of purpose is of great importance in the ordinary affairs of life. How much more so in the things of religion. A double-minded man—he who has no fixedness of purpose, no energy of will—is unstable in all his ways. Ye who walk in the narrow way let your resolutions be unalterable. Think of the blessed Saviour's, "My God, my God, why hast thou forsaken me?" Though He was momentarily forsaken, at least to be left to anguish inconceivable and unutterable, his heart nevertheless was fixed and He could still say, "My God, my God."

The Scriptures surpass in simplicity, strength and grandeur all the writings of Rome and Greece. Even Homer never approached the sublimity of Moses in his holy songs, especially the last which all the children of Israelites had to learn by heart. No Greek or Latin ode ever could attain to the sublimity of the Psalms; for example, that which contained "The God of gods, the Lord, has spoken," surpasses all human conception. Never has Homer or any other poet equalled Isaiah in portraying the majesty of God, in whose sight kingdoms are but a grain of dust; the universe a pavilion which is raised to-day and taken down to-morrow. Sometimes the prophet has all the sweetness and all the tenderness of a pastoral in the smiling portraits which he makes of peace; sometimes he soars to such a height as to leave everything beneath him. But what is in heathen antiquity at all comparable to the tenderness of Jeremiah deploring the evils of his nation; or to Nahum viewing far off with his prophetic eye the proud Nineveh falling under the assaults of an innumerable army? We seem to see that army; we seem to hear the clash of arms and noise of chariots; everything is painted in a lifelike style that seizes upon the imagination. He leaves Homer far behind him. Also read Daniel, declaring to Belshazzar the anger of Jehovah about to fall upon him, and search in the most sublime originals of antiquity for something to compare to them.—*Penelon.*

FOR "THE FRIEND."

Some Reminiscences of a Good Man—Ebenezer Worth.

(Continued from page 414, vol. lxixiv.)

On Ebenezer Worth's farm there was a pretty large tract of woodland. A Friend desiring to purchase some wood as it stood, they walked through the part he wished to buy, and each as they went, put down on paper what they thought it was worth. After getting through and comparing figures, they had each reached the same amount as to the value of the timber, their figures were the same.

Another triangular tract was looked over and a price agreed upon per acre. On surveying it, there turned out to be about double the quantity supposed. The purchaser being still willing to take it, E. W. became uneasy lest he might not realize what he had first anticipated, and said, "Now when thou has disposed of this wood, if thou fails to make out of it what thou first expected, let me know and I will make it up to thee."

It is understood that it was not unfrequently the case for him to ask to have the oxen put to the cart and send a load of wood to some poor family in the neighborhood.

It was the writer's privilege to accompany E. W. on three visits to a person (W. E. Udderzook) condemned to death for the murder of his brother-in-law, in order to obtain an insurance that had been placed upon his life. His voice in addressing him was mellowed down into a tone that was both tender and entreating, but it is feared, failed to make much lasting impression. W. E. U. was an uncommon man, of fine physical development, cleanly in person, neat in his dress, and courteous in manner.

Dr. Charles Evans, Aaron Sharpless and other Friends being at the writer's house, inquired what effect Ebenezer's communication seemed to have on the poor man: they were informed as above stated. When Dr. Evans remarked that it reminded him of a visit of George Dillwyn to a similar prisoner in Burlington jail; on returning from which, he met a Methodist minister on the street, who inquired of him as to the spiritual condition of the prisoner and was informed that he seemed indifferent to anything they could say to him. The minister then said, "Ah, Mr. Dillwyn, you are not the man to preach to such a hardened sinner as he is, let me go and see him and I will shake him over—about ten minutes, and then you can go and preach to him, and it may do him some good." Another of our ministering Friends did subsequently so shake him over the "bottomless pit" as to make him quake, and in great measure to confess his guilt to the writer in his cell.

Robert Scotton, an esteemed minister, and Joseph Elkinton, Sr., a valuable elder, spent some time at Tunessassah usefully employed in caring for and instructing the Indians. The latter, after his return, paid a visit to them when under the care of E. W., and remarked to the writer that E. W.'s talking to the Indians was at times so reverential and impressive as to seem almost "apostolic," they (the Indians) held him in great esteem. E. W. was mindful to visit the sick and infirm, but not many socially.

When taking leave, on one occasion, he remarked, "he hesitated to invite persons to

visit him, as he had no wife." He used to tell the Indians that when persons were rightly joined together the connection was so intimate and sacred that neither one could ask for a blessing alone without including both. Unmarried as he was, he certainly had a just conception of what constituted a true unity in married life.

The late John G. Whittier in a private letter thus speaks of him, in allusion to some extracts from his journal, that had recently been published: "I think the extracts indicate a character of rare unselfishness and practical piety and faithfulness to the Divine Monitor and Guide. One is glad to get away from the empty noises of self righteous presumption, and contemplate such a beautiful unworldliness, such a close walking with the Maker. I think the papers very valuable, as they furnish a lesson greatly needed, at this time of loud profession and irreverent familiarity with Divine things and offensive self-glitteration."

W. P. T.

"FOR THE FRIEND."

True Worship.

Some thirty years ago an aged Friend felt a concern to hold a special meeting in the old meeting-house at Settle (York, England), to which the public were to be invited. When the time arrived, a goodly number of the latter responded to the invitation, and the meeting was gathered for some time in solemn silence, when the Friend rose to his feet with these words, "Doubtless many of you who are unaccustomed to our meetings for worship are wondering when the service will begin. The service will begin when you begin to serve." He then resumed his seat, and the silence continued and deepened. I do not know his name, I do not know what the rest of his vocal service on that occasion was, but I do know one heart to whom those few words went home, in an eloquent and never to be forgotten lesson; and to my own mind they have often returned in times of meeting, recalling the wandering thought, and reminding of the true spirit of worship. When we begin to serve—when the spirit of the created soars beyond its earth-born cares and fetters, and meets in sweet communion with the Spirit of the Creator, then, and not till then, can the service be said to commence, can the true meeting be held. Not in the earnest listening with the outward ear to the words of man's wisdom, however intellectual and improving to the understanding these may be, but with the spiritually hearing ear, and understanding heart; attuned to catch the softest whisper of his voice, whether it be in reproof, instruction or consoling love, attuned to listen for that still small voice, that was never yet listened for in vain.

MABEL THOMPSON.

YORK, England.

GEORGE WHITEFIELD ON WAR.—Those who, like myself, have studied the Journals of the greatest preacher of the eighteenth century, George Whitefield, will have noticed that he not unfrequently refers to the Quakers, and to the kindness and hospitality shown him by them. I was lately looking through two volumes of his letters, published in 1771, and the accompanying extract is of such a character, that I think it cannot fail to interest thy read-

ers. The letter is dated "Philadelphia, Nov. 10, 1739."

The Quakers. . . . I think have left us an example of patient suffering, and did more by their bold, unanimous and persevering testimonies, than if they had taken up all the arms in the kingdom. In this respect I hope I shall follow them as they did Christ, and though I die for Him, yet take up no carnal weapon in defence of Him in anywise.—*Joseph J. Green in British Friend.*

As Quick as the Telephone.

One night a well-known citizen, who had been walking for some time in the downward path, came out of his home and started down town for a night of carousal with some old companions he had promised to meet. His young wife had besought him with imploring eyes to spend the evening with her, and had reminded him of the past when evenings passed in her company were all too short. His little daughter had clung about his knees and coaxed in her pretty willful way for papa to tell her some bedtime stories, but habit was stronger than love for wife and child, and he eluded their tender questioning and went his way.

But when he was blocks distant from his home he found that in changing his coat he had forgotten to remove his wallet, and he could not go out on a drinking bout without money, even though he knew his family needed it, and his wife was economizing every day more and more in order to make up his deficits; and he hurried back and crept softly past the windows of the little home in order that he might steal in and obtain it without running the gauntlet of questions and caresses.

But something stayed his feet; there was a fire in the grate within—for the night was chill—and it lit up the little parlor and brought out in startling effects the pictures on the walls. But these were nothing to the pictures on the hearth. There, in the soft glow of the fire-light knelt his little child at her mother's feet, her small hands clasped in prayer, her fair head bowed, and as her rosy lips whispered each word with childish distinctness, the father listened, spell-bound:

Now I lay me down to sleep,
I pray the Lord my soul to keep,
If I should die before I wake,
I pray the Lord my soul to take.

Sweet petition! The man himself, who stood there with bearded lips shut tightly together, had said that prayer once at his mother's knee. Where was that mother now? The sunset gates had long ago unbarred to let her through. But the child had not finished, he heard her say: "God bless Mamma, Papa and my own self. God—bless Papa—and please—send him—home—sober. Amen."

Mother and child sprang to their feet in alarm when the door opened so suddenly, but they were not afraid when they saw who it was returned so soon, but that night, when little Mamie was being tucked up in bed, after such a romp with papa, she said in the sleepest and most contented of voices:

"Mamma, God answers almost as quickly as the telephone, doesn't He?"—*Our Paper.*

TRUTH is the apostle before whom every cowardly Felix trembles.—*W. Phillips.*

Sectarianism vs. Loyalty to Truth.

Narrow sectarianism is out of date. It is a block in the path of progress. It is scorned by all right-thinking persons. So strong and healthy is the objection to it, that there is no longer need to fight against it. To do so is to fight a man of straw. The real danger is from the opposite quarter. We are becoming so fearful of sectarianism that we need to remind ourselves that Christian manliness and loyalty to truth demand that we shall maintain a strong attitude, none the less strong because courteous, in upholding and spreading what we are assured is true.

No truth is the exclusive property of any man or any denomination. There is no such thing as Methodist truth, or Presbyterian truth, or Quaker truth. But there is such a thing as forgotten and neglected truth. There is such a thing as a man, or a denomination discovering this truth, and compelling others to recognize it. This is what has actually happened in the case of Friends. The truth that God speaks in every heart has in its practical application been largely left to Friends to emphasize. Yet, if we will but calmly think it over, we shall see that this truth is of the most vital importance. If we can make men realize this, it will have a tremendous effect upon their attitude towards God. The truth that God actually does dwell in his children, that He does supply them with the strength and comfort and purpose they need, if only they will submit to Him and co-operate with Him is held by very many Christians, but it receives an emphasis among the Friends which is rarely seen elsewhere. Yet it is one of the chief purposes of the work of Jesus Christ to show this to us. It is upon this that most of what are often considered our peculiarities rest. Do we seek for outward as well as inward peace—peace among men, as well as peace with God? It is because the spirit of Christ within us is the spirit of justice and peace. Do we disuse outward rites and ceremonies? It is because the Lord has shown us that no outward ceremony is in itself pleasing to Him, and that outward ceremonies tend to take our attention from the very reality they are intended to typify. Therefore, as we are commanded of Christ's that indicates that He wishes us to accept any rites, we disuse them, but would lay additional emphasis upon a spiritual and practical fact that we are brought into and to maintain co-partnership with Him in everything. Do we conduct our worship without pre-arrangement, and do we uphold the voluntary system in our ministry? It is that Christ may have the leadership, at that everyone may be equally open, whatever his or her occupation may be, to receive the call into that department of work which Christ may indicate. Our plea is for reality, for a true untrammelled work of the Holy Spirit, the hearts of men to-day. It is a plea that should have its foundation in a living experience of our own, and which we should neither apologize for, nor hide, but make as effective as possible, that men may recognize the living and perpetual youthfulness and applicability of the message of Jesus Christ. This is in no wrong sense sectarianism. It differs from it as the daylight does from candlelight. It rests not upon prejudice or tradition but upon principle. It is consistent with

vest, appreciation of truth brought to us by
ers, and with fellowship with all who love
Lord. It can modify its methods but can-
sacrifice principle.

No good end is gained by ignoring or hiding
truth we have once grasped. The fewer
number who hold it, the more important
for us to be faithful. It is our solemn
and welcome privilege to do what in us
to bring others to grasp the same truth
enter into its wonderful privileges.—*R.
T. in the Interchange.*

The Greenland Missionary.

We must be willing to be despised and re-
fused, if we would follow Jesus. The success
the missionaries in turning the Greenlanders
in darkness to light soon roused the hatred
the sorcerers, who had been accustomed to
to give the people, and they stirred up some
killed men to murder them. These men came
New Hernhuth and made their way into the
mission-house while the native Christians were
away, and they found only one of the mission-
aries at home. This was Matthew Stach, who
busily engaged in translating. He showed
signs of fear and made no effort to get away
from them. After they had sat a little while,
the chief said, "We are come to hear good."
I am glad of it," replied the missionary and,
once being obtained, he commenced by sing-
ing a hymn and next prayed that the Lord
would open their hearts. He then proceeded
to talk to them. "I will not say much to you
the Creator of all things. You know there
is a Creator;" and to this they all assented,
except one. "You also know that you are a
created people." "Yes," they all replied.
"Then," said the missionary, "I will tell
you what is most necessary to know. You
have a Saviour—He who created all
things. He came into our world like another
man, did the will of his Father, instructed
us, though the malice of his countrymen who
did not believe his word. On the third
day He rose from the grave, and ascended to
Heaven, whence He will come again in the
days, when all the dead shall rise and appear
before Him as the righteous Judge, and He
will render to every man according to his
works."

Then, turning to the leader of the band, he
continued, "But thou, poor man, what wilt
say when all the persons that thou hast
despised shall cry out against thee at his trib-
unal, and say, This wicked one destroyed us
when thou hadst sent thy messengers to call
us, and prevented our hearing about thy
saviour? What wilt thou then answer?"
The poor wretch stood silent and trembling,
his eyes downcast to the earth, while the
missionary proceeded: "I will tell you how to
escape this dreadful judgment. Fall at the
feet of Jesus. Thou canst not see Him, yet
He is everywhere. Tell Him that thou hast
sinned, and He loves the human soul, that He rejects
none who cry for mercy. Cry that He
will cleanse thee from thy sins in his blood,
but not off thy prayers, for thou art not
dead, but will soon forever cut off thy hope."
After Matthew Stach had done, Anna, who
was a Christian, whose brother had been mur-
dered, spoke of the power of Jesus' blood, and
them she had felt its blessed effects, and

entreated them to resist the truth no longer.
They all listened with great attention, and
afterwards walked before the house for some
time with their hands folded, and towards
evening went away, without offering either
insult or violence.

Thus God can turn the hearts of men like
water, and can cause difficulties to melt away
like snow before the sun.

"This poor man cried, and the Lord heard
him, and saved him out of all his troubles.
The angel of the Lord encampeth round about
them that fear him, and delivereth them. O,
taste and see that the Lord is good; blessed
is the man that trusteth in Him."

Notes from Others.

Can men justly shed blood for commercial ends?
—*Franklin.*

"I am not disclosing any state secret," said the
French ambassador at the University of Chicago
last month, "when I say that my experiences among
the diplomats of many lands has strengthened the
belief that I have always held that arbitration
boards, not swayed by business or sentiment, but
by intellect alone, must of a surety bring about a
peaceful solution of the most difficult questions." This
is the view of a practical man of long experi-
ence in diplomacy. His words strengthen the
belief that the forces of development are slowly
working toward a final solution of the question of
war—a solution which will satisfy the highest
morality of which mankind is capable.—*Spring-
field Republican.*

Herbert Spencer has written a letter pleading
for mitigation of the war spirit, says a London
dispatch to the *New York Journal and Advertiser*.
In it he says: "Whatever fosters militarism, makes
for barbarism; whatever fosters peace, makes for
civilization. There are two fundamentally opposed
principles on which social life may be organized—
compulsory co-operation and voluntary co-operation
—the one implying coercive institutions, the other
free institutions. Just in proportion as military
activity is great does the coercive regime more
pervade the whole society. Hence, to oppose mili-
tarism is to oppose return toward despotism. My
fear is that the retrograde movement will become
too strong to be checked by argument or exhorta-
tion."

VALUABLE BIRDS' EGGS.—Ex-Senator John Lewis
Childs, of Floral Park, L. I., purchased of Jean
Bell, of Philadelphia, a collection of North American
birds' eggs and nests said to contain at least
one specimen of every kind of egg known. Jean
Bell has spent twenty-eight years in gathering this
collection. In size they range from that of the
Great Auk, which is valued at \$1800, to that of
the smallest humming bird. The collection cost
over \$25,000 in actual cash outlay for eggs. J. L.
Childs will add the collection to his own, which is
very large. He has a collection of stuffed North
American birds which contain 700 species, with
1000 of all known varieties.

Ex-Mayor Hewitt, of New York, declares that
to be rich and not to use riches for the general
good is to be disgraced, "because, after all, riches
are but the result of general co-operation."

A recent writer in the *Evening Bulletin* of Phi-
ladelphia has this to say about some religious sects:
"The religious clubs (the churches) have in them
many unselfish human beings, but an order in
which the members would sacrifice themselves abso-
lutely, effacing their own personalities absolutely
(the most difficult of tasks), enduring persecution
and contempt, poverty and the almost complete

severance of social ties, for the purely unselfish
object of saving their fellows, was needed bodily,
and the Salvation Army was born. The Army saves
immense expenditure of Divine grace. It is on its
knees not for praying only, but for scrubbing. It
shows the world a combination of faith and works
that appears to our imperfect vision something like
perfection. If a good hustling job of hard and
unpleasant labor will pave the way to the salvation
of a human soul, the Army does the job first and
prays afterwards. It gets hold of a drinker; it
shows him a better way of life; it gets the drinker
to take that way, and thus it saves praying against
the run-seller. The Army aims to obliterate the
drinker; then the seller will shut up shop. To
most of us the minstrel business of the Army is
repellant. For many a year I hated it with the
sour superciliousness of a Quaker, until I began to
understand that the work justified the advertise-
ment."

Items Concerning the Society.

Our friends John S. and Esther Fowler having
felt clear of further service for the present in
these parts, have returned to their home.

John and Elizabeth Bellows, after visiting a
relative in New York State, propose taking pas-
sage for England in the *Oceanic* on the 24th inst.
They were for a time guests of United States Sen-
ator George F. Hoar, at Worcester, Mass. Senator
Hoar's immigrant ancestor came to New England
from Gloucester, Jan Bellows' home, and the latter
being applied to, several years ago, by the Senator,
for aid in tracing the connection, this led to a
friendly acquaintance and correspondence; and so
to John Bellows' recent presentation at Harvard
University by Senator Hoar for the degree of A. M.

Abram Fisher writes of his return home to Wood-
land, N. C., in peace, after attendance of New York,
New England and Canada Yearly Meetings. He
had service in New York Particular Meeting on a
First-day; also attended the Portsmouth, R. I.,
meeting twice on First-day. Being invited to
"take charge" of the meeting, he declined. He
encloses a portrait, with printed recommendations,
of a Methodist evangelist who, he writes, "wanted
my help to get employed. But I told him we did
not believe in paying for preaching; and he seemed
surprised, as he said Friends in New England had
employed him."

Two articles in the *Atlantic Monthly* of this
month have the titles: "Two Generations of Quak-
ers," one of these, contributed by Logan Pearsall
Smith, being extracts from "An Old Diary," and
the other, by Rowland E. Robinson, presenting
"Recollections of a Quaker Boy." The pictures
thus presented represent two widely removed gen-
erations.

Anna Votaw, of Richmond, Ind., who spent the
winter and spring with her son, Albert Votaw,
of Westtown School, Pa., recently returned home,
having visited many meetings in and around Phila-
delphia.

A book of sermons by "representative Friend
ministers," illustrated with portraits (!) is said to
be in process of publication.

SUMMARY OF EVENTS.

UNITED STATES.—In consequence of the refusal of the
men to work who were engaged in feeding the boilers in
the anthracite mining region of Pennsylvania, 1200 in
number, about 100,000 miners and others have been
thrown out of employment. It is estimated that the wages
of these men would amount to over \$300,000 a day. The
loss to the coal companies for each day of idleness is com-
puted to be nearly as much. Collieries that are idle are
threatened with damage by flooding and accumulated gas.
This strike was not approved by the United Mine Work-
ers, who have influenced the firemen to return to work.

The number of men unemployed in consequence of the strike in different steel works is stated to have been 7,000 on the 17th inst. The stoppage of these mills has seriously affected the canning industry and manufacturers of various kinds.

A despatch from Washington of the 17th says: "Action was taken to-day by Japan and the United States which will, it is hoped by the authorities, lead to a prompt settlement of the Chinese indemnity question. In order not to delay a settlement, Japan has magnanimously withdrawn her claim for increase of her indemnity. Authorities here say that Japan, by withdrawing her proposal, has given the Christian nations a lesson in magnanimity which some of them should take to heart."

Lewis Elkin, late of Philadelphia, has been requested by a large estate to create a fund for the relief of disabled women school teachers of the public schools in the city. His will provides that, "Any unmarried female teacher, who shall have taught in any of the public schools of this city for a period of twenty-five years, and has, at the time of her application, no means of support, shall receive from the income of my estate the sum of \$400 per annum, to be paid to her quarterly, clear of all taxes, during the term of her natural life, if she should continue without means of support for that period."

On the 16th the Weather Bureau's weekly summary of crop conditions is as follows: The States of the middle Rocky Mountains and Missouri and Mississippi valleys have experienced another, the third consecutive, week of intense heat, the maximum temperatures over a large part of these districts ranging above 100 daily during the week, many stations reporting from 100 to 107. With an almost entire absence of rain, the crops in the region named have been subjected to most unfavorable conditions. The Governor of Missouri has in consequence of the heat and drought, designated the 21st as a day on which "the people are requested to assemble at their usual places of worship to invoke the blessings of Almighty God." Little rain has fallen in the State since Fourth Month 27th. Cattle owners are preparing to send their cattle to Northern Wisconsin, a well watered and grassy prairie country.

The great gushing oil well near Beaumont, Texas, is creating considerable interest in the Southwest. The well far eclipses any ever drilled in the United States, and the output is 7,000 barrels daily, greater than the largest gushing well in Russia. It is estimated that this flow will last 25,000 hours, or nearly four years, and the flow is constantly increasing in volume.

It is said nearly 2000 farmers within thirty miles of Chicago have had their houses equipped with telephones.

Details of the new Edison storage battery have been published which explain that the positive pole contains iron or a compound of iron, and the negative pole, which is often crashed yields the finest material for glass making. The number of factories in this region has nearly doubled in the last ten years.

A recent paper states that although the diameter of the earth has been roughly known for many years, it has only lately been accurately ascertained, after thirty years' labor and a cost of \$500,000. It is 7,926 miles at the equator and 7,899 from pole to pole.

The thirty-one best sugar factories in this country yield more than a third of the domestic sugar product.

The steamship *Northeastern* is the first boat of a regular line to make the trip from Chicago to Europe and return. The round trip took thirty-four days, but it is expected this time will be materially lowered on the next voyage.

A preliminary statement of the Chinese population, derived from the returns of the twelfth census, shows that there are approximately 83,800 Chinese in the United States proper, as against 107,475 in 1890. About 67,700 or 75 per cent. are contained in the Western division of States and Territories.

There has been a remarkable increase in the number of Japanese in the United States since 1890, the preliminary figures of the present census showing a total for the United States proper of about 24,300, as against 2,039 in 1890.

There were 413 deaths in this city last week, reported to the Board of Health. This is 225 less than the previous week and 121 less than the corresponding week of 1900. Of the foregoing, 239 were males and 204 females: 61 died of consumption of the lungs; 20 of inflammation of the lungs and surrounding membranes; 5 of diphtheria; 15 of cancer; 9 of apoplexy; 10 of typhoid fever and 3 of cholera.

COTTON closed on a basis of 8½¢. per pound for middling uplands.

FLOUR—Winter, super, \$2.10 to \$2.25; Panna, roller, straight, \$3.20 to \$3.30; Western winter, straight, \$3.25 to \$3.40; spring, straight, \$3.40 to \$3.60.

GRAIN—No. 2 red winter, 72 to 72½¢.

No. 2 mixed corn, 57 to 57½¢.

No. 2 white oats, clipped, 40½¢.

BEEF CATTLE—Best, 5½ to 6¢; good, 5½ to 5½¢; medium, 5½ to 5½¢.

SHEEP AND LAMBS—Choice, 3½ to 4¢; good, 3½ to 3½¢; common, 1½ to 2¢; spring lambs, 4½ to 6½¢.

HOGS—Western, 8½ to 8½¢.

FOREIGN—The brutality of German troops in China has aroused a profound impression in Germany, and it is reported that German soldiers are being brought home in chains, after having been court-martialed for cruel conduct in China.

The Government of Canada is making great efforts to explore the large tracts of almost unknown territory within its domain; and millions of acres of land, it is proposed, shall be granted to railroads for this purpose. The mineral wealth of these regions, and the value of its extensive forests are expected to be very great when made accessible. Canada, it is said, has the largest forest in the world. It is in the Labrador and Hudson Bay district, and is, roughly, 1,000 by 1,700 miles.

A despatch of the 18th from Constantinople says: "Following the graduation of the first Turkish girl at the American Girls' College, the Turkish Government has issued an edict prohibiting Turkish from attending foreign schools, the employment of Christian teachers in Turkey, or the appearance of Turkish ladies in public accompanied by Christian women companions. The edict deprives hundreds of foreign governesses of the means of subsistence. It is intended to prevent the dissemination of liberal ideas."

A despatch from St. Petersburg to the *London Daily Express* says: "Anglophobia is a Russian, and a Chinese Convention has been fortified and garrisoned by Russian troops."

A period of oppressive heat has continued in England and on the continent. Great Britain has had no similar experience within eleven years. Sunstrokes, apoplexy and heat prostrations have been frequent in London and Birmingham. Dying, it is believed, has been increased by the prolonged heat and in some places by drought.

A despatch of the 22nd instant says: "Phenomenal heat prevails throughout all Northern Russia. The temperature in St. Petersburg to-day was 117 degrees Fahrenheit. In Oleska it was 103, and the rate of mortality there is 70 per cent. above the normal."

An apparatus has been invented by J. Gardner, of Manchester, England, to give information to vessels passing at sea of impending danger, by means of wireless telegraphy. A mast is set up on the danger spot, equipped with instruments, which issue at intervals of two, three, or four minutes, signals which are received by the danger spot. Vessels supplied with suitable instruments receive these messages automatically, as long as they remain within the influence of the transmitting apparatus.

A telegram from Tacoma announces an outburst from the volcano Kioet in Northern Java last month which 700 natives and a number of Europeans perished.

A statement was recently made in the British Parliament that the concentration camps in South Africa numbered 14,624 men, 27,711 women and 43,075 children, also that the mortality for the Sixth Month was 63 men, 138 women and 576 children.

The population of Belgium, according to official figures, was 3,714,532 on Twelfth Month 31, 1890, of which total 3,399,000 were males, 2,485,383 spoke Flemish only, 2,485,072 spoke French only, and 700,997 both languages.

New South Wales has 15,000 miles of wire netting as a fence protection against rabbits.

A despatch from Manila of the 18th says: "The United States steamer *Albatross* arrived to-day, after three months' trial of a provincial form of government in the islands of Cebu and Bohol and the province of Batangas, Luzon, control of those districts, owing to their incomplete pacification, has been returned to the military authorities, it having been proved that the communities inhabited are backward and undeserving of civil administration."

RECEIPTS.

Unless otherwise specified, two dollars have been received from each person, paying for vol. 75.

Jacob R. Elfreth, Pa.; John S. Palmer and Lydia W. William S. Palmer, G'n'n; P. Ellis DeCout, N. J. A. Angle Haines, N. J.; Rebecca A. Cox, N. J. Henry Hall, P.K'd.; William Wendte, Mass.; George R. J. Lee for himself, G'n'n; John W. Foster, E. W. Foster, George C. Foster, Simon F. Perry, Arthur Perry, Charles Perry, Mary A. Gardner, Martha B. Sheffield and Lydia F. Nichols; John Carter, Phila., \$3 for himself, Rebecca S. Conner, Shelter for Colored Orphans and L. M. Thornton, Samuel C. Moon, Penna.; Joel Egan, Cal.; Joseph J. Jafferis, Pa.; Benjamin J. G'n'n; Phila., E. W. S. Lowry, Phila.; Lydia S. Thomas, Phila. and Sarah V. Willis, Ia.; Evan Smith, Ia.; Joseph H. Truman, Jr., Phila., \$6 for George School, Libra Association of Friends and Ellen A. Pine; George Foster, R. 1. \$6 for Elizabeth P. Foster; Eliza Browning and Mary Collins; Emma S. Dean, W. J.; Wm. Scattergood and for Charles C. Scattergood, Pa.; Anna M. Warrington and for T. Warrington, Penna.; Mary E. Cadwalader, Phila. Emily Pusey, Penna.; Ezekiel C. Shoemaker, Cal. R. B. P. Haines, Phila.; Matilda Yerkes, Phila.; Charles M. Cooper, N. J.; Henry Haines, Phila., \$6 for himself, Virginia Nicholson and E. C. N. Brown, Ia.; Jacob, Va.; Ruth S. Abbott, Phila.; William M. Moon, Pa.; Hannah Nickle, N. J.; Peter Thomson, G'n'n; Jesse Negan, Agent, Ia. \$6.25 for Albald Crosbie, Joseph Hawley, Rezin Thompson and Lars C. Hansen, 25 cents; W. H. Gibbons and for Sam Miller, Pa.; Mary N. Glover, N. J. \$6 for herself, Virginia Nicholson and E. C. N. Brown, Ia.; Josiah W. Ballinger, N. J.; Levi R. Cowpertwaite, N. J.; N. R. Whitacre, N. J.; Richard Asbridge, Pa.; Mary C. Satterthwaite, Pa.; Clarke M. Gifford, Mass.; Rebecca E. Haines and Susan L. Haines, Pa.; Henry B. Leeds, Agent, Ia. \$6 for Elizabeth H. Bromley, William Matamoras and Howard A. Nichols, N. J.; John J. Matamoras, Phila.; Barclay R. Leeds, Phila., \$2 for himself 2 copies, William E. Tatum, Daniel Leeds and William H. Leeds; Jesse W. Tayl. Phila.; George S. Hutton, Phila., \$8 for himself, Phoebe Hutton, George Pandrich and Anne Thompson.

Remittances received after Third-day noon will appear in the Receipts next following week.

NOTICE.

WESTON BOARDING SCHOOL.—A stated meeting of the WESTON BOARDING SCHOOL will be held at Fourth Arch streets on Seventh-day, the 27th inst., at 10 A. M.

JOHN W. BUDLE, CLERK.

DIED, Fifth Month 23d, 1901, of consumption, at home, of her brother, Ashley Johnson, near Monroe, Morgan County, Indiana, EMELINE AVERY, widow of Will Avery, in the seventy-second year of her age; a holy member and elder of West Union Monthly Meeting, at the end drew near, the charity which characterized life, her peaceful mind and bright hopes for the future, and a religious faith which sustained her to the end. These are they who came out of great tribulation, having washed their robes and made them white with the blood of the Lamb, and from henceforth eternally praise Him.

—, on the eleventh of Seventh Month, 1901, at residence of Caleb T. and Rhoda M. Engle, his parents, of Whiting, Iowa, ENOC LORAIN ENGLE, aged twenty years and four months; a member of Springville Monthly and Particular Meeting of Friends. For about two years he was nearly blind. He bore his suffering (which was very great at times), with much patience. The patient countenance, which continued to the end was, in trust, an evidence that he has been received, and at rest with his heavenly Father.

—, Fifth Month 25th, 1901, at her home near Tuckanema, Pa., SARAH B. CHAMBERS, in the forty-fourth year of her age, daughter of Jael C. and the late J. P. Chambers, and a member of New Garden Monthly and Particular Meeting of Friends. She was a patient sufferer during an illness of several months, saying she was weary of her Heavenly Father, and that she might terminate. The quietness of her spirit, the expression of feelings of comfort during her sickness, the favor of the Divine presence at the time of the funeral, and the comfort of her friends and a comfortable rest, that, through the mercy of our Heavenly Father, her spirit has been safely gathered into rest.

THE FRIEND.

r's address in the summer months, W. Falmouth, Mass.

Who is the Richer?

the inordinate and stupendous power apparently about to be held over the commercial industrial world by J. Pierpont Morgan be apprehended from the fact that he and colleagues are reported now to control the interests representing over eight hundred million (\$8,620,584,958) dollars and his practical control over other lines of business is enlarging. "The truth is," the *Pall Mall Gazette*, of London, "that Morgan and his brother financiers continue they have been doing of late they will soon up the empire [British] and there will be more chance for war."

It depends on the righteousness of the character holding the power. That so wide a power can remain untinctured with selfishness seems beyond human probability. Then a selfishness hath once conceived it brings in despotism and a general crushing out of individual rights and the liberties of manhood. If the motive be unselfish, and a reservoir of missionary power is becoming stored up under the sense of a mission to bless humanity, is a wise steward who so ministers his power, and history shall rise and call him blessed. We are not afraid that He to whom given all power in heaven and in earth will overrule this vast accumulation, capable of being a civilizing force, for ultimate salvation and blessing unto the ends of the earth. But a grave responsibility for blessing or cursing rests personally upon the monarchs of the world's wealth and labor. Have they that they have not received? "Sweetest thou not" said a great magnate on earth, "that I have power to release thee, have power to crucify thee." Jesus an-

swered him, "Thou couldst have no power at all against me except it were given thee from above." But Pilate disposed to release the Christ nevertheless stifled his conscience lest he should not be "Caesar's friend." Use the world-power as a man's heart will, upward or downward, still "there is no power but of God," and to Him he shall answer for it. "Be not thou afraid when one is made rich,"—except it be thyself. Why does any friend of Christ, being a child of God, stand, move or speak in awe or in any obsequiousness before a representative of world-power, a multimillionaire, when a Christian's own God and Saviour is infinitely more a millionaire? Let such continue to be rich in realizing that truly our fellowship is with the supremely Richest, and Wisest, and Mightiest—"our fellowship is with the Father and with his Son Jesus Christ." Untold wealth is ours though stored away from our carnal touch for in that kingdom to which we are joined all things are ours, and we are Christ's, and Christ is God's.—"Wherefore let no man glory in men" (1 Cor. iii: 21—23).

The Maintaining of a Meeting for Worship When a Marriage is Solemnized.

The advocates of a resort to private dwellings for the solemnizing of Friends' marriages have already occasion to see their cause effectively set back by the liberties taken with appointed meetings for marriages, which we cannot suppose would primarily have been ventured upon in the regular meetings for worship. These beginnings of encroachments in indulged meetings cast no small flood of light on things which would further be assumed in meetings for marriages at home.

May it not be forgotten that both our specially appointed and our stated meetings are equally meetings for public worship, and that an appointed meeting for the convenience of a marriage is not an occasion leased to the contracting parties, but dedicated to the Head of the Church.

Danger developments have been so clearly pointed out in a letter addressed by a Friend to an overseer of one of our meetings, that his own language seems preferable to quote here:

My Dear Friend:

I don't wish to be understood as objecting to Meetings being appointed for the accomplishment of a marriage—there may some-

times be a necessity for it—but I have noticed with regret that such meetings have been at times an opportunity for the introduction of new things—in imitation apparently of the "churchly" way of doing things.—A liberty seems to be felt by the young people to take such appointed meetings into their own hands and to do much as they choose—the restraint of an ordinary meeting for worship seems to be laid aside and the dignity and solemnity of the occasion is hurt. I wish that our young people who ask for the privilege might feel the burden of simplicity laid upon them and do nothing that would tend to fasten upon the meeting adherence to a form as such. Extremes beget extremes.

Invitations to the ceremony are issued in vast numbers limited only by the capacity of the meeting-house and sometimes it is given out that others are not expected—i. e. *this is not a meeting for worship*—a serious change truly and far-reaching in its consequences.—Other practices also have shown up at appointed meetings, quite subversive of good order.

I have seen a bride and four brides-maids carrying bouquets of flowers as they marched into one of these appointed meetings—and recently "the wedding march" has been played as the company passed into what was called in the news-papers "a meeting appointed by the monthly meeting of—"

"Married by the Rev" So-and-so is not unfrequently seen as part of the programme of a so-called Friend's marriage.

Our members who have no sympathy with the Friendly conception of simplicity and still less with the officers of a meeting whose business it is to "persuade men," will grow restive under advice—but advice should not for this reason be withheld.

The mode of accomplishing marriages that is prevalent in real Friends' meetings is conceded by outsiders to be consonant with religion and good sense and withal beautifully impressive. Why change it?

I shall hope for kindly condescension on the part of our dear young Friends, even when their sympathy is wanting—expecting that mature years and deeper experience will bring them to Truth's side.

The most serious objection urged against the use of the public meeting for marriages seems to be the temptation to display which they afford. But (to repeat a former observation) if we should drop our present public mode we should drop a most telling testimony for the one Mediator of a Divine covenant. We should dispense with an emphatic opportunity of testifying to the Truth as we hold it, especially before strangers who would never otherwise have attended one of our meetings for worship. If the spirit of ostentation could

be eradicated from the human heart by privacy of marriage ceremonies, this would then be worth considering. But as we know that secret power does not reside in home weddings, we should cherish the public testimony as a service too valuable in other respects to be set aside.

FOR "THE FRIEND."

The True Liberty.

Where the Spirit of the Lord is, there is liberty (2 Cor. iii: 17). Perhaps there are no words more dear to English or American ears than those of freedom and liberty; in a thousand different ways, as a race, we show our love of both. Free speech, liberty of conscience, free will, liberty of choice—were either of these to be in peril, a thousand different voices would at once be raised in protest. Nor is the liberty which the true believer finds to be his, in the new life which is in Christ Jesus, less precious or worthy to be maintained. Precious indeed is "The liberty of the glory of the children of God." The Psalmist speaks of this liberty when he says, "So shall I observe thy law continuously for ever and ever, and I shall walk at liberty; for I have sought thy precepts." (Psalms cxix: 45). But there may be a very large amount of misconception as to the real, the true meaning of liberty. We are accustomed to hear it defined as "The power of an agent to do or forbear any particular action." Our young folks like to define liberty as "freedom from restraint," or power to do as they like; to be free to follow the dictates of their own will.

Probably some such misapprehension as this, led the Apostle to warn the Corinthians, "Take heed, lest by any means this liberty of yours become a stumbling block to the weak." The great preacher, Phillips Brooks, gave to the world a nobler turn. "Liberty," said he, "is full power to do our best." Here is a liberty within the reach of all. Full power to do one's best, is a liberty that cannot be restricted by age, by outward circumstances, worldly condition or varying gifts. For Christ, for the Church and for each other, we may all do our best. "For freedom did Christ set us free, stand fast therefore." We surely lose that glorious freedom when we excuse ourselves from Christian life and service on the score of inability! Full power is given to each of us to do our best! In the simple lines which follow, it has been well expressed that as our motive counts with God, and not the results of our effort, so none may be excused from taking their right place:

He cast his net at morn where fishers toiled,
At even he drew it, empty, to the shore;
He took the drier's plunge into the sea,
But thence within his hand no pearl he bore.

He ran a race, but never reached the goal;
He sped an arrow, but he missed his aim
And slept at last beneath a simple stone
With no achievements carved about his name.

Men called it failure, but for my own part,
I dare not use that word, for what I say;
Shall question are its judgment shall be read,
Not "Hast thou won?" but only "Hast thou striven?"

MABEL THOMPSON.

YORK, England.

Daniel Webster's Warning.

Macaulay was not a profound student of comparative politics, and his well-known prophecy of the evils days, which await the republic need not greatly disquiet us, although part of his prophecy has already been verified by the result. But Webster was a wise statesman, perhaps our wisest, and a profound student of our system of government, and he has left for our instruction this grave and weighty warning:

"The freest government," says he, "would not be long acceptable if the tendency of the laws was to create a rapid accumulation of property in few hands, and to render the great mass of the population dependent and penniless. . . . In the nature of things, those who have not property and see their neighbors possess much more than they think them to need cannot be favorable to laws made for the protection of property. When this class becomes numerous it grows clamorous. It looks upon property as its prey and plunder, and is naturally ready at all times for violence and revolution."

Now, it is at least quite possible that in the not distant future American politics may transform Webster's warning into history, for our electorate is already beginning to be divided, and must, in obedience to the law of social evolution, continue more and more to be divided, by that sharp cleavage which separates those who are contented with their lot from those who are discontented with their lot. Under whatever disguises, called by whatever names, inheriting or seizing whatever partisan organizations, the alignment of the two great political divisions of American voters, who will sooner or later struggle against each other for the possession of the Government, will inevitably be upon the basis I have named. The party of the contented will be ranged under one banner, and the party of the discontented will be ranged under the other, and that alignment will steadily develop increasing sharpness of division until the party of the discontented, being the majority, has obtained the control of the Government, to which under our system, they are entitled; and then they will be sure to remodel the present system for the distribution of wealth, unless we have previously done so, upon bases wiser and more equitable than those now existing. The one party will be, under whatever name, the party of capital, and the other party will be under whatever name, the party of labor. If any doubt had existed upon this subject among men accustomed seriously to reflect upon political problems, it ought to have disappeared in view of the developments of the last two presidential elections and of the present growing tendency alike of capital more and more to consolidate itself in great masses as in preparation for the coming struggle, and of the brotherhood of American labor more and more to consolidate itself in one organization in like preparation. Ominous signs are indeed almost daily discernible that those leaders of confederated labor who are really loyal to it and are not purchasable by the party of capital, have discerned that the true remedy for what seems to them the present unjust inequality in the distribution of wealth is through legislation. If yesterday they foolishly resorted to attempts to overawe the nominees of the

party of capital, sitting as legislators, by display of force and threats of violence, by tomorrow they will probably have learned the ballot in America, while not so noisy, far more peremptory than the dynamite bomb it does not explode, but it controls; and it control will be as resistless as fate if the party of labor decides to clothe all its demands, it has already clothed many, in acts of legislation, for then will occur what the Duke Wellington foresaw, "a revolution under forms of law."—Wayne MacVeagh.

War and Degeneracy.

The following pertinent comments on a new book entitled "The Individual," by Professor N. Shaler, of Harvard University, are taken from *The Advocate of Peace* (Boston):

Professor Shaler's opposition to war arises fundamentally from his position that every man's life is most valuable in the scheme of nature, and that premature death is an exceedingly evil. "The idea," he says, "that the death of the young under any circumstance can be other than calamitous . . . finds its only real support among those who hold to the notion that war is a help to the better motives of man. . . . They indignantly ask of those who are for peace whether they are willing to purchase it at the cost of the hardy virtues and noble devotions which uplift our race." "The error of these unservant persons . . . is due to the common mistake of supposing that the quality displayed in an action are derived from the action itself. . . . A man does not derive from the fight the muscular strength he uses in battle. . . . His courage, his obedience, his endurance in the trials of the campaign are not bred in it; they are the product of his whole life and that of his ancestor who gave him his nature and nurture." "He draws an instructive comparison, by way of illustration, between the hardy, courageous, high-minded Swiss, who have scarcely felt touch of war for a hundred years, and the French, 'a folk of endless warring, who hardly a generation in a thousand years has known campaigns.'"

The result of this age-long process of endless warring, as among the other Latin peoples, is not "courage, high-mindedness, patriotic self-devotion." The reason is plain. The able-bodied young men die in battle or disease. "The result is the impoverishment of the nation's blood." Keep up the process for a few generations and the inevitable result is a decadent folk such "as we find among nations who have most amply made the hideous experiment of breeding nobility by sending their best to premature death." "The fact that war is necessary to maintain the idea of manly courage is as mistaken as the notion that the system of the duel was required to uphold the sense of personal honor."

"Whoever would mitigate the supreme evil of untimely death, whoever would give to us naturally glad world a chance to win its happiness, cannot do better service than to contend against war. . . . If we can but spare the evitable wars—those which could be avoided if all decent men saw the measure of the necessity—the world would be safely enough at peace."

FOR "THE FRIEND."

Separation, its Cause and Cure

The Church of Christ is not divided, nor is the prayer of the Lord Jesus unanswered, that they may be one as we are one. And this unity of heart and feeling, is the necessary result of the unity of each and every member with the Great Head of the Church, the Lord Jesus Christ; for all who are of that one Church are baptized by one spirit into one body. And one of the main duties of every member, is in all meekness, lowliness, long-suffering, forbearance, and in the spirit of love "endeavor to keep the unity of the spirit in the bond of peace." For this end are the gifts of the spirit bestowed by Christ on the Church, "that all may be brought into the unity of the faith and of the knowledge of the truth of God, unto a perfect man, unto the measure of the stature of the fullness of Christ" (Eph. iv: 13).

It is true that the members of this church in our days, as in all ages, be found scattered here and there, like a lone, solitary flock in a wood, hidden to the eye of men among different nations, languages or creeds, but that still constitutes their oneness is the same all. And the Lord knoweth them that are His, as He knew the seven thousand among whom He called Israel though to the eye of the prophet, he seemed to be left alone. But even then, God was not the God of the Jews alone, but the God of the Gentiles also and all who would serve him and work righteousness, according to the measure of light that God has bestowed on them, are accepted of Him. But will not do for any man or any body of men whom more light has been vouchsafed, to look according to the way of those who have received less light for to whom much is given, him much shall be required.

The things that are written in Scripture are our instruction. And the same God and Father, who was with Israel in the wilderness and who led them by the hand of Moses has promised saying, "Lo, I am with you always, unto the end of the world." Israel was led by God to be a peculiar people separated unto God, from among the nations. And we may derive instruction from considering their successes and declensions, and the lessons that led thereto so as to avoid the rocks that guide our course by these friendly beacon lights, that we may reunite in the harbor of peace.

After a long night of apostasy wherein men repented after the truth it pleased God to heal himself and his power more clearly and fully to our early Friends, when the clouds parted, the Sun of Righteousness shone clearly on their souls when they felt the beams thereof. That unity and gladness and their hearts notwithstanding that both civil and ecclesiastical powers strove to crush them. It was all in vain, and trusting the Lord they came off more than conquerors, for they not only baffled the efforts of those who only strove to do them harm, but in their admiration and respect.

But now alas! what the enemy of our Zion led to do by strength he has accomplished by stratagem, owing to unwatchfulness on our part. He has entered within our very ranks and amongst those calling themselves "Friends," are those who set up their stand-

ards of error as being those of the Truth. These despise her holy feasts and mock at her holy solemnities. They contemn the elders and make light of the princes. Altars do they build of brick and they hire priests whom they have made to minister at them. For these things the Lord doth hide his face from Jacob and the anointed priests and Levites sit dumb in the dust. Our children go up and down in our streets seeking some to give them bread to satisfy the longings of their soul. Some wander from city to city, from one meeting to another, where may be found sufficiency of bread, but few indeed there are wherein may not be found the leaven of the world. Surely Zion has cause for lamentation and fasting for these things, lest her light be extinguished.

It is indeed possible for those who live in the spirit of the world to hold the truth in words but what a momentous question. What will it avail any one member to have a form of godliness and yet not live in the power of it? Such may hold the truth in unrighteousness yet are they stumbling-blocks in the path of those who would seek the way to Zion, for they have a name to live and yet are dead.

There neither is nor can be unity between the two seeds, the flesh and the spirit. Those who walk in the flesh after the light of their own eyes cannot please God. And they who are led by the spirit all walk in the same way, their watchmen see eye to eye. That which is of God cannot separate. All that separates arises from the perverse will of man or the machinations of Antichrist.

As sure as Zion is, so is there a path that leads thereto. A path the unclean, the unholly, cannot tread. A path which the wisdom of man cannot discern for it is not in man nor of man but of God. But as the Lord led Israel of old in the wilderness by the pillar of the cloud by day and the pillar of fire by night, so does He give his word to be a lamp to his feet and a light to his path to him who walketh therein. It is the Lord by the light of his spirit, who leads in the way. His spirit of promise condemns the evil, leads into all righteousness, and into all truth. Led by the spirit, the wayfaring man, though accounted a fool by the worldly-wise one, yet shall he not miss his way therein. And as Zion is one, the way is one. As Jesus said, "I am the way, the truth and the life; No man cometh unto the Father, but by me."

Pilgrims to heaven "seek those things that are above where Christ sitteth at the right hand of God" and the way in which they walk is that path in which Christ the Good Shepherd leads them. And as his voice is heard and he himself is seen and felt by each individual member of his flock so is his presence known and felt amongst them as He leads the way. What, then, separates and divides amongst Jacob? Both Christ and his Apostles foretold that like as there were false prophets amongst Israel in ancient days so should there be false Christs and false teachers among the Christians, grievous wolves devouring the flock feeding themselves and not the flock, and speaking and teaching things which they ought not for filthy lucre's sake. These seek not the glory of Christ and the good of the flock, but they seek their own glory and profit. Many such teachers are there now, and if denounced they cry "O charity! charity!" as if it were

greater charity to spare the reputation and profits of their craft than it is to show the people how they are misled. Should the wolf be left alone which worries the sheep? Should not rather the sheep be brought under the care of the Good Shepherd? O "cease ye from man whose breath is in his nostrils for wherein is he to be accounted of."

For the great and exceeding glory of the Christian dispensation is that all shall "be taught of God," and God hath given his Son to the church to be their prophet, priest and King. As God spake in times past to the fathers by the prophets, so does he now speak to us by his Son. He writes not his law on tables of stone but on fleshly tables of the heart. The light of the spirit shines thereon in the sanctuary of each heart. He unfolds to the understanding that they may read therein and rightly interpret it, and also expound to them the Holy Scriptures which speak of Him. As the sheep know Christ the Shepherd's voice, so by the same ear do they try and distinguish false spirits and false teachers and both teachers and doctrines are also known by their fruits. A walk with God is essentially one of inward peace but to imbibe false doctrines from a false teacher gives pain, and wounds the tender conscience.

The more polluted Christ's doctrine becomes, being mixed with the commandments and doctrines of men, the more diseased is the flock likely to become. So that the Christian graces of love, benevolence, charity, meekness, humility, gentleness and the like are seen neither in the preacher nor the people, and there is little in their life and conversation to distinguish them from the non professors of the world. Amongst them are found pride, vanity, jesting, backbiting, evil speaking, hard-heartedness, being lovers of ease and pleasures, and grinding down the poor, not to speak of the selfish gratification of grosser lusts, which are all condemned by the law of Christ.

So long as these corruptions exist and remain uncondemned by the church, there can be no proper union, for unity must be in spirit, and that the spirit of holiness. No living body could or would, desire to be united to a dead body, and neither an empty name nor priestly rites give life. For life is manifest by works, but these things declare them to be yet among the congregation of the dead.

Long continued times of ease have never conduced to the continued welfare of the church. And its times of greatest glory have followed periods of distress. It was so to Israel of old. Israel cried to the Lord whilst in Egypt and the Lord hearkened and saved them to a man. After forty years in the wilderness the tribes who had received their portion on the East side of Jordan failed not to assist their brethren in the field. David with his brethren, suffered affliction, and God gave deliverance by his hand. But Solomon in times of peace and plenty, forgot the Lord's commands, and division and separation took place in his son's reign. As oft as Israel turned to serve the Lord, he helped them, but forgetting him they were diminished in number and brought low till at last a small remnant alone remained in captivity and the prophecy was literally fulfilled that the city which went out by a thousand should go out by a hundred

and the one which went out by a hundred should go out by ten, for the remnant who returned but numbered some forty to fifty thousand, which one tribe alone could muster when first the land was occupied.

And is it different with the Christian church? their Lord and Master before leaving them told them "In the world ye shall have tribulation but be of good cheer, I have overcome the world." And no sooner did the apostles begin to preach Jesus after the day of Pentecost, than the Jews raised up a bitter persecution of the brethren. Of this they soon wearied, and it is recorded: "Then had the church rest, and walking in the fear of the Lord and the comfort of the Holy Ghost were multiplied" and edified. But from the Lord's message by John to the seven churches of Asia, we see how corruptions had already crept in, Antichrist had made his work to be felt, and false teachers did abound. It is recorded that during the next three hundred years the church suffered ten cruel persecutions. These acted as the fierce wind on the traveller with his coat, causing them to cling closer one to another. But the flood-gates of iniquity were opened by Constantine, called the Great, who by constituting Christianity as the religion of the Empire, caused the pagan temples with their pagan priests, to become nominally temples for Christians. Neither the rites nor idols suffered much change, except in the nomenclature, and pure Christianity fled into the wilderness and found shelter in the fastnesses of the Alps. A dark night of apostasy set in over the world—for fully one thousand years—with here and there a glimmer of light from some individual. But God was pleased to revive his work among men, by faithful witnesses, some of whom became willing to seal their testimony with their blood, such as John Huss, Jerome of Prague, Wycliffe, and finally Martin Luther and his coadjutors; by means of whom many of the corruptions were cut off and the body cleansed.

But though a great advance had been made these forgot that "it is not by might nor by power but by my spirit saith the Lord." And reverting to the fleshly ark, Europe was deluged in blood. Since Christ always suffers in his members He surely grieved for these, as he did over Jerusalem in the days of his flesh. The church of Christ never yet made a true advance by means of the sword. Through suffering Jesus obtained his crown as Lord of all. Through suffering Jerusalem was purged of her idols, and both Daniel and his three friends were advanced to favor. And it is through suffering that the church has always come out of it in fellow sympathy, in unity of mind and soul. So was it in England where the faggots that blazed around the martyrs, kindled the work of a more thorough Reformation than even Germany experienced, and had it not been for the different sects seeking political power by force of arms, how much more thorough and permanent would that work have been. It was reserved for our forefathers, the Friends, filled with the grace of our Lord Jesus Christ and the love of God, to trust themselves wholly and unreservedly to the care and keeping of Whom it was the great aim of their life implicitly to obey and serve. And though at one time over four thousand of them lay in noisome prisons great was the victory they won,

and all done in the gentleness of the Lamb for finally not only did the ruling power grant to them full liberty to worship God unmolested, but their example coupled with their own conduct when under the noble William Penn taught those around them the true secret of civil power in granting liberty of conscience to all alike, provided that that liberty does not interfere with the rights and privileges of others.

But their continued and grievous suffering had the same effect as such had produced in all ages and welded them together as one man, and though there were petty schisms at times, such as existed in the apostle's days they were comparatively few and unimportant and but served to show more clearly the unanimity of thought and feeling in the body at large. Such were the fallings away of James Naylor, John Perrott and others with them.

Not for one hundred years after the death of George Fox were there any serious secessions or dissensions in the Society at large, but though there were not a few faithful servants of the Lord who diligently labored amongst Friends and others, the godly zeal which those who were first gathered displayed in disseminating the gospel abroad, evidently abated in proportion as the members grew in wealth and worldly care. Now, no successful campaign of man was ever accomplished without great self-denial and hardship. Those of the true missionary in the service of King Immanuel are often none the less so, as seen by the recount by the Apostle Paul of the dangers and scourings, and labors he had undergone in his love and service for his Lord, and the same may be said of George Fox. It is the same may be said of George Fox. It is the power of discipline together with the sense of loyalty and duty that obliges the soldier to undergo the hardships of a campaign. It is the power of love and the sense of loyalty and duty to his Divine Master that actuates the minister to go forth to proclaim the gospel to his fellow-man. The first obeys man and seeks so to act as to obtain the applause of men. The latter seeks the approval of God alone, and looks for the honor that comes from Him, in the reward of the peace of God in his soul for service acceptably done. It is a humble and a humbling service, but the reward is more than earth can give. But as faithfulness to duty on the part of a few individuals only or even on the part of a force alone, does not ensure success no more does the same in the army of the Lord. Paul felt that those who tarried with the stuff were not only partakers of his joys, but that they were fellow-helpers by their prayers and means, in the propagation of the gospel, and keenly did he feel, when by their conduct the word was evil spoken of. To be a true missionary church the word of the Lord must have free course and be glorified, which can only be when the members as a body are living in obedience to the teachings and leadings of God's spirit. For it is Christ's prerogative alone to call, furnish and specify the field of labor of those whom he sends into the field. Such is a live church, far removed in character from that wherein others, otherwise moved than by God's spirit enter into the labor and choose their own line of service, or leave this choice to others.

Christ sent his disciples whither soever he

himself would come. The Lord directed Philip to go toward the South into the desert, where his mission was to preach the gospel to the lone charioteer (Acts viii: 26). Paul was directed to go into Macedonia, whilst Peter was prepared to go to Caesarea.

As a church declines in the Divine life, its godly zeal for the good of others grows cool. Nor can a creaturely zeal taking these things into its own hands at all compensate for the loss. The beginning of this century found the Society of Friends a united body, but the seeds of dissension had been scattered among its members, and ere long a separation similar to that of the Ten Tribes of Israel from Judah Benjamin and Simeon took place. It was no that Jeroboam alone by his influence caused the revolt, but he was the ordained and fore told leader. The cause of the revolt lay deeper. So it will not do to say that Elias Hicks was the cause, he was but a prominer instrument in propagating what he claimed to be a new and forward departure and an organizer of those who held the same with him. Suffice it to say he himself acknowledged he had departed from the truth as held by George Fox, William Penn, Robert Barclay and the other early Friends.

In a healthy body a wound comes not without cause. And the true physician endeavors to seek the cause that he may remove it. But probing to do so, he may give pain. But is better to let a festering sore go unchecked, temporarily to suffer, that it may be healed. We know the long standing cause of Israel's revolt, viz: the high taxes, consequent on the holding the splendor of Solomon's court, a other paraphernalia of royalty; a refusal of an easement therefrom, and a refusal with threat.

Israel, through iniquity lost the care of God's ark and with it lost the protection Him who manifested his presence and power there. Jerusalem never fell before her enemies without her inhabitants first departing from the law of God. Neither would the glorious manifestation of God's power and presence as known amongst the early Friends have been withdrawn had their children wall as closely to God as they did; nor would so grievous division at a later date have separated brethren. Rather than than justifying ourselves, or glorifying our beloved society though in it was found no cause for things, let us remember that God gave us that sacred ark which had so often witnessed such overshadowing glory to be carried away captive by the enemies of Israel; and find to be lost to human ken; and let us, with remnant of Judah, who returned from Babylon, acknowledge our sins and seek the pardoning mercy and favor of our God; for it were it not that He remains the same, unchanging, gracious, loving Lord, we had long ago been consumed and our name but a memory of the past.

In view then of our sad, broken state, are led to enquire "Is there no balm in Gilead is there no physician there?" Yea, the seer who from common Scribes, Pharisees, Gileans and Publicans; sects bitterly antagonistic, chose his apostles, and united the bonds of an everlasting brotherhood Jews, Samaritans, Gentiles, felt his healing power and became one in Christ Jesus.

he remains the same, to-day, yesterday and for-
 ever, in love, in power, in willingness to
 father and to bless his people. What closer
 ties of nature are to be found than of parents
 to children, brothers one to another, or of the
 husband to the wife. Yet too often we see
 these estranged and the intensity of the dis-
 like is proportionate to the former love. So
 says Solomon "A brother offended is harder to
 be won than a strong city; and their conten-
 tions are like the bars of a castle" (Prov.
 xvi: 19. But even then when those come un-
 der the kindly influence of Christ's spirit they are
 reconciled and their mutual love restored.
 Pure repentance bringing unto the footstool of
 mercy teaches us ourselves to be merciful and
 charitable to our fellow-man, So John's bap-
 tism was "to turn the hearts of the fathers
 to the children and the hearts of the children
 to the fathers," (Mal. iv: 6). It rejoiced the
 believing Jews, that God had also granted re-
 pentance, to salvation, to the Gentiles, and
 that Samaria had received the word of God.
 We are then, of the church of Christ? If
 so, have we been baptized by his spirit into
 his name, his nature? If so, then shall we
 love all men, even our enemies, and be at
 peace with all men as far as in us lieth seek-
 ing the good of all and the welfare of the breth-
 ren.

Why then should Israel contend against
 Judah and Judah against Israel? Shall the
 world devour forever? Can a house divided
 against itself stand? Would not the Kingdom
 be stronger to resist enemies were it one?
 And whether is it more important to contend
 and separate concerning minor matters when
 the world lying in wickedness, awaits to hear the
 joyful news of salvation or to strive to obey
 our Lord's mandate and the burden of his
 prayer that the church may be one as He is
 one. "By this shall all men know that ye are
 my disciples if ye have love one to another;"
 and this we should do that the world may be-
 lieve that God hath sent his Son into the
 world to be the Saviour of the world, and that
 we having received him are saved from all
 malice, ill will, evil speaking and the like,
 which separates very friends. So should we
 read the living epistles, known and read of all men.
 Let us remember "How good and pleasant it
 is for brethren to dwell together in unity."
 Can the world with all its wealth compound
 anything so precious as that holy anointing
 oil which flows to every member? the same
 oil that was poured on Jesus' head now runs
 down to the least one of the flock. He,
 anointed of the Holy Ghost, went about doing
 good, preaching the gospel to the poor. In
 those who truly come to sit at his feet, O
 where there is found a place for ill or unchari-
 table feelings? And as we abide under his
 teachings, shall we not learn alike, if we do
 as He said: "Learn of me." There is a one-
 ness a blessed unity and here alone is it found,
 on the Truth itself. For as the sun remains
 the same through all the changing seasons
 and through every age, so Truth is unchange-
 able. The earth may change its position,
 clouds and tempest intervene still the sun
 shineth in its strength, and moveth in its ap-
 pointed course. Let us not say then that the
 difference of the unity and strength of the
 Society in its early days lay entirely on the
 will of God, and in his special favor to them

as not given to us. Did we see aright: God
 hath poured out his blessing abundantly upon
 us. We have entered into the fruit of their
 sufferings and labor. Peace and plenty smile
 on our homes. Learning is widely disseminat-
 ed in our midst, and the Holy Scriptures, that
 precious volume, are accessible to every one.
 Every man may meet to worship God under his
 own vine and under his own fig tree and no
 man dare interfere. The uttermost parts of
 the earth are by improved means of travel
 brought near to our doors, and nations, like
 Ethiopia are stretching out their hands to God.
 Are we as a people gratefully repaying by a
 loving, diligent service, all these unmerited
 favors? Are we not too generally sitting
 down at ease, too much concerned for tempo-
 ral things, for worldly pleasures, for our
 comfort and ease that we may set our house
 on high, that our children may not see want?

Let each one judge for himself, for the
 time will soon come when the Just Judge
 whose law is "to whom much is given much
 shall be required" will unerringly distinguish
 in his own light between Dives and Lazarus.
 Our brother's shortcomings, if we think we
 perceive them, will not justify ours nor make
 us any better by comparison; rather if our
 eye sight be clearer, it is plainly our duty to
 walk accordingly, that we may, by loving
 counsel and example, win our brother. The
 receiver of the five talents, by use gained five
 others, and he with one, gained the one, both
 were equally commended as were the laborers
 in the vineyard, some of whom worked but
 one hour. Now the design of the Christian
 religion is to elevate man to his right sphere.
 And Christ Jesus had compassion on the infir-
 mities of man whether of the body, mind or
 soul. There is then in the storehouse of
 Truth abundance found to minister to his men-
 tal and spiritual needs, and our physical needs
 are amply provided for by God's bounty in
 nature. The benevolent may find work in
 these three fields of service, for all conduce
 to the happiness of men whilst passing through
 their pilgrimage below. The sun of God's
 grace shines over all, and gladdens the giver
 as much, if not more, than the receiver.

But the brightest beams of the grace of God
 are seen in what he has done and provided, for
 our spiritual wants, as being heirs of eternity.
 And God's greatest gift is that of his beloved
 Son, both as he came in the flesh as a sacrifice
 for sin as a teacher and example to man, that
 he might assure them of the truth of God,
 manifesting his power and glory by miracles,
 such as the Creator alone could perform; and
 as he now comes in spirit, as the grace of God,
 as the great teacher, leader, and sanctifier of
 men. Perfect in his attributes for "All
 things that the Father hath are mine." One
 with the Father in power and glory, God
 blessed forever.

He is all essential as our enlightener, our
 Redeemer. But other gifts hath God be-
 stowed and doth bestow more especially on his
 church. Gifts of the spirit for the edification
 and comfort of the church and the Holy Scrip-
 tures, which are the written utterances of
 those having the gifts of prophecy. These
 latter, though not all essential to salvation,
 are yet highly conducive to the profit and sal-
 vation of those who hear and obey and those
 in whom God has bestowed them will be held

accountable for their proper improvement
 thereby. It is clearly the Divine will that
 man should grow in grace, in knowledge, in
 wisdom, in faith, and make increase of every
 gift; and this is done by a diligent and daily
 use. And what can compare to what has been
 provided when God himself by his Holy Spirit is
 man's teacher and the Holy Scriptures are his
 text book, wherein man may meditate and di-
 gest his law, and confirm his faith. We are
 therein instructed diligently to teach these
 things to our children that their hearts may
 be as a garden prepared for the good seed of
 the Kingdom. In very early years the Lord
 may be pleased to reveal himself to them, to
 open their ear, that they may hear his voice,
 that he may enlarge their understanding and
 give that faith unfeigned which purifies the
 heart. Such cases we see in Samuel, Timothy,
 and many others since. The children are the
 hope of the church. Time will soon bear them
 on its wave to lift the places of those who are
 fast laying down their arms. And God is able
 out of the mouths of babes and sucklings to
 ordain strength, that He may still the enemy
 and the avenger. Among our early Friends
 were those who, like Timothy, had been fa-
 vored with pious parents who thus trained
 their children in the knowledge of Scripture,
 such as George Fox, Isaac Penington, Rich-
 ard Claridge and many others. These men
 growing up under the enlightening influence of
 God's spirit became able scribes in the law of
 their God, and their administrations were com-
 forting and instructive to the brethren, con-
 vincing, and converting gainsayers.

Let us then see to it, that no feeling of
 ignorance or weakness on our part thwart our
 known duty in this respect. "He that lacketh
 wisdom, let him ask of God, who giveth to all
 men liberally, and upbraideth not." And having
 done according to our ability, our just Mas-
 ter will not exact more.

Again does family prayer and family worship
 hold that place which it ought in all our fami-
 lies. Rather is it not in many sadly neg-
 lected, and in some wholly absent?

Our worship is to be in spirit and in truth.
 Silent it may be, as to outward words, yet
 silence of mind is a necessary preparation to
 this most solemn duty. "Be still and know
 that I am God." "Keep silence before me,
 O Islands! and let the people renew their
 strength; let them come near; then let them
 speak; let us come near together to judg-
 ment" (Is. xli: 1). In every place where the
 two or the three are gathered together in the
 name of Jesus there doth he himself draw nigh.
 But we are not thus gathered though our bod-
 ies be present, if our minds and souls are not
 centered on Him who alone can supply our
 need. When collected for the purpose of
 Divine worship let then the door of our heart
 be closed to the world and to earthly things
 and awaiting in silence the coming of our Lord
 He will lead us into the sanctuary. He will
 provide a sacrifice of praise or prayer or
 thanksgiving and kindle the fire in our hearts
 with that from off the holy altar. We should,
 as George Fox exhorts, and as our early
 Friends were in the practice of doing, thus di-
 ligently wait on the Lord, and when called for
 not withhold the sacrifice of the lips, for "He
 that offereth praise, glorifieth me and to him
 that ordereth his conversation aright will I

show the salvation of God" (Ps. 1: 23). Yet, let none appear in words without or above the measure of the motion of God's spirit inclining thereto, for that brings not life but death. For words are far from being essential to true spiritual worship, as we read of the worshipping hosts in heaven "When he had opened the seventh seal there was silence in heaven about the space of half an hour" (Rev. viii: 1). But thus to pray for and with our family or to instruct them in the fear and nurture of the Lord, is a duty not at all confined to those who are called to service in the church. Every man according to his particular gift. If faithful in these things can we doubt but that God would pour out a blessing upon us and we should know that "because He lives we live also?" Our doubts would be removed, our faith established, our knowledge of doctrine increased, our love to one another and to our Lord and Saviour be more fervent, and, above all our unity and fellowship one with another, and with our glorified Head would be known and felt as a covenantal bond, not to be broken.

Let us then seek for things whereby to edify one another, have fervent charity towards all, and if the place of anyone be to reprove or rebuke, let it be done with all long suffering and forbearance. Differences of opinion on minor matters may exist as they did amongst the early Christians, yet do not these alone justify separation. Only differences on fundamentals, producing discord and that continually, can justify any member in refusing patiently to bear the burden of others, and when counsel is contemned, then may separation be right and proper. Such did take place on such an issue in our Society from 1826 to 1830, and such also in our own day. But now the sharpness of dissent is passed should we not be willing to humble ourselves before the Lord, become willing to learn of him, trust his grace divine as all sufficient for our every need, that following our Good Shepherd we may be brought into the one path of truth and present an unbroken front to the power of evil. For assuredly as a divided house cannot stand, so an army in the field acting under conflicting counsel, can hardly expect to be victorious.

Let then our prayer be "Thy Kingdom come, Thy will be done, in earth as it is in heaven"; nor let our will prevent this happy consummation.

This, dear reader, is presented for thy consideration from one whose travail of spirit has long been "that we all come in the unity of the faith, and of the knowledge of the Son of God unto a perfect man, unto the measure of the stature of the fullness of Christ" (Eph. iv: 13). W. W. B.

MILDRED RATCLIFFE was at Caleb Pierce's in company with W. K. an esteemed minister from Pennsylvania, but one who sometimes caused uneasiness to his friends by a restless uneasy disposition. They were strangers to each other, but after dinner Mildred entered into some close conversation with him, as to where he was bound, and the nature of his errand, etc., concluding her remarks by saying, "I feel to leave thee this legacy—If thou goes where Master don't send thee, the devil will set thee to work." P H.

PUT UP THE SWORD.

I have sung of the soldier's glory
As I never shall sing again;
I have gazed on the shambles gory,
I have smelt of the slaughter-pen.

There is blood in the ink-well clotted,
There are stains on the laurel leaf,
And the pages of fame are blotted,
With the tears of a needless grief.

The bird is slaughtered for fashion
And the beast is killed for sport;
And never the word compassion
Is whispered at Moloch's court.

For the parent seal in the water
Is slain, and her child must die
That some sister or wife or daughter
Her beauty may beautify.

And the merciful thought we smother—
For such is the way of man—
As we murder the useless mother
For the unborn astrakhan.

But a season of rest comes never
For the rankest sport of all;
Will his patience endure forever,
Who noteth the sparrow's fall?

When the volleys of hell are sweeping
The sea and the battle plain,
Do you think that our God is sleeping,
And never to wake again?

When hunger and ravenous fever
Are slaying the wasted frame,
Shall we worship the red deceiver,
The devil that men call fame?

We may swing the censor to cover
The odor of blood—in vain;
God asks us, over and over,
"Where is thy brother, Cain?"
—James Jeffrey Roche, in the Century.

George Fox on Holiness.

In Tenth Month, 1650, having been driven out of Chesterfield in the dead of night, George Fox and his companions came to Derby, where, as was common with him, they were soon under arrest and before the magistrates. After divers questions, "At last they asked me," says Fox, "whether I was sanctified?" I answered, "Yes" for I was in the paradise of God. "They then asked me if I had no sin?" "Christ my Saviour has taken my sin." They asked how we knew that Christ did abide in us? I said, "by his Spirit that He hath given us." They temptingly asked, if any of us were Christ? I answered, "Nay, we were nothing, Christ was all." When they had wearied themselves in examining me, they committed me and one other man to the house of correction in Derby for six months, as blasphemers.

"While I was here in prison divers professors came to discourse with me. I had a sense before they spoke that they came to plead for sin and imperfection. I asked them whether they were believers and had faith. They said, yes. I asked them in whom. They said in Christ. I replied, if ye are true believers in Christ, you are passed from death to life; and if passed from death, then from sin that bringeth death; and if your faith be true, it will give you victory over sin and the devil, purify your hearts and consciences, and bring you to please God, and give you access to Him again. But they could not endure to hear of purity, and of victory over sin and the devil. They

said, they could not believe that any could be free from sin on this side of the grave. I bid them give over babbling about the Scriptures, which were holy men's words, whilst they pleaded for unholiness."

"At another time a company of professors came, who also began to plead for sin. I asked them, whether they had hope? They said, yes. I asked them, what hope is it you have? Is Christ in you the hope of glory? Doth it purify you as He is pure? But they could not abide to hear of being made pure here. Then I bid them forbear talking of the Scriptures, which were the holy men's words; for the holy men that wrote the Scriptures pleaded for holiness in heart, life and conversation here, but since you plead for impurity and sin, which is of the devil, what have you to do with holy men's words?"

Passing over twenty-four years we still find Fox contending for the same doctrine of purity. As before, he is a prisoner. A priest and some people come to him and ask if he was grown up to perfection? "I told him," says Fox, "what I was, I was by the grace of God. He replied, 'It was a modest and civil answer.' Then he urged the words of John, 'If we say we have no sin, we deceive ourselves and the truth is not in us.' He asked, 'what did I say to that?' I said with the same apostle, 'If we say that we have not sinned, we make him a liar and his word is not in us,' who came to destroy sin and to take away sin. So there is a time for people to see that they have sinned and there is a time for them to see that they have sin; and there is a time for them to confess their sin, and to forsake it, and to know the blood of Jesus Christ cleanse from all sin. . . . I told him, There is a perfection in Christ above Adam and beyond falling, and that it was the work of the ministers of Christ to present every man perfect in Christ, for the perfecting of whom they had their gifts from Christ. . . . The priest said, 'we must always be striving.' I answered, it was a sad and comfortable sort of striving, to strive with a belief that we should never overcome."

THE HYGIENE OF FASTING.—Almost all the great founders of religions have deemed it salutary to prescribe a certain amount of fasting for their disciples. The reason for this, says a (German) writer, is not only the knowledge that it is well for man to conquer his bodily desires, but also the experience that persons eat too much. To overload the stomach with food is not less unhealthy than to deluge it with beverages; the more nutritious the food the more hazardous are the consequences when excess is habitual. Of all the sins of nutrition, the immoderate use of meat is certainly the most grievous. It gives to the body in a form that is favorable for easy assimilation the albumen that is absolutely necessary to life, and hence the earliest effect of its excessive use must be to surcharge the body with nutrients.

The chief point here is the critical examination of what is called hunger. Many persons believe that any and every sensation of hunger must be satisfied immediately, but this is great mistake. An equally great, if not worse mistake, is the opinion that one must eat until a sense of satiety arises. These two mistakes

combined lead to an unfavorable development of the human body, for the weight of the body grows to a degree that is detrimental to the activity of most of the chief and finer organs.

For every stature an approximate weight may be stated that may be accepted as normal, and in accordance with this weight are adjusted the vital organs, particularly the heart. When the heart has volume sufficient only for a body of one hundred and fifty pounds and is put to work to satisfy the demands of a body of two hundred pounds, it soon shows that it is unequal to its task. It is just as if an engine that was built to pull only a prescribed weight were used to pull a large additional weight. The activity of the other organs as well as of the heart is hindered by the fat that is deposited about the latter. Excessive nutrition injures the mental capabilities, also. Of the particular consequences of excessive nutrition, such as hypochondria (the very name of which refers the reader to the region of the abdomen), and the gout, it is hardly necessary to speak."—*The Literary Digest*.

Natural and Spiritual Life.

A fine specimen of vegetable life is much more admired than a miserable specimen of animal life yet it must be admitted that the latter possesses a higher kind of life than the former. And the finest specimen of a natural, un-Christian, may be much more pleasing to men than a wretched specimen of a spiritual man, a Christian. Yet the latter possesses a form of life which promises eventually to land him much higher and farther than the former can possibly attain. The natural man, so noble and excellent, may have climbed to the highest round of the ladder. The poor spiritual man is only standing perhaps on the lowest round of his, but, if not in this world then surely in the next, he will reach a much higher position than the other. There are in every community some splendid people who have made the most of themselves every way except spiritually.

How much more useful they would be, how much better hope for the future they would give, if they would but allow Christ to enter and impart to them the gift of eternal life! There are also in every community, we deplore the fact, many Christians whose lives are not what they should be. We do not excuse their imperfection or justify their sins. But if they love Christ, He will see that character is perfected, rounded out, sanctified, and they will eventually attain to "the measure of the stature of the fulness of Christ." The Son of God came from heaven that He might reach down to us. He tabernacled in the flesh that He might attach us to himself, and lift us up. He brought himself in touch with us that we might obtain quickening and be brought into fellowship with his life. "The gulf between us and God is bridged from the Divine side as we might cross over and be with God. That is our attitude toward Christ? "He that hath the Son hath life but he that hath not the Son of God hath not life."—*N. Y. Observer*.

If a tree be fixing itself in the earth and reaching out its roots, it is certainly growing, although it be nothing taller than for-

merly. So, albeit a Christian may want the sweet consolation and flashes of affection which sometimes he has had, yet if he be growing in humility, self-denial and a sense of needy dependence on Jesus Christ, he is a growing Christian.—*Thomas Boston*.

Notes from Others.

THE REVISED VERSION.—The Committee of the British and Foreign Bible Society, who at their last meeting passed the following resolution with reference to the circulation of the Revised Version of the English Bible: "This Committee thinks it desirable to issue the Revised Versions of 1881 and 1885, either by themselves, or as alternative readings to the Authorized Version, or in both forms, and suggests that steps should be taken to revise the laws of the Society to attain this object."

We are frequently cheered by instances in which others than Friends are speaking out on the great question of peace. At Llandrinod Wells a dinner was held last week to welcome home certain local soldiers, and Stephen George, B. A., Presbyterian minister, was one of those selected to respond to the ministerial toast. He did so in a plain, outspoken utterance against war in every shape and form, pointing out that it was only when pure religion begins to decay that it was found out that that war was compatible with Christianity. The standpoint of the early Christians was clearly put before the audience, and many faithful words spoken, the address being concluded with an apt quotation from John Ruskin. A bolder action than this can scarcely be conceived, but this minister was nevertheless listened to with respect and even cheered.—*London Friend*.

ART FOR ART'S SAKE.—The last blow struck by Joseph Cook, the best equipped all-round reformer this country has developed, was against the Pagan nudities of the Boston Museum of Art. It was a warning against the "art for art's sake" that puts beauty above duty, which has been at least contemporaneous with the moral, physical and political decline of Babylon, Greece, Rome and France.

"Well," says another periodical, "it is something of this spirit that has found its way into the church choir and organ loft and brings forward the stage prima donna to sing the songs of Zion—a sort of Jezebel high priest, praising God on Sunday and Satan on Monday."

"We recently met a young woman, a member of a well known vaudeville society, and by no means a total abstainer, who told us that she was a soloist in a prominent church in Brooklyn, and sang there regularly when business is slow. She used her church singing as a sort of side line, and was glad for the air of respectability it gave her. The minister we suppose, would say in answer to this, that he was catching his people with guile, and that 'art' was necessary in singing. Well, then, there is no reason why his pulpit should not be filled by a good actor occasionally, for surely 'art' is as good in the pulpit as in the choir."

CHINESE CHRISTIANS.—In a paper before the Newcastle Church Congress, it was said of native Chinese Christians (now numbering about 250,000): "Everywhere small, oftentimes very small communities of persons have been formed, who by their abandonment of ancestral worship and idolatrous social customs, are subjected to a social ostracism, and who, partly in consequence, cling together as brethren, with a tenacity similar to that which finds its secular expression in the powerful Chinese organizations known as 'guilds.' These converts live pure and honest lives, they are teachable, greedy of Bible knowledge, generous and self-denying for Christian purposes, and so anxious to preserve the purity of their brotherhood that it

would be impossible for such abuses as disgraced the Church of Corinth to find a place in the infant churches of China. Above all, every true convert becomes a missionary, and it is in this spirit of propagandism that the hope for the future lies. After eight-and-a-half years of journeyings among Asiatic peoples, I say unhesitatingly that the raw material out of which the Holy Ghost fashions the Chinese convert, and oftentimes the Chinese martyr, is the best stuff in Asia."

Another writer says: "The same marvellous fortitude and recuperation have been demonstrated by the native Christians in China that surprised English Christians in relation to the Malagasy when the missionaries were driven out of Madagascar. Why is it? It is because the omnipotent Christ-Spirit is living in the midst of his Church always, whether in China, or Madagascar, or England."

Items Concerning the Society.

By direction of York Monthly Meeting, England, the "Plea for a Peaceable Spirit," issued by London Yearly Meeting, has been printed as a poster, 3 feet 4 inches by 4 feet 2 inches in size—a form in which it is attracting the attention of many who are not Friends.

Thomas William Marsh's reference at the *Friend's Quarterly Examiner* reunion was to the saying of Charles Lamb, that the sight of a Friend did him good for the rest of the day.—*London Friend*.

This corrects the extravagance quoted in these columns as from Carlyle.

The tract entitled "The Society of Friends," which was reprinted in THE FRIEND for Seventh Month 13th, is from a reprint which William B. Kirkbride, 908 Berkeley Ave., Trenton, N. J., was concerned to have issued, further copies doubtless may be obtained of him.

Our friend Joseph S. Elkinton has obtained a minute for religious service in the counties of Morris, Essex and Warren in the State of New Jersey, and in Dutchess County, New York—especially the appointment of one or more public meetings in the county towns thereof.

The last minute book of the historic "morning meeting" has been duly inscribed with the full particulars of the laying down of the meeting by London Yearly Meeting. The records fill ten large volumes, from 1673 to 1901. The last regular meeting was held on the twenty-eighth of First Month.

A concrete example often impresses where statistics and generalizations fail. The longevity of Friends is a well-known fact, an interesting illustration of which has recently come under our notice. A young Friend of Birmingham (aged two), the daughter of Paul and Isabel Impey, has not only both her grandfathers and grandmothers alive, but is also favored with three great-grandfathers and one great-grandmother, not to speak of a great-great-great uncle. They are all Friends.—*London Friend*.

The minute for religious service in a part of New England, which was granted by Philadelphia Monthly Meeting in the Fourth Month, to Edwin P. and C. Virginia Sellow, was returned by them at their last Monthly Meeting, with interesting information. They had attended the Yearly Meeting at Westley, R. I., the two Particular Meetings and one of the Monthly Meetings composing it; and one of the meetings of the larger body held at Amesbury, Mass., on a First-day morning. They had met with members of a third body of Friends also. By all they had been kindly received. They had appointed three public meetings, viz., at Spring-

No. 140 N. SIXTEENTH STREET, PHILA.

Entered as second-class matter at Philadelphia P. O.
Editor's address in the summer months, W. Falmouth, Mass.

"WHEN the enemy shall come in like a flood the Spirit of the Lord shall lift up a standard against him" (Isaiah lix: 19). That enemy is now materialism,—“professing that gain is godliness,” instead of godliness being the great gain. Nations and men have caught the spirit of grasping, scruples are brushed aside, inconvenient principles of Truth laughed at. Mammon is the god of this world which blinds “the eyes of them that believe not, lest the light of the glorious gospel of Christ, who is the image of God, should shine into them” (2 Cor. iv: 4).

“Afterward that which is spiritual.” If only these “hewers of wood and drawers of water,”—the laborers for material prosperity, are building better than they know a framework of a coming civilization which the spirit of the living Christ shall come into and dominate, then his brethren can but rejoice in the result, though the carnal builders “meant it not so.” Theirs is not the blessing whose work is wrought for the aggrandizement of self; but Christ is the glory who turns their blind working into the uses of his love, and makes even the wrath of man praise Him; while they who were not conscious co-operatives with Him and the word of his grace, who meant not their babel-building so, have their reward and go to their own place.

What satisfying riches are known when we believe we are laborers together with God! That our work is a work of harmony with the Eternal Spirit, and not of proud defiance for our own emolument. Doubtless grander works for true civilization had been done in the name of Christ had his name, through faith in his authority, made men or nations

spiritually strong who have given their strength to that which perishes.

He must increase, they must decrease. We apprehend an infilling of the Spirit into much that has been and shall be wrought, though under motives so far below the high calling of God in Christ, and that a spiritual day will in his own best time be dawning, or is already dawning, to supersede the carnalism of Church and state and business.

We, the Society of Friends, should have been found vanguards of his spiritual day. The standard which the Lord will uplift when the enemy comes in like a flood is the same spirit which George Fox and his successors to this day have been raised up to be forerunners of, and to prepare the way of the Lord. “As for me this is my covenant with them,” the prophecy continues to say, “My Spirit that is upon thee, and my words which I have put in thy mouth, shall not depart out of thy mouth, nor out of the mouth of thy seed, nor out of the mouth of thy seed’s seed, saith the Lord, from henceforth and for ever.”

The Sea Island Work.

Just after the great storm and inundation among the Sea Islands of South Carolina in 1893, whereupon two members of the Philadelphia Meeting for Sufferings visited the destitute inhabitants in their scene of desolation, R. C. Mather found the condition of that people increasingly laid upon her for their help and upbuilding. She opened a relief mission for the utterly destitute and feeble old people. It is now a veritable Old Folks’ Home in successful operation and humanely conducted. For many years she has been a faithful Christian laborer among the colored people of the island about Port Royal, and many owe it to her efforts that they have had food, clothing and an education.

She is endeavoring to erect a school-house to be opened in Tenth Month next for the pressing needs of the younger generation; and is anxious to add a hospital department to the Home as a much needed Christian charity, without sectarian bias, and to increase the inmates of the Home as soon as means received will permit. “Since I began work here, thirty-four years since,” she says, “mercy has inspired all our efforts, nor will the work be in vain if it prove an object lesson of mercy to counteract the cruelties one witnesses in-

flicted on man and beast. We have an interesting school of forty pupils at Peacehaven, an industrial school similar to this.”

A Recompense beyond Figures.

One would like to see the housewife’s labor more fully remunerated and her work more professionally handled, but that she has compensations it is impossible to deny, says the *Philadelphia Ledger*. In a large sense the living wage is hers; she works not to make a living, but that all about her may be enabled to live. She has the control of the conditions of life; she can say whether it shall be one of enjoyment or mere existence, and can ease the burdens of others, even if she have no power to lighten her own. She knows that it can never be said of her that her work does not pay; that she does not give good value; that she takes more out of life than she brings into it. She has the unique joy of always giving full measure, pressed down and running over, and she may even whisper in a confidential ear that her receipts are in like proportion, even though her pocket may be empty while she says it.

If you would know whether the housewife’s work is worth doing, you must ask those for whom she toils; but if you would know whether or not it pays her to do it, you must ask her herself alone. Of a truth, she is one who regards life as a giver and not as a taker; who receives work as her glory and not merely as her duty; can we say, then, that she is not treating her situation on the broad lines of race, and that her work is anything else than a valuable social function, performed for all society as well as for her own individual set? Let us rejoice that in our utilitarian age, when men measure success by facts and figures, there remains to us some who have eyes to see beyond and through these; who have ideals above realities, who can gild common clay until it looks like gold, and who can find in love the fulfilling of the law.

The worker whose heart is in her work, be it professional or trade work, or merely that of a housewife, will always make that work pay; will make it yield her a recompense beyond that of figures. There is a reward in work, both for men and women, when it is honorably and creditably performed and which benefits others, even if it leaves the worker monetarily poor. To all true workers there can be but one standard of value by which to test work—namely is it worth doing? If it be so then it never can be unpaid.

THE strongest confidence in the protection and favor of God does not preclude the use of any of the proper means of self-preservation and defence which his providence has put in our power.

The soft, soothing zephyrs of springtime
That cause baby buds to awake,
And the glorious rays of the sunshine
Are not merely for man's own sake.
For each tiny flower or leaflet,
As it grows in garden or sod,
Is doing its best and its fairest
To tell of the glory of God.

—W. N. Yates.

Cuba.

[We have from time to time given notes of information concerning Protestant effort in Cuba under the name of Friends, and in continuation of such information the following offering may suitably be added.]

The wonderful dealings of the Holy Spirit with his almost unknown and unworthy followers are far past comprehension to the human mind, but one can exclaim with Abraham's servant "I being in the way the Lord led me."

Two of us went to Cuba over a year ago, but we are both now back in the United States, and though we may have done little ourselves, yet the Holy Spirit has so worked on others also that there is now there a meeting of two or three hundred worshippers and we believe that it is through the working power of his Holy Spirit. One who has brought to the Lord at Aguacate writes: "I had such a fine meeting in the prison in Havana; such attention, and God was with me. Many of the men were in tears, and after meeting they came forward very eagerly for tracts." He further says, "Quite a new thing in the prison—they have an altar fixed up after the Roman church and the figure most prominent is that of the Virgin Mary, and here was a Quaker talking to the men. Perhaps there has never been this before, but I felt that fact before I had spoken, that there the Roman priest used to say his Latin.

"Now here is a clear trial for us, Quaker against Roman. May God help his own servants." But perhaps never before has a Quaker poured forth his exhortations to repentance with a Roman altar behind him." One of the curious facts about the above is that the writer, Arthur E. L. Pain, comes out as "a Quaker" entirely upon his own responsibility. A year ago he was a wild young Englishman in South America, straying where he would in vice and sin, and the only Friends he has ever seen have been Ellen Woody and the few of El Faro Christians, who are of that persuasion.

From THE FRIEND, which is well read there, he has read much and also the Friends' books we have there.

The Lord has laid his hand heavily upon him and has made him to work mightily for the advancement of his Kingdom.

There are many things connected with his life and our life there that we do not feel at liberty to put in print, but which make us able to say unquestionably that God is with the "El Faro Cristiano." We almost regret that we have not the freedom to tell them, still we believe many Friends can join with us in praises to the name of the Lord that He, himself has raised up one who can speak his words in the Spanish language. It certainly is his own work. Much has been written about Cuba, that if the writers knew more of what they were writing about, probably would not have been written. These remarks are copied back into the Spanish papers there, and have

prejudiced the Cubans against, not only newspaper correspondents, but also Christian men, who have really been anxious to do good. So we refrain from remarks except to say that little is known there of pure Christianity and there must be at least one thousand places where the light of the gospel can be sown by any who are so called of God.

JOHN B. WOOD.

Seventh Month 29, 1901.

Arthur W. Dowse stayed with us until Arthur Pain seemed fitted to take his place and then went on to fulfil his call at Calcutta, where he arrived safely some month or so ago.

Where Spices Come From.

Salt is obtained from brine springs, or salt mines. The salt from the mines is called rock salt, and looks like dirty pinkish glass. The rock is crushed and dissolved in water. The dirt, being heavy, settles to the bottom, and the clear water, which is poured from the top, is evaporated, leaving the salt behind. It is then dried, says *McCall's Magazine*, and according to the size of the grains, is called hay salt, household salt, or table salt.

Pepper comes from the berries of a plant which grows in tropical countries. The berries which grow in long clusters like small bunches of grapes, are green before they become red. They are dried in the sun, and the red coat shrivels up and turns black. When the berries are ground they give black pepper. White pepper is obtained by drying the berries in the shade, soaking them, and by removing the outer skin by rubbing with the hand before grinding them to powder. The white pepper is less pungent and acrid than the black, and generally costs twice as much.

Cayenne pepper does not come from the pepper plant, but is obtained by drying and grinding the seed pods of capsicums or chilis, which are the fruits of plants belonging to the same family as the potato and tomato.

Mustard has been in use for a long time. It was used as a medicine before the Christian era. The oil was extracted and used for rheumatism, or mixed with other ingredients and used as a remedy for snake bites. The Saxons used it as a condiment, crushing the seeds and mixing them with honey and vinegar. Genuine mustard is obtained from a mixture of white and black mustard seeds.

The housekeeper's trouble is to keep the mustard pot supplied with freshly-made mustard. Unless frequently attended to the mustard becomes dry and unsightly. Made mustard will be found to keep fresh much longer if it is mixed with water which has been boiled and just allowed to get cold. Another plan is to add a little salt or a little vinegar to the mustard, but either addition alters the flavor of the mixture.

Vinegar is made by the fermentation of some liquid containing alcohol. In this country it is usually made from cider. In France and Germany it is made from wine, and such vinegar is superior to the vinegar made from malt, as in England. The sharpness is due to acetic acid, which is always present in vinegar.

JUSTICE.—Believe nothing against another but upon good authority; nor report what may hurt another, unless it be a greater hurt to others to conceal it.—*W. Penn.*

The Spanish and Other Oaths.

In Austria a Christian witness is sworn before a crucifix between two lighted candles, and, holding up his right hand, says, "I swear by God, the Almighty and All Wise, that I will speak the pure and full truth, and nothing but the truth, in answer to anything I may be asked by the court."

Jewish witnesses, while using the same words, add to their solemnity by placing their hands on the page of a Bible on which is printed the third commandment.

[How could a Christian swear at all, with his hand placed on the Sermon on the Mount verse 34?]

A Belgian witness swears to be veracious in these words, "I will speak the truth, the whole truth, and nothing but the truth; so help me God and all the saints."

The Spanish oath is more elaborate. The witness kneeling on his right knee, places his hand on the sacred Book, and, being asked by the judge, "Will you swear to God and by those holy gospels to speak the truth to all you may be asked?" answers, "Yes, I swear." Thereupon the judge says, "Then, if thus you do God will reward you, and if not will require of you." In some parts of the country the ceremony is different. The witness forms a cross by placing the middle of his thumb on the middle of his forefinger, and kissing his thumb—a practice which would probably be very familiar to some English witnesses—exclaims "By this cross I swear!"—*Law Notes*

Curing United States Money.

It has been stated that United States green backs are wearing out fast and a big reserve fund is to be established, to be kept in the Treasury vaults until it is more thoroughly cured than the notes now in circulation. Orders were given the other day for the clerk of the Bureau of Engraving and Printing engaged in printing greenbacks to work on hour extra each day beginning Seventh Month 1st. One hundred million dollars in green backs are to be accumulated and will be laid aside to get completely dried out before being issued. They will be one, two and five dollar notes and it is estimated that it will take three months to print them. Whenever possible it is the policy of the Treasury department not to issue greenbacks until they have been stored six or eight months. By that time they are well-seasoned and are in condition to withstand considerable handling.

During the last two years, however, the unprecedented demand for notes, especially those of small denomination, has not permitted the department to lay aside any quantity. Most of those printed during that time have been put into circulation within one or two months after being received from the big money mill. Anyone accustomed to handle paper money can easily detect the difference between green and seasoned bills. A note that has been thoroughly cured is crisp, firm and tough, while a green note is thick, soft and mushy. After the latter has been in circulation it becomes rough like a piece of blotting paper and is soon unfit for currency. It rarely lasts more than a year, while the life of a well-seasoned note is anywhere from two to ten years.

KEEP thy tongue from evil.

"Humanism and Christianity."

"Humanism" is a modern term for that rement of civilization and culture which, wever vitally dependent for its development the life of faith, may be cognizable as the ghest worldly excellence even by the unerare instincts of "the natural man." "The present," remarks a recent writer in the *London Quarterly Review*, in enlarging upon the works of the late Walter Pater and other humanistic authors "may be a propitious moment for dwelling on modern humanism and phenomenon intimately connected with it which has received much attention of late arars, namely, the curious confluence of clasal and Christian ideas in a synthesis of Pater and Christian culture, deeply affecting ristian thought." Some specimen extracts from the *Review* article, entitled as above, are subjoined. If in any degree illustrative the Divine possibility and purpose of gathing all "folds" of earnest seekers into one lock" of happy finders, their reproduction ill not be unwelcome to Catholic spirits.

"For the origins of the humanistic movement we must go back to the fourth century and the gradual assimilation of antique thought by Christian writers, such as Paulinus of Nola, Prudentius, and Claudian, themselves representatives of what Niebuhr characterizes as an early Renaissance, produced by freshness and ardor of the new creed trying to find expression for its higher thought in cultured language and therefore turning to the spring of antique wisdom," in order to grow to fertilize Christian thought. In the dark ages," long before the full efflorescence of the Renaissance, in spite of the animosity the Church towards culture, humanism had secret devotees among scholars, clerical lay—a kind of esoteric clique hiding its light from the profane crowd but keeping up certain continuity of thought and feeling, till papal Rome, either from taste or policy, absorbed Pagan culture and, so to speak, Romanized literature.

"Erasmus, 'Prince of Humanists,' or, as Pope calls him, the prophet of the Renaissance in his enthusiasm for the 'new learning,' and apparent lack of religious zeal, in his ny-sidedness as a master of style, a scholar, poet, in his preference for moderation and peaceful development as opposed to the violence of militant Protestantism, may fitly be regarded as the ancestor of our modern dees to culture. He was a Unionist too, if we may use the term, who never for a moment ve up the hope of preserving the alliance of culture and religion. 'May Christ's dove come along us or else Minerva's owl,' he writes to the George of Saxony. If at times he pre-erred worshipping at the shrine of Minerva being with Christ in the temple, we know from his writings, that he was very apprehensive lest the revival of classical learning ght lead to a recrudescence of Paganism with demoralizing tendencies. Erasmus, as a an of wit and humor—the 'mocking reformer' as he was called, with Lucian for his favorite author—suggests a kindred mind at a later stage of the Renaissance, viz: Montaigne, an equally pronounced humorist, yet a confessed Catholic, charmed by the religious life of Romanism, but far from convinced by the tenets of the Roman faith, handing down

the succession in the apostolate of humanism to Goethe, 'the last Hellenic,' as well as the archimandrite of the religion of culture in its modern dress, summed up in the formula 'To live resolutely in the whole, the good, the beautiful.'"

"It is Goethe who, to use Pater's expressions, represents the breadth and centrality, with blitheness and repose, which, as he tells us, are the essential marks of Hellenic culture. His influence on modern humanists cannot be over-rated; and Pater himself owes not a little to him in the breadth and depth of his culture. . . . Pater appears at times enigmatic; yet there is no lack of lucidity in his style. . . . He treats literature as distinctly a fine art, with the tact and taste of an accomplished 'master of sentences'; . . . Less picturesque than Carlyle, less florid than Ruskin, less insinuatingly insistent than Newman, he illustrates in his own writings what he advances as an axiom in his Essay on Style, that 'imaginative prose' is the 'special art of the modern world.'"

"The tendency of mediæval religion had been to depreciate man's nature; the tendency of the Renaissance, to rehabilitate human nature, the body, the heart, the senses, the intellect. This antagonism is not so pronounced now; and Pater in his writings has done much to effect a reconciliation. 'The perfection of culture,' as he says in his studies of the Renaissance, 'is not rebellion, but peace; only when it has realized a deep moral stillness has it really reached its end.' But beyond this process of pacification there is, on the part of cultivated men and women in the present day, a yearning regard for the ages of faith, their healing virtue and invigorating force, which is in strong contrast to the repulsion felt by some of the leaders of the sixteenth century Renaissance for the religion of their day. Even so pronounced an advocate as Matthew Arnold speaks of the 'sad lucidity of soul,' yearning for something more than culture; and looks back with regret to the lost faith which he would revive and reform, so as to bring it into closer agreement with what is best in modern thought. Modern culture seeks for a complement, and finds it in reasoned religion, which takes account of and provides for the serious exigencies of human life.* 'Culture,' says the author of 'Natural Religion,' 'is properly a direction given to the development of life; but religion is the principle of life itself.'"

"Platonism," says Pater in his book on Plato and Platonism, the result of his ripest thought, 'is in one sense an emphatic witness to the unseen, the transcendental, the non-experienced, the beauty, for instance, which is not for the bodily eye.' This is the distinguishing mark of latter-day Hellenism, as tempered and corrected by modern science and modern thought. Its attitude is no longer that of antagonism to religion; it has no longer any desire to supplant religion by a 'gospel of culture'; it begins fully to acknowledge a latent power in religious faith to work out man's higher destiny. It calls to mind that the best work of the Renaissance itself was accomplished when 'the glow of mediæval faith' inspired it; that Michelangelo himself

*I. E., Furnishes the "counsel of the godly" implied though not expressed in Ps. 1: 1.

coming to it 'with a genius spiritualized by the reverie of the Middle Age, penetrated by its spirit of inwardness and introspection, living not a mere outward life like the Greek, but a life full of inward experiences, sorrows, consolations,' discovered that a 'system which sacrificed what was inward could not satisfy him; and that 'for himself he had long since fallen back on that Divine ideal which above the wear and tear of creeds, has been forming itself for ages as the possession of nobler souls. And now he began to feel the soothing influence which since that time the Catholic church has often exerted over spirits too noble to be its subjects, yet brought within the neighborhood of its action; consoled and tranquilized as a traveller might be resting one evening in a strange city.'"

"As we noticed in Michelangelo a return to the soothing influences of the religion of his day, as was also the case in Goethe towards the close of his life, so in the case of some of our modern men of culture, such as Pater and Symonds, there comes a time when a yearning for the faith of their childhood comes back with a rush and a strong desire to recover it in one form or another. 'I would give a great deal,' Symonds once declared, 'to regain the Christian point of view.'"

"In an obituary notice of Pater in the *Oxford Magazine* from the hand of a clerical admirer and constant friend, we have an interesting picture drawn of Pater, as the 'Brazen-ous Recluse,' as a student of deep religious feeling keenly sensible to the influence of a stately ritual; a man of transparent naturalness; ready good-humor and courtesy; but, above all, never happier than when discussing with childlike simplicity and submission some of the cardinal mysteries of the faith.'"

"The modern man of culture, like Pater's Marius [in his 'Marius the Epicurean'] finds that life can alone attain to something like completeness with 'the advent of some new or changed spirit into the world, mystic, inward hardly to be satisfied with that wholly external and objective habit of life which had been sufficient for the old classic soul.' The late F. W. H. Myers, in whom literature has recently lost one of its most cultivated representatives, expresses the same conviction in his essay on 'The disenchantment of France,' where the lack of 'the tonic faith' or the feeble acquiescence in a filmy, formless pretence of it, has produced, as he tries to show, that helpless fatalism which lies at the root of literary decadence.

"It is this danger which just at present inspires the more vigorous of modern men of culture with alarm and a strong desire to avert it in the interests of humanism and intellectual development. It is on this account that they set themselves to accentuate the importance of reasoned religion, reason being considered an important element in it. Thus the late Dr. Martineau, in his 'Study of Religion,' whilst emphatically denying that there is any antagonism between 'the modern culture and the ancient sanctities,' and indeed admitting that the functions of art and literature are in a sense sacred, goes on to say that they are so 'because concerned with a universe equally consecrated by a Divine presence.' Equally emphatic in pointing out the inseparability of culture from religion is Professor

Eucken of Jena, in his work on 'The Struggle for the Spiritual Contents of Life' . . . Thus we see humanism in its most recent manifestations, emerging out of the chrysalis state of Neo-Paganism, and, on the whole, making for spiritual idealism. In the region of sentiment, too, . . . the moral defects of aesthetics are becoming recognized; and a way is being discovered by which to escape out of the ennui, brain-weariness, malaise, produced by the excessive aesthetic sensibilities of those who, a little while ago, professed to find complete satisfaction in the 'cult for loveliness.' We are arriving at a more practical and healthy conception of the function of culture, as a 'tone running through conduct,' rather than as an end in itself.

'The work of the Renaissance, of which modern humanism is a continuation, is, like that of the Reformation, still incomplete; consequently it becomes a question what developments of it may be expected in the immediate future. There are certain layers of society which it has as yet barely reached, or into which it has only imperfectly penetrated where culture is still regarded as merely a graceful adjunct to life, a decorative appendage of doubtful value, a harmless pastime leading no whither, if not a positive hindrance to success. For this reason 'sweetness and light' have been as yet suffused but moderately into those dim Philistine regions which Matthew Arnold set himself industriously to convert, so as to stem 'the common tide of men's thoughts in a wealthy and industrious community.' If he failed, it was not so much because his message came to the middle class before its time, as that his method of ironical criticism missed its mark. It would seem that the airy tone of intellectual superiority he assumed towards the masses, 'the populace,' as he called them, was ill adapted to win them over to his own way of thinking, though he graciously told them that superior men of culture like himself were 'the true apostles of equality.'

'Modern attempts at "humanizing education"—to adopt a term used by Coxeterhope in his recent Oxford lecture on Taste—by means of University Extension Lectures for the middle class, may prove eventually more successful. University settlements in the neglected regions of Whitechapel and Bermondsey and elsewhere may bring about in time a closer union between labor and culture. Here, at least, are fields left for future cultivation. Nor is there any cause of despondency on account of the comparatively slow progress made hitherto. It is forgotten sometimes even by students of the Renaissance, that culture had even then to struggle hard for existence. No doubt need be entertained that in the future as in the past the [social] supremacy of mind will eventually assert itself.

'But if destined to succeed in conferring a nobler dignity on trade and struggling labor in developing and refining the capacities of the man in the street in a democratic age which sadly needs its mollifying influences, humanism must have the support of religion. On the one hand, religion must be enlightened, broadened, deepened by culture. On the other, culture, informed with the spirit of religion, acknowledging the supremacy of the Divine in humanity, must become 'transmuted from an

intellectual attainment into a spiritual grace.' We may therefore congratulate ourselves on the confluence of humanism and religion to which we have drawn attention in the preceding pages. Concurrent and concomitant influences—the one supplying the mental, the other the moral discipline, amid the fierce actualities and activities of life under modern conditions—they will produce that calm self-recollection and cheerful serenity of spirit which may save what Emerson calls our 'corporeal civilization' from sharing the fate of the civilizations of the past.'

Dangerous Use of Human Attainments.

I think I have seen the danger of young men or women dwelling anywhere else than in the valley of humility. Human learning, human attainments and excellencies—I mean all those things that are obtained by the memory, judgment, reasoning powers, and mental abilities, separate from any immediate influence and assistance derived from the Source of all true wisdom—these natural acquisitions and talents are well in their places, and are serviceable to us when kept in subjection to the pure teachings of Him "who teaches" by his Spirit "as never man taught." . . . I have been in company with some young persons of our Society who have been not a little injured by giving way to pride and foolish talkativeness in respect to many matters in which, though they seemed well informed, yet, not keeping in the littleness and lowliness, they have acquired themselves but ill, through letting in a forward, prating spirit.

Now, the best light in which we can view true talents and virtues, and in which they are set off to the best advantage, is the sombre shade of humility. For the more the framework is colored, or gilt, or carved, or ornamented, the more there is to take off the attention of the eye from the picture itself. So that it seems to me best for each of us to dwell in the littleness, in the lowliness; always bearing in mind where we are.—John Barclay.

WHAT A BOOK CAN DO.—In a retired valley of Joshua, in India, there is a little hamlet of charcoal burners. A few years ago their little manner of life was the rudest possible. There seemed no glimmer of hope for better things.

A missionary passing through the village spoke to the people. Two men became interested and purchased copies of the New Testament. Their employers soon noticed a change in the grade of charcoal from these two men—it was more carefully burned, was better packed and free from stones and grass. This charcoal was looked upon as a special brand, and brought a special price. On Friday work was suspended, and these men and their families, gathered for religious worship and the study of the Bible.

Shortly after, they began to reclaim the mountain land about them, to plant wheat and garden stuff, and recently one of them became forehanden enough to build a neat farm house in place of his old hut. His employers say he is the most efficient and trustworthy man in the mountain. He himself says he owes his new vigor to his weekly day of rest and that without it and his Testament he could not do his work.

"Sun, Stand Thou Still!"

There are certain items of history or tradition which seem to militate against Holy Writ—these skeptics receive readily and remember long. Of ten thousand facts of a different description they treasure none.

If you will go to that opposer of Christianity who appeals loudly to the Chinese chronology and ask him a few questions you will find that part of Asiatic history with which he is utterly unacquainted. Ask him what he thinks when the Chinese speak of Yao their king, declaring that in his reign the sun stood still a long above the horizon that it was feared the world would have been set on fire; and fix the reign of Yao at a given date which corresponds with the age of Joshua, the son of Nun. You will find in nine cases out of ten the objector knows nothing of that part of the Chinese record.

Of the Bible, and of ancient literature connected with the Bible, he is uninformed; the cause is his appetite for darkness rather than light.

The Latin poet, Ovid, amuses the schoolboy greatly in his fanciful narrative of Phaeton's chariot. This heathen author tells us that a day was once lost; and that the ear was in great danger from the intense heat of an unusual sun. It is true that, in attempting to account for this incident of peril and wonder, the writer, as is his custom at times, consulted only his imagination, and clothed it all with an active fancy. But of notice is somewhat attracted when we find mention Phaeton, who was a Canaanitish prince and learn that the fable originated with the Phœnicians, the same people whom Joshua fought. If you ask an unbeliever of these incidents, or of the common tradition with nations, that a day was lost about the time when the volume of truth inform us that "the sun halted not to go down for the space of whole day," you will find that he had never thought on these points—they are not of a character that he is inclined to notice.—David Nelson.

THE WOMAN AND HER CLOTHES.—"When woman devotes one-half of her life to thoughts of dress she absolutely takes the whole question out of its proper relation to her life, and belittles the talents which God gave her for far greater things," writes Iward Bok, in reply to a woman correspondent in the *Ladies' Home Journal*. "It is, indeed, a grave question, whether she does or debase herself. Nor will she be well-served the chances are far greater that she will 'over-dress.' No woman who has any regard for what is worth while in this world, and what will bring her the surest and fullest happiness in the long run will so dissipate her energies and vitality. The right to dress prettily and becomingly belongs to every woman. It is her birthright, and her duty. A disregard of dress, or the affectation of queer freakish dressing does not belong to a normal woman. But to make dress one of the things of life is carrying it beyond the ridiculous point and close to the criminal. It is just this rightful adjustment of the thing in life which simplicity does for us. It gives a rightful place and a rightful value to each thing and it doesn't belittle the one or distort the other."

FOR "THE FRIEND."

a Misapprehension of Our Views Concerning Christ.

A writer in a recent issue of *The Evening Bulletin*, of this city, over the signature of m., gives an account of a subject of local interest—the small burying ground now covered by the pavement of the Bourse building at Fifth and Market streets which was first used as a burying ground by the Seventh-day Baptists in 1716, and also alludes to some of the events of the early history of Philadelphia connected with the career of George Keith. After mentioning some circumstances connected with the controversy which George Keith had been engaged in, this writer says: "Keith finally left the city, and then took refuge, disappointed and embittered, in the north of England. But the several hundred Quakers who he had gathered around him and who had established meeting-houses here, in the present Berks county and in New Jersey, began to decline as a faction or sect when they were deprived of their leader. They were known as Keithian Baptists or Quaker Baptists. Some became Baptists, others went into the Episcopal Church and some became Seventh Day Baptists. One of these Seventh Day Baptists was Richard Sparks, a carpenter who was the owner in the beginning of the eighteenth century of the eastern part of the ground on which the Bourse now stands, as well as of the southeastern corner of Fifth and Market streets, which was not far from one of the branches of Dock Creek. When Sparks died in 1716, it was found that he caused this ground to be given to his will to his little band of religious comrades, the Seventh Day Baptists, for a permanent burial place. The first grave dug there was for the reception of his own body. From that time, or until about nine years ago, when the construction of the Bourse began, this graveyard on the corner of Ransstead Place was a singular survival of ancient times to the heart of the city."

It is not our purpose to enlarge upon the incidents connected with the life of George Keith who on his death bed expressed his wish that he had died while he was a Quaker, believing that then "it had been well with him," to correct a statement in regard to the views of Friends, contained in this article.

The writer remarks:—

"The schism which Keith opened in the ranks of the Quakers was due to his advocacy of the teaching that they were in error when they worshipped only the Inner Light or Spirit of Christ, that it was their duty to pay homage to the Mediator in Heaven, who, as a man, had been put to death, that there was no such vagueness in their spirituality, and that their doctrine needed body and form to make its true meaning properly understood. On the other hand, the regular authorities of the denomination at that time contended that only Christ whom they worshipped was a spiritual Christ, existing in the heart of each person, and that the sufferings of the man Christ at Jerusalem were only incidental features of his earthly life."

The following passages from an epistle of loving counsel which some Friends in England, addressed to George Keith and others while he was yet in Philadelphia, contain a clear

statement of the doctrines which they held, and which Friends still hold, upon the important subjects referred to, and show unmistakably the soundness of their religious belief in the efficacy of the offering made upon Calvary for the sins of mankind.

These Friends say that though they have always believed the Gospel dispensation to be a spiritual dispensation, yet it was "In no wise to oppose, reject or invalidate Jesus Christ's outward coming, suffering, death, resurrection, ascension and glorified estate in the heavens; but to bring me, to partake of the remission of sins, reconciliation and eternal redemption, which He hath obtained for us and for all men, for whom He died and gave himself a ransom; both for Jews and Gentiles, for Indians, Turks, and Pagans, without respect of person or people. And Christ is to be fully preached unto them according to the Holy Scriptures, by them whom He may send unto them for that end; that as the benefit of his sufferings extends to all, even to them that have not the Scriptures or outward history thereof, they may be told who was and is their chief friend, that gave himself a ransom for them and hath enlightened them; yet not excluding those from God's mercy or salvation by Christ who never had nor may have the outward knowledge or history of Him, if they sincerely obey and live up to his Light; for his Light and salvation reach to the ends of the earth. Yet still we that have the Holy Scriptures, and those plain outward confirmed testimonies concerning our blessed Lord and Saviour Jesus Christ, both as to his coming in the flesh and in the Spirit, have cause to be thankful to God for the peculiar favor, and that the Scriptures are so well preserved to posterity; and we beseech you let us keep to the plainness and simplicity of Scripture language, in all our discourses about matters of faith, divinity and doctrine; and sincerely believe, own and confess our Lord and Saviour Jesus Christ, the Son of the Living God, in all his comings, appearances, properties, offices and works both for us and in us."—G. J. S.

PHILADELPHIA, Seventh Month, 1901.

THE CHRISTIAN'S MODE OF CONQUEST.—As long ago as the fourteenth century, Raymond Lully, scholar and missionary, saw through the hollowness of that sort of religion, which had sent so many thousands of Europe's bravest to fight the battle of faith with carnal weapons in the Holy Land; and he wrote a book in which he discusses the question whether the heathen should be converted by force or whether men should labor for the spread of the gospel by persuasion, according to Christ's example. He declares for the latter method as the only Christian mode of procedure; and in his treatise on the Contemplation of God, where he makes all Christendom pass in review before his mind's eye, he says, concerning the knights: "I see many knights going to the Holy Land, in the expectation of conquering it by force of arms; but instead of accomplishing their object, they are in the end all swept off themselves; therefore," he says, addressing Christ, "it is my belief that the conquest of the Holy Land should be attempted in no other way than as thou and thy apostles undertook to accomplish it—by love, by prayer, by tears, and the offering up of their own lives. As it seems that

the possession of the Holy Sepulchre and of the Holy Land can be better secured by force of preaching than by force of arms, therefore, let the monks march forth, as holy knights, replenished with the grace of the Holy Spirit, and proclaim to the infidels the truth of thy passion; let them from love to thee exhaust the whole fountain of their eyes, and pour out all the blood of their bodies, as thou hast done from love to them."—Henry L. Schenck at an Episcopal Church Congress.

FOR "THE FRIEND."

ONLY TO FEEL THY PRESENCE.

[The late William Shaw, during his last illness, on being asked by his wife if he wanted anything, replied, "I want to feel his Holy Presence."]

Only to feel Thy presence,

As a child on its mother's breast,
And the weary, suffering soul,
Finds rest, sweet rest!

Only to feel Thy presence,

And the world with its sin and deceit,
Shall fade as the mist of the morn,
And all is sweet, so passing sweet.

Only to feel Thy presence,

When crossing the dark valley o'er,
To comfort and cheer till my feet have reached
That shore, that shining shore.

Only to feel Thy presence

When parting with all most dear,
Till I reach the loved ones immortal
In the land just over there.

Only to feel Thy presence

When Thou my life shall sever,
In glory to sing Thy praises
Forever and forever.

SPRINGVILLE, Iowa.

P. E. T.

FOR "THE FRIEND."

Some Reminiscences of a Good Man—Ebenezer Worth.

In a previous article mention was made of a remark of Joseph Elkinton, Sr., that Ebenezer Worth at times, when addressing the Indians—"Seemed almost apostolic"—probably in reference to some such occasion, or a similar one, that the following entry was made in his diary under date of Tenth Month, 19th, 1863, at Tunesassa: "Last night and this morning was much favored to trust in the Great Head of the Church that he would help me this day. Went up to the council house to meet the Indians; after waiting awhile a good many collected. Peter Crouse was interpreter. I think I was much favored to feel for them, and raised above the fear of man in expressing my feelings, and was truly comforted, hoping I had in unmerited mercy been enabled to discharge my duty; they felt like brethren and sisters to me; the praise be to Him, the Great Head of the Church, who is worthy."

While at Tunesassa he received the following interesting letter:

PHILADELPHIA, Ninth Month 15, 1843.

My Dear Friend:—

I've often thought of thee with feelings of affectionate and brotherly sympathy in thy lonely situation, far from the flock with whom thou hast been wont to mingle in spirit and take sweet council. But the everlasting Shepherd and Bishop of souls, Christ Jesus, is as near at Tunesassa as he is at Bradford, or in Philadelphia, and when He, who is indeed our

Light and our Life, appears in our seeking souls we thirst not for any other streams.

I doubt not thou wilt have thy seasons of desertion and stripping, when the Chief Shepherd may seem entirely out of view; but keep a steadfast and single eye to Him and He will assuredly appear again to thy comfort and rejoicing.

I shall not be surprised if thou feels as though thou were doing little or no good, and even be ready to call in question sometimes the propriety of thy present allotment. This is no new thing to them that are endeavoring to serve the Master and 'tis good to bring us to try the grounds of our movements like proving them by the fleece, both wet and dry; but they are no cause of discouragement; they rather show that the spiritual life is preserved and the soul not resting at ease upon the unrefined lees of its own works. Thou art not forgotten by thy friends who have unity with thy service in this allotment, and believe thou art in thy right place. Be not too much cast down then, when the enemy may try and buffet thee, for this is his way with the upright in heart; but as they keep their love and allegiance to their Holy Head, He will bring them out of the furnace pure as gold.

In love I am thy attached friend,

THOMAS EVANS.

The following is from E. W.'s diary, related to him, it is thought, by Asher Wright, a Presbyterian missionary, residing among the Indians.—"George Smith had been a member of the mission church on the Buffalo Creek Reservation, maintaining a consistent Christian character, he died of a lingering disease, bearing his sufferings with Christian patience and fortitude, and giving earnest testimony to the preciousness and sustaining power of the gospel.

"A day or two before his death, he was thought to be already dead by those who had the care of him, and was dressed for the grave. After lying in this apparent lifeless condition for an hour or two he revived, and began to relate the wonderful views of heavenly things with which he had been favored while in that seeming unconscious state. I called at the house soon after he revived and found him bearing earnest testimony to the truth and preciousness of Christianity, and exhorting all round him to embrace it. He soon after directed his remarks to me and urged me to make all possible effort for the people and said among other things, 'I am a poor Indian and do not even know how old I am; but I know this, that Jesus Christ came into the world to save sinners, and that He will save all that come to Him. I know He will, for He saved me; tell them of it, tell it to the Indians, tell it to the white man, tell it to the negroes, tell everybody—He will save all who believe in Him. He will not cast away any who come to Him. Persuade them to believe in Him that they may live forever.'"

W. P. T.

THE Scriptures give four names to Christians, taken from the four cardinal graces so essential to man's salvation; "Saints" for their holiness; "believers" for their faith; "brethren" for their love; "disciples" for their knowledge.—Fuller.

Catherine of Siena.

Among the leaders in the new life which quickened Europe in the fourteenth century, when the shadows of the dark ages were passing away, there is none more fascinating than Catherine of Siena. As contemporary of John Wyclif, she had many points in common. Of course, she made no pretence to his scholarship, and she was no courtier, as he was. But both of them were heart and soul engaged in winning the world which they influenced to Christ. The coarse robe and simple mode of life of Wyclif found a counterpart in Catherine's ascetic self-denial, and in the old worn Dominican cloak so familiar on the streets of Siena and Florence, and in which she slept her last sleep in Rome. Alike Wyclif and Catherine were reformers before the Reformation. Each lived and died in the Roman Church. A century had to pass before the seed sown by Wyclif's Bible and preaching bore fruit in the Protestant Reformation in England; and for her reformation Italy is waiting yet.

It was a wild and even savage life in the midst of which Catherine grew up. The feuds between Siena and Florence were not so much wars as raids with the bitterest jealousies of rivals in trade and politics inciting to such hand-to-hand conflicts as school boys are supposed to put away with their childish things. The noble still held his serfs in shameful bondage. The infamous Bernabos Visconti, Duke of Milan, put to death any of his vassals caught killing hare or wild boar or other game, and when two friars dared to expostulate with him on his inhumanity to his dependents, he immediately sent them to the stake. Again and again, during Catherine's short life, the plague carried off thousands of victims. The land was cursed by the presence of mercenaries who, strangers to the love of home or the pride of patriotism, sold themselves out to the highest bidder for their brutal services. The pope had left Rome for Avignon, living there with his cardinals and courtiers in shameless profligacy, while Italy was farmed out under legates more rapacious and cruel than even the nobles and the mercenaries.

So much needs to be said before we can appreciate to the full the marvellous life of Catherine, the wool dyer's daughter of Siena, the child of parents pious, indeed, but wholly illiterate and entirely without influence in the republic or the city. To ascribe her successes to any other than a Divine source is to refuse to recognize the supernatural only to be challenged to explain facts that cannot be accounted for on any human grounds. That from infancy she was conscious of a Divine leading, and that obedient to the heavenly vision she devoted herself to God and his world, moving among the plague-stricken in ministries of mercy; pleading for peace first with her neighbors and then before the leaders of the warring republics; winning the ear of political leader, prince and pope; preaching so that the tongue of the unkindest critic was forced to say, "It is not a woman that speaks, but the Holy Spirit himself;" appealing to the consciences of the foremost men of her times by letters which are still quick with righteous indignation; and crowning her other successes by bringing a vacillating and self-indulgent pope, in the teeth of his cardinals and of all the influences of statecraft and selfishness, to

abandon beautiful Avignon, and once again make malarious and melancholy Rome the seat of the papal power—that all these triumphs of heart and mind and soul were the achievements of a poor, frail woman who died at thirty-three, cannot be explained on any theory which denies the superhuman a place in the government of our world.

It is my purpose now, without arguing the point, to note a few of the characteristics of Catherine, and in doing so I may commend to the reader who wishes to study more in detail this wonderful life, her biography by Josephine Butler. Catherine "practised the presence of God." "While I was praying" she would say, "my Saviour showed me the meaning of this, and spoke thus to me." Under a sense that she was the messenger of the Divine will to man she would often be crushed to the earth. "I conjure you," she writes to her trusted spiritual friend "to pray for me that may be guided in the path of humility. Dwell ever in the remembrance of God."

Very early she learned from her Lord that she must "banish from her heart all anxiety thought concerning herself and her own salvation." At the bidding of love of ease or safety she dared not pause and say, "I shall not find peace in doing this or that." "When I live for the honor of God," she wrote in her last letter to Pope Urban, "without thinking of self, we receive light, power, and constant and a supernatural perseverance."

And yet the Catherine of these heaven gifts did not cease to be a sweet, simple minded woman. "I never," writes her disciple, Friar Bartholomew, "saw the least melancholy in her countenance, which was always cheerful and even merry." At the sight of a bank of mountain flowers in sunny Provence her face would flush with pleasure; and as she watched an ant-hill she bade her fellow travelers believe that "these little creatures came from the sacred thought of God."

Although she had no schooling, she taught herself to read, that so she might study the Scriptures, and when, many years later, she learned to write, she commanded a style of poetry, philosophy and correspondence which has been held to give her rank even with Petrarch and Dante.

The presence of the titled and wealthy seemed to awe her as little as the threats the brutal or the blandishments of the court. To the fair but infamous Joanna, Queen of Naples, she writes, "If you will take up the cross, many will follow you. Awake, my sisters, and act courageously. It is no time to sleep; time itself sleeps not; it flies like the wind. Sir John Hawkwood, the free-lance whose name sent terror into the hearts of his enemies, is to her a fellow-sinner needing as much as she, a Saviour. 'Retire, I beseech you, little into yourself, my brother, and contemplate the dangers and punishment to which you are exposing your soul in the service of the devil.' Amid the splendors of his privy room in his palace at Avignon, Pope Gregory quails before Catherine as she looks him in the face, and says 'In the name of God and of the fulfillment of duty, you will close the gates of this magnificent palace, and set out of Rome.' And Gregory had to surrender. His successor, Urban, who ran to the opposite extreme, was bidden by her "to temper z

h charity," and to accept all contradiction opposition with "tranquillity of heart." Over wild and depraved natures her power was equalled only by her courage. Climbing the cart which bore the tortured criminals to execution, she pleaded and prayed with them until their hearts were melted to repentance. Her evangelistic labors over for the Lord and Saviour the spiritual conquests the hours just past. Under her appeals a young nobleman forsook his profligate life and yielded himself to Christ and his love, and when the world drew him back she would refuse to give him up. "The time will come" she wrote to one in words which were prophetic, "when God will enable me to throw loose around your neck which will prevent you from ever escaping again." Long after she was dead, the vile Bernabos, once the powerful Duke of Milan, betrayed and imprisoned, and then out and dying, clutched with foul and filthy fingers the bar of his window, and without saying gasped out, "A broken and a contrite heart, O God, Thou wilt not despise." When, in the streets of Florence, a furious mob, armed with swords and clubs and thirsting for blood, cried, "Where is the wicked woman? Where is Catherine?" she turned and kneeling before the ring-leader as he brandished his sword aloft, said, "I am Catherine. Do whatever God permits you to do to me." And man slunk away unnerved.

She was in prayer, however, that her most remarkable victories were won. As we read her prayers to-day, we touch the secret as to the source of her power. In the last of them of which any records remain, she writes: "Eternal God, I commend to Thee my beloved children; leave them not orphaned and comfortless; visit them by Thy Spirit, and make them to live in the perfect love." And in every prayer there is a clear dependence on Christ as her one and only Saviour. Her dying words were the expression of her whole life. "Yes, Lord, Thou callest me to come to Thee; I go to Thee, not on account of my merits, but solely on account of Thy mercy, and that mercy I have imputed in Thy name, O Jesus, of Thy precious blood." Nothing is more marked in her life than her spirit of true, pure faith in her Saviour. She could seem as though fanaticism, so rife in her day had little power over her. To the theological subtleties of the doctors of the Church she paid slight heed. In a corrupt age she was fearless in exposing the weak spots in hierarchy and ecclesiastical system. "The Church," she says, "has no need of perfumes, incense or of precious stones and gold. It needs courage and faith." In her dying moments some one had placed before her a table on which were some relics of the saints, but she did not look on them. The key-note of her whole course was trust in Christ. Her words with which she incited the pope and his followers to do battle for God and his righteousness were words which she must often have urged home on her own heart. "Enter into this conflict without fear. If God is with you, who can be against you? Unite yourselves with Christ, and fight like men for Him; be ye as ye fight; but let your only weapons be prayer and prayer, virtue and love."

To-day it is not difficult, as we walk the narrow streets of Siena, to picture her as she lived among her friends and neighbors. The spiritual life is the same in all centuries and lands. The errors inevitable to her age no doubt affected her. She was no paragon of perfection, "faultily faultless, icily regular, splendidly null," but a true woman of like passions with others. But the one clear note of love to God and to his world is what we catch as we listen now. The doctor of theology who ascended the pulpit to preach her funeral sermon found himself speechless. "This holy one," was all that he could say "has no need of our preaching, and eulogy; she herself speaks, and her life is her eulogy." So has it always been with all true lives. So may it be with ours.—T. H. Pattison, in *Episcopal Recorder*.

PANAMA HATS, so called, have not been so much in use for many years as at present. They are not, however, the product of Panama at all, or even of the State of Columbia, says a correspondent of *The Times*, but are manufactured in the neighboring Republic of Ecuador, and sold in enormous quantities under the general name of Guayaquil hats throughout Mexico, Central America and South America at from fifty cents upward. But the true Panama hat sells at prices varying from twenty to one hundred and fifty dollars each, according to their fineness. They are prized in South America because their closely woven texture not only renders them impervious to the sun's rays, but likewise waterproof, which is highly esteemed where it is deemed desirable to keep the head dry during the constant equatorial showers.

This hat is made of a single piece of straw, and is extremely light and flexible. The plant from which it is made is the jipi-japa. The hats are made by Indian women, and require infinite patience and delicacy of handling, the very finest quality often requiring many months to bring to perfection. They are made on blocks placed between the knees, making it necessary to be constantly pressed close to the breast. The headquarters for the purchase of the bona fide hat is at the little mountain village in Ecuador called Monte Cristi. The correspondent affirms that purchases often amounting in value to thousands of dollars are made in the dark, the dealers being entirely guided in estimating the value of the goods through a sense of touch. The Indian women squat in a circle around the market place, each with her little bundle of hats, a dim oil lantern indicating their presence, and there they await the purchasers from all parts of the continent.

So flexible and fine are the hats that some years ago a present of a hat was made to the President of Mexico, inclosed in a small cigarette case of the same material without any injury.

"Commend me to that generous heart,
Which, like the pine on high;
Uplifts the same unvarying brow
To every change of sky.
Whose friendship does not fade away,
When winter tempests blow,
But, like the winter's icy crown
Looks greener through the snow."

THE COST OF THE BOER WAR.—The loan of \$300,000,000 which Sir Michael Hicks-Beach is negotiating is one index of the cost of the Boer war.

There is another cost, however, than that which appears in the Budget, and one for which the nation cannot be recompensed. A recent return of the War Office reports the cost of the war in human flesh and blood down to a month ago. From this it appears that the number of deaths has been 14,728. Of these 3936 were killed in battle, 1301 died of wounds soon after battle, ninety-six died in Boer prisons, three hundred and four died after having been sent home as invalids, two hundred and ninety-three were killed by accident, and the appalling number of 8793 died of disease. No fewer than seven hundred and seventy-five are still missing or in captivity among the Boers. And 2189, having been sent home as invalids, have so far failed to recover their health as to remain permanently unfit for duty, if not quite disabled. If we reckon that most of the "missing and prisoners" will eventually be reported safe and sound, we have a total of 17,000 men forever lost to the working force of the British Empire.

That is a loss of the heaviest kind, and one for which there can never be compensation.

Seventeen thousand lives, of her best picked men! And it was to have been merely a "military promenade" to Pretoria! It is an appalling proof of the illimitable uncertainties into which a nation plunges blindly and headlong whenever it goes to war.—N. Y. *Tribune*.

THE CHRISTIAN SABBATH.—The Christian has a Sabbath. But it will be observed most completely in heaven. All the Old Testament institutions are typical. The Sabbath typified rest. "God rested on the seventh day." At first, the rest, like all types instituted among the Jews, was physical, but the anti-type is never other than spiritual. Our rest is spiritual and eternal and heavenly like God's. The fourth chapter of the Hebrews makes this plain. "There remaineth therefore a rest to the people of God." Indeed we may have foretastes here below of the supreme peace and tranquillity of soul which is to characterize our heavenly existence. But then it will be complete and uninterrupted.

One word of warning, however. Because the Christian has not embodied the Jewish Sabbath in his creed, he should not therefore hastily and wantonly conclude that he is justified in keeping nothing, and working seven days in the week and ten hours every day thereof. Nor will he be inclined to do this. The Christian welcomes stated and set seasons of worship. He need not have a law to drive him to the place of worship. Yea, if he could worship with his brethren an hour or two every day of the seven, he would count it a great privilege. It is the beauty of the Christian dispensation that God's laws are written upon the heart, and that God works in us mainly through the Holy Spirit both to will and to do of his good pleasure.—*The Mennonite*.

It is not always the man most applauded who is most serviceable in either State or

THE ESTABLISHMENT OF THOUGHT.—That our thoughts may not be dissipated they need a vital purpose. That the soul may not float off it needs an anchor. Our thoughts take the direction of our works. So it is a proverbial wisdom which says: "Commit thy works to the Lord, and thy thoughts shall be established." Our thoughts are committed to the same that our works are, and it is for the training of thought and inward character that hearts are supplied.

The alternative would be: Commit thy works unto self and thy thoughts shall be to thyself, continually meander, and unstable. The rescue and salvation of our thoughts from the mind is the committal of our works to the Lord, doing them all as unto Him, consulting Him about all that we propose to do, that He may be the central authority of our deeds to the gathering of our thoughts shall be. These will be prone to take the direction of the hearts' strongest love, for where our assurance is there will be the heart, and the thoughts of the heart, be also. "I," said the Lord, "if I be lifted up from the earth, will draw all men unto me." His love so manifested by the Cross is the attractive power of the Cross for all men. "We love Him because He first loved us," and reconciled us by His death, that love, as the new commandment, be "the fulfilling of the law." So with the motive of our works and purposes centered in our "Chiefest among ten-thousands and together lovely," our works are committed to Him as their authority, that whatsoever we do by His hands find to do we may do it heartily as to the Lord. What a gatherer and savior of our thoughts into a healthy and living ones of purpose and of power, and what an anchor to our souls both sure and steadfast,

Christ in us the hope of glory is thus found to be!—the Establisher of the thoughts of all those whose works are committed unto Him, and done in singleness of heart as unto the Lord. What a security against the growing insanities of the world, disestablishing and distracting the powers of thought and inward control, so that they are like the chaff which the wind of caprice or passion driveth away!

Many a home is a hospital of deranged thoughts and inward instability, because men and women will be careful and troubled about many things instead of gathered unto the "one thing needful." Many a business is wrecked because of a disestablished mind too impatient to wait upon the Lord. We know not how many commercial establishments have been saved by the right use of a Friends' mid-week meeting; or how many a family has been established "in the nurture and admonition of the Lord," as the blessing that follows the committing of our works unto Him.

"Be careful for nothing. But in everything by prayer and supplication with thanksgiving let your requests be made known unto God; and the peace of God which passeth all understanding shall keep your minds and hearts by Jesus Christ."

A Dividing Spirit.

Without being aware of any spirit of separation being at work, we note the coincidence that the writer of the following letter was moved to copy for our readers' perusal an extract on that subject from Thomas Chalkley's Journal, before he had seen the communication of W. W. B. in number 3 of THE FRIEND. We feel at liberty to quote the following from his letter, before giving the extract:

DEAR FRIEND:—In reading over Thomas Chalkley's Journal yesterday I happened on the paragraph which I forward with this. I do not know that the spirit which he intended to discourage is as prevalent now as it was forty years ago, but I thought the revival of his objections to a dividing disposition might at least do no harm with some.

I have since read "W. W. B.'s" article on Separations [in number three]. It seems to me to contain just views, and if the professing churches among Friends of all shades of sentiment could but act in accord with them our Society would be a united body. But alas, when we survey the whole field in England and America, and read of the almost entire sacrifice in practice of the original testimonies that characterized Friends in worship, ministry, music, ornaments in apparel and furniture, art, complimentary language, vain amusements, fiction-reading, etc., on the part of all the Yearly

Meetings, except our own Yearly Meeting and a small remnant here and there, one feels that there is no reasonable hope of such unity in the future. I can see nothing to distinguish most bodies of Friends now extant from other Christian denominations but our peace principles. Forms of worship are somewhat different, but seem fast assimilating to those of the Methodists.

There are those who glory in these changes and there are periodicals which sustain them in their tone, and sometimes editorially. And yet I am unable to see any open path for those Friends who wish to sustain our valuable testimonies to stem the torrent of revolt (if I may so term it) that has set in and been sweeping away one landmark after another for the past fifty years. Separations are no remedy if we read their history, and note their results on the Society during that time.

THE FRIEND, I believe, has been always loyal to the pure Truth, and I hope may have the support of the Friends of Truth in upholding that standard. Not that I am much of an advocate for controversial essays. They are necessary at times to defend the right, but unless written in a charitable spirit often fail to convince an opponent.

The "open path" which our correspondent does not see, for the preserved remnant to follow, may yet exist without being visible, except at the opening. It consists in our following faithfully the openings before us for each day. What they will lead the flock out into, we leave to the Shepherd.

THOMAS CHALKLEY ON SEPARATIONS.

About this time a loving friend of mine informed me that one whom I very well knew in Barbadoes, a minister of our Society, had gone into an open separation, so as to keep meetings separate from his brethren and contrary to their advice. I was concerned in love to write to him a few lines to remind him of the unhappy state and end of such who notwithstanding the brotherly love and kind treatment of Friends had separated from us, and losing the sense of truth which had made them serviceable in the church, were actuated by a rending, dividing spirit, by which the enemy of our happiness had so far obtained his end, as to make some disturbance for a time; but few, if any, of these separatists, have had further power than to promote and maintain their separate meetings during their own lives; such meetings having in every instance I have known, except one, and that lasted not long, dropped on the death of the founders. And though we think it our duty to testify against, and disown all such, yet this disowning is only until the persons offending, from a real sense of, and sorrow for, their faults, acknowledge and condemn the same; then the arms of

Christ and his church, are open to receive and embrace them.

I therefore earnestly besought him to consider the danger of offending any who love and believe in Christ, though ever so little in their own or other men's esteem; for we cannot have true peace in departing from the pure love of God, his truth and people; to which I added the following sentences out of the New Testament:

"By this shall all men know that ye are my disciples, if ye have love one to another." Do not lose this mark.

"We know that we have passed from death unto life, because we love the brethren. He that loveth not his brother abideth in death. He that loveth not, knoweth not God; for God is love. He that dwelleth in love dwelleth in God, and God in him."

EULOGY OF THE DECEASED.—In sending a notice of the death of Mary Wood to our present number, a relative remarks in his letter, "More might have been truthfully said, but there seems to be a little testimony against eulogy."

Where the object of a eulogy is to please a family, relatives or friends, such a testimony may well be heeded; but where it is for the honor of truth, we deem that the truth shall be clearly spoken so far as it is to the glory of the grace that made one what he or she was. Under gospel concern "there shall also this that this woman hath done, be spoken for a memorial of her," is sometimes due to the church and the cause. We sympathize with our friend in his caution. It is on the right side.

FOR "THE FRIEND."

The Two Seeds.

"And I will put enmity between thee and the woman and between thy seed and her seed; it shall bruise thy head, and thou shalt bruise his heel" (Gen. iii: 15).

As the seed so the fruit. From wheat oats do not grow; nor from the apple grows the pear. Before the fall of man, man was of God, and God saw that man, with all things that He had made, was good, and Adam is called in Scripture "the son of God" (Luke iii: 38). But having fallen, another spirit is found in man. Hence is found in him the spirit of God, which is Christ the Word, and the spirit of evil, which is Satan. And whichever rules in man and which man obeys, his servant man is, "for his servants ye are to whom ye obey, whether of sin unto death, or of obedience unto righteousness." Neither can any man serve the two masters. Christ Jesus, in the parable of the tares, calls "the good seed, the children of the kingdom, but the tares, the children of the wicked one" (Matt. xiii: 38). Again, Jesus, who came into the world "to save his people from their sins," laid it down as a standard, "Whosoever committeth sin, is the servant of sin" (John viii: 34).

And the converse as given by the Apostle John is equally true, "ye know that every one that doeth righteousness is born of God" (1 John iii: 29). Jesus, the first-born of God's new creation knowing that He came from, and was born of God his Father, told the Jews who claimed to be Abraham's seed, that if they were his children, they would do the works of Abraham, the works of faith and righteousness, in which God found Abraham when He ratified his covenant to him, when He gave to him and to his seed the rite of circumcision as a seal of righteousness in obedience to God's commands. But the Jews not obeying the inspeaking Word of God, obeyed Satan, and doing so, Jesus told them they were "the children of them who slew the prophets," and that "they were of that Father whose works they did," even of the Wicked One, for they sought to slay the greatest of all God's prophets even his dear Son.

The "seed of the woman" is the seed of Abraham, in whom all nations were to be blessed, and this seed, as the apostle says, is Christ. To be born of Christ, is to be "born of the spirit," for "the Lord is that spirit" and this is "to be born of God." Those, then, are "Sons of God" who are led by God's spirit, and these only constitute the true church of God, of whom Christ is the first-born, and as such the Head, the Priest and Prophet of the family and household of God.

These seeds are not carnal, nor material, but spiritual. And between them, in man, is a strife for the mastery, as God said of the wicked world, who, obeying evil, perished in the flood, "My Spirit shall not always strive with man, for that he also is flesh," (Gen. vi: 3).

The prophets and apostles often speak of the wicked spirit as the flesh, as says Paul, "For the flesh lusteth against the Spirit, and the Spirit against the flesh, and these are contrary, the one to the other" (Gal. v: 17). So also, says James, of the spirit that ruleth in the natural man, "Do ye think that the Scripture saith in vain, the spirit that dwelleth in us lusteth to envy" (Jas. iii: 5). This indwelling spirit of evil, the seed and growth of the serpent, must be cast out by one stronger than he, and none is able to do this but Christ Jesus, who has all power given to Him both in heaven and in earth, and Christ is the seed of God. Man, then, as a free agent is the battle field between these two opposing seeds. Naturally man chooses the evil, but God, disquiets him there and inclines him to obey the good. Happy for that man who, hearing this Almighty Saviour and Friend, thus knocking at the door of his heart, yields his will to serve Him, admits Him there to cleanse his soul, to cast out the evil one who once bare rule that Christ may take up his dwelling there, as God hath said, "I will dwell in them and walk in them; and I will be their God, and they shall be my people" (2 Cor. vi: 16).

Thus is the Kingdom of God set up in the heart; for God by his spirit, dwells, rules and reigns there. "Know ye not that ye are the temple of God, and that the spirit of God dwelleth in you" (1 Cor. iii: 16). Then is that prayer of the longing soul fulfilled,

"O, Saviour, welcome to my heart,
Possess thy humble throne,
Bid every rival, Lord, depart,
And reign, O, Christ, alone."

That man is then truly of the seed of Abraham to whom are the promises and of the royal seed of David; and Christ the seed in them, to whom all God's promises are sure, become "in them the hope of glory."

For such have entered into God's covenant become circumcised in spirit, and sanctified and made holy, "by the blood of sprinkling," "the washing of regeneration and the renewings of the Holy Ghost." These stumble not at God's word, like the Jews of old, being disobedient thereto, but "having in obeying the truth through the spirit, purified their souls and having been 'born of the incorruptible seed, the Word of God, which liveth abideth forever,'" they become "a chosen generation a royal priesthood, a holy nation, peculiar people; that ye should shew forth its praises of Him who hath called you out of darkness into his marvellous light."

It was in the happy retrospect of his accomplished work that that eminent servant of the Lord, George Fox who had been called of God to proclaim the acceptable day of God, to turn men to the light of Christ which alone can lead them into all truth, and many having been turned thereto by the Spirit's power accompanying his testimony and come to sit down in the kingdom of God which is righteousness, peace and joy in the Holy Ghost, and in a sense spiritual communion with these will patiently awaiting his last summons to his Heavenly Father's home he praised God and exclaimed, "All is well; the seed of God reigns over all and over death itself. And though I am weak in body yet the power of God is over all and the Seed reigns over all disorderly spirits." After saying this he lay in a precious heavenly frame of mind as quietly fell asleep in Jesus. W. W. B.

A NEW DEAD SEA.—The Swedish explorer Sven Hedin, has discovered a very curious lake in Tibet, says the *Revue Scientifique*, which describes as follows:

"It is a very large sheet of water, hitherto unknown—a new Dead Sea—almost as interesting as that of Palestine. It is one of the strangest sheets of water that I have ever seen, writes the learned traveler. It is enormous extent but not very deep. To sail on it you have to walk through it on foot for a kilometer (over half a mile) from the edge to reach the boat; then the boat must be dragged another kilometer, so that a distance of two kilometers must be traversed from the shore before the boat with its equipment can be really floated. But the most curious and most remarkable feature of this inland sea is the incredible quantity of salt that it contains. The bottom is a compact mass of salt, on whose rough surface it is very disagreeable to walk as one must do to reach the boat. The boats themselves, our oars, our clothes, adds M. Hedin were all as white as chalk, and when drops of the water fell on the ground they left globules behind them as if they were sap from a candle. It is not remarkable that this sea and its neighborhood are as sterile as the Dead Sea of Palestine."—*The Literary Digest*.

ECONOMY is far removed from meanness. There is a proper husbanding of resources but it must not be at the expense of a noble spirit and a wise expenditure in the home and religious duty.

Some Thoughts Upon Friends' Principles.

DRESS BY C. L. MAYNARD, PRINCIPAL OF WESTFIELD COLLEGE, ENGLAND.

It may seem to savor of arrogance that one who stands on the outside should undertake to address the Society of Friends on their own principles, but occasionally it is those who are committed to a certain mode of thought to see the most clearly whither it is tending. Any rate it is good now and then to see ourselves as others see us, and be spectators rather than actors.

I am one of those who believe that the existence of the Society of Friends has been been of value to the Church of God in England, and that not only as giving clearer light to individuals who have composed it but fully much, or more, in the effect that its pro for the simplicity of truth has had on other religious bodies. The doctrines for which it stood in its youth are no longer resented, but have been gradually absorbed into the main body of Christian thought and feeling, so that the distinction between Friends and others is not so strongly marked as it was in the beginning. To me personally the Society of Friends is not on this account merely an historical body that has done good work in the past, but is a necessary factor in our present religious life, an ever-present testimony in favor of purely spiritual worship, beyond all value in face of the tendency to formality and routine that besets all of us, especially those of us that belong to the Church of England. For the time being let us fix our minds on the differences rather than on unity.

To an outside and superficial observer, the points that first attract attention are apt to be negative points. Friends do not have outward observance of the Sacrament; do not have any organized ministry, specially educated; do not approve of war with all its vast chinery; do not sing hymns in their worship; do not share in the recognized amusements of the world; do not take the oath in the courts of law; and so on, even with the lesser things, till one wonders what it is they give the impression of standing apart; of not sharing, of reserve rather than action.

Now, it is always a pity to fix the mind and attention on a negation, an empty space, a void, a not doing anything; for negations, though useful to clear the ground of error, can never be found to do active work. Let us fix our minds on the positive, the constructive, the living side of the Society of Friends, and we shall find it is most distinct; the principles taught are by no means negations, but the reverse, and are different branches of a living and organic whole, which bears its life in many directions.

When a division arises in the church of Christ, it is always useful to find out what caused it. It is wholly impossible it should be the work of one man or a dozen men; it is necessary, the call of the age, and has a definite meaning. The true unity of the church is like the depth of the sea, and the divisions are like the waves on the surface; the waves attract the attention of the mere on-looker, noisy, uncertain, aggressive, superfi-

cial, known to everyone who sails lightly over the surface, but it is the firm solid depth below that is the real thing, miles and miles of it unmovable clear and mighty, and only known by those who sound it or dive into it. That is the proportion between the division and the unity, and all are so one in Christ that as soon as the surface is left and we speak of things Divine we do not know to which division of the Church the speaker belongs.

Taken historically, these divisions have done nothing but good, because each one at its rise is the remedying of a serious defect in the Church that gave it birth and the embodying of the truths previously overlooked and undervalued.

To start with the Reformation was the great reaction against the power of the priesthood. The doctrines of life and salvation are all there in the Church of Rome, but they are very nearly neutralized in actual force by this one doctrine of the existence of a priesthood, the priest so standing between man and God that all offerings, all blessings, must pass through him. The term Protestant sounds negative as though protesting against all this, but really it is positive, a protest for one and one only doctrine, that every human soul has the right to stand face to face with its Maker as the flowers stand before the sun in the sky. That it was not on the twelve but on the one hundred and twenty that the Spirit fell, and that no person, or system, or ceremony, or any external thing whatever, has been made necessary, but that the desire of the soul after God and his pardon and his holiness is the sole qualification for receiving all his blessings. Christ who is the exponent of God that we can understand, who is indeed God in relation to man, is the sole Mediator.

Now Luther did not invent all this. He is not the founder but the spokesman of Protestantism. Just as again and again Peter spoke out what the other eleven were thinking or wishing, so Luther spoke for thousands and thousands of hearts captive and pining to be free. The axe must have an edge, the needle must have a point, and one man must go before the others and bear the brunt of the attack, but he is very little use, he is only a voice crying in the wilderness unless he has the weight and force of other lives close behind him. The Reformation was like the coming of spring after a severe winter, when all the face of nature is renewed at once.

In like manner George Fox was no inventor or even founder. He was a man in whom the Spirit of God dwelt with a pervading presence such as has been seldom seen on this poor earth and when he spoke and testified and preached he gathered in all prepared and tender hearts to see things in the light in which he saw them. They were ready, and it was "a word to the wise" when he spoke. For example, "William Dewsbury was immediately convinced, as G. Fox himself was, who coming to him found himself in unity with him" (Sewell). The plough had painfully traversed up and down, tearing out weeds, and exposing the hard soil to rain and dew and the benign influences of the sun and air, but it was empty and bare and as soon as George Fox scattered the Divine seed it was sheltered and cared for and nursed by these honest and good hearts, and brought forth a harvest of goodness and

beauty and the reality of spiritual force such as perhaps has never been known before or since.

From whom did the Friends re-act or break off? Undoubtedly from the Puritans, as is proved by considering the following list which shows the stock from which some of the leading Friends sprang:—George Fox's parents were staunch Presbyterians ("Righteous Christ"); Robert Barclay was a Presbyterian; Isaac Penington, a strong Independent; John Audland, an Independent minister. Anne Audland (Newby) was brought up among strict Puritans. Edward Burrough belonged to the Church of England, but left and became an ardent Presbyterian. Elizabeth Stirredge was brought up the strictest Puritan. William Dewsbury joined the Parliamentary army, and lived among Independents and Anabaptists. John Crook, apprentice, joined a Presbyterian congregation. Stephen Crisp, of argumentative learning, speaks of "acquaintance with many sects." John Banks used to preach in a chapel, and read long prayers. William Bailey was a Baptist minister; John Gratton, a Presbyterian, who heard all the great preachers. William Edmundson belonged to the Parliamentary army. Richard Claridge, Church of England, Oxford scholar, joined the Baptists. George Whitehead, was a Presbyterian. This being the case, Puritanism becomes even more important from our immediate point of view.

We must try and state clearly, first, what were the main ideas or central aims of the Puritans and, secondly, what were the main defects of their system which produced so strong a reaction.

The main ideas that are embodied in Puritanism are strong Protestantism, complete independence of man, and the soul's right to be alone with God. Individualism was at its extreme, each heart separately taught by the Spirit. Self-discipline was a strong point, starving every lower taste to try to increase and strengthen the spiritual life. Also, seeing that it was a wicked brutal age, and the tyranny of the throne had become insupportable, they believed themselves called to give their lives in fighting for freedom and righteousness and the supremacy of the law of God. They were exceedingly strict with themselves as to "keeping the Sunday," hearing sermons, and exercising their spirits in prayer and self-denial and in every way they knew. The infusion of their sincerity lasts even to this day, and is the backbone of English integrity. Carlyle speaks of them in his "Letters of Oliver Cromwell as follows:

"Perhaps no nobler heroism has ever transacted itself on this earth. And the soul of it remains part of the eternal soul of things. Here of our own land and lineage, in practical English shape, where Heroes on the earth once more who knew in every fibre, and with heroic daring laid to heart, that an Almighty Justice does verily rule this world; that it is good to fight on God's side, and bad to fight on the devil's side. The essence of all Heroisms and Veracities that ever have been or will be."

The defects, in spite of all this good, were mainly three:

(1) Undervaluing the word of God speaking in the heart. They were so profoundly, so literally attached to the written Bible that their attention was confined to its pages.

(2) Too little sympathy with all the human affections. Willing to suffer direst pains and losses themselves, they expected it from others, and the mere fact of suffering was no argument at all.

(3) They inflicted their own standard in all things on others. There was the "right" supported by the words of the Bible, and everyone must conform to it, better voluntarily, of course, but if not, why involuntarily. All the less noble of them easily became bitter and narrow and ready to persecute all who differed with them, and all the younger generation and the more careless tended to become mere formalists.

Thus one of the most utterly sincere movements the world has ever seen became in time the parent of hypocrites who have been a reproach and a by-word ever since.

Now the early Friends, almost every one without exception, were converts from this religious atmosphere, born and brought up in it, impregnated with the Puritan way of looking at things, and taking over their very modes of expression. The three defects were becoming oppressive and grievous to all those among them, and there were thousands, who were truly taught by the Divine Spirit, and the rise of the Friends was the necessary reaction. Of the two churches that formed the true Puritans, the Presbyterians were by far the more intolerant and hard towards others, but the Independents were equally strict with themselves and their own children and dependents, and they stood firmly with each other and with the milder Baptists too, against the Church of England and the Royalists. Universally and as it were unconsciously, they laid very great stress on the opposite of the three great defects:—

(1) They laid first emphasis on the word of God that speaks in the heart of men. The Reformation abolished the priesthood, and this further step abolished the ministry as a separate body. Among the Puritans the ministry had become too important; every part of the Bible was considered equally inspired, and the most obscure themes were chosen, and then, on any important occasion, they would preach from 9 a. m. to 4 p. m. with one half-hour's interval. All this was swept away, and though some Friends still preached very long sermons, the general meetings were in great simplicity and often silence, a few words from the heart taking the place of these learned and involved discourses. With such speaking "there is neither male nor female," but the spirit speaks through all alike.

(2) An abundant spring of sympathy was opened with all human ills. Not only for their own friends under cruel persecution, but for all. They have held to this strongly altruistic principle ever since. The emancipation of slaves, the reform of prisons, the attempts to lighten the condition of the Stundists, and now the help given to the Doukhobors, the inquiry into the opium traffic; indeed we may say that whenever some difficult, delicate, and tedious piece of work is no one's business and has a philanthropic object, there the Friends are to be found. This was true from the earliest days. See the beautiful account in John Woolman's Journal:—"In a time of sickness, a little more than two and a-half years ago, I was brought so near to the gates of

death, that I forgot my name. Being then desirous to know who I was, I saw a mass of matter of a dull, gloomy color between the south and the east, and was informed that this mass was human beings in as great misery as they could be and live, and that I was mixed with them, and that henceforth I might not consider myself as a distinct or separate being."

(3) They never fought these battles with material weapons; they never worked by force, but by reason and love only. The Puritans could be almost as bitter persecutors as the Roman Catholics, and the Quakers are the only older sect that has never retaliated. The fires of Smithfield, the pillory, and the stocks, had not taught the Puritans any better, but the pure love spread abroad in the hearts of the Friends, had taught them that man's cruelty is just short of limitless, and that patience and generosity conquer where the most stubborn resistance fails.

This solid foundation and groundwork of Puritanism, built on the superstructure of these three beautiful alterations in its stern spirit produced those characters that for pure spirituality and devotion, for utter disinterestedness and the power of forgiving love, must always hold one of the very foremost ranks in the story of the Church. There seemed absolutely no difficulty and danger and misery over which they could not triumph, so truly were they made "more than conquerors through Him that loved us." And how they suffered! From 1662 to 1697, only thirty-five years, thirteen thousand five hundred and sixty-two of them suffered imprisonment in England, and if you count the Commonwealth, Ireland, New England, and all, you must add ten thousand more, and the number of those who died in gaol or from direct hardships is three hundred and eighty-eight.

It is a glorious childhood for any community to have had and to be able to look back always to such a spiritual ancestry is a possession for life. But do we wish to have all our good things in the past? Is it really a good thing to have started on so high a level and to have been coming down ever since? Suffer the word of warning, and see whether the historical view I have tried to give you does not even of itself suggest where the weakness has come from, and in consequence where the remedy might be sought for and found. A man of great insight said to me the other day, "I cannot take the interest in the Friends that some of the isolated characters deserve, because they lack that main sign of the force of healthy life, the power of reproduction." We must admit there is some truth in these words, and that even since the first rank of the converts from Puritanism, the children have tended not to be the equals of their parents. In actual numbers you are not nearly what you once were, for in the year 1700 you were sixty thousand or seventy thousand, which would be equivalent relatively to eight hundred thousand now and you would be the first to say you were not of the generally heroic mould that they were. What is it that has been lost? I believe we may go back on the three reactions I brought before your notice, and you will find that they need reacting from again.

(1) The written records of the Bible tend to be undervalued. [Doubtless the doctrine of

the "inspeaking word," or the universal and saving life of Christ, can be and has been thus abused,—even to a sifting of our membership. And we have been dismembered also by a reaction from this to the other extreme of making the Bible "the sole rule of faith and practice."

But these swayings backward and forward are incidental to human weakness, and the strong, fundamental truth of our spiritual standard is not to be judged by them. These are as "waves" on the majestic deep, so aptly described in the fifth paragraph hereof. We believe no organization has proved practically more loyal to the Scriptures than the Society of Friends, and that its holding of them in the Spirit is the surest hold on them for their perpetuation that the Church will find.—Ed. It is far easier to do without the Bible, but if we neglect it we shall find that the Spirit of God does not speak more to us but less, and we drift into vagueness of doctrine and thence into worldliness of aim and practice. "Take heed to the doctrine" is as truly a command as "Take heed to thyself," and if we lay down our weapons we shall do very little true work for God.

(2) The very beauty of philanthropy makes a formidable rival to the true missionary motive. [Both in their true sense are of the same root, if by "motive" is meant motive power, the moving of the Divine Spirit.] Human suffering may occupy too large a share of our attention, and human sin too little. We find it far easier to deal with the bodies of men than with their souls, and our energy runs to changing their circumstances, and not like the true evangelist, changing their hearts and lives. This is the black shadow always attending that noble thing, philanthropy [For philanthropy as a gospel shadow, see Acts v: 15].

(3) The beauty of toleration may easily run into that spurious charity that leaves people alone. Hoping for the best may easily be deluded and false hope, and again and again we are warned by our Lord that we must let his witnesses, his messengers. It is far easier to leave people alone and not interfere with them, for we get no thanks for awaking them. It is considered "bad form" now-a-days to blame anyone directly or set them right. Whatever the faults of the seventeenth century were, they were not lukewarmness. Everyone loved their own religion and was a devoutly anxious others should love it to Lukewarmness is more violently rejected our Lord than error. The easiest of all things is *laissez-faire*, and to swim with the stream indifference is our real enemy and now takes the form of kindness and toleration it hard to combat, and indeed no form of opposition is so hard.

Let us leave all difficulties and look at what can be, for it has been. The Puritan* may do the ploughing, with its deep conviction sin, before the Friend* can rightly do it

* We take these names, not in the sectarian sense but as principles: that is "repentance towards God" is the necessary line of preparation for saving faith; growth in our Lord Jesus Christ. The thought of writer—that of "the terror of the Lord" being near before we can "persuade men," appears the same as conveyed on our page 13 of number 2, in the Remittances of Ebenezer Wood, where two kinds of labor were distinguished from each other.

wing. A quite humble and obscure instance was to mind, very touching in its simplicity. It is in the life of George Whitehead, who grew greatly dissatisfied with the Presbyterian ministry he attended, and hearing of Friends, was anxious to know more about them. He went to a meeting at Sunnyside, and was very much impressed in any way by the words of the Friend who spoke, but profoundly impressed was the effect produced on the hearers. What struck him most, he says, was "seeing a young girl going mourning out of the meeting, and bending her seated on the ground with her face toward the earth as if she regarded nobody present, as she, mourning bitterly, cried out, 'Lord make me clean! Oh Lord, make me clean!' This did far more deeply and tenderly affect my heart than what I had heard spoken before more than all the preaching that ever I had heard from man." Here the true unsparing plough of the Puritan had been at work, and we must use it. If not, the precious seed so often falls on ground pre-occupied and shallow ground that needs to be pierced rough and through by the sense of the demands of God, and our own inadequacy to meet them.

With this preparation and the true seed, the harvest will be as good as ever, for the principles of God never grow old. We have always with us the same soil, for the heart of man remains the same through the ages; the same, for the word of the Lord endureth forever; the same climate and enemies, for life is under much the same conditions; the same sun in the sky, the force of the Spirit of God, and if we add the same method of working, both in ploughing and sowing we may expect the same glorious results.—*London Friend.*

WHAT IS YOUR RELIGION WORTH?—A gentleman was traveling from Cambridge to York, and as a true servant of the Lord Jesus he might ever be to about his Divine Master's business. Ere he started, he furnished himself with a pocketful of tracts; and as the train drew out of the Cambridge station, he began to hand them round. One of the passengers refused, and taking a race card out of his pocket, he held it up, saying, "You see this; it's my religion." "It is, my friend?" "Yes," he replied. "I suppose you have a great many of those cards?" "Oh, yes, I have pinned all over my mantel-piece." "Well, now, go on and collect as many more as you can; pin them all around your room; and when the doctor tells you that you have only ten minutes to live, take them all down, count them over, and see what your religion is worth."

They sat quiet, the one in silent prayer and the other in anxious thought. When the gentleman opened the door to alight, the man said, "say, you can give me one of those papers if you will." The tract was immediately given; and the result is known to Him who will not let his word return void, but will make it accomplish its purposes.

Dear reader, what is your religion? Every man has a religion of some sort or another, for man must worship and make a god of something or somebody.—*British Evangelist.*

RICHARD BAXTER's dying words were "Almost all!"

An Epistle

From the General Meeting of Friends, held at Fritchley, Derbyshire, the ninth of Fifth Month, 1901, to the Members and Attenders of its Meetings and any others to whom this may come.

DEAR FRIENDS:—We are assured by the apostolic declaration, and experience confirms it, that "the grace of God that bringeth salvation hath appeared to all men, teaching, that denying ungodliness and worldly lusts, we should live soberly, righteously and godly in this present world, looking for that blessed hope and the glorious appearing of the great God and our Saviour Jesus Christ, who gave himself for us that He might redeem us from all iniquity and purify unto himself a peculiar people zealous of good works" (Titus i: 11—14).

The way of salvation is made open to all by what Christ has done for us by his coming, death and resurrection, and by what He is seeking to do for us, by his Spirit, if we are willing to receive Him in the way of his coming to our souls. And those who thus receive Him, He will gently teach and lead forward in the way of his choosing, which is ever the best, for "it is not in man who walketh to direct his steps" aright.

Let any who have felt the visitations of Divine light or grace, still look for that blessed hope (which is *Christ in you*, the hope of glory) for its further appearances from time to time, which are needful for us in our journey through life towards "that city which hath foundations, whose builder and maker is God."

That which may be known of God is manifest within. He shows it unto us. How needful then that we turn from ourselves to Him who is the way, the truth and the life, and seek Him where He may be found, even within, for as our Saviour declared "the Kingdom of God is within you." He will not be lacking in teaching and leading all who thus turn toward Him, but let us not only be willing to be taught and led, but also to be baptized with the Holy Ghost and fire; with the Holy Ghost to renew and bring forth that birth which is of the Kingdom of Heaven; and with fire, that all that is of a contrary nature may be consumed.

Regeneration is a great work; do not let us think it is already accomplished, but rather seek that its further work may be wrought in us. Then shall we be kept humble and truly helpful to one another. There are, we believe, many up and down who have known something of these saving visitations to their souls, and who have been enabled thereby to make some straight steps to their feet, but whose spiritual eyes have not been fully opened to behold clearly the Divine source from which they spring. Oh, that these may not be satisfied to remain where they are, but be willing to cease more from themselves and seek for more of the appearing of Jesus Christ, so that the work of their salvation may go forward, through the operation of Divine grace in their hearts. For if we are not on the watch, eyeing our Divine light and Leader, the enemy will have us either to stand still too long or move when we should stand still, and so hinder our spiritual growth and progress. We are his servants whom we obey, and though

we have to contend against the world, the flesh, and the enemy, let us not be discouraged, for "greater is He that is in you than he that is in the world." Therefore be of good cheer and seek the Lord and his strength. He will not leave any of his little ones who put their trust in Him.

As there is more of an individual faithfulness, we may believe that there will be more of a gathering and drawing nearer together. In a living and growing Church there are differences of growth and experience from that of the child, to the father and mother in Christ. It is not so much all coming to the same stature, nor mere conformity to an outward standard, that has the gathering influence, as being individually faithful to the measure of Divine light with which we are visited. Then shall we truly help one another, and having our lamps trimmed and burning, be ready to enter in with the Bridegroom of Souls at his coming.

Those who are in measure purified unto Christ, are zealous that their works should be wrought *in Him*, for only such works gather unto Him and are to his praise and glory, and it is unto Him that the gathering of the people must be. He is our High Priest and King. He alone is head over all things to his Church and people—to all those who allow the government of their souls to be upon his shoulders.

Living in a day of outward ease and prosperity, yet of much mental strain, hurry and excitement, there is great danger to us as individuals and as a Church of leaving our first love, of losing in degree that zeal for God and the saving knowledge of his truth with which our souls were visited at the first. There is danger, lest in pursuits which are deemed lawful the wings of the soul be clogged, lest heavenly aspirations have less and less place in our minds, and the things which are seen and temporal gain our attention over those things which are not seen and are eternal. Our unwearied enemy lays his snares on the right hand and on the left, to entangle the feet of the unwary. The mystery of iniquity works in hidden and insidious ways, and often under the appearance of good and the heaven of the spirit of this world permeates in a greater or less degree all that bears not the seal of the Divine Spirit. Therefore "let him that thinketh he standeth, take heed lest he fall," and all give diligent heed to the Master's injunction: "What I say unto you I say unto all, watch."

Our worthy predecessor, William Penn, in addressing Friends in his day gives this counsel and admonition:—

"Wherefore I cannot but cry and call aloud to you that have long been professors of the Truth, and know the Truth in the convincing power of it, and have had a sober conversation among men, yet content yourselves to know the Truth only for yourselves, to go to meetings, and exercise an ordinary charity in the Church, and an honest behavior in the world, and limit yourselves within these bounds, feeling little or no concern upon your spirits for the glory of the Lord in the prosperity of his truth on the earth more than to be glad that others succeed in such service. Arise ye in the name and power of the Lord Jesus. Behold how white the fields are unto harvest in this and other nations, and

how few able and faithful laborers there are to work therein. Your country folks, neighbors and kindred want to know the Lord and his truth and to walk in it. Does nothing lie at your door on their account? Search ye, and see and lose no time I beseech you. . . . Let the Lord be chiefly in your eye, and ponder your ways and see if God has nothing more for you to do, and if you find yourselves short in your account with Him, then wait for his preparation, and be ready to receive the word of command, and be not weary in well-doing, when you have put your hands to the plough and assuredly you shall reap (if you faint not) the fruit of your heavenly labor in God's everlasting kingdom."

On behalf of those young in years your earnest desires have arisen. Dear hearts, untired as yet in the furnace of affliction, before whom life stretches out as a flowery path, give heed, we beseech you to the injunction "Remember now thy Creator in the days of thy youth, while the evil days come not nor the years draw nigh in which thou shalt say 'I have no pleasure in them.'" The time of flowers will not last always, but if in the Spring-time of life, your hearts are given up to follow the heavenly leadings, when trials and temptations befall you, you will have an unfailling comforter, a helper in every time of need. "Seek" then "the Lord while He may be found, call ye upon Him while He is near," give not sleep to your eyes nor slumber to your eyelids, till you have found the Beloved of souls, who is calling you to himself that his blessing may rest upon you: "Behold I stand at the door and knock, if any man hear my voice and open the door, I will come unto him and sup with him and he with me." Wherefore dear ones, do not put off or withstand the day of your visitation, but humbly yield thereto, and your spiritual eyes will be opened to see the beauty of holiness and your hearts prepared to receive the treasures of the heavenly kingdom. Think not that it is impossible to arrive at this state because so few are willing to strive for it. "Ask and it shall be given unto you, seek and ye shall find, knock and it shall be opened unto you;" yea dig deep and search diligently until you have found the pearl of great price, and be willing to sell all and part with all that you may obtain it, and you will indeed find it a treasure of priceless value and know a joy and peace in its possession which nothing of this world can give.

And to all who are in measure faithfully endeavoring to let the day's work keep pace with the day, a word of encouragement goes forth. Let nothing hinder you dear friends, nor from going forward in the heavenly journey, nor from a willing and faithful obedience to the Divine requirings. You will not be exempt from trials, but they will bring no evil upon you, but be as the furnace fire which prepares the metal for the Master's hand to fashion as He will. We do not know what may be required in the future, and therefore cannot tell what baptisms are necessary now, so let there be no shrinking from suffering, or want of faith when the way seems dark or long, but cling close to your leader and hold fast your confidence in Him, and He will prove a sure refuge until the storm be overpast.

Beloved friends, older and younger, let us be concerned in all the designs and purposes

of life, the occupations and pursuits, the recreations and enjoyments, in which we spend our precious time, constantly to bring our deeds to the Light that it may be made manifest if they are wrought in God, and may we day by day seek to gather yet more deeply with humility and watchfulness into that true inward silence in which the Divine presence is felt, where we shall be baptized into oneness of heart, our spiritual strength be renewed and ability received to wrestle for a blessing upon the Lord's heritage. Thus will the weak be strengthened, the wounded bound up, the ignorant instructed, those out of the way restored, and the Church enabled to put on strength in the name of the Lord, for they that wait upon the Lord shall renew their strength, they shall mount up with wings as eagles, they shall run and not be weary, they shall walk and not faint.

And now brethren we commend you to God and to the word of his grace which is able to build us up and to give us an inheritance among all them that are sanctified.

Signed in and on behalf of the meeting,
JOHN E. SOUTHALE, Clerk.

The Language of the English.

That hackneyed American maiden who said London was a nice place if you knew the language was not a bit absurd. We speak English; but we have built up our forms of English expression upon the English of a few shires of the old country that it was spoken between two and three centuries ago, while they have been blending and changing the speech of all their home peoples during the same period. The result is that an American can hardly utter a sentence in England without calling attention to the difference between his speech and that of the people about him. Only yesterday, after eighteen months' residence in England, I rushed up to a conductor in Charing Cross Station, and asked, "Which car for Bromley?" He stared at me and I knew I had spoken a foreign tongue to him because street vehicles like omnibuses and horse-cars, are called road cars and tram cars, and there are no other cars in England.

If you ask a guest at your home in England whether he likes his meat rare, he asks what you said because he does not understand you. He calls meat underdone when it is not thoroughly cooked. If you tell him you fear the asparagus is canned, he is at a loss again, because he would have said it was tinned. To ask him to pass the powdered sugar will again set him to wondering, for he calls it icing sugar, generally, though he knows that it is sometimes called caster or sifted sugar. And if you have candy on the table you may not call it so without betraying your foreign origin, for he calls candy "sweets," abbreviated from "sweetmeats," and used to designate all preserves, puddings, pies, candies and jams.

To go farther along the eccentricities of English at the dining-table, most persons know, I suppose, that the beet is called beet root, corn starch is corn flour, corned beef (or a particular cut of it) is called "silversides of beef," and napkins are serviettes.

The American who believes, as thousands do, that to betray one's nationality is to invite overcharging and extortion in the West End shops of London is not only hard pressed to

choose the peculiar words the English employ, but he has quite as many and as deep pitfalls to avoid in the methods of pronunciation. I will not refer to the false or ignorant methods of illiterate persons, but will confine attention to some eccentricities of pronunciation of gentlemen and ladies of education, rank, and breeding. They say immettly, injin for engine, militry, figger and figgers, clark for clerk, paytent, naytional—and so on through a long list. The peculiarities of their mode of pronouncing their own names of families, places, and things are not open to criticism, because if they may not do as they please with their own, it is hard indeed. They pronounce Berkely barclay, Cowper is cooper, Cadogan is kerduggan, Ralph is rafe in some shires, Craven is sometimes crawven, Derby is darby, Leveson-Gower becomes loosun-gore, Hertford is hartford, and Albany is spoken so that the first syllable shall rhyme with shall, instead of with hall, as with us. I hesitate to say that Cholmondeley is called chumly, and that Beauchamp is beecham, as every one knows these eccentricities yet they are the most remarkable of all the liberties the English take with their language. You must say Balmo-ral and Trafal-arg and you must chop the following names very short: Lud-get Ho-b'n, South-uk, and Merrybun, whenever you wish to say Ludgate, Holborn, Southwark, and Marylebone. I have heard the Prince call his own house Mohrer House, though we call it Marlborough House.—*Julian Ralph in Harper's Magazine.*

PENNSYLVANIA AND SOUTH AFRICA.—While the "repetitions" of history are often far from parallel, we may learn lessons from past events which point to principles rather than methods. Such an instance our friend Howard Hodgkin justly finds in the principle which actuated William Penn in his action toward the Indians of Pennsylvania. There can be little question in the minds of any that had the principles of Penn animated either party in the conflict, war in South Africa would never have broken out, or if it had broken out would never have reached its present stage. We cannot, however, mend the past; the war, with all its suffering, its hatred, its meanness, its destruction, as well as its heroisms, its generousities as displayed by individuals, is a matter of history, fresh pages of which continue to be written every day. Have the principles which governed the founding of Pennsylvania no practical application to the position of affairs in South Africa to-day? Howard Hodgkin rightly argues they have. "It is almost bewildering to think," he writes in the *Westminster Review*, "how rapidly a change for the better might be effected if only our statesmen could first appreciate and then imitate the wisdom of the Quaker courtier of the seventeenth century." "Penn," he believes, "would have united with us in desiring the extension of a beneficent British rule, which his justice and gentleness might have rendered acceptable, but he would not have forced it by arms upon an unwilling people. . . . It were better to be on friendly terms with two contented peoples outside the British Empire than on terms of enmity with two rebellious peoples lately introduced within it." "If only the English will rise to the high level of the first

titlers of Pennsylvania, the other inhabitants of South Africa will rise (at least) to the level of the Red Indians."—*London Friend*.

"BUT above all things, my brethren, swear to, neither by heaven, neither by the earth, or by any other oath."

And yet they tell us that these oath-boundstitutions of darkness "do not interfere with anyone's religion?" What kind of religion is that blasphemy will not interfere with? that kind of religion is it that a positive transgression of God's holy law will not interfere with? Is it the Christian religion, or is Pagan?—*Octographic Review*.

NOTHING does reason more right than the oneness of those who offer it; for truth suffers more from the heat of its defenders than from the arguments of its opposers.—*IV. m.*

Notes from Others.

It is highly probable that Christ would confine a "Boss" to politics, and not recognize his place in the Church.—*N. C. Friend*.

Although the diameter of the earth has been roughly known for many years, it has only lately been accurately ascertained, after thirty years of labor and a cost of \$500,000. It is 7,926 miles the equator and 7,899 from pole to pole.

The Customs Collector of San Francisco reports: Opium brings in a big revenue of more than \$1,000,000 a year. The total importation to San Francisco of opium prepared for smoking is 1,804,183 pounds.

The new interest in animals and birds is a real of Christianity in the very spirit of Jesus. Here a real love to animals springs up, cruelty man can have no place.—*Christian Register*.

Dr. Sealch, in a recent address before the Lough School of Arts, sounded again the timberline alarm. A deficiency of wood will soon be felt, he said, unless systematic measures for increasing the world's supply be adopted. He points to as a remedy the cultivation of timber upon sterile land, just as other crops are raised. It is plain that the nation which enters upon foresting on a large scale will eventually have valuable resources.

SO MUCH FOR THE "FREE GIFT."—King Edward is cutting down many useless expenditures of crown. The royal buckhounds and the wilders at Windsor have been given up, and lately number of king's chaplains in ordinary has been reduced from thirty-six to twelve. The ecclesiastical establishment at St. James' Palace has been reorganized, a dean, a sub-dean, eight priests in ordinary, thirty-six chaplains in ordinary, twelve lay chaplains, a master of the Chapel Royal, five "gentlemen" and ten "child" choristers, an organist and other officials.

J. M. Sheldon, of Topeka, Kansas, author of "In Steps," in Chicago, lately said: "Last year the United States paid over \$1,000,000,000 for intoxicating drinks, \$600,000,000 for tobacco, \$25,000,000 for kid gloves, \$5,000,000 for ostrich feathers only \$12,000,000 all told for mission work at home and abroad. Yet we call ourselves a Christian nation. Some of the followers of this Esau of the world are denominational rivalry, sectarianism, distinctions, gambling and spoils in political life and drink and lust and contempt of the marriage relation. All these are coming up fast. If

we shall overcome these evils we must have the Divine blessing."

CARNEGIE TO AN ENVIOUS FRIEND.—One of Carnegie's friends says: "I remember as we drove down to the station on his four-in-hand coach, I was saying how I envied him his wealth, and he said: 'I am not really to be envied. How can my wealth help me? I am sixty years old and I cannot digest. I would give you all my millions if you could give me your youth and health.' And then I shall never forget his next remark. We had driven on some yards in silence, when he suddenly turned, and, in a hushed voice, speaking with a bitterness and a depth of feeling quite indescribable, he said: 'If I could make the bargain, I would; I'd gladly sell anything to have half my life over again.' And I saw his hands clench as he spoke."—*Mainly About People*.

THE PHILOSOPHY OF PERSPIRATION.—"There are many troubles which you cannot cure by the Bible and the hymn-book," said Henry Ward Beecher, "but which you can cure by a good perspiration and a breath of fresh air."

There is a large paradox in the philosophy of perspiration. The hotter the healthy human body becomes the more freely it perspires, and yet the more freely it perspires the cooler it grows.

Many persons try to keep cool by avoiding all unnecessary exercise and lounging in the shade. That is entirely unphilosophical. Perspiration, instead of being a symptom of suffering from the heat, is a sign of relief therefrom. And it may be accepted by all persons in normal health that moderate exercise, sufficient to induce a liberal moistening of the skin is the best specific that can be prescribed for their use in hot weather. None suffer more torture on a sultry day than those who make their special effort to avoid perspiration.—*N. Y. World*.

A VALUABLE PAMPHLET.—The directors of the Old South Work in Boston, says the *Intelligencer*, have rendered a distinct service to the public in adding The Hague Arbitration Treaty to their series of "Old South Leaflets," constituting No. 144 in that large and valuable series. It is not the first service which they have rendered in this international field. William Penn's "Plan for the Peace of Europe" and the introduction to Grotius's great work on "The Rights of War and Peace" have both been published among the Old South Leaflets, and other historic peace documents are to follow. None, however, can be more useful than the present issue, giving the full text of The Hague Arbitration Treaty. Furnished for the mere cost of printing, five cents a copy, it makes it easily possible for the students in our schools and colleges, and for the general public, to become familiar with its provisions; and it is to be hoped that thousands will do so.

Address "Directors of the Old South Work, Old South Meeting-house, Boston, Mass."

Items Concerning the Society.

What a glorious thought it is [that of a Yearly Meeting] were having our own way is no part of the satisfaction; where love rules and self is slain!—*N. Carolina Friend*.

The possibilities of careful management of trust funds have been illustrated in a case recently brought to attention. In New Jersey, in 1851, a young woman, L. L., came "of age," and received as her inheritance \$25,000 in personal property, with a farm, etc. Her own mental capacity not being strong, she gave a power-of-attorney to a friend (a Friend, also), to manage her estate for her, and he, after about twenty-five years of charge, resigned his attorneyship to his son. Some time since she died, the trust having thus lasted almost precisely fifty years afterwards. So successful

had been her two agents that while she had been maintained and cared for, during the half century in entire comfort and independence, out of her property, the \$25,000 had been increased to \$877,000. Two well-known Burlington county Friends, who were requested to audit the account, found it a task requiring a week's steady work, and were not a little impressed by the final showing.—*Intelligencer*.

The Yearly Meeting, held at Portland, Maine, last month, followed the lead of New York and agreed to refer to the next Quinquennial Conference the question of bringing the entire Christian Church of America into a united movement against the liquor traffic. The Uniform Discipline has now been adopted for active operation. After a year's study the Representative Meeting found no real changes needed. The membership is 4,592, and 151 of 34. There were 19 births, 81 deaths, and a gain admissions to membership. J. Elwood Paige was reappointed Clerk. An elderly member, Nathan Douglas, in his ninetieth year, sat through most of the meetings.

Edward Grubb took up the duties of Editor in chief of *The British Friend* with its number for the present month, succeeding William Edward Turner who has, for several years conducted the paper with marked ability. The new editor announces his purpose as follows:

"To receive and deliver the message of early Quakerism; to carry to the present generation the gospel of a living Christ; to face with resolute courage the facts of life; and to hold up to a distracted age, torn with conflicting passions and agonizing uncertainties, to unknown ends," the calm, sure beacon of the Divine purpose revealed in the person and teaching of Jesus; to learn and to teach the inward power of his cross; to bear witness to the reality and directness of Divine communion, the certainty of the Father's guidance of his willing and waiting children; such are among the aspirations with which he enters upon a task that can only be performed with a higher than human help.

"That our Christianity may be conservative, as holding fast to all that is deep and true in the faith of those who have gone before us; evangelical, as being a real gospel for the sins and sorrows of men and women to-day, both as individuals and in their social and national relations; catholic, as recognizing the many-sidedness of truth and the multifarious character of human needs, these are the thoughts we would hold before us, and for faithful adherence to which we would bespeak the earnest prayers of all who have at heart the cause of spiritual religion."

AN AGED ARMENIAN FRIEND.—Constantinople Monthly Meeting, says the *London Friend*, has recently lost by death one of its members, Ibrahim, a minute being recorded in which he is stated to have left "the example of a devout, grateful and loving spirit."

Ibrahim was born in Rodosto. Soon after he left school, having been trained for a teacher, he felt dissatisfied with the old Armenian form of worship, and so began to study the Bible both in the ancient and modern language for himself; in this he received new light and life, and was anxious to learn more. At that time, about sixty years ago, American missionaries had just begun to preach simple, evangelical truths, and Ibrahim was much interested in what he heard, but still he was not satisfied with some of the views the missionaries had expressed, so for many years he felt he could not join in membership either with the Armenian or Protestant Church. As he had been teaching all his life he often came in contact with individuals who held similar views with himself, and that was all the Christian fellowship he enjoyed till the Friends' meetings started in 1881, when he began to attend the meetings and apparently ap-

Does Christ's Church Hang on a Date?

Individual churches are sometimes as foolishly proud as each other as individual men would be, should they rest their claim to be called an on priority of birth. If one should say, "You have no right to claim the title of man, for I came into manhood seven years before you were born!" he would be using the outward church logic.

Some Protestants, instead of resting spiritually on the one Foundation, other than which no man can lay, even Christ Jesus, allow themselves to be vexed with the unworthy me-question; as "Where was your church before Luther?" As if spiritual life and authority could subsist in a date. They who are carnal enough to see nothing deeper for the church of Christ than shell and outward organization, will have to be left to their puzzle. In a certain island they claim the right to be called the holy catholic church, the communion of saints, as against a certain peninsula, because missionary stations for Christianity are traced back rather farther in Britain than in bishopric is at Rome. A little of this sentiment was not absent from a church called Friends, in a section not long settled, when members were asked why, since their principle and conduct of public worship and religious operations were the same as those practiced by the other church in the same place, they should not enter in with them under one organization? The only answer was, "Because we got here first!"

Some have been accredited with solving their me-puzzle by their quick wit. We observe in the *Herald of Truth* the statement that:

Sir Henry Wotton, when at Rome, having one day to hear vesper, the priest, with whom he was acquainted, sent to him by a boy of

the choir a small piece of paper on which was written: "Where was your religion to be found before Luther?" Sir Henry immediately wrote under it: "My religion was to be found *then* where yours is not to be found *now*—in the written Word of God." When the same question was propounded to Joseph Mead, a man of great learning, he facetiously answered: "Where was the fine flour when the wheat went to the mill?" And on another occasion: "Where was the meal before the corn was ground?" A still more pointed answer was given more recently when the old taunt was launched by an American priest in Rome at a Protestant fellow-countryman. The Protestant answered by pointing to a cleanly worshiper, whom he and the priest had met earlier in the day, with his face begrimed with soot. "Where," he asked, "was the man's face before it was washed?"

The concluding remarks of the same article approach the truth more nearly than we usually find it described in the periodical press:

It is, however, not age—so far as organization is concerned—that gives a religious body the right to be known as the church of Christ; but the faith to which it holds. Any body of people, who obey from the heart the form of doctrine delivered to the saints, who worship God in the spirit as well as in the truth, must be regarded as the church of Christ. Age cannot cover up corruption, nor can it bind to Christ a body of people who have departed from the doctrine, and cease to manifest in their daily lives the true fruits of the Spirit.

We feel no interest in breath and paper thrown away on arguments contending for earliness of time, as between the claims of Waldensians, Armenians, Abyssinians, Greeks, Anglicans, or Romans; as if the element of time or outward framework, were fundamental for the genuineness of the living church of Christ. It is not time, earlier or later in any place or in history, that makes the right to be the church, but union with the Spirit of Christ. At any time true church life or authority ebbs or flows with that. Or if the symbol of a stone, which Peter's name means, must be rested on, it is of the same Rock of Ages, Christ Jesus, who is the one foundation on which his Church is built, being the Divine Word and Revelation of the Father. The living stone bears witness to the Rock as being of the same substance, and is "blessed" as a recipient from the Father of the direct revelation of Christ. "Other foundation can no man lay."

We belong to a Society which George Fox and others began to organize two hundred and fifty years ago. Are we any better for those years? Is the Society purer than in the day of its espousals? Are more of its adherents living members of the church of Christ? Or take any church of the *oldest* organization—is it found now more Christian in life by its earlier date? An association is only a society when it poses on its date or history, and only a church as its members are actuated by the living Word,—who is Christ, the Head over all things to his Church.

So if any one asks a true Quaker "where his church was before Fox," he will have it to say that his church antedates all Christian societies, for it consists in being joined to the Word which was in the beginning. His fellowship is in common with all those ancients to whom the Word of God came both before and since the Scriptures came,—with all those to whom John declares Christ came before the incarnation, to whom, receiving Him the Word, "He gave authority to become sons of God, even to them that believe on his name; who were born . . . of God." All they are of the church of Christ that are of his Spirit and "if any man have not the Spirit of Christ he is none of his." "And He is before all things, and in Him all things consist. And He is the Head of the body, the church: who is the beginning" (Col. i: 17-18).

Creating Markets by Impoverishing Customers.

"Killing the goose that lays the golden egg" is an old and fabled expedient which some nations, employers and laborers do not yet appear to have outgrown.

A laborer may get better wages by helping his employer to be able to pay them than by hindering the employer's success and reducing his profits. Laborers have no small part in making it pay to employ labor.

The success of employers is often dependent on the heartiness to labor for them which they encourage in workmen. We hear of a once prosperous industry which produces a much smaller output with the same number of hands, since by putting unkind pressure upon them it has lost their sympathy.

Capital that promotes the strength of labor, and labor that strengthens capital, are mutual upbuilders one of the other.

A grocer that pauperizes his neighborhood

by rum, so reduces the paying power of his customers as to destroy his own custom or trade.

It is difficult to see the business policy of opening markets in the far East by starting the process of making hostile feeling in customers for generations, of depleting their strength and purchasing-power by war and sullen subjection. How can the cannon blast a people into being well-to-do customers? How can we create a wilderness and call it a market? To make a people furnish us a market shall we make them able and willing to buy, or shall we crush their spirit for prosperity and alienate their patronage?

We may get of natives reluctant markets laggardly following a war with them, yet not because of our violence but in spite of it. But our memory fails to recall trade as prospered between peoples by their fightings with each other. Armed and pugnacious commercial travellers, irritable to take offense and fight are, indeed, sent forth by governments; but not if they know it, by sane business houses, to expand their trade. Wise merchants win their trade, but merchandizing governments think to demand trade for themselves at the pistol's mouth, and so they paralyze it.

Trade voluntarily follows the gospel and its love, not the flag and its hate. And if the professing church militant had not chosen to be the church military, it could long ago have promoted peace and the arts and commerce of peace by the sword of the Spirit as nations should flow together in mutual confidence unto Him to whom "the gathering of the people shall be."

But the sin of taking life for commercial ends which Franklin so justly condemns in a nation has its wages in death; and the setting aside of a pure Christian conscience cannot annul the verdict, even now looming up before some nations, "Thy money perish with thee."

A LARGE GUSHING OIL WELL.—The great gushing oil well near Beaumont, Texas, is creating considerable interest in the Southwest. The well far eclipses any ever drilled in the United States, and the output is seven thousand barrels daily, greater than the largest gushing well in Russia. It is estimated that this flow exceeds twenty-five thousand barrels every twenty-four hours, and the flow is constantly increasing in volume. This is due to the fact that when the oil was struck the iron casing was blown out of the hole, and the size of the hole gradually increased. A solid six-inch stream of oil shoots into the air a height of two hundred feet. It is thought that the only way to save the oil is by dirt reservoirs, and they are being constructed as rapidly as possible in order that none of the oil may be wasted. As is usual in such cases almost fabulous prices are being paid for almost waste lands. Thousands of people have visited the well, and it has served to depress prices in the oil market.—*Railway Review.*

Golden Rod.

"In the first drowsy heat of summer's noon,
Ere yet the pastures are embrowned and dry,
Or yet the swallow breathes her parting sigh,
Under the red sun and the crimson moon,
Greeting us all too soon,

"Comes the plumed golden-rod with flaunting train,
And lifts her yellow head along the way
Where sweet wild roses bloomed but yesterday
And foamy daisies nodded in disdain
At earlier sun and rain.

"With thy approach the year seems waxing late,
And yet its ripestfulness is not come.
Far off we scarce can hear the "Harvest Home!"
The apple-pickers loiter at the gate,
Well pleased with maids to wait.

"When I the sunshine of thy bloom behold,
And pluck and bear thee home with fond caress,
I am the richer for thy lavishness,
Thy Midas touch hath turned the land to gold
For me to have and hold."

The Solidago, or golden-rod, belongs to the family of composites. Solidago Virgaurea was the original species and because of the golden-yellow flowers massed in small clusters on a long interrupted spike, it received its common name golden-rod. In ancient times magic wands and divining rods were considered of great importance for ensuring success in the performance of certain mystic rites. According to tradition the golden-rod was one of these sacred rods. In competent hands, it was said to point to hidden springs of water, as well as to hidden treasures of gold and silver. A poet of 1600 puts it—

Some sorcerers do boast they have a rod,
Gathered with vows and sacrifice,
That borne aloft, will strangely nod
To hidden treasure where it lies.

As to the competent hand that should wave this rod the seventh son of a seventh son was considered to be the most fitting person.

At one time the golden-rod was called wound weed on account of its healing powers, and thus it received its scientific name *Solidago* from *in solidum ago vulnera*, "I consolidate wounds."

Herbalists of two and three centuries ago pronounced it "one of the most noble wound-herbs." A tea was made from the young leaves, either green or dried, and used extensively in their prescriptions. In this country it has also been used as a curative especially the species odora, or sweet golden-rod, the leaves of which contain an aromatic, stimulating, volatile oil that when crushed will give out a pleasant odor much like anise. An infusion of these leaves was employed to relieve spasmodic pains and nausea, while from its dried flowers and leaves there was concocted a popular beverage called Blue Mountain tea.

Gerarde tells us that in the days of Queen Elizabeth golden-rod leaves were brought from abroad in a dried state and sold in London markets by herb-women for half a crown an ounce. About that time however, it was found growing in English soil and when it was discovered to be a native plant it soon became valueless and was discarded from use. As Gerarde says—"plainly setteth forth our inconstancy and sudden mutability, esteeming no longer of anything how pretious soever it be, than whilst it is strange and rare. This

verifieth our English proverb, 'Far fetch and deare bought is best for ladies.'"

At one time the kind known as nemoralis or what we locally call dyers-weed was used largely in Europe as a dye.

It will also be remembered that the golden rod has been quite extensively recommended as the national emblem of our United States. This has come I think, from the fact that this genus is known to be one of the most characteristic of this country, numerous both in species and varieties, and not entirely wanting any State of the Union. In the northern central States particularly does it abound, being an important element of beauty until late autumn. Out of one hundred species eight are natives of the United States, while the others are nearly all American, only two of the species being natives of the old world.—*Home Magazine.*

The Dukhobors in Canada.

JOHN ASHWORTH'S SECOND VISIT.

John Ashworth has recently returned for a second visit to the Dukhobor settlements in Manitoba. Before returning, his impression were communicated to a representative of the *Manitoba Morning Free Press*, from whose report the following points will be of interest to Friends. John Ashworth's tour was divided into three sections. On the conclusion of the first he reported finding, among other things, that the idea of living together was less strong than twelve months ago and the sentiment of independent action was growing. In one case a man had provided a special brand for his own cattle, and in other ways individualism was asserting itself.

Within two years a large number of these people have, to a large extent, become self-supporting on their own land. In one village John Ashworth found that a covered "democrat" wagon had just been bought and paid for by the village. Elsewhere he found man turning the leg of a chair with a home made lathe, and in another village a home constructed loom was in operation. Contrary to usual practice the Dukhobors have solicited no help from the Government for public works, such as bridge building. Last year they constructed a bridge over the Swa River and have just completed a substantial truss bridge across the Assiniboine. A ferry has been made in another place, and is operated without charge, for their own convenience and that of the general public. Two windmills have been erected for grinding corn. In one village John Ashworth found an excellent graded road with ditch on either side, and crossings in front of each house, as they had already erected and arranged a house for school purposes.

The eleven villages in the Saskatchewan district were next visited, and were found to have a population of one thousand four hundred and eighty-three; two thousand and fifty-one acres were ready for sowing. Horses, oxen, and a stock were in excellent condition, the people being contented, and rapidly improving the circumstances. At the village of Horeloffs a flour mill was in working order, with a well built dam and flume. At Terpenne another mill was almost ready to begin work, a cutting half a mile in length having been made for the flume. An implement agent nearly

informed John Ashworth that last year he sold the Dukhobors two thousand dollars worth of implements, which had all been paid for. He said he would gladly let them have a carload of implements, taking in return the promise of three of the head men that the goods could be paid for.

"The Dukhobor who drove us from one of the villages to another," said John Ashworth, has applied for a section of land, and another homestead application was made at the same time as his. I mention this as an indication of how they are adapting themselves to the conditions in which they find themselves this country."

In every Saskatchewan village there is a Russian bath-house, which it is one of the chief cares of the settlers to erect. It consists of two rooms. In one corner of the inner room there is a large pile of stones which can be heated by a fire to a very high temperature. Water is poured on the hot stones, filling the room with steam, and a copious perspiration is thus produced, the whole procedure being the same as that of a Turkish bath. The outer room is a cooling room, where the bather disrobes before going into the inner room. All the Dukhobors take one bath weekly. At first they carried the water from the river or the nearest creek. Now, however, wells have been sunk in the villages. John Ashworth used several of these baths and found them most refreshing. He also slept in several of the Dukhobor houses, and found the utmost cleanliness prevailing. The settlers in the Saskatchewan district are making good progress, and there is no foundation for the idle tales that have been put in circulation about them. Their side is being reached out for, one of the big oil companies especially having taken pains to introduce its products amongst them. Some twenty men from each village (that is, over two hundred in all), have worked this summer on the Canadian Pacific Railroad. Four men of this district who worked last year as drillers in the Garson quarries gave such satisfaction that the quarry company sent them word that they were wanted again.

Our friend subsequently visited the Dukhobors in the Yorkton district.

John Ashworth lays much emphasis on the need of teaching the Dukhobors, and we are glad to hear of prospects opening in that direction. Offers to settle for the purpose of teaching have been received from Michael Herbinin, who has visited the Saskatchewan colony, and from Almanofsky, of Winnipeg, and his son, George, also from R. G. Benner and his wife (the latter a daughter of Almanofsky). The proposals are warmly endorsed by the Commissioner of Immigration at Winnipeg, who writes of the Almanofsky family, "I have had occasion to engage them for interpreting and other purposes, and I think the opportunity has arisen for a solution of the educational question among the Dukhobors, to a certain extent.—London Friend.

Work for some good, be it ever so slowly;
Cherish some flower, be it ever so lowly.

—F. S. Osgood.

"SELFISH is the heart that seeketh Him
In sorrow"

"FOR THE FRIEND."

Some Brief Extracts from a Manuscript.

LIFE OF BENJAMIN KITE.

Having completed his term of apprenticeship at Merion Benjamin Kite returned to reside in Philadelphia and obtained employment as a journeyman with T. Scattergood. He had now an opportunity—denied during his apprenticeship—of attending week-day meetings. Of this he availed himself and soon won the confidence of his employer. But the labor was too severe for him, and one day Thomas coming into the yard and seeing him standing with his hand on his breast in evident pain, approached him with affectionate commiseration and said: "This trade is too hard for thee, it is killing thee;" to which he received for answer, "I know it, but do not know how to help it." Thomas quickly replied, "Thou dost not know how to help it, indeed, and hast had so good an education! Why, teach school, and I'll go and get thee one." He was as good as his word, and a teacher being wanted at Fair Hill, Thomas secured the place for him. He was also concerned to find a suitable place for the young teacher to board at and was equally successful in this kind office. The home he selected was that of Benjamin Mason who had living with him his two pious single daughters, both in delicate health and the younger not far from her end. Benjamin Kite opened his school Second Month, 1775, and found the income would be sufficient to satisfy his moderate desires. He was contented with his new employment and much gratified with the society of B. Mason's daughters. He found them more refined and intellectual than the females he had been accustomed to associate with, and although ill-health in some measure curbed with them the vivacity of youth, yet resignation gave a sweet cheerfulness to their conversation. Their society was exactly such as was most agreeable to him and he always looked back with tender emotions to these companions of his youth and was firmly persuaded that the time spent in their society had a very beneficial influence upon his character, improving his literary taste, polishing his exterior deportment and strengthening every aspiration after virtue. Such is the influence ever exerted by truly good female society upon ingenuous, clean-hearted young men. Sarah Mason was at this time about twenty-eight years of age and Martha twenty-two. They had been blessed with a religiously concerned mother who had carefully watched over and instructed them, and the blessing of the Most High rested upon them and his peace was round about them as they passed through "the valley and shadow of death." They treated the teacher as a brother, and he soon felt them as sisters. It was the first year of the Revolutionary war and though feeling a warm interest in the welfare of his country, he believed it necessary for him to refrain from much political conversation. Some of his near relatives in Philadelphia were warm Whigs, and although he could but sympathize with, he dared not encourage them. He therefore mingled little with them. To keep out of party excitement he remained more at home than otherwise he would have done. And when free from school duties spent much time

with the two sisters, while Martha was able to bear the exercise, rambling through the neighboring fields and meadows. This had soon to be given up and in peace and quietness her gentle spirit was released from its worn tenement. Her death and the increasing indisposition of her older sister rendered the breaking up of the family necessary. This doubtless loosened the tie which bound the teacher to Fair Hill and an offer being made of a situation at Byberry, which would afford an increase of salary, he resigned his school at the end of 1776. On removing to Byberry he became an inmate of the family of Thomas Walsley, whose wife was a sister of S. and M. Mason.

The American Revolution was now raging, and the inhabitants of that township, not having given in their allegiance to the government, there were no persons appointed to look after the roads or care for the poor. To remedy the inconvenience likely to result from this state of things, the inhabitants concluded to do what appeared needful without authority from any higher power. They accordingly met at B. K.'s school house and elected necessary officers; these assessed taxes which, though no compulsion could be used, were readily paid, and B. K. writes of these occurrences: "I may truly say that I never knew the poor better taken care of, nor the roads in better order than while this in *imperio imperium* lasted, which was several years." S. Mason, who was now rapidly sinking, in a decline, came to reside with her sister, and her old friend, the teacher, had an opportunity of watching the closing hours of her life, as he had done those of her sister. She had appeared at times in the ministry, and being faithful in the stations allotted her, her Heavenly Father was near in the time of suffering and her end was peace. At the funeral that faithful, clear-sighted minister James Thornton, bore testimony on her behalf, "She hath done what she could."

Some members of the Society in Byberry suffered much in consequence of their religious scruples against being in any way concerned in war measures. B. K. was twice arrested on account of military fines and marched part of the way to Philadelphia. The collector, however, finding he could not be frightened into paying the demand, released him saying, "I will take you at another time." On the second occasion he appeared to have made an arrangement for them to meet a man who paid or seemed to pay the money for him. This he did under the impression that the prisoner would not let a compassionate man suffer for doing a kind act. The manoeuvre, however, did not answer the expected end.

Among the valuable friends B. K. became acquainted with at Byberry, none stood so high in his estimation as James Thornton. Respecting him he wrote, "I was favored with as much of his friendship as was suitable considering the difference of our ages and situations. He lived midway between my home and the school-room and he would frequently walk up his lane, at the time of closing my school, and so meet me on my way home, and I would always return with him to his door, passing the time in improving conversation. The remembrance of these seasons has a pleasing relish at this time." Of him he says, "Sol-

emnity was the prevailing feature of his character. In the ministry how weighty did he appear! How heart-reaching, how tendering his expressions while he pleaded with us in the name of the blessed Redeemer, to be reconciled to the Most High. In prayer how solemn were his approaches; a weightier frame of spirit than his when thus engaged I could not conceive of. His fervent labors did not seem to produce all the good they were calculated to effect. This, no doubt, had a gloomy effect on his susceptible mind. I was present at a meeting there when he stood up and after dilating on the abundant labor that had been bestowed upon them, and the little good fruit produced, and telling them that instead of minding those things that make for peace, their hearts were gone after their covetousness, he made a solemn pause and then after a few minutes added, 'I have received in this meeting the command, Pray not to me for this people for their good, for I will not hear thee.' From the sorrowful state of that people since it plainly appeared they were scarcely worthy to be prayed for."

On another occasion he wrote of James Thornton: "Often have I been struck with something like awe in viewing his solemn countenance, when he seemed as if endeavoring to pierce the world unknown and catch a glimpse of the gates of that city which hath foundations."

Benjamin Kite preserved some records of the sufferings and disstrains which his friends endured during the war. To-day their wheat was seized for the use of the American army; to-morrow the British troops drove off their horses and in neither case was compensation to be looked for, but such scenes are the usual attendants upon war and among its least evils. Jas. Thornton was indefatigable in his exertions to relieve the suffering and distressed, and by his influence with the officers of either army could often put a stop to meditated plans of outrage, or obtain for sufferers that relief which their innocence pleaded for in vain. Time passed on, the war was at an end and independence acknowledged by England. Soon after peace was proclaimed, B. K. being in his thirtieth year, thought the time had come for him to make a home for himself. His affections were placed upon Rebecca Walton, an active maiden much his junior, and one of his scholars. After securing her consent he thought an increase of funds would be desirable, and an opening offering in the village of Frankford that promised such a result, he removed thither, after a seven-years' tarryance at Byberry. Jas. Thornton preached their wedding sermon, and prophetically pointed out some of the coming events in their lives. He then fervently prayed for their preservation. The humble home of the newly-married pair at Frankford was the abode of much peace and enjoyment, for Benjamin Kite was well fitted for domestic happiness. In the year 1788 Jas. Thornton paid a religious visit to Friends in Great Britain, and he stopped at Frankford as he was journeying to Philadelphia, to bid an affectionate farewell to his young friends. Benjamin was not at home, and the next day wrote him as follows:

FRANKFORD, Fifth Month 23, 1788.

"I should have been very glad to have been at home yesterday to have taken my farewell

of thee, a long farewell! It is a close trial to some of us to part with thee, to part with our father in the gospel. But we must submit, and I wish freely to acquiesce in all his appointments who hath called thee to visit the churches in thy native country, there to do as thou hast in this land. Endeavor to rebuild the waste places of Zion, to bear thy part in the afflictions of Christ for his body's sake which is the church, that where He reigns thou mayest reign with Him. But it ill becomes such a one as I to treat of the ministry. I only want to express my love for thee and to assure thee that I shall often remember thee. . . .

"There are so many better entitled to thy correspondence that I cannot expect letters from thee, but if I hear frequently from thy sons that thou art well, it will be a great pleasure to thy affectionate friend,

BENJ. KITE.

Eight happy but uneventful years were spent in Frankford, and then came the removal to Philadelphia, where he taught Friends' Select School for girls, this soon becoming large. Its duties, in addition to many meeting appointments, engaged his time pretty fully. When at Byberry he had opened to Jas. Thornton his prospect of removing to Frankford, that wise man had said, "Ah! thou art bound for Philadelphia. 'Tis only a stopping place," and so it proved. A circumstance occurring later I may mention here. About the beginning of the Seventh Month, 1804, Jesse Kersey attended the Market Street meeting in the city, being then on his way to pay a religious visit in England. In the course of his testimony, he said, "There were those present who if faithful would be called to the ministry of the gospel." Perhaps Benjamin might have meditated on this prediction, perhaps he might have looked around upon the members of the meeting to judge upon whom such a service would fall. However this may have been, a few nights after he dreamed that he was in his school room when the door opened and in walked Jesse Kersey, accompanied by Sarah Harrison, whom he knew had both sailed for England a few days before. The school-room and the girls had by this time been replaced by the male members of the Market Street meeting. Jesse addressed them as he had done before, stating that some would be called to the ministry. S. Harrison then went among them and laying her hand upon six of them said, "these are the ones alluded to." Benjamin would often tell the dream, but would not mention a name until as one after another appeared, he would say, "That was one of Jesse Kersey's preachers." This went on until five had spoken when a Friend evidently in much distress of mind inquired of him if all those designated had spoken, and when told that only five had done so he turned away in tears. "That man," said B. Kite, "was to have been the sixth, but he never gave up to the heavenly vision." Doubtless he had asked in the hope that if it was said all had appeared, he would find in this assurance some relief and hope that his apprehended call was not a real one.

(To be continued.)

WE are never well informed of the truth till we are conformed to the truth—Mason.

Danish Butter.

The butter of Denmark, writes W. E. Curtis to the Chicago *Record-Herald* from Copenhagen is considered superior to that of all other countries. It brings the highest price in fancy markets, and can be found all over the world in shops where luxuries are sold. In South America, South Africa, in the East and West Indies, in India, Egypt, and in tropical countries generally it is used by epicures who pay one dollar a pound for it in tins of one two and three pounds weight. No other country has been able to produce butter that will stand changes of climate so well. In Holland and Sweden attempts are made to compete with the Danish dairymen, but the butter from those countries is worth only half as much and does not keep half as well, while the efforts of dairymen in the United States have practically failed, with a few isolated exceptions. There is one creamery in Iowa, I believe, which produces butter that stands the tropic heat comparatively well, and will melt and solidify if it passes from a colder to a warmer and the to a colder climate, like the butter made in Denmark. Refrigerator ships are now found on nearly all the big steamship routes, and they can carry perishables as long and as far as necessary, but butter shipped by the ordinary cargo steamer usually melts and remains in a liquid state as long as it is exposed to the tropic heat. When it passes into the temperate zone again it hardens, and the change usually spoils it for the taste, entirely destroying the flavor and leaving it like ordinary grease or oil. The Danes, however, produce a butter which will endure this ordeal without affecting its flavor or sweetness, and these are the only people of whom this may be said.

Therefore, it is the popular impression that some secret process is used either in the preparation or the packing of their butter, and was diligent in trying to ascertain the fact. Every butter man I met assured me that the Danish butter was made in the same manner and contained the same ingredients that are found in the butters of other countries, except that the Danish dairymen were more patient and careful in its preparation. There was no secret process; no preservatives were used; no chemical change was produced before packing. Nevertheless, none of the several butter packers in Copenhagen would allow me to inspect their establishments. They explained that strangers were not admitted under any circumstances, although there was no particular reason why they should not be; that applications from American dairymen to witness butter packing in Denmark were numerous and frequent, and were always denied. They seemed to confirm the stories of secret processes.

DURING the forty days after his resurrection, the Lord spoke to his disciples of things pertaining to the Kingdom of God, showing that "all things must be fulfilled which were written in the law of Moses, and in the prophets and in the Psalms, concerning Me." Jesus opened their understanding, that they might understand the Scriptures, Moses and the prophets. How precious, how full Christ and his future glory, as well as his accomplished work, must the Hebrew Scriptures be!

NO MORE SEA.

JOEL BEAN.

Little child once more
sit upon the shore,
and see the billows break, and hear the ocean's roar.

I would be dreadful here,
y heart would quake with fear
I were left alone; if my Father were not near.

ut He commands the deep,
nd lulls the winds to sleep,
nd bids the swelling flood its boundaries to keep.

earth, and sea, and air,
ll life receives his care,
the world which He has made so excellent and fair.

his is a goodly tent,
ut for a sojourn meant,
ith a curtain of azure spanned—the star-decked
firmament.

ly altars of unwhewn stone
the presence of God is shown,
nd the glow of the sunset clouds is a veil before
his throne.

little child once more,
reading life's western shore;
vast unfathomed deep stretches far out before.

et led by my Father's hand
o the realms of the Spirit land,
e will more and more reveal what I do not under-
stand.

hat wonders await the sight
in the city celestial, whose light
s the glory of God and the Lamb! *There shall be
no more night.*"

sealed the great Book shall be,
nfolded the mystery;
he tides of unrest shall cease: "*There shall be no
more sea.*"

COSTLIEST SUBSTANCE KNOWN.—That rare
element helium, which was found first in the
sun by the spectroscope, and then by Profes-
sor Ramsay in the mineral cleveite, is the cost-
liest substance known. It has been found re-
cently in the gases given out by the hot
springs at Bath, and there Professor Dewar is
collecting it to submit the element to his
high pressure and low temperatures. It
costs £200 per cubic foot to collect, or more
than one million times the price of coal gas.
o freeze it, enormous pressure and almost the
absolute zero of heat will be needed. The
rocess is difficult and rather dangerous, and
the professor and his assistants at the Royal
nstitution require to exercise the utmost care
or the escape of only five feet of the gas
ould mean £1,000 gone irretrievably.—*Lon-
on Lancet.*

PATIENCE.—No amount of hatred or ill us-
age can injure any one if only he possesses his
ul in patience; from this discipline of suf-
ering he may rather win the virtues of meek-
ness and charity. His one danger arises not
rom his enemy, but himself—that he should
well upon petty wrongs and grow garrulous
bout himself, and in the end become peevish
nd irritable. Persecutors in history never
njured their victims by fire or sword. They
dly succeeded when the blood of the perse-
uted turned into gall. He who thinks kindly
f his enemy gathers a quick reward into his
wn bosom. How soon will it be over! How
tle does any man's word matter! How
reat is the love of God.—*Watson.*

Why Tolstoi was Excommunicated.

The Russian Church has excommunicated
Count Leo Tolstoi, the eccentric novelist, his-
torian, religious reformer, philanthropist, and
the announcement published in the organ of
the Holy Synod is so peculiar, says the *Chris-
tian Advocate*, that it is worth publishing.
The effectual part of it will remind us of some
testimonies of disunion in the Society of
Friends.

In its solicitude for the children of the Or-
thodox Church, to guard them from being led
into corruption, and in order to save those
who have gone astray, the Holy Synod has de-
liberated on the anti-Christian and anti-eccle-
siastical teachings of Count Leo Tolstoi, and
has deemed it expedient, in order to preserve
the peace of the Church to issue a circular
dealing with the heresies of Count Leo Tolstoi.

The circular runs as follows: "Count Leo
Tolstoi, to the grief and horror of the whole
orthodox world has, by speech and writing,
unceasingly striven to separate himself from
all communion with the orthodox Church, and
this not only clandestinely but openly, in the
knowledge of all persons. All attempts to
dissuade him from this conduct have proved of
no avail, and consequently the orthodox Church
no longer considers him as one of its members
and cannot regard him as such so long as he
does not repent and become reconciled to the
Church. We, therefore place on record his
apostasy from the Church and we pray that the
Lord may restore him to comprehension of the
truth. We pray Thee, therefore, O merciful
God, who desires not the death of a sinner,
hear us, and have mercy on him and restore
him to Thy Holy Church. Amen.

"ANTONIUS, Metropolitan of Saint Peters-
burg; THEOGNOSE, Metropolitan of Kieff;
VLADIMIR, Metropolitan of Moscow; HIE-
RONYMUS, Archbishop of Kolm and War-
saw; JAKOFF, Bishop of Kichineff; MAR-
CEL, Bishop; BORIS, Bishop."

The wife of Tolstoi has addressed the pro-
curator of the Holy Synod protesting against
the action. After declaring that her indig-
nation and grief are immense, she says:

"Now that, owing to this document, the
spiritual death of my husband follows, that
is God's concern, not man's. The life of the
soul, thank heaven is not within the jurisdic-
tion of the powers that be, but when I see
this excommunication delivered by the Church
to which I belong, established by Christ in or-
der to hallow the solemn acts of a man's life
—birth, marriage and death—whose mission
is to proclaim the law of charity, the remis-
sion of sins, and the love of our enemies,
whose duty toward all is to pray for all, then
I am at a loss to understand."

And after this she denounces her husband's
persecutors as renegades who proudly placed
themselves at the head of the Church, and
who, breaking the law of love and humility,
have behaved like spiritual executioners.
Last of all she declares that "God will be in-
dulgent to those even without the Church, who
have lived a life of humility and who have sac-
rificed their worldly possessions through love
of and devotion to Him. His pardon will go
to them rather than to those whose miters
and decorations are set with precious stones,
but who, like bad shepherds, cut away mem-
bers of the Church whose pastors they are."

The excommunication of Tolstoi is in har-
mony with the system, and the authorities of
the Holy Synod bore with him for many
years. If they believe in the system, they
have done right. If they are hypocrites, his
wife's imprecations are undoubtedly deserved.
The Count, of course, so far as the world to
come is concerned, is not afraid of their ful-
minations.

THE UNTAMED TONGUE.—Of all the members
of the human body there are none that can be
used to such good advantage in promoting the
welfare of all mankind as the tongue; and yet
the vast amount of evil done by this little
member none but the omniscient God will ever
fully know.

Many able writers have exhausted their store
of knowledge trying to teach the race how to
control this member, and after all it was ap-
parent that they had not learned the art them-
selves. Great sums of money have been ex-
pended in all ages of the world to tame and
discipline the untamed tongue, but none have
been able to reach the good of their aspira-
tions. Indulgent parents have sacrificed many
home comforts that their children might re-
ceive a good education and learn to use the
tongue in a proper manner, and to speak cor-
rectly, who have received in return for their
kindness abusive language from the tongue
yet untamed.

The great Creator has endowed the race of
mankind with the blessing of speech. What a
good privilege it is to be able to express our
thoughts and feelings in this way. It is in-
deed very sad that anything that is so capable
of doing good should ever be used for any oth-
er purpose; but alas, it is too true that even
the children of God do not always keep their
tongues from evil nor indulge in conversation
becoming the gospel of Christ. Many bitter
tears have been shed by some who have sought
to control the tongue and failed because trust-
ing in themselves and not in Jesus. He alone
by his restraining grace can calm the wildest
passion of the human heart and tame the un-
ruly tongue.—*Selected.*

CHRISTIAN ARITHMETIC.—Some one has
compiled the following Scripture rules for
Christian arithmetic.

Notation, "I will put my laws into their
minds and write them in their hearts."

Numeration, "So teach us to number our
days that we may apply our hearts unto wis-
dom."

Addition, "Add to your faith virtue; and
to virtue knowledge; and to knowledge tem-
perance; and to temperance patience; and to
patience godliness; and to godliness brotherly
kindness; and to brotherly kindness charity."

Subtraction, "Let us put off the works of
darkness, and let us put on the armor of
light."

Multiplication, "Mercy unto you, and peace
and love be multiplied."

Division, "Wherefore come out from
among them and be ye separate saith the Lord
... and I will receive you."

PEACE is not merely quiet upon the surface,
but a deep-seated rest of the inner life. It is
such an inward reality—quiet within the soul,
restful, life beneath all other life—that Christ
gives to them that are his.

For "THE FRIEND."

Some Reminiscences of a Good Man—Ebenezer Worth.

Under date of Second Month 19th, 1845, Ebenezer Worth wrote in his diary: "Although unworthy of the least of the mercies which a kind and merciful Master bestows upon his people, I may again acknowledge his unmerited favors to me which have been many. I have at times been brought very low, feeling but little strength to move forward, and have felt the necessity of making a pause and waiting upon the Lord; passing through that fire which can consume our corrupt and unregenerate nature; this is at times trying, but I find it necessary and profitable and have great reason to be thankful that the Lord is still mindful of me and continues thus to visit me. Of his dealings with his creature man are in wisdom and mercy. There is great cause for thankfulness and encouragement. I went yesterday to Cornplanter's, I was much favored in an opportunity with Charles and William O'Bail."

"Fourth Month 21st.—When I have endeavored to give myself up to the Lord, placing my dependence on Him; I have experienced strength and comfort. Yesterday in my sitting with the Indian children in school, I felt a good degree of strength to enter into secret spiritual labor, and I think I may say, consolation in it, the praise is due to the Lord. May what I have written be blessed to me, in time to come, if I should be spared to read it."

"1845, Eighth Month 20th.—Attended the funeral of John Blacksnake, son of Owen and Ann Blacksnake, (one of the scholars at Cold Spring); it was conducted in a sober and orderly manner. The parents and relatives appeared to feel their loss keenly, but were, I trust, in a degree resigned to the will of the Lord. I understand his mother, when she went to take her last look at the corpse, spoke as follows: 'My dear little boy, thou hast left this world, yet I continue to love thee. I have been thinking in my heart to help thee and make thee well (happy). I cannot help thee dying, for the Lord has promised that we shall all die and leave this world. It is now better for me to try to be good, that I may meet thee in heaven for I should like to meet thee there.' I was present at the time, but I did not understand the language and I understood from the interpreter that thinking in her heart meant prayer."

"31st. May the Lord in his mercy be with us, for his life-giving promise can alone minister consolation in all our trials, and at times when we are favored to partake largely of it, makes up more than we are called upon to sacrifice for our Divine Master. What an inexpressible favor it is to come under his blessed wing, to be near Him, whom we love, and in whom we trust; who has in his his infinite mercy, granted us the privilege of addressing Him in the endearing language of our "Father, who art in Heaven." O! it is comforting beyond the power of language to express to the soul that is bowed under a sense of its own unworthiness, and at the same time favored to feel a living sense of the loving kindness and goodness of our Heavenly Father and his dear Son, our blessed Saviour. It has frequently during the past week been the breathing desire of my heart, that my time

might be more fully given up to the Master's service, that I might perform the duties required of me in his time and in the way that would be most pleasing to Him, that when the right time for me to be released shall come I may be favored to feel that the service required of me here is performed, and that I may return home with the reward of peace."

In the Third Month, 1840, he writes to his friend Jos. Elkinton. "I have lately passed through some close trials and exercises, after which I have been favored to experience a good degree of peace, quietness and composure of mind, accompanied with love to my Divine Master. Now, under that feeling I have tried to weigh the subject and think it right to inform thee, my dear friend, and other members of the committee, that I feel liberty to return home in the Fourth Month and attend the Yearly Meeting. As to my returning to this place, I must now leave it, with desires that I may be rightly directed and obedient to what my Divine Master is pleased to require."

"Thou hast probably been informed that there is a party among the Senecas to establish what they call a republican government, and do away with the office of chief. That party has sent on a delegation to Washington. The chiefs have also sent on a delegation. On Sixth-day evening last there were a number of white men, who live up Cold Spring Creek, came to the council house where the Indians had been holding their New Year's meeting or dance; they had been informed that these white men were coming to injure them or their property. I understood the most of the Indians were in the bushes near the house. Not finding the Indians they commenced breaking windows and doors and attempted to set fire to the house. When the Indians saw them destroying their property they went to them. It is said the whites were armed with clubs and abused the Indians. Thomas Jacob was so badly hurt that his recovery is thought to be doubtful. The chiefs have sent to Lodi for their attorney to advise and assist them."

CROOKED PATH OF CABLE MESSAGES.—When we follow the course of a cable dispatch and see how many hands it passes through before reaching the person it is intended for, the wonder is that all cipher messages do not contain mistakes. The operator ticked it off to the cable station at Hong Kong. From there it was sent to Singapore; it entered India, was caught up at Madras and hurried on to Bombay; with lightning winds it flew to Aden, in Arabia, where it was put on the cable to Suez, Africa. Then began the race towards Europe by the way of Malta, Gibraltar and Lisbon, ending in the eastern hemisphere at London. From the English capital it made another deep sea journey to New York, and from there was telegraphed overland to Washington, having been transcribed no fewer than fifteen times.

By thine own soul's law learn to live;
And if men thwart thee, take no heed,
And if men hate thee, have no care.
Sing thou thy song and do thy deed;
Hope thou thy hope and pray thy prayer,
And claim no crown they will not give.

—John G. Whittier.

What Has it Done for You?

After a noted skeptic had concluded one of his infidel lectures in a village in the north of England, he challenged those present to discussion. Who should accept the challenge but an old, bent woman, in most antiquated attire, who went up to the lecturer and said:—

"Sir, I have a question to put to you."

"Well my good woman what is it?"

"Ten years ago," she said, "I was left a widow, with eight children utterly unprovided for, and nothing to call my own but this Bible. By its direction, and looking to God for strength, I have been enabled to feed myself and family. I am now tottering to the grave; but I am perfectly happy, because I look forward to a life of immortality with Jesus in heaven. That's what my religion has done for me. What has *your* way of thinking done for you?"

"Well, my good lady," rejoined the lecturer, "I don't want to disturb your comfort; but—"

"Oh! that's not the question," interposed the woman; "keep to the point, sir. What has your way of thinking done for you?"

The infidel endeavored to shirk the matter again; the feeling of the meeting gave vent to uproarious applause, and the skeptic had to go away discomfited by an old woman.

Let us change the picture. The mother of Hume, the infidel philosopher, was once a professor of Christianity. Dazzled by the genius of her son, she apostatized from her early faith, and followed him into the mazes of skepticism. Years passed, and she drew near the gates of death, and from her dying bed wrote to him the following pathetic letter:

"My Dear Son:—My health has failed me. I am in a deep decline. I can not long survive."

"My philosophy affords me no comfort in my distress. I am left without the hopes and consolations of religion, and my mind is sinking into a state of despair."

"You can afford me some substitute for the loss of the hopes of religion. I pray you hasten home to console me or, at least, write to me the consolations that philosophy affords at the dying hour."

Such are the straits into which infidelity leads its votaries. To them death is at best but a leap in the dark, and they shrink with fear lest it be a leap into "the blackness of darkness forever and ever." Said the learned and courted infidel Voltaire:

"In man there is more wretchedness than in all animals put together. He loves life, and yet he knows that he must die. If he enjoys a transient good, he suffers various evils, and is at last devoured by worms. This knowledge is his fatal prerogative; other animals have it not."

"The bulk of mankind are nothing more than a crowd of wretches equally criminal and unfortunate, and the globe contains carcasses rather than men. I tremble at the review of this dreadful picture, to find that it contains a complaint against Providence itself, and I wish I had never been born."

This is the best that infidelity can do for man. Listen now to the words of a dying Christian. Said the godly Haliburton:—

"I shall shortly get a very different sight

f God from what I have ever had, and shall meet to praise Him forever. What a wonder that I enjoy such composure under all of my bodily pains, and in view of death itself! What a mercy that, having the use of my reason, I can declare his goodness to my soul! I bless his name, I have found Him and die rejoicing in Him.—*Blessed be God that ever I was born.*—*The Armory.*

Notes from Others.

FROM THE LAND OF THE PHARAOHS.—Securely ashored on the forward deck of the German steamer *Johanna*, which arrived in New York recently from Calcutta, was an Egyptian boat, said to be four thousand years old, recently dug out of the bed of the Nile. The boat is stoutly boxed up, and was shipped at Port Said. Freight charges were paid there amounting to two thousand marks. The boat is for the Carnegie Museum, at Pittsburgh. It is about twenty feet long, seven feet wide and five feet in depth. It will be sent to Pittsburgh by express.

James Chalmers, noted as an explorer and missionary: Dr. Oliver Fellows Tompkins, of the London Missionary Society; James Walker and Thomas Athbone, young men who accompanied the expedition from Australia; and eleven native converts, have been massacred and eaten by the inhabitants of the island of Caribatta, in British New Guinea. "Punitive force" was organized in Australia, which encountered violent opposition, making it difficult to land. They, however, "marched into the interior and destroyed several villages."

Men with their millions are pointed out as models in newspaper articles and addresses delivered to young people on commencement occasions, and young men and boys are told that they may emulate them; and they will do so. Young Americans are not to be challenged in that way in vain. They will make great fortunes also. If it seems best to them to steal a railroad, or to wreck a bank, or to adulterate spices, or to create a war in order to bring it about they will not hesitate. It is the fortune they must have.—*Christian Advocate.*

An illustrated periodical recently contained a cartoon representing the treadmill of fashion. On a tram jumping-apron composed of boards labelled "Cards," "Balls," "Dinner parties," "Theaters," "Peras," "Summer resorts," and so on, an elegantly dressed lady was placed, tramping at the height of her speed to keep up with the revolution of the endless chain, while her husband was down by the side of the machine laboring with all his might to shove gold into the fire-box to keep up steam. It is a faithful representation of the ideal of life held by many Americans.

As a result of the Japanese Buddhist mission to his country, instituted a year or so ago, a church called the "Dharma-Sangha of Buddha" has been established in San Francisco, with three branches at other California towns. In the San Francisco temple there is a membership of three hundred in the Young Men's Buddhist Association, mostly of Japanese. At an English service on First-days, twenty or more Americans are present, of whom eleven have already been converted to Buddhism, and have openly professed that they "take their refuge in Buddha, in his gospel and in his order."

A German paper has received for the statement that the Pope receives more mail than any other person, his mail bags containing daily from 22,000 to 23,000 letters and newspapers. King Edward receives about 3,000 newspapers and 1,000 letters every day; while the Czar and the German emperor receive each from 600 to 700 letters and ap-

peals; the King of Italy, 500; and the Queen of Holland from 100 to 150. Emperor William gives a good deal of personal attention to his mail, and answers many of his letters himself, using since the death of his grandmother, Queen Victoria, a black-bordered paper. Ordinarily, however, he uses large sheets of light blue or dark gray paper.

At Pitman Grove, evangelist Smith, speaking of the cry raised of the depletion of church statistics, said that before the "inquest" was held he was convinced that lots of "our higness was dropsical, and needed to be tapped rather than exhibited."

"All the heresy and 'isms,'" he continued, "are but old ideas dressed up in new clothes."

He declared that where one man falls through "fanaticism" a hundred fall through "formalism." "Holiness," he said, "means death to a lot of that curiosity which keeps you running around after all these new fads."

"There is lots of work you can do in the Church without religion."

CURIOSITIES IN LITERATURE.—Probably the most extraordinary journal in the world is published weekly in Athens. It is written entirely in verse, even the advertisements.

The most remarkable book in the world, so far as its appearance is concerned, is neither written nor printed. It is in the Imperial Library of Paris and the letters are cut out of tissue paper with a pair of scissors. A sheet of blue tissue, in which the letters are cut, is placed between two pages of white, and so the matter is read.

The first book printed within the limits of the United States was the "Bay Psalms Book," which was issued in Cambridge, Mass., in 1640. Specimens of the publication are extremely rare and command very high prices.

In his last lecture, Joseph Cook declared his belief as follows: "I believe in the Ten Commandments, and in the nine beatitudes; and in the seven petitions of the Lord's prayer; and in the four 'alls' of the Great commission; and in the six 'whatsoevers' of the apostle; and in the strictly self-evident truths in the 'cans' and 'cannots' of the Holy Word and of the nature of things; and that it is He who was, and is, and is to come; both exhaustless love and a consuming fire; Father, Son and Holy Ghost; one God, infinite and unchangeable in every excellence; of whom the Universe is the autograph and the conscience of man the immortal abode; and the character and cross of Christ, the most glorious self-manifestation; our Saviour and Lord to whom be adoration and dominion, world without end."

The American Revision Committee have completed their work of revision of the Holy Bible, and it will be published by Thomas Nelson & Sons, New York, in Eighth Month. The committee state that they have, besides incorporating the appendix in the text, bestowed much time in rectifying the errors, inconsistencies, oversights, and infelicities which have been detected. Moreover, inasmuch as the American Revisers, in preparing the appendix of 1885, aimed to reduce the differences to the lowest limit, they waived the larger part of their preferences, many of which they regarded as of decided importance. This new edition will embody a considerable part of these emendations which represent the deliberate preferences of the whole American Committee, but which were not put into the appendix. Furthermore, carefully selected marginal references and concise topical headings have been added.

The present age bears a considerable resemblance to the declining days of paganism, when the philosophers were undermining the old religion with their criticism and the new religion was struggling

into life. While Christianity is not, perhaps, being destroyed as paganism was destroyed, it is undoubtedly going through a very critical evolutionary phase, and it seems inevitable that it will issue from the ordeal a very different kind of religion from what it was, say, a century ago.

Such ages of tradition are frequently periods of melancholy. Men's minds are unsettled, and there is a general spirit of uneasiness abroad. When the Roman Empire was under the government of the Antonines, although the period was one of great material prosperity (just like our own Victorian epoch in that respect), it was yet tinged with a kind of intellectual sadness.—*Westminster Review.*

Items Concerning the Society.

At Concord Quarterly Meeting held at Media on the 13th instant, Thomas Whitson was liberated to attend Ohio and Western Yearly Meetings, and Jonathan E. Rhoads the Yearly Meeting to be held at Sugar Grove, Indiana.

Francisco G. Cala writes to this paper from Havana as follows: "The Church of the Friends of Havana has ceased its connection with the American Friends' Board, but it still retains its denomination of the Friends. It sustains itself on its own resources, and at present the services are very well attended. 'There is a fund of \$150 for the construction of a meeting place.'"

He desires all correspondence, remittances, etc., to be addressed direct to the Cuban Mission, No. 52 Teneife, Havana.

Nearly two years ago Timothy B. Hussey, of North Berwick, Maine (formerly clerk of New England Yearly Meeting), who has resided several years in Palestine, organized a large party of members of our religious Society, with others on a journey by steamship to the Mediterranean and the Orient. He is now forming another company, preferably of the same class, to accompany him next Spring (Second Month 8th to Fourth Month 22nd) to Palestine and the European and North African countries on the way while going and returning. The steamer engaged for this one of the Clark's Cruises, is the *Celtic*, of the White Star Line, the largest steamship in the world.

Some persons want silence, some want singing, some want intellectual discourses, some want emotional excitement, some want spicy and entertaining talk. But what all need is a sense of God. They need to feel the "real presence" in their meeting places. If they really did find Him they would have "good meetings," and they would come away with new power upon them for the work of life. Perhaps it is not easy to find out how to do this, but surely it is strange that so few give it any thought or show any concern about it, for there will never be great transformations and baptisms in our meetings until we learn how to find the "real presence" in them.—*American Friend.*

SUMMARY OF EVENTS.

UNITED STATES.—Minister Rockhill's advice that cereals and flour have been included in the free list of the new Chinese tariff are regarded in Washington as an important provision, owing to the growth of American exports of wheat and flour to China. In 1899 these amounted to \$2,298,033, which was almost double the shipments of the preceding year. The trade has continued to increase and the Pacific coast interests have looked forward to supplying China with a considerable part of her consumption of wheat and flour, most of which heretofore has gone from Atlantic ports around Cape Horn.

The Amalgamated Association of Iron, Steel and Tin Workers have issued an appeal to organized labor and the general public for funds to aid them in their strike against the United States Steel Corporation for complete recognition of the union. The number of men who have quit work in response to the strike order is estimated at 65,000.

Editor's address in the summer months, W. Falmouth, Mass.

Preparation for Hearing, and for Answering.

During a Friends' meeting in a place of summer resort, a prominent merchant from Boston arose recently and testified that he never understood till that day how it was that he received more spiritual help and uplifting, and came away more enduringly fed with living substance through the ministry given forth in Friends' meeting than he had ever known from the best discourses of other churches. Not that the Friends' sermons could approach he others in ability, in perfection of construction, in well chosen language, in precision of scriptural truths and doctrine, in acceptable manner or style, in strength and force of address. Were that the root of the matter in preaching or in worship, he would go elsewhere than to a Friends' meeting. But he had learned to love their mode of worship as a condition of the true feeling. In his first sitings in our meetings he had found the spaces of silence very queer and not easy to endure. But in the midst of one of them the language had secretly laid hold on him. "Where two or three are gathered together in my name, there am I in the midst of them." Thenceforward a real engagement of spirit with the Master had proved to him the value of this silent intercourse with Him, together with his waiting people. He now had found why he had profited so much by the Friends' ministry, however uncouth the sermons. It was because of his individual exercise of spirit which preceded any of the spoken words,—the entering into that preparation of heart which is from the Lord, to fit the soul for the reception of the message and answer of the tongue which should in due season follow. This ministry was wont to come on as an opening of light

and life, and brought the satisfaction of an edifying and solid feeding, which without that inward preparation would fall on the outward ear as canting sound. It is unto deep that the Deep calleth, and it is for a waiting worship that a waiting ministry is preparing.

Authority, or the Scribes.

Why should it be thought that the Rock of Divine revelation must so readily give place to the unstable sands of conjecture, and the supernatural, be at once scouted when rivalled by a vague and scholarly surmise? Why should raising a dust clear the sight of faith so much better than the Sun of Righteousness? or the principle of guessing in the dark carry more authority than the principle of Divine revelation?

We form into a list this specimen cabinet of current drift (gathered in the *Episcopal Recorder*), to show the sandy foundation which some think more scientific to build on than the Rock:

1. The miraculous interruption of the laws of nature . . . hampers the narrative with extreme improbability;
2. It would seem more rational to suppose;
3. One is tempted to conjecture;
4. Probability is our only guide;
5. It is unthinkable;
6. Any conclusion can be reached only by an induction founded upon matters which do not afford perfect certainty;
7. A fair amount of circumstantial evidence pointing to conclusions of a pretty definite kind;
8. This view carries with it almost irresistible conviction;
9. So far as may be approximately guessed;
10. We may conclude with considerable certainty;
11. Perhaps we should occupy no untenable position;
12. Recent investigations make it not improbable;
13. Unfortunately we are reduced to inference and conjecture;
14. If it is allowable to form a judgment, it seems to us very doubtful whether;
15. We shall probably not go very far astray if we assume;
16. This cannot be ascertained with even approximate probability;
17. We may therefore fairly presume;
18. This interpretation is at least preferable, but it is not free from all objections, but if it fail us we have no data for precisely determining;
19. We are therefore justified in coming to the provisional conclusion;

20. Which renders the accuracy of any conclusion more than suspicious.

The blind leaders!—go ye not after them.

TO WHAT IS THE LOWERED PUBLIC MORAL SENSE DUE?—Referring to one of the recent wars, John M. Robertson, of London, says: "War-mongering in the case before us has visibly involved an enormous amount of social malice and social arrogance, habits of mind plainly unpropitious to civilization; and in the opinion of some of us, an immense demoralization in the way of reckless credence, reckless villification and unscrupulous argument."

A HAVEN FOR BATHERS.—The water of the Great Salt Lake is clear and transparent, with a bottom of white sand and a margin of incrustated salt. It is one of the purest and most concentrated brines in the whole world. Its waters give substance to no living thing; there is not the smallest insect or worm to frighten the most timid bather and the bathing is the most perfect sea-bathing in the whole of North America or in Europe. No human body can sink in it. One may actually walk the water, no matter how deep it is. Your body will persistently rise up, the shoulders above the surface, or you may even sit down in it. Its wonderful buoyancy must be experienced to be realized. No knowledge of swimming is necessary; one may enter the lake without the slightest fear, all you have to do is to lie down and float. But to swim in it, that is another thing! When your hands are put under the water to take a stroke your feet "will not down;" it is impossible to keep more than one end of your body under water at a time. You cannot swim but if you are a man you may float on your back with your arms crossed under your head, and smoke your pipe or cigar with as much ease as if in your own room. The water is so salt that it cannot be swallowed without great danger of strangulation; a small drop in the eye, too, gives much pain.

But in spite of all the dangers bathing in the Great Salt Lake is refreshing and invigorating notwithstanding that the body must be rebathed in fresh water afterward to remove the immense quantity of salt which adheres to the skin. It is hard work to make any headway, even against the smallest waves. Nearly half a million people bathe in the Great Salt Lake every year; they come from all over the world, and tourists are beginning to realize that Salt Lake City and the magnificent surroundings present the greatest scope of novelty and is destined to be a leading watering place.—*Home Magazine*.

Thou shalt be served thyself by every sense
Of service which thou renderest

—E. B. Browning.

The Holy Spirit.

BY JOEL BEAN.

During a visit in the city of Boston when a boy, I took the opportunity one first-day morning, to hear Theodore Parker preach to his large congregation in the Unitarian house. He was then in the height of his fame, and New England was stirred by his influence. One short sentence of his eloquent sermon that day fastened itself indelibly upon my memory.

It was this—"The Universe is God's Body." This is one conception of God,—as the soul of the universe.

It is a terse statement of the doctrine of the Divine Immanence. A special emphasis was put upon this conception by the Unitarian revolt from an extremely exclusive view of the Divine Transcendence taught by New England Trinitarianism.

The history of religious thought has abundantly shown the inadequacy of either one of these conceptions, without the other.

The thought of God as immanent in all motion, and living in all life, may be held without faith in his personality as disclosed in the Revelation of himself to mankind, in the trinity of Father, Son and Holy Spirit.

On the other hand, the doctrine of the Trinity may be so held and taught as to give the idea of three Gods: separately operating to reclaim a portion of a banished race. Upon this line of teaching the reality of the nearness of God to man is often obscured, and the Light and presence of his Spirit in every soul is sometimes denied.

Admitting all that science can discover of God, as

"Light of all our light the Source,
Life of life and force of force,"

we need more. We need the fuller truths of Revelation, that which science never could discover, that He is our Father; that man was created in his image; and that He is the Divine Original to which all the essential attributes of our humanity correspond, such as Will, Purpose, Love.

"He that planted the ear, shall he not hear?
He that formed the eye, shall he not see?
He that teacheth man knowledge, shall not he know?"

But "God is a Spirit."

How could spirit find expression but by some word? So, from the beginning God has declared himself through the Word. First in Creation. "He spake and it was done." He said "Let there be light, and there was light." By his word was every thing made that was made. From the tender grass yielding seed, and the tree yielding fruit, thro' advancing gradations of vegetable and animal life, the Creative Word was uttered until the crowning word appeared in Man, made as "in the image of God." In man the word became articulate in human speech. And finally, in the fullness of time in man "the Word was made flesh and dwelt among us."

It seems to me the Incarnation was a necessity, in the very nature of things, for the full revelation and expression of God. And not for that alone. It was no less a necessity for the regeneration, the redemption from

sin and death, the sanctification, the spiritualization of man. It was a necessity for the working out of our human destiny, as fore-ordained before the foundation of the world. Our existence here is but a stage in the progress,—the primary term of an unending school.

Its purpose and end as disclosed in the Revelation of God is through the processes of a Divine training to bring us up out of the grossness of material conditions and the vileness of sin into a fitness for our inheritance as children of God. From the material to the spiritual. For "not that which was first is spiritual, but natural; afterward that which is spiritual."

The first creation is natural. The new creation is spiritual. The word of God that was clothed with power in the first, is the word of God incarnate in the second. He is the second Adam, the head of a regenerated race. "The first man Adam was made a living soul, the second Adam is a life-giving spirit." "The first was of the earth earthly; the second is of Heaven."

The Lord from Heaven has entered into our humanity (as I conceive it) in a two-fold sense. First, in a unique sense, as the Son of God, to show us the Father, and to set before us the pattern of the perfect man. Second, in a universal sense to carry forward the work of God within us, for the liberation and development of the spiritual nature,—the regenerated life.

The great procession of mankind is forever moving on to a spiritual world, for the enjoyment and intercourse of which we shall need spiritual faculties and capacities. "The natural man receiveth not the things of the Spirit, neither can he know them, because they are spiritually discerned."

There must be "the ear to hear what the Spirit saith." There must be the eye to perceive the heavenly vision. There must be the capacity for intercourse with spiritual beings;—for communion with the "Father of Spirits."

This must be possible since all our means of communication, and of enjoyment here,—all seeing, hearing, feeling, speaking, have their origin in God who is a Spirit.

He sees, He hears, He speaks. He speaks mystically through all the voices of nature; but to man He has spoken audibly and intelligibly through his Son.

And through the Son we are taught the true conception of the Holy Spirit.

God has manifested himself in the flesh, that we might come to know Him in the spirit. Then the outward presence was withdrawn and his Spirit was given to be our teacher. The veil of the flesh was rent to show us the way to the Holy Presence in the inner Sanctuary. The Holy Spirit is the interpreter of the Word. He brings to our remembrance and understanding what the Father has spoken through the Son. He is given to lead us into all truth.

So far we may speak with confidence, since it is a part of the instruction clearly given us, and adapted to our human capacity.

But there are definitions and attempted explanations of the Trinity, which have been pressed so far as to scatter and divide rather than to gather and edify the churches of Christendom. To my own mind it has always

seemed confusing to speak of the Holy Spirit as a personality distinct from the Father and the Son. The Holy Spirit is the Spirit of Christ. The Holy Spirit is God.

The Holy Spirit has always been in the world,—has always been a Divine witness in human hearts, has always been the "Light of men."

How then are we to understand the Pentecost, and the gift of the Holy Ghost on that day?

How are we to understand the present age to be the dispensation of the Holy Spirit?

The increasing manifestations of God through successive dispensations appear to correspond to successive stages of human advancement.

The primitive ages of patriarchal rule prepared the way for a clearer disclosure of the Divine government and the revelation of law. Then the Law was a schoolmaster to bring to Christ, who is the embodiment of Love. All led on in one direction, towards one end; from the outward and formal to the inward and spiritual; from the visible to the invisible realities of the Kingdom of God.

Not until the revelation of God in Christ, and only I believe through the knowledge of that revelation, could there be any full apprehension of the priceless gift of the Holy Spirit. To them that know not Christ, the Spirit is a light shining in a dark place, a Divine spark to point the way of life.

But them that know of his advent and work and teaching;—of his trials and triumphs; of his cross and crown, the Holy Spirit is present to take all these things and show them unto us.

The Law of God was over all. Just the same before as after it was apprehended by man. The love of God was over all, just the same before as after it was shown in Christ. So the Spirit of God was always the same, before, as after Pentecost. The difference was not in him, but in the content of his message. Since that memorable day He is the Representative of the Saviour, the Crucified, Risen and Glorified Saviour.

The Pentecost has therefore, I believe, like the Passover before it, a great dispensational significance. They mark, on the dial plate of time, the historic disclosure of eternal facts.

What is the value that we set upon this gift of the Father? Little, it seems to me, have the churches of Christendom come to appreciate, or even to recognize, the wealth of blessing offered in this gift.

The Holy Spirit is the present Christ; the fulfillment of his assurance to his disciples—"Lo, I am with you always."

The peculiar distinction of the Society of Friends has been their vital testimony to this fact; and their practical recognition of it in worship and ministry and daily life. The early Friends believed in Christ present, "to speak to their condition." To inspire and direct their religious exercises, and to counsel and guide them in temporal affairs. They believed in Him as acting not only insensibly through all the faculties of the enlightened mind, to ensure a clearer view and better judgment, but as consciously indicating the Divine will, when important decisions are to be made, or untried paths are to be chosen in the journey of life. They believed that in the silence of the soul waiting upon God, the voice of the

Shepherd could be known, to point the way, so show the work, to give the message that would be beyond the scope of human wisdom to discover.

Has such high faith been verified by a corresponding life and character in those who held it? I think it has. Our libraries are rich with annals of beautiful lives framed to be pattern of this ideal. And our memories are stored with personal pictures of such saints.

Moreover there are those now living, not a few, who from their own experience can bear witness to the reality of spiritual guidance in things great and small, and to the safety that has never failed to be found in following it.

The fact of a very definite interior direction attested by countless incidents that confirm it, in the history of those who have believed in it.

We all acknowledge the omnipresence of the Spirit. But I am aware that there are those who seem not to accept this doctrine of a conscious, superhuman, individual guidance. To me it seems a necessary corollary of the Christian faith in God as our Father. A belief in God which owns no supernatural action of his power and no supernatural evidence of his presence is far from the faith illustrated and taught by Jesus Christ.

To those who saw and heard Him in the flesh He said, "I will not leave you orphans, I will come to you." The Presence with you will be a presence in you, to guide, to teach, to comfort, to convict the world of sin, of righteousness, of judgment. We have all felt the convicting power of the Spirit of Christ for sin and unbelief. We have felt the joy of heavenly approval, the joy of angel ministry, when we have met some strong temptation and overcome or wrestled for a blessing till we have prevailed with God.

"What is this that I feel that condemns me when I do evil, and justifies me when I do well?" was the secret query of one on her way to a meeting appointed by George Fox. "In this state," she records, "I went to the meeting. It was a large gathering. George Fox rose with these words: 'who art thou that utterest in thy mind, what is this that I feel that condemns me when I do evil, and justifies me when I do well?' I will tell thee what it is. He that formed the mountains and created the hills, and declareth unto man what his thoughts are—it is He by his Spirit that condemneth thee when thou dost evil, and justifies thee when thou dost well. Keep under its influence and it will be thy preserver to the end." To this declaration the ancient friend added "It is the truth, the very truth, and I have never departed from it."

Christ has taught us to come to God, to pray to Him, not as to a mute Jove, but as to a loving Father. The Holy Spirit is given to make clear and to make real to us this relationship. In Christ we have the Father revealed, and the perfect man exemplified. In the Spirit we have the power to become like Him.

Bryant to the waterfowl has voiced the intuition of the poet:

"He who from zone to zone guides thro' the boundless sky thy certain flight, in the long way which I must tread alone, Will lead my steps aright."

Much more than the instinct that guides the bird is the spirit given to man in proportion to the higher place he occupies in the chain of being.

The Spirit on Jesus descending

Took the form of a dove;

On his followers it came in the semblance

Of fire from above.

These visible manifestations were emblematic of the Holy Spirit's work and effect. To imperfect disciples his coming is with fire. So the baptism of the new Dispensation is spoken of as "The Baptism of the Holy Ghost and of Fire." It is to cleanse, to purify, as well as to fill. On the purified, brought into the likeness of Christ, He rests as a dove, in gentleness and peace. The fire must do its work ere the dove can rest.

The later discourses of our Lord, recorded by John, dwell upon the Spirit which would be more to his followers than his bodily presence could be. He designated him especially as the "Spirit of Truth." He shall lead into Truth. They who love the truth will be led into it. With those who love Christ and keep his commandments, will the Father and the Son come to abide in the Spirit. Another special designation given was that of "Comforter." While plainly setting before them what they would have to suffer in a world that would hate them as it hated Him, Christ told his disciples of what the Comforter would be to them in the midst of the trials of earth, that their "joy might be full." How many since have proved the truth of his words, as they have been made to "rejoice in tribulation," and when besieged by the manifold powers and agencies of evil have been upheld and strengthened to be "more than conquerors" through Him who loved them. The Holy Spirit has brought blessing out of adversity, and turned sorrow into joy.

With such thoughts of the Spirit in our minds we learn the importance of that introversion which feels after Him and opens the heart to his presence. Silent waiting, silent worship, silent pauses for thanksgiving and prayer at the daily board, can never be meaningless nor profitless. They must be recognized as the becoming attitude of the human Spirit in the presence of the Divine in order to hear the inspeaking Voice to learn the will of God, and to receive the commission and anointing for Christian service. In this, as in other things—"according to your faith will it be unto you."

"Whoso has felt the Spirit of the Highest, Cannot confound, nor doubt Him, nor deny, Yea, with one voice, O World, though thou denyest, Stand thou on that side, for on this am I."

But for all good there seems to be a corresponding counterfeit. We know that many are the forms of error and falsehood which lay claim to the fullest attainment of spiritual possession and leadership. Why such cases of deception are permitted we shall know when we learn why evil is permitted at all.

It is described by the Apostle Paul in the Second Epistle to the Thessalonians, as a part of the working of the "mystery of iniquity," whose coming is "with all deceivable influences, with power and signs and lying wonders." It is a part of the revelation of the "man of sin, who opposeth and exalteth

himself above all that is called God, or that is worshipped; so that he as God sitteth in the temple of God, showing himself that he is God." And the reason why any come to be deceived by the false spirit is clearly given. It is because they received not "the love of the truth." Somewhere in the secret place of choice the temptation has been yielded to, to prefer the flattering falsehood to the self-crucifying truth. In following the flatterer they come to "believe a lie," and then in all sincerity it may be, they are subject to a false spirit; they enslave a false God.

"Awful is the moment that comes to every man and nation to decide, In the strife twixt truth and falsehood, For the good or evil side."

On the side of evil stands the tempter to persuade and beguile.

On the side of Good is the "faithful and true witness,"—the Spirit of truth to show the way of righteousness. One appeals to the lower nature with promises of immediate reward for some soul-surrender. The other points to the "straight and narrow way" of the Cross, to eternal life. I cannot believe that the child of the Lord who loves the truth and keeps to it, will be left to "strong delusion."

But all the false profession that is in the world can never disprove the true.

Patriarchs, prophets, apostles, and the great procession of confessors and martyrs, and saints, adown the ages to the present day, form "a great cloud of witnesses" in heaven and in earth to the possibility and privilege of "walking with God;" and to the grandeur of the life, that redeemed from sin, is shaped and controlled, and graced and beautified, sanctified and glorified by the indwelling Holy Spirit.

I have endeavored to write of what our Lord has taught, and of what has been known, and may be known of the Holy Spirit, by loving, believing and obedient souls.

But perhaps one balancing thought may be needed to guard against disappointing expectation, or discouraging self-examination on the part of those whose experience seems not to answer to these views. There may be not a few to whom the terms in which the doctrine has been presented, is as an "unknown," or at least an "unfamiliar tongue." It should be borne in mind that the Spirit is a "still small voice" often unrecognized. But lack of recognition, or lack of truth is no evidence against any truth.

Like the babe Immanuel, for whom no room was found in the crowded inn, the Divine visitant is unnoticed by the thronging multitude, while positively witnessed by wise seers who followed the "Star in the East," and by humble watchers whose ears are open to angel ministers, and to heavenly messages. The waiting Simon sees "the Salvation of God," the light of the nations, and "the glory of Israel, in the Child that the great world, and the crowds of common worshippers heed not. And the aged Anna, "serving God with fastings and prayers night and day," when she sees Him, knows Him, and gives thanks, and speaks of Him to all who look for redemption in Jerusalem.

"The pure in heart shall see God." Look to behold Him in his gentlest appear-

ance. Harken to hear the softest whispers of his Spirit. Be ready to obey his manifested will; and light will shine on the one right way, and as it is followed it will grow brighter and brighter "unto the perfect day."

Tottering age may become childlike in the spirit of the welcomed Child. And youth may be made valiant in discipleship and apostleship through the baptism and power of the cherished Holy Spirit.

FOR "THE FRIEND."

Maxims from "The Interior Life."

BY T. C. UPHAM.

Think much and pray much and let your words be few and uttered with seriousness and deliberation as in God's presence. And yet regard may be had to times and seasons. We may innocently act the child with children, which in the presence of grown persons, would have the appearance of thoughtlessness and levity, and may perhaps at times express our gratitude to God and our holy joys with an increased degree of freedom and vivacity, especially in the company of those who bear the same image and who know what it is to rejoice in the Holy Ghost.

Some persons think of obedience as if it were nothing else than servitude. And it must be admitted that constrained obedience is so. He who obeys by compulsion and not freely wears a chain upon his spirit which continually frets and torments, while it confines him. But this is not Christian obedience. To obey with the whole heart, in other words, to obey Christ, would have us essentially the same, as to be perfectly resigned to the will of God; having no will but His. And he must have strange notions of the interior and purified life, who supposes that the obedience, which revolves constantly and joyfully within the limits of the Divine will partakes of the nature of servitude. On the contrary, true obedience, that which has its seat in the affection, and which flows out like the gushing of water, may be said, in a very important sense to possess not only the nature, but the very essence of freedom. We may pray with the intellect without praying with the heart, but we cannot pray with the heart without praying with the intellect. Such are the laws of the mind, that there can be no such thing as praying without a knowledge of the thing we pray for. Let the heart be fully, wholly given up to the pursuit of the object, but let the perception of the object be distinct and clear. This will be found honorable to God and beneficial to the soul.

"It is well to distinguish between principle and method. The first has a moral quality and must be maintained at all hazards; the other pertains to expediency and as a question of opinion permits of conference and of concession as circumstances may require. Conscience comes into play in the one case and mere judgment in the other."

UNDER the rule of Mammon, wars are inevitable. Ever dividing and destroying, passion is then swollen into fury. Would we have peace, we must change the present temper of the soul of society all over the world from greed to self-sacrifice, from selfishness to love of one another.—*Stafford Brooke.*

FOR "THE FRIEND."

THE WORLD'S CRISIS.

"Peace be on earth," O, Jesus Christ,
Where is the mercy thou hast taught?
It seems the mission of thy life,
The sinful world hath not yet caught.
'Tis seeking still the golden calf
And sacrificing lives to it.
How shall we answer for such waste,
When at the Judgment seat we sit?

The Universal brotherhood

That thou wouldst have mankind to feel

Is turned to bitter enmity,

When we at mammon's altar kneel;

Then strife and crime and war combine

To add their horrors to the world,

And men forget the flag of peace

That thou dost so desire unfurled.

The mind of mankind seems on fire

And burning to acquire vast wealth,

While love and happiness and peace

Will disappear, as if by stealth.

Men kill each other for their gold

And nations now for mammon fight,

Forgetting all God's higher laws,

As they their country's honor blight.

Will selfishness destruction cause,

Or will the nations cease to fight

Ere they have lost the power to see

And follow in our Father's light?

Let men regain their trust in thee,

O Dear Christ, and learn thy peaceful ways,

Then earth will find its sin removed

And will be blessed with joyful days.

SELECTED.

Culture and Religion.

As facts and doctrines form the intellectual outworks of faith, historical criticism must make good the one, and sound philosophy must so far warrant the other. But when all that argument can do has been done, it still remains true that the best and most convincing grounds of faith will still remain behind unshaped into argument. There is a great reserve fund of conviction arising from the increased experience which Christian men have of the truth of what they believe. And this cannot be beaten out into syllogisms. It is something too inward, too personal, too mystical to be set forth so. It is not on that account the less real and powerful. Indeed, it may be said that once felt it is the most self-evidencing of all proofs. This is what Coleridge said, "If you wish to be assured of the truth of Christianity, try it." "Believe, and if thy belief be right, that insight which gradually transmutes faith into knowledge will be the reward of thy belief." To be vitally convinced of the truth of "the process of renewal described by Scripture, a man must put himself within that process." His own experience of its truth, and the confident assurance of others, whom, if candid he will feel to be better than himself, will be the most sufficing evidence. But this is an evidence which, while it satisfies a man's self, cannot be brought to bear on those who stand without the pale, and deny those things of which they have not themselves experienced.

A clear and trained intellect is one thing, spiritual discernment quite another. The former does not exclude, but neither does it necessarily include the latter. They are energies of two different sides of our being.

Unless the spiritual nature in a man is alive and active, it is in vain that he works at religious truth merely from the intellectual side. If he is not awake in a deeper region than his intellectual, though he may be an able critic or dialectician, a vital theologian or a religious man he cannot be. Not long ago I read this remark of the German theologian Rothe,—"It is only the pious subject that can speculate theologically. And why? Because it is he alone who has the original datum, in virtue of communion with God on which the dialectic lays hold."

So soon as the "original datum" is there, everything else becomes simply a matter of right reasonableness. Or as a thoughtful English scholar lately expressed it:—"Of all qualities which a theologian must possess, a devotional spirit is the chief. For the soul is larger than the mind and the religious emotions lay hold on the truths to which they are related on many sides at once. A powerful understanding, on the other hand, seizes on single points, and however enlarged in its own sphere, is of itself never safe from narrowness of view. For its very office is to analyze, which implies that thought is fixed down to particular relations of the subject. No mental conception, still more no expression in words, can give the full significance of any fact, least of all of a Divine fact. Hence it is that mere reasoning is found such an ineffectual measure against simple piety, and devotion is such a safeguard against intellectual errors." Yes, "the original datum," that is the main thing.

And what is this but that which our old Puritan forefathers meant when they spoke of a man "having the root of the matter in him"? The devout spirit is not fed by purely intellectual processes, sometimes it is frustrated by them. The hard brain work and the seclusion of the student tend, if uncounteracted, to dry up the springs alike of the human sympathies and of the heavenward emotions. It is said of Dr. Arnold, certainly no disparager of intellect, that no student could continue long in a healthy religious state unless his heart was kept tender by mingling with children, or by frequent intercourse with the poor and the suffering.

Principal J. C. SHARP.

CHARACTER WILL SHINE.—A jeweler in a western town recently found a precious treasure in a peculiar place. His home coffee mill was broken and he took it apart to find what was the trouble. He discovered that it had been wrecked by the action of a stone of some sort that had even cut its way into the metal of the grinders. He took the stone to his jewelry store and putting it under a microscope discovered that it was a large diamond of the blue tint variety and worth about two hundred dollars. It is thought that the diamond got mixed up with the coffee when the grain was screened in South Africa where the coffee was raised. The diamond was about the size of a coffee grain, and had the same dull color.

What a striking illustration of the value of reality over sham and pretense! The diamond was plain and unpretentious but being a diamond wherever it was found, no matter how humble the circumstances, or associations, it

as a precious treasure. So true character will ever come to its own in the end.—*L. A. Banks.*

REST.

If we believed, we should arise and sing,
Dropping our burdens at his pierced feet,
Drows would flee, and weariness take wing,
Hard things grow fair, and bitter waters sweet.

If we believed, what room for fear or care
Within his arms, safe sheltered on his breast?
Peace for our pain, and hope for our despair
Is what He meant who said, "I give thee rest."

Why linger, turn away, or idly grieve?
Where else is rest—the soul's supremest need?
Tranquilly He offers; meanly we receive,
Yet love that gives us rest is love indeed.

He love that rests, say, shall it not do more?
Make haste, sad soul, thy heritage to claim.
It calms; it heals; it bears what erst ye bore,
And marks thy burdens with his own dear Name.

Carried in Him and for Him, can they harm
Or press thee sore, or prove a heavy weight?
Say, nay; into thy life his blessed calm
Shall drop, and thus no more be desolate.

To more with downward eyes go faltering on,
Alone and sick at heart, and closely pressed,
Thy chains shall break, thy heavy heart be gone,
For He who calls thee, He will "give thee rest."

—*M. L. D., in Home Magazine.*

The Ministry of Little Things.

The humility of Jesus in respect to little things is well worthy of imitation on the part of his disciples. Many young converts, in the order of their new love for their Saviour, express a willingness to do anything for his sake, but often when an opportunity for some humble and apparently insignificant service presents itself they hesitate, and, as the crucial moment of the opportunity passes, they become indifferent or try to believe that the chance for service was not, after all, of much importance or value. And this is true of many who have been longer in the way. They are quite ready to do a great thing, or attempt to do it but are not willing to cast themselves into the performance of the humbler service.

If we did not measure our work by human standards we might see the real relations of things more clearly. With men a single achievement is sometimes so distorted as to fill the whole heavens. They speak of it as great, and really come to believe it great, although, according to the standard of God, it may be of relatively insignificant value; while a deed which receives no attention from men, and for which there is no applause, may be sealed with Divine approval, and cause the angels to rejoice; and in the outworking of the Divine plans for the redemption of men it may become truly great, and even sublime. We are inclined to forget too, that through the performance of the humbler task we develop the ability required for the performance of the so-called greater. This is a natural law which finds expression on every hand, and in no department of human activity is it more forcibly manifested than in the practical affairs of the Christian life. To him who has employed his talents faithfully and well in the Master's service, even though they be of an apparently indifferent sort, shall be given the ability and the opportunity for the

larger service with the larger talent. But one must be willing to do the smaller and simpler service first. The student can know nothing of the profound scientific problems of astronomy unless he has already mastered the simpler forms of mathematics; nor can one expect to do great things for God and humanity until he has learned to do and is willing to do the smaller things.

There is a wonderful potency in the little of life, since it is these that exercise the determining influences, as a general thing. Not many lives are affected for good or ill by what are usually spoken of as great movements; indeed, most great movements are but the natural development and fruitage of things small and humble. A cup of cold water is an insignificant thing, and not worth saying anything about, but it is dignified into greatness when the Master says of it, "Whoever shall give to drink unto one of these little ones a cup of cold water only in the name of a disciple, verily I say unto you, he shall in no wise lose his reward." To feed the hungry, to relieve the thirsty, to receive the stranger, to clothe the naked, to visit the sick and the prisoner—these are humble services, and not much is said of them before the world, but those who engage in them in the Master's name have the supreme satisfaction of knowing that they are doing his work, and theirs will be the ineffable joy of hearing the King say unto them, "Inasmuch as ye have done it unto one of the least of these my brethren, ye have done it unto me."

If the things we do were related only to this life it might be different, but as every act of our lives is related in some mysterious and essential way to the life that is to come, this present life becomes a serious affair. As the majority of people are unable, because of their limitations, to accomplish the great things, but are able, no matter how humble the sphere of their activity, to do the little things, it is the duty, as it should be the privilege, of everyone who acknowledges himself to be a disciple of Jesus Christ, to do with all his heart whatever his hand finds to do; and if the "whatever" should be confined to the little ministries of life, the privileges of this kind of service should be sought after the more eagerly.—*Christian Advocate.*

Exercise.

The World's Athlete seeking the honor of men, observes strictly the laws of physical health, exercises daily in his training that his body may be fitted to excel to win the race, and gain applause from men. But after all what doth it profit?

Yet it is a fit type of the Heavenly Pilgrim, seeking only the honor that cometh from above, with eye fixed upon, and ear intent to his teacher, whose will to him is law, daily exercising himself to hold always a good conscience towards God and man, that he may keep himself in God's love and may overcome all obstacles and every hindering thing (the besetting sin, trials and temptations of life,) and at the end of life's race receive a crown of glory that fadeeth not away.—*W. W. B.*

Whoever undertakes a friend's great part
Should be renewed in nature, pure in heart.

—*Wm. Cooper.*

Words of Truth and Soberness.

I have found my mind engaged to be somewhat particular concerning the manner of my entering into the work of the ministry, to stand by way of caution and proper encouragement to others who may peruse the same; having in the course of my observation had cause to fear some have taken the work of preparation for the ministry for the thing itself; and so have proceeded very far to their own great wounding, and the hurt of others, in bringing forth the untimely fruit, which is exceedingly dangerous, and carefully to be avoided. Nothing is a sufficient guard to preserve therefrom but the single eye through the Divine blessing, awfully considering what a great thing it is for dust and ashes to speak as the Apostle Peter directs. "As every man has received the gift, even so minister the same one to another, as good stewards of the manifold grace of God. If any man speak, let him speak as the oracles of God; if any man minister let him do it as of the ability which God giveth."

The Apostle to the Hebrews saith that "no man take this honor to himself, but he that is called of God as was Aaron." So that whatever some may pretend to, and intrude themselves into, unless they are really called of God, they will have no share in that honor that cometh from God only. The church of Christ hath not been without its troubles from false ministers, neither in its primitive times, nor in ours. That excellent gospel liberty of all who feel themselves inspired thereunto whether male or female; speaking or prophesying one by one, hath been and still is abused by false pretenders to Divine inspiration; yet the liberty ought to be preserved inviolable, and other means found out to remedy this impropriety, which would not be difficult were the members in a general way spiritually minded, rightly favoring the things that be of God. Forward and unsanctified appearances by way of ministry would then be easily awed and suppressed, so as not to disturb the peace of the Church.

The case has been otherwise as I have observed in some places; but little minded, if the words and doctrine were sound, and nothing to blame in the conversation. Here the main thing which is the powerful demonstration of the Holy Spirit, is little regarded; and if a few are deeply pained at heart with such lifeless ministry, they find it exceedingly difficult to lay hands thereon for want of more strength; especially when they perceive what strength there is against them; for formal professors love to have it so, rather than to sit in silence. . . . Nothing of or belonging to man can possibly add any lustre or dignity to so Divine a gift. Neither will the best adapted words or doctrine, ever so truly and consistently delivered, be any more than as sounding brass or a tinkling cymbal, without the power, light and demonstration of the Spirit of Christ. There is no occasion at all for those who regard his power as the substance of their ministry, to be any way solicitous about words, as the lowest and most simple are really beautiful when fitly spoken under that holy influence.—*Journal of John Griffith.*

CHRISTIANITY is an experience; not an opinion.

WHAT DOES IT MATTER?

It matters little where I was born,
Or if my parents were rich or poor;
Whether they shrank at the cold world's scorn,
Or walked in the pride of wealth secure.
But whether I live an honest man,
And hold my integrity firm in my clutch,
I tell you, brother, as plain as I am,
It matters much!

It matters little how long I stay
In a world of sorrow, sin and care;
Whether in youth I am called away,
Or live till my bones and pate are bare.
But whether I do the best I can
To soften the weight of adversity's touch
On the faded cheek of my fellow-man,
It matters much!

It matters little where be my grave,
Or on the land or on the sea,
By purling brook or 'neath stormy wave,
It matters little or naught to me.
But whether the Angel of Death comes down,
And marks my brow with his loving touch,
As one that shall wear the victor's crown,
It matters much!

—From the Swedish.

FOR "THE FRIEND."

Some Brief Extracts From a Manuscript.

LIFE OF BENJAMIN KITE.

(Continued from page 44.)

Much interesting matter concerning the prevalence of the yellow fever and the doings of the commissioners to aid the poor—of which body B. K. was clerk—is here given, which I pass over, and come to a unique circumstance, which may be of interest. David Barclay of London—descendant of the apologist, having through the failure of some creditor come into the possession of an estate on the island of Jamaica, together with a number of slaves, determined they should be freed, and directed his agent to manumit them. This the man refused to do on the ground that such an act would render him so unpopular among the planters, that the matter rested for a time, till at length a person was engaged to bring them to Philadelphia, put them in charge of a "society for improving the condition of the blacks," of which Jas. Pemberton was president and B. Kite clerk. The agent found sixteen able-bodied persons and some children; these all expressing their willingness to go with him, passage was engaged for them, but when they came in sight of the ship they were afraid and refused to embark, having been told by some evil-minded persons that they would be sold to the Spaniards. Thereupon the agent found himself in great perplexity and knew not what to do. At length calling one of the most intelligent of them aside, he explained his purpose and urged him to induce the others to consent to go. The reply was, "We are your slaves and we must do as you bid us." Finally after much trouble they were gotten aboard. During the voyage the agent entirely won their confidence and delivered them over safely to the society. David had sent friends to start them well on their new career of freedom in which they mostly did well for themselves. The liberation of these slaves cost D. Barclay—including what they would have brought in Jamaica—over thirteen thousand dollars, and so well was he pleased with the care of the committee of Friends that he sent each one of them a copy

of the Apology, a Cheshire cheese and what he might well have omitted, a pipe of his brown stout.

I find nothing of special note until 1813, when Ohio Yearly Meeting was first held, his beloved brother, John Letchworth, being there with a minister. Thus he wrote of his surroundings: "The Men's Yearly Meeting is held in a shed adjoining the brick meeting-house belonging to Short Creek Quarterly Meeting, which women Friends occupy, and I understand, fill. If thou pictured to thyself one of the sheds of your brick yards extended forty-five feet one way by seventy-five the other, with blocks on the ground on which rough boards are laid for seats and midway of the long side a passage from the road two-thirds of the way across, at which place are two benches with backs, with the front side of the shed boarded up about three feet, thou wilt have a tolerable idea of the men's apartments, and yet here Benjamin, even here, business can under proper qualifications be transacted with propriety."

Concerning this Meeting John Heald, a worthy minister and very particular friend and correspondent of E. Kite, wrote him: "It was attended by about, I suppose, two thousand persons, though I am ready to conclude there were rather less. A solemnity continued to attend the several sittings and deliberations thereof. Near the close my mind was led to view in retrospect the time when the number of Friends' families (in Ohio) was less than ten. My father, one young man and myself were all who attended one meeting and that the only one in the western country, less than forty years ago. I remember the first established meeting—the opening of a Preparative Meeting, then a Monthly Meeting, Twelfth Month, 1785; a few years since a Quarterly Meeting and now a Yearly Meeting is opened attended by such a large body of Friends, and with such overshadowing solemnity; I said in my heart, 'How great things Thou hast done and art doing for thy people, oh Lord; how dost Thou delight to do us good.' How small, but a few years ago and what a great multitude now! All this brought about in the compass of my own knowledge and the opening of all these meetings I have attended except the Preparative." After J. Letchworth's return B. Kite writes to him:

"Beloved Brother:—Thy safe arrival at home after thy toilsome journey is an additional proof that He who puts forth his own is not only able but willing to guide and guard them securely on their way and return them in peace and safety. I several times heard tidings of thee and that Friends were pleased with thy company and service. If it was consistent with my proper business I believe I should have ventured to come and see thee, having a great desire to be informed of the state of Friends where thou hast visited, and as to how it fared with thee both in height and depth, suffering and rejoicing. But as this is not the case, can thou not come to see us and stay a few days? I often think of Friends in Ohio and condemn none of them for going there to settle. Where there is no law there is no transgression. But for those who know that the poor Indians were obliged to part with their land against their will is it not

contrary to the principles of Immutability Justice—is it not contrary to the spirit of the gospel which breathed peace on earth and good will to men, for the followers of the Lamb to possess those lands? This subject is much on my mind this evening and I just throw it out as a query.

Hast thou heard of the death of Nicholas Walm. He appeared to die of mere decay of nature. I did not hear that he said much on his death-bed. Just before the close, his poor deranged son came into the room and was much affected. Nicholas fixed his eyes on him and said, "To die is gain. To have this evidence sealed upon the mind is a favor indeed. Many who are girded with the linen ephod are running to and fro that knowledge may be increased."

J. L. replies, "To hear that my company was not burdensome is pleasant, for I had to use plain dealing. In my first setting out I felt like a child at a man's work. Yet I can truly say that I have been helped out beyond expectation. I have had to marvel at the kindness of our Heavenly Father at the indulgent manner in which he deals with his children. . . . I am pleased with thy honest zeal and don't wish to abate it, but when I take in to view in how many ways professed Christendom is acting contrary to the golden rule, 'thou shalt love all,' . . . In a letter to J. L. B. K. says, "It seems that I reported Henry Kull as being a gentleman in the best sense." What did thou mean by that expression? thou asks. I have no recollection of so writing but when I inform thee that he is simple yet polite, humble yet accomplished, thou wilt not think it a very strange characterization. C. Healy was in town yesterday. He is a very interesting man. I attended the opening of Western District Monthly Meeting on Fourth-day. This meeting will no doubt tend to promote the good cause if the members will be willing to keep little enough. As dear Jas. Simpson said, "as little as the snow birds so that the arrows of the evil archer may not strike them."

Yes it is true, that officers called a "court-martial" sit in this city and men are being brought before them by force to answer for not drilling. Fines have been paid, and from the ignorant collected. None, I believe, have yet been imprisoned or restrained made. My Thomas was one who was drafted (war of 1812). He was most easy to go at the second summons, without waiting for the bayonet. I went with him. He let them know he did not acknowledge their authority and desired his protest against their jurisdiction might be recorded. It was so done. This is pretty much the way in which our young Friends have acted. When they appeared to be done with him, I asked liberty to say a few words. I told them in as concise a manner as I was capable of why they could have no authority, and ended by saying, "This judge advocate will not deny," and he did not deny it. What amount they have fined Thomas we have not heard, but it is an alarming precedent . . .

(To be continued.)

"Aim high!
No shaft is ere mis-spent
Which aimed with true intent,
Strikes near the mark."

PRAYERS.

There are prayers of the heart, there are prayers of the head, there are prayers that are prayed, and prayers that are said. The prayer of the head is well rounded and wise, the prayer of the heart may bring tears to the eyes, the prayer that is quickest to reach the Most High, and the surest to bring back the Father's reply, the prayer that the world least misunderstands—the prayer in the Spirit, of Heart, Head and Hands."

Items Concerning the Society.

"A few people may hold a good Quarterly Meeting," was remarked by a Friend as they were riding from the recent sitting of Caln Quarterly Meeting.

Elisha Steer of Ohio has a minute for the same tent of service as Jonathan E. Rhoads, namely, Eastern Yearly Meeting and the meetings consisting in it.

One of our Friends travelling on religious service, whose letter quoted in these Items in our 2, seemed to say that it was "Portsmouth, R.," in which he was requested to "take charge" of the meeting called Friends, has since written that it is "Portsmouth, Va."

John S. Rountree has prepared with much care an important statistical review of the position of titled Friends during the past forty years. It is played on seven pages of the *London Friend* for 25th Month 9th. We note that in 1861 the members and attenders of Friends' meetings amounted to 17,094; in 1891 the number is 25,143. Those who joined the Society in 1861 were 368; last year, 528. Married in Friends' meeting-houses, in, 58; last year, 80. Number of meetings, in, 317; now, 373.

A correspondent writes: "To my mind the greatest peril to our religious Society at this time is along intellectual lines, particularly in the systematic study of the sacred Scriptures on a literary and scientific basis. First-day schools have taken very limited hold upon our Yearly Meeting thus far, except in *union* and *mission* work; but the efforts of our members in these *union* and *mission* schools reveal how faint and imperfect a conception of the true Friend many have, and also tend further dim that vision, and to lessen the prospect of their becoming such themselves.

THE LATE RACHEL GRELLET.—The following appears in the *London Friend* of the 9th inst.: "The death of Rachel Grellet claims more than mere passing notice in these pages. She was the only child of Stephen Grellet. Her mother's sister of our late dear friend Isaac Collins. Her death will recall many recollections of her loved father.

"She resided for many years at Medford, Burlington County, N. J., where she passed into her heavenly rest on the 4th ult. She became gradually conscious, and passed away, without apparent suffering, shortly after midnight.

"She was warmly interested in the Christian work in France carried on by Friends, and to the cause was a liberal subscriber to it. So lately as the sixteenth of First Month last she writes (after having been advanced age): 'It does seem a very old age; but I can only be fully prepared, through the mercy of our beloved Saviour, I shall glad to depart and to be with Him, which is far better. I can testify that He is very gracious to

"It was a great satisfaction to her to know that the trunk full of her father's papers had been safely deposited in the Logonian Library in Philadelphia,

where they had been carefully arranged, pasted, and bound in twenty-four folio volumes. Many are charts of sales, and deeds made to the original inhabitants of Philadelphia.—Many deeds of Wm. Penn, not bound, belong to the collection.

"J. B. BRAITHWAITE."

BI-CENTENNIAL CELEBRATION OF WM. PENN'S GIFT OF LAND TO EAST NOTTINGHAM MEETING.—It has been arranged by those having charge of the property, to hold, on the 14th of Ninth Month, an assembly at the old house at Calvert, known in Friends' records as East Nottingham, Maryland, to celebrate the two hundredth anniversary of William Penn's gift of that property to the Society for the maintenance of a place of public worship.

The committee have made arrangements for an all-day meeting, and persons from a distance will find conveyance from the railroad at Oxford, Pa., or Rising Sun, Md. Papers and other sketches of historical interest are to be presented there, and all Friends and others that are interested in this old Meeting property, that has now stood nearly unchanged for the past hundred years are invited to attend. It was the meeting-place of John Churchman and other ancient worthies.

Nottingham, as a Quarterly Meeting, was set off from the Western Quarter of Philadelphia Yearly Meeting, before a Yearly Meeting in Baltimore was established; and later it became a part of that organization.

NORTH CAROLINA YEARLY MEETING.—From the report of a correspondent, the following portions are selected: "North Carolina Yearly Meeting of the religious Society of Friends (one hundred and ninety-fourth anniversary), met at High Point on Fourth-day, the seventh of Eighth Month, 1901, and closed on Second-day, the twelfth. The attendance was about the same as usual, but the interest manifested was much more marked, and the issues before the meeting aroused intense interest and attention. When the proposed new uniform Discipline came before us for consideration it received strenuous opposition, some of the Quarters reporting that their Monthly Meetings were against its adoption and that some were divided and that some were in its favor, the result reached this year was not absolute rejection, but compromise for another year, to allow time for full consideration."

"As subject after subject came before us all were treated in that spirit of love so conspicuous in Christ's disciples. The Epistle from London to our Yearly Meeting was particularly satisfactory, other Epistles were fairly so. We had the company of several Friends in the station of ministers from other Yearly Meetings and of some who were not, all of whom were welcomed and had their place, one Philadelphia brother included. At the Meeting for Worship held on Fourth-day, a young minister from Ohio spoke about Micah and the false prophets in Ahab's day, and afterwards succeeded by emphatic calls to work on several to come to the front and kneel at what some call mourners' benches, which was not again repeated. There was some attempt at congregational singing."

"The meeting for Divine worship was held in the meeting house and proved a favored one. True prayer, refreshing silence, then ministry by a young woman so clear and convincing that a Baptist minister present said he had never before heard such, then silence, then ministry from a Philadelphia Friend, then silence, concluding in quiet solemnity, evidencing living worship. Other meetings were held in the grove under the tent and in the open attended by other ministers. In the evening a lecture was given in the house on Quakerism. The speaker gave some fair enough definitions, but got off the track, I think, when he spoke about Friends' testimony about dress being past and gone."

"All appropriations asked for before the Yearly Meeting are now referred for consideration to the representatives, who had a pretty hard time this year" [concerning the claims for mission work.]

"Friends are looking to build a boarding-house with committee rooms on their own ground near the meeting house for the convenience of the meeting and its attenders, and it was referred to the representative meeting in Fourth Month. We had a lively time when questions of education and Guilford College came to be considered. The trustees reported a deficiency of income this year amounting to near two thousand dollars, which shortness in income now amounts to near twenty thousand dollars, and they are seeking for a fund of one hundred thousand dollars, to enable them to continue their work in its present way. Only about four per cent. of our young people have attended it during later years, leaving ninety-six out of every one hundred members without any benefit from the funds and property subscribed by the donors for the benefit of the entire body. We are mostly agricultural and handicraft people, and need industrial training in harmony with our surroundings and for the age in which we live, and particularly to assist our poor children, of which we have many. Now if we take a Northern Yearly Meeting who are more wealthy, we met twenty-two per cent. of their children going to Westtown, and if the same proportions attended Guilford there would be four hundred or more. It is a serious question, and of still more importance to have the young people grounded in the safe and solid principles of Divine truth which we profess."

"The view of Friends who favored the adoption of the new Discipline was that we might keep in touch with the meetings which adopted it; while others believed we had received injury already by too close contact with the fast Friends, who have paid pastors, music and singing, gone off in dress and address, had honor, heathen names for the days of the week and months of the year, calling on all present to stand up and sing the doxology and then dismissing the gathering, etc. While if any one should conscientiously keep seated he is called a Willbur or a Gurney or some other human name. As to music and singing, about twenty-two years ago at our Yearly Meeting held in Tennessee, the representatives agreed on and presented to the Yearly Meeting a minute to this effect: 'Being satisfied that during the services of our past Yearly Meetings, as well as this, the views which we as a Church have ever held upon the subject of worship have been in some measure violated, in the giving out of hymns and calling upon the congregation to rise and join in singing them, the representatives have agreed to recommend that any repetition of such action in the sessions of this meeting will be considered out of order.'

"I would also call attention to the fact that after praying or preaching, singing has a tendency to lightness and a removing of serious impressions; how impossible is it for a congregation of different kinds of people to join in singing whatever may be given out, whether suitable to their conditions or not, much of which could not be said by any without falsehood. Now it is the language of the heart which God regards, and considering the variety of conditions and the different subjects of praise, adoration, confession, petition, etc., contained in every collection of hymns, how can any one in the fear of the Lord with propriety be ready to sing whatever may be given out? It follows that if all sing, some must utter words with the mouth contrary to the language of the heart, which so far from being acceptable to the Lord, is hypocrisy and an abomination in his sight. Again, if the language of the heart be spoken in prayer, does it not show indifference whether our prayers be heard or not, to begin singing immediately after, perhaps very different in matter from what has been prayed for? Ask yourselves seriously, is outward singing intended to please the

caral ears of men or the Holy Spirit or a Holy God? Why such anxiety about tunes, voices and music? Is the Lord to be pleased about such poor things? How can people who live in open opposition to God join in singing without uttering falsehood? and the Lord requires truth in the inward parts. We want emancipation from the possibility of human control, and the uniformity we desire is on the lines of the teaching of our Lord and Saviour Jesus Christ. Hence we raise a protest against the proposed subservience to a five years' body of unknown people on Episcopal pretensions. We love our friends too well to trust the cause of Christ to any other president but Him whom God has set forth to be our Leader and Commander.

"A few words more, and I have done. We want to preserve and transmit to our successors the principle and practice of disinterested service under Divine control, and if our exchequer is full, to distribute it wisely, but if empty, to be content and honest. I simply allude to this as we are called on for money, money, to appropriate now-days along so many lines.

"A. FISHER.

"WOODLAND, N. C., Eighth Month 21, 1901."

SUMMARY OF EVENTS.

UNITED STATES.—The strikers in the steel industries appear to be weakening. In a recent statement President Shaffer of the Amalgamated Association said in reference to colored men who have been excluded from the organization: "This strike colored men have done much damage by going to work. Some of them have wanted to stay out with us, and could not become members of the organization. Naturally they went to work and took the place of our men because they had been spared." The number of members of the Association when it began the strike is said to have been 18,892, and the balance of the national treasury is \$7,450,000. It is stated that in consequence of the strike American consumers of finished goods are placing orders in Great Britain on quite a large scale.

The petrified forests of Arizona were recently examined anew under the direction of the General Land Office. The silicified logs lie in the greatest abundance within an area of eight square miles in Apache county. In some places they lie more thickly than they could have stood while living as trees, and it is thought that they must have been carried there by a swift current of water.

Six students from the Pei Yong College, at Canton, who arrived from China several days ago, will enter the University of California to complete classical and scientific educations. They were selected by the Chinese Government to study modern American methods, with a view of spreading them in their native land.

A union of the women employed as clerks in retail stores in Chicago has been formed, intended to secure shorter hours of work, a day of rest on the first-day of the month, and better conditions in general respects. It is the purpose of the clerks to form similar unions, to be composed exclusively of women, in every section of the city.

The census returns show that an increase of longevity has taken place since 1890. The average age at death in 1890 was 31.1 years; in 1900 it was 35.2 years. The principal causes of premature death were as follows: With the rate per 100,000 was as follows: pneumonia, 191.9; consumption, 190.5; heart diseases, 134; diarrheal diseases, 85.1; kidney diseases, 83.7; apoplexy, 66.6; cancer, 60.8; old age; bronchitis, 48.3; cholera infantum, 47.8; debility, 45.5; inflammation of brain and meningitis, 41.8; and pneumonia, 34.4; typhoid fever, 33.8. Death from all the principal diseases shows a decrease since 1890, the most notable being in consumption, which decreased 54.9 per 100,000.

The second annual session of the National Negro Business League, an organization founded largely through the efforts of Booker T. Washington, lately met in Chicago. In address before the Washington audience, the object lesson of one honest negro succeeding magnificently in each community in some business or industry is worth 100 abstract speeches on securing opportunity for the race. In the South, as in most parts of the world, the negro who does something and possesses something is resented by both races. Usefulness in the community where we live constitute our most lasting and potent protection. We want to learn the lesson of small things and small beginnings. We must not feel ourselves above the most humble occupation or the simple, humble beginning." In reference to the lynching of negroes one speaker said:

"It is a disgrace to American civilization that such atrocities are committed. Let the law be carried out against offenders as individuals, and leave races and classes to enjoy the freedom which belongs to them."

The State Department has received a report on conditions in South Africa from Consul General Stowe at Cape Town. He says the imports from the United States in 1900 were greater than those of 1899, and that this country still stands second among the nations exporting direct to South Africa, and, in addition, ships a large supply of supplies via England. The natives, he says, are astounded when they view the work of our agricultural machinery in the fields. The children sit in school at desks made in America and in American pews in their places of worship.

In the United States a first class locomotive passenger engine made for 100,000 to 110,000 miles a year, and the end of twenty years is supposed to be worn out. In England the length of time an engine is run, is considerably greater, but the Americans claim that their plan of using them is the more economical.

The down of the thistle is said to be much used abroad in mixing it in silk goods. It makes a very strong yarn which can be used as a stuffing for pillows, cushions, etc. A considerable quantity is imported into the United States annually in tight, iron-bound barrels of from 250 to 300 pounds. Its competition with cotton is now being felt by the Southern growers. Most of it comes in duty free or under a very small tax.

It is stated from Washington that the rural free delivery service will, in a few weeks furnish to its patrons stamped envelopes bearing return notices, stating the route on which they were mailed. In case of non-delivery they will be sent back to the carrier who first collected them, and be by him returned to the person who deposited the letter in the mails. This new feature of the service is intended to give the rural patron the same facilities that are now enjoyed by those who live in the cities and to render their letters more secure in the mails. The service will be greatly augmented during the next few weeks.

With the object of recording instantly and accurately the height of the tide in the Delaware River at the foot of Chestnut Street, the United States Coast and Geodetic Survey is installing in the office of the Maritime Exchange five squares away, in the Bourse, an electrical tide indicator, which, it is said, is the first instrument ever to be set up in this country to record the tide electrically at a distance from the official gauge.

At the Philadelphia Fair last week, reported to the Board of Health. This is 16 less than the previous week and 119 more than the corresponding week of 1900. Of the foregoing, 256 were males and 285 females; 47 died of consumption of the lungs; 35 of inflammation of the lungs and surrounding membranes; 6 of diphtheria; 8 of cancer; 8 of apoplexy; 10 of typhoid fever and 3 of scarlet fever.

COTTON closed on a basis of 84c per pound for middling uplands.

WHEAT.—Winter, super, \$2.15 to \$2.30; Penna. roller, straight, \$3.20 to \$3.30; Western winter, straight, \$3.25 to \$3.35; spring, straight, \$3.40 to \$3.65.

GRAIN.—No. 1 red, soft, 74c to 74½c; No. 2, 72c to 73c; No. 2, 70c to 71c.

BEEF CATTLE.—Best, 53 to 55c; good, 51 to 53c; medium, 49 to 51c.

SHEEP AND LAMBS.—Choice, 34 to 36c; good, 34 to 36c; common, 18 to 26c; lambs, 30 to 61c.

FOREIGN.—The steamship *Islander* of the Canadian Pacific Co., on the 15th inst. struck an iceberg off the coast of Alaska and quickly sunk; about forty passengers it is believed perished.

Major O. J. Sweet, in command of the Third District in Midland, one of the Philippine Islands, says: "The question of slavery, although not a legal one in the United States, is still a fact, and is a constant source of trouble on account of slaves escaping from one master to another, or their being stolen. Whenever a question relating to slavery comes before me I simply make the owners prove they are slaves beyond doubt, in which case I have nothing to say to them, but in case I pick a slave in the market I give the alleged slave freedom per *homo*. Thousands of Moros are held as slaves who are by right free people."

Three deaths have occurred in Havana from the bite of a mosquito infected with the yellow fever.

The population of Venezuela is stated to be 2,444,816; about 2,000,000 are unable to read and write.

Wrecked steamships are being established along the Gulf of St. Lawrence.

Recent observations published at Toronto of the height of clouds, show that cirrus clouds varied from 25,500 feet to 36,000 feet in height, and the mean height of cumu-

lus clouds was 5,500 feet in summer and 4,300 feet winter.

The *Mark Lane Express* summing up the crop statistics says: "The best authorities estimate the wheat crop of the United Kingdom at 56,000,000 bushels, that of France at 300,000,000 bushels and the crops of Belgium at Holland at 40,000,000 bushels, a total of 396,000,000 bushels for the great wheat importing area of North-western Europe, which needs 664,000,000 bushels. America, with wheat and corn exports of 40,000,000 bushels, has 675,000,000 bushels, and is, therefore, able to do with the deficit single handed."

Steam motor wagons have commenced to run regular between London and Tunbridge Wells.

It is supposed there are now about 11,000 Boer under arms in South Africa. Frequent collisions with the British have been reported. The latest estimate of the number in the neighborhood of 100,000. Martial law has been proclaimed in the Queenstown District.

A recent act of Congress authorized the appointment of 1,000 school teachers for the Philippine Islands, 8,000 written applications for these positions have been received from 781 men and 600 including both men and women have arrived at Manila.

The immigrants arriving in this country last year (448,572) were greater in numbers than since 1893 (502,917). Since 1896 the heaviest immigration has been 623,000, 1892; the lightest, 229,000, in 1898.

RECEIPTS.

Unless otherwise specified, two dollars have been received from each person, per *vol* for *vol*.

Mary M. Dillon, Kans.; Jacob V. Edge, Pa. Martha R. Newkirk, Phila.; Edward Comfort, Gr and for Edith C. Tattal, Pa.; Milton Stanle agent, Ind., \$14 for Joel D. Carter, Hannah Horne, Addison Hadley, Albert Maxwell, Jo Harlow, Nance, and Edwin and David Thomas, Mass.; Sharpless, for John P. Sharpless, Pa. Isaac N. Vail, Cal.; Gertrude Whittier, Carlton Mass.; T. C. Cope, O.; John S. Keeling, Ireland to shillings; Henry Stanton, O.; A. E. Harve Kans., \$3 to No. 14, vol. 76; Joseph Henderson agent, Ia., \$22 for Lorenzo Rockwell, Lewis Rockwell, Ralph E. Faxon, and Daniel J. Peckham, O. Tjossem, Severn Tow, Christian Thompson, Om K. Tow and Hugh L. Knowles, N. Y.; R. P. Le ett, Pa.; James F. Reid, Pa. Philena Y. Smedley and for Horace W. Smedley, Pa. John H. Binger, N. J., \$6 for himself, Edward H. Jones, and Charles D. Kalkins, for Clara C. Starbuck, N. Mass.; Edwin Ballinger, N. J., for Charles Ballinger and Mark B. Wills; Annie J. Jones, Del.; J. German, Phila.; Daniel D. Test, Phila.; Ruth Ann Harned, N. J.; Wm. Bishop, N. I.; Thos. Whitson, agent, Pa.; \$46 for Hannah F. Fell, Malin Hoopes, Ralston R. Hoopes, Thomas Hogue, Susan C. Garrett, Ruthanna Hoopes, for Mrs. Eldridge, Rebecca G. Passmore, Mercy Roberts, Elizabeth L. Roberts, Phebe I. Wally, Hannah F. Webb, Deborah J. Windle, Philena Yarnall, Susanna F. Sharpless and for Thom Sharpless, Wm. T. Sharpless, M. D., and Isa Sharpless, Jane S. Warner and for Electa J. W. and Elizabeth W. Simms, N. J.; Aaron Meke agent, N. Y., \$8 for Chas. B. Owen, H. Foster Owt Freelove Vile and Edward Wood; Matilda John, Ia.; Margaret Ward, Canada; Elizabeth Taylor, Phila.; S. L. Whitson, Phila.; Thomas Whitson, agent, Pa., for Stephen W. Savory, Jo Whitson, Wm. B. Moore and for Oscar Wood, Pa. Hannah F. Smedley, Pa.; Jane G. Smedley, Pa.; Rebecca E. Buzby and Hannah T. L. yard, N. J.; Samuel A. Bacon, N. J.; R. Nich son, N. J., \$10 for Sarah Nicholson, Rebecca Taylor, Henry Read, Hannah J. Prickett, a Louisa W. Hancock, Wm. F. Webster, and for Charles Mercer and Hannah N. Harry.

Remittances received after Third day noon will appear in the Receipts until the following week.

NOTICES.

WESTWORTH BOARDING SCHOOL.—The school year open on Third day, Ninth Month 31st, 1901. New scholars seek to be at the school before noon, if convenient. Applications for admission should be made to Wm. F. WICKERSHAM, Principal, Westworth, Pa.

The "Open Door."

Perhaps more than one apprehended that a recent article in THE FRIEND, entitled "Creating Markets by Impoverishing Customers," was aimed at the President's policy. Had it been written for his benefit, the writer's concern would have been sent to him privately, heretofore has been done on other concerns. Nothing from these columns would probably reach the President's eye. Neither was he in the eye of the editor as responsible for such policy. But what was in mind was unsound popular opinion—unsound as to war for its method—which was voiced by a leading United States Senator recently in these words:

"We have reached a point in our industrial development where we produce more than we consume; we must find markets for the surplus. We can get partial relief by tariff reduction and reciprocity treaties with European and South American countries, but the great markets of the world are in the far East. We want our fair share of them, and intend to have it; and the way to secure it is, not to pull down the flag and run away, but to remain and hold on to the position, the prestige, the advantage, and the opportunities that we enjoy."

This is a somewhat mild way of putting the much more unscrupulous language of others the doctrine of bloodshed for trade;—not a President's language or policy, for of that we are not aware. But a broader burden than our own nation's policy was really the weight on our mind,—that mammon god of all those nations who insist upon forcing by arms "an open door in the East." Whatever may be the end of the work of the Christian missionaries, we believe a heaven was working under the spell love that have hastened the day of an openness of heart for western trade

through Christian intercourse, which is a far surer and really quicker open door than any which hate or greed can force.

Doubtless our government's exceptionally humane and considerate policy towards China in her distress, will demonstrate the greater openness won for trade by the more peaceable spirit.

The little protest on our mind we discover thus expressed in William Vaughan Moody's poems:—

Our fluent men of place and consequence
Fumble and fill their mouths with hollow phrase,
Or for the end-all of deep arguments
Intone their dull commercial liturgies—
I dare not yet believe! My ears are shut!
I will not hear the thin satiric praise
And muffled laughter of our enemies,
Bidding us never sheathe our valiant sword
Till we have changed our birthright for a gourd
Of wild pulse stolen from a barbarian's hut.

How to Begin Miracles.

"Except ye see signs and wonders ye will not believe." Our Saviour would invite belief even by these, if necessary. But still graver would be the rebuke, "when ye see signs and wonders ye will not believe!"

He has visited and revisited us with evidences of his will and our own duty. We have not lacked for signs,—secret signs and open signs. These, if we would heed them, would be followed by wonders. "Whatsoever He (the inspecting Word) saith unto you, do it." This is the "beginning of miracles" of grace to one who does what he believes Christ says, feeling his Lord's secret signs by the witness for truth in his heart.

It was pronounced the "beginning of miracles" at Cana of Galilee, when men obediently filled the water pots with water. The water of obedience will still be turned into wine of spiritual life which Christ will drink anew with us in his kingdom. The witness for truth is sign enough, and wonders enough will go along with it if heeded.

How many deliverances have we had, for which we could remember we had prayed in faith? These are of the same working as those wonders which should have helped the hearers of Jesus to believe. If we have been careless to believe his inspecting Word, shall we not believe for the very works' sake? How many providences have shaped our course, in which, when looking back into them, we read wonders of a Wisdom above all human

planning. Again the retrospect constrains us to believe a present Saviour.

Well it is for us if, when we see signs and wonders, we will believe. Better is it when we will believe the pure word of Truth on the strength of his own secret Witness, without waiting for wonders and perhaps at length judgments, to reinforce it. So shall the verdict without rebuke bless us in saying, "Because ye have believed ye have seen signs, and because ye have obeyed the signs, ye have seen wonders!"

THE SOUL'S HOPE.—O my soul, dignified with God's image, redeemed by Christ's blood, betrothed by faith, enriched by the spirit, adorned by graces, ranked with angels—love Him by whom thou art so much beloved! Be intent on Him who is intent on thee; seek Him who seeketh thee; love Him who loveth thee—whose love anticipates thine, and is its cause! He has all merit, He is thy reward; He is the vision and the end! Be earnest with the earnest, pure with the pure, holy with the holy! What thou shouldest appear before God, that should God appear to thee! He who is kind, and gentle, and of great compassion, requites the meek, the kind, the humble, and the compassionate. Love Him who drew thee from the lake of misery, and from the mire clay. Choose Him for thy friend above all friends, who when thou art bereft of all things, can alone remain to thee. He will not forsake thee, but will defend thee from devouring foes, lead thee through an unknown region, bring thee to the streets of the heavenly Zion and place thee with angels in the presence of His Majesty, where thou shalt hear the angelic melody,—holy, holy, holy! There is the chant of gladness, there the voice of exultation and salvation, of thanksgiving and praise, and perpetual hallelujah! There is accumulated bliss and supereminent glory! —*Augustine.*

NEED NOT UNCOVER BEFORE THE KING.—The present holder of the Barony of Kingsale celebrated his birthday recently. This title is one of the most ancient in the peerage, dating from 1181, but its chief distinction is the curious privilege which attaches to it—the right to remain covered in the presence of the sovereign. In the reign of John, Lord Kingsale's ancestor, John de Courcy, Earl of Ulster, was granted this right among his rewards for successfully championing King John's cause in a duel. This is one of only three cases. The others are those of Lord Forester, and the master of Trinity College, Cambridge, to each of which titles attaches this curious right.—*London Daily News.*

God's nobleman is he who ennobles man.

FOR "THE FRIEND."

"Dwelling in Light Unapproachable."

[A friend in New England has left on record a remarkable dream or vision which he witnessed in the Twelfth Month, 1890.

The description, however, of what he saw in the dream, says the Friend who sends it for our perusal, "I have thought might be communicated to others, yet with a feeling that such manifestations of the Divine Being, which He has at times condescended to make known to mortals on this side of eternity should be received and published under feelings of awe suitable to the solemn nature and incomprehensible majesty of Him who has thus appeared to man."]

He says one night soon after falling asleep he thought it was time to arise, and going out of the house as he thought, "it occurred to me that the air and all things about were of more than common clearness and brightness. A place was soon reached where a better view could be had, and upon looking up I saw in the heavens before me a bright and shining One whose countenance was of most awful beauty, majesty and power, and he seemed the very embodiment of all purity and goodness, and I involuntarily cried out, 'Pure pure! O! how pure!'

"And gazing spell-bound it appeared to me that it was not the coming sun that made the heavens light, but this glorious Heavenly One who was all light and purity.

"And it occurred to my mind at that time that there were perhaps many more like myself who were early abroad in the land, and by the month of many who should see this it would be established; and speaking to myself I said, 'What now can the atheist and the unbeliever say.'

"How long this glorious appearance was I cannot say, but directly coming rapidly towards me it passed by to the right, and immediately all was thick darkness; and awaking I found myself in my room.

"This Heavenly One had that upon his head that was like pure gold and his countenance and the expression of it I will not attempt to describe,—there are no words in which an adequate description could be given. And he had on a garment that was like a mist for lightness and 'whiter than any fuller's soap could make it.' Blessed indeed will those be who have a garment like this when they have done with earthly things.

"As I was lying there lost in wonder and in deep thought as to what had been seen, my mind seemed to go back over my life to that time when I first thought upon a future state and what it might be like unto, and remembered that it was very strange to me at that time how it could be light in heaven as there was no sun or moon there as recorded in the sacred writings. Now I saw it very plain, having beheld the whole heaven lighted by the very presence of the Heavenly One. It was very wonderful. Everything seemed to be light from this very presence there."

A COINCIDENCE.—The late ex-Judge Fancher, of the Supreme Court of New York, informed us that he consented to deliver a lecture in New Jersey for the benefit of the church. The night was stormy and dark and he debated long whether or not he should go. He went, and to his great delight one of his

clients, in no way connected with his denomination or the church, had driven over from his fine estate out of compliment to his lawyer and asked him home with him for the night. The next morning before he returned to the city he conducted him through his greenhouses. Two days later Judge Fancher received a letter from a firm of solicitors in England, informing him that they were employed by the executors of a will disposing of a great estate, to make search in the United States for a certain man who was one of the heirs. The man had come to the United States and was supposed to be a florist. His name was given. The judge had no particular knowledge on the subject, and was about to write to them that the information was too meagre, and to suggest another lawyer who would probably do the work better than he could, when it occurred to him that as his friend who entertained him had unusually fine greenhouses he would send the letter to him, and his gardener proved to be the man looked for. He was soon put in possession of a large fortune and went back to his native land to enjoy it.—*Christian Advocate.*

The National Bureau of Forestry.

The rapid growth of sentiment in favor of forestry culture is gratifyingly illustrated by the establishment, at the beginning of the present (Eighth) Month, of the National Bureau of Forestry, under the act of the last Congress. The growth of sentiment in favor of this important work is interestingly shown by the annual increase in the appropriations during the last few years. In 1899 it was only \$28,520; in 1900 it was increased to \$88,520, and this year that sum is advanced to \$185,440, nearly seven times what it was in 1899, and more than double that of last year.

One secret of the success of the movement in favor of forestry culture is that, after painstaking effort, it was clearly demonstrated to the farming interests that woodland culture is of direct and vital import to them in many ways. It was proved beyond dispute that forest areas had a tendency to prevent prolonged droughts and to preserve an even flow of water in the streams which irrigated the farms. Proof was also furnished that where ordinary intelligence was displayed very satisfactory financial returns might be had from otherwise waste land by the cultivation of trees. The experimental work of the Division of the Forestry attached to the Department of Agriculture was of such a surprisingly effective character that its advancement to the status of a bureau was inevitable.

The field of work of the new Bureau will be much broader than the work of the branch of the Department of Agriculture, and it should, and doubtless will, be correspondingly greater in valuable results. There will be three important divisions, one having charge of forest management, a second of forest investigation and a third of records. The object of the first is to assist owners of forest areas to develop them so that they may be handled as an unfailing source of timber supply. To this end an expert is sent to ascertain the condition of the standing timber, the prospects of reproduction, the facilities for marketing, the best method for harvesting

the crop so as to secure the largest present and future yield, and the prospect of success under intelligent management. A work plan is furnished, together with much important and necessary data.

Something of this work was done under the old Division of Forestry, and how popular was is demonstrated by the fact that private owners of about 3,000,000 acres applied for advice, and more than one-half of the acreage named was placed under management. Protection against fire, browsing animals and thieves, the study of trees, their rates of growth, distribution and reproductive properties and other scientific matter connects therewith form some of the functions of the new Bureau. There are many perplexing problems to be solved, and without the aid of the forestry knowledge of foreign countries, climatic and other conditions in this country are totally different in many respects to those existing in Europe, making it obligatory on the part of the new Bureau to pursue original lines to reach success.—*Philo. Ledger.*

WHY DON'T HE?—A little boy was attending a campmeeting with his mother, and the place where they lodged was only separate from the adjoining apartment by a thin curtain. As the mother was putting her little boy to bed they heard the voice of some one praying in the next room, and the little fellow inquired,

"Ma, what is the man doing?"

"I should think," said the mother, "he was praying and wanted to be wholly the Lord's."

"If he wants to be," said the child, "why don't he be?" And this is a question which though easily asked, might puzzle wiser heads to answer.

There are multitudes of persons who pray and sigh and cry, and desire to be wholly the Lord's, but if they want to be, why don't they be? In many instances they ask the Lord to do the very things which He has asked to command them to do; a procedure, the reasonableness of which seems to be not clear apparent. The Lord is "a present help" every time of need; but He helps those who help themselves, he listens to those who listen to Him, and His blessing is on those who are ready and willing to receive it upon the conditions which He imposes. There are multitudes of people who are more ready to promise than to work, and are more willing that the Lord should do for them, than they are to undertake to do the little that He requires of them. Prayer is a gracious privilege, but is not designed to be a substitute for obedience, or an excuse for idleness. When we have done all we can there is still enough left to ask God for; and when the Lord has done all He can for us, there is still enough left for us to do for ourselves. Let us see to it that our prayers express the things that we truly desire, and let us not while praying in or direction be acting and living in another. *Common People.*

HOLLAND has ten thousand one hundred windmills, each of which drains on an average three hundred and nineteen acres of land.

God's gifts bless as they are received; the blessing twice as they are imparted.

The Tsangpo, Loftiest of all Rivers.

The Tsangpo is in several respects the most remarkable river in the world. It is the highest of all navigable streams, flowing for nearly thousand miles at an elevation of from even thousand feet to fourteen thousand et. During the greater part of its course current is sluggish, but for a hundred miles more the mighty river, in its descent to the east plain, runs with the speed of a mountain torrent. Though one of the largest of Central Asian streams, it has never been followed on its source to its mouth, and until recently it was doubtful of which of two well known rivers it was the headwaters.

The Tsangpo rises in the extreme southwestern corner of Tibet, at a height of nearly ten thousand feet. Receiving the drainage of the slopes of the Himalayas and of a little own Tibetan range running parallel with these mountains, it soon becomes a stream deep and deep enough to be navigable. There a considerable boat traffic upon it, at an elevation of little below the summit of Mount Annapurna. It flows due east for some eight hundred miles, receiving numerous large tributaries from both south and north, and when near the sea it is, at low water, nearly a third of a mile wide and twenty feet deep; in flood, two miles wide and of unknown depth. In longitude ninety-four degrees east it makes a sharp bend to the south, and passes through the Himalayas in a course known only to the savages who dwell upon its precipitous banks.

When last seen by an explorer it is at a height of from eight to eleven thousand feet, when it emerges in Assam it is only four hundred feet above sea level. From this point it pursues its sluggish way for another three hundred miles as the Brahmaputra to the Bay of Bengal. There has been a long controversy, into the details of which it is not necessary to enter, as to whether the Irrawaddy or the Brahmaputra is a continuation of the Tsangpo. Though there has been as yet no direct evidence—the expedition of throwing in marked logs in the river having failed—the general consensus of scientific opinion is in favor of the Brahmaputra, and the latest English gazetteer decides it under this name.

It is hardly to be expected that pure science has been so much benefited by the lifting of the veil which hangs over this part of the river's source. But there can be little doubt that the scenes of magnificent beauty and grandeur which will thrill the expectant world and which it now and nobler conceptions.

The imagination fails to grasp the reality as there is no other instance on earth of a large river dropping eight thousand feet in one hundred and fifty miles, plunging with a mad rush of a mountain brook hemmed by ranges of steep peaks are from thirteen to twenty-two thousand feet in height. The native testimony is conclusive as to the existence of at least one awe-inspiring fall before Tibetan territory is left.

The attempted ascent from the plains of Assam has been absolutely prohibited hitherto by the Indian Government on the entirely reasonable ground that there is almost a certainty that the explorer would be killed by the savage Mishmis, who are intolerably jealous of the sense of a stranger in their country. This

would necessitate a punitive expedition costly in treasure and in life—an evil by no means commensurate with the gain of having satisfied what is, after all, pure curiosity. The Tibetan officials also, while preventing so far as they are able, any white man from Tibet, for some unknown reason forbid Tibetans even to attempt to descend the river beyond their own frontier.

The Tsangpo has been explored, however, with the exception of this one hundred and fifty miles, notwithstanding the opposition of the Tibetans and the difficulties presented by the highest mountain region in the world, though not by white men.

At any time within the last thirty-five years the trans-Himalayan traveler might have met a caravan of Tibetan and Indian traders with their pack-laden sheep climbing or descending some steep mountain pass, or crossing the Tsangpo on rafts. Walking humbly with the servants or slaves, for to walk is a mark of servitude with those people, there would be an Indian with tea bowl and prayer barrel suspended at his girdle, counting his rosary as he walked, differing in nothing apparently from his companions, except in his more intelligent face and the greater interest with which he noted everything about him. But open his prayer barrel, which he piously twirls when he comes to some particularly dangerous spot, and there will be found in it, instead of the scroll with the Buddhist prayer, "Om mani padmi hom," notes of the journey after the boundary was crossed, observations with sextant and compass and a simple route survey showing the length of each day's march, the relative position of the prominent peaks, the course of the streams and their approximate breadth and depth.

Examine closely his rosary, and one would discover to his surprise that, instead of the orthodox one hundred and eight beads, there were only one hundred, and that he dropped one at every one hundred steps, which were uniformly two and one-half feet long. If he were watched carefully, he would be seen to steal from camp at night, when all else were sleeping, if biting wind, freezing cold and driving snow permit, with his box and tea bowl. Taking from beneath the false bottom of his box a few instruments, and pouring some quicksilver into his tea bowl for an artificial horizon, he makes an observation of some star, notes the condition of barometer and thermometer, compares his chronometer with his watch, and then goes back to camp to write up his journal, and at length to sleep.

Years after, the traveler might see this same man at the Great Trigonometrical Survey in Calcutta, reading to an English officer his journal, explaining his observations and route survey, and narrating his adventures—in one instance these included a seven years' slavery in Tibet. He asks who he is, and is amazed to learn that he is only a schoolmaster in a little Himalayan village in the district of Kumaon.

What is his reward for these year long toils, sufferings and dangers, this daily risking his life in an attempt to add to the world's knowledge. A little piece of land, possibly a small pension, and, while he is able to serve—oblivion. But soon the scientific journals will be full of accounts of the wonderful journey of the native Indian explorer, the great extent

and marvellous accuracy of his survey, his pluck and endurance, his fertility of resource, and, above all, his single hearted devotion to the cause of science. If his services are publicly recognized by some great society, with the names of world renowned explorers, we read merely, "The Pundit employed by Captain T. G. Montgomerie—a good watch—for his route survey in Great Tibet."

It was in 1861 that the successful opposition of the Tibetans to the exploration of the trans-Himalayan region by Europeans, as well as the fact that Indian traders were permitted to travel freely throughout Tibet, suggested to an officer connected with the Great Trigonometrical Survey of India the expedient of employing native surveyors.

The village schoolmaster, Nain Singh, who had been in the service of the brothers Schlagintweit during their explorations in Kashmir, was the first man to receive the necessary training for the work. At the headquarters of the survey he was taught the use of the sextant, compass, etc., to recognize all the larger stars, to walk with paces of uniform length and to make a simple route survey. When these things had been sufficiently acquired he was sent to explore the Tsangpo from its source to India if possible. It was in 1865 before he succeeded in establishing himself in Tibet as a trader desiring to buy horses and at the same time as a pious Buddhist to do homage to the Lhasa Lama. His "instrumental equipment consisted of a large sextant, two box sextants, prismatic and pocket compass, thermometers for observing temperature of air and of boiling water, pocket chronometer and common watch, with apparatus, the latter reduced as much as possible."

After numerous adventures he finally reached Lhasa, where he had an interview with the Grand Lama, whom he described as a fair and handsome boy of about thirteen years of age, seated on a throne six feet high, attended by two of the highest priests, each holding a bundle of peacock feathers. In this journey he was able to follow the course of the river only to the neighborhood of Lhasa, some six hundred miles. Nor did he succeed in tracing it further in a second journey, made seven years later, —a journey memorable, however, from the fact that he made a route survey of four thousand three hundred and nineteen miles, twelve hundred of which were through country never previously explored, and took four hundred and ninety-seven observations. During all this time he was known to the scientific world only as the "Pundit," but the sufferings of this last journey having so affected his health as to compel him to give up his connection with the survey, his name was disclosed. He has been followed by others, among whom those known as A-k, D-m—g and K. P. have accomplished the most in trans-Himalayan exploration, all men of like courage, endurance, and animated by a single minded devotion to their duty. But none has succeeded as yet in tracing the Tsangpo's course through the mountains to Assam.

But there are indications of a change of feeling of the rulers of Tibet toward the Indian Government which promises free intercourse between the two countries in the not distant future. As the deadly hostility of the Mishmis to strangers penetrating their moun-

tain fastnesses has been largely due to Tibetan influence, we may look in time to a similar change among them to friendliness. If this should be the case, we trust that the man who lifts the veil which shrouds this wondrous passage of the river through the Himalayas may be one of that noble band, a native Indian surveyor.—*National Geographical Magazine.*

FISHES AND THEIR EGGS.—Birds, which hatch their young from eggs, are pre-eminent for their parental care, fashioning nurseries with extraordinary ingenuity and skill, and giving unwearied attention to the brood until they are fledged and able to fly. Fishes, which are two steps lower in the ladder of life, also, as a rule send their young ones into the world in the shape of eggs; but from the nature of things are unable to lavish on them the same elaborate care. To a large extent they are at the mercy of storms and tides, and have few facilities for the enjoyment or the comforts of home-life. Eggs which are simply shed in the open sea, and float where the tides are able to carry them, cannot be guarded by the parents; but they have a protection peculiarly their own in being so transparent as not to be easily distinguished from the water itself. Even when contained in small numbers in a bottle of sea-water they can hardly be seen. But fishes, like other animals, love fresh eggs; and, in spite of their transparency, find and eat them. The eggs are often so numerous that the hungry fishes need only open their capacious mouths, and strain the water through their gill openings, to ensure an excellent meal. The eggs which sink to the bottom and adhere to stones and shells are more troublesome to gather, but they are a great attraction to many fishes. For instance, haddock often lose their lives while stealing the eggs of herrings; for they resort to the beds where the herrings spawn, and the trawlers, knowing this, go after and capture the haddocks.—*Home Magazine.*

INWARD PEACE.—There are persons who school themselves to external composure, maintaining a calm, unruffled exterior amid all the disturbing circumstances of life. The power to do this is frequently a great advantage to its possessor. He controls himself, and he avoids many incautious acts and unpleasant circumstances. But this external calmness may be illusive. There are persons who maintain this aspect of quietude when they have very little true inward rest. They control their feelings for the time, but the tumult and the storm rage within, and they have no rest to their souls.

Very different is the condition of those who have the inward peace of God; those hearts are filled with the deep content, the abiding rest, which is the portion of the soul centered in God, and free from all the tumult and disturbance of a restless and disordered world. The storm may rage without, but there is peace within. The hurricane may roar, but the soul which has found refuge in Christ and has built upon the everlasting rock knows no ill and fears no danger. There is not merely the appearance of calmness and composure, but the calmness is real, the rest is genuine, the composure is not pretended; it is an inner calm, such as the world knows not, neither can comprehend.—*Home Magazine.*

FOR "THE FRIEND."

Maxims from "The Interior Life."

BY T. C. UPHAM.

No man ever arrived at Christian perfection, no man can ever arrive at that ennobling state, who walks by sight, rather than by faith, of whom it cannot be said, as of the father of the faithful, "he went out not knowing whither he went." Perhaps we may say it is the highest attainment of the soul (certainly it is the foundation of the highest or perfect state in all other Christian attainments) that of entire and unwavering confidence in God. O God, we are thine, forever thine. We will not let thee go until thou bless us. And when thou dost bless us, still we will not let thee go; we will ever trust in thee.

It seems to have been the doctrine of some advocate of Christian perfection, especially some pious Catholics of former times, that the various propensities and affections, and particularly the bodily appetites, ought to be entirely eradicated. This doctrine when carried to its full extent is one of the artifices of Satan, by which the cause of holiness has been greatly injured. We are not required to eradicate our natural propensities and affections, but to purify them. "We are not required to cease to be men, but merely to become holy men."

Our spiritual strength will be nearly in proportion to the absence of self-dependence and self-confidence when we are weak in ourselves, we shall not fail, if we apply to the right source for help to be found strong, "strong in the Lord."

COSTLY LONDON FOGS.—A London fog, says the *London Chronicle*, is an expensive visitation. A day of it, counting the day at eight hours, is estimated to cost anything from £50,000 to £100,000 in hard cash. No small proportion of this goes to the gas and electric light companies, which have to supply about a third more power than usual. But there are also the railways. For signaling is expensive. At Clapham Junction alone, £50 has been spent by a single railway company during a day's fog in extra pay to the plate layers. When the red light cannot be seen at a distance of a hundred yards the plate layers become fog signalers, and for this they are paid a shilling a day in addition to their regular wages, and 4d. per hour overtime, provided the overtime does not run into a second shilling.

Fog signals, like a cuckoo, are more frequently heard than seen, and, like a number of things, such as babes, cats and crickets, make an amount of noise altogether out of proportion to their size. The largest of those in use is scarcely bigger than a crown piece, and is a quarter of an inch in depth. The little tin box contains a teaspoonful of gunpowder and three percussion caps, and is fitted on to the rail by a red ribbon. It comes from Birmingham mostly, and costs exactly a penny apiece. A hundred and fifty thousand or so are purchased by a big railway company in the year, and there are not many left over at the end of it.

"Virtue alone outbuilds the pyramids;
Her monuments shall last when Egypt's fall."

Rare Talents of the Esquimaux Dog.

R. G. Tabor, concessionaire of the Esquimaux Village at the Pan-American Exposition, thinks no other breed of dogs equals the Esquimaux dog in versatility.

"The Esquimaux dog is not only good for draft purposes, but he is a splendid hunter and, unlike our dogs here, of which breed is good for some particular kind of game, the Esquimaux dog is good at all kinds, large, small, and varies his methods to suit the kind of game he has in chase.

"He is the only dog that I ever heard of that would fish. In the summer time the Esquimaux ever thinks of feeding his dogs, a one of the prettiest sights in the far north to get up on a summer morning and see the Esquimaux dogs standing in the wash of the ocean watching for fish.

"The dogs do not like the water because it is extremely cold; therefore, nothing but hunger will drive them into it. But in the morning you will see them wade out breast deep the ocean and stand as motionless as statues. When a fish comes within range a dog will dive just as a seal would do, and come up to fifteen feet farther out with the fish in its mouth.

"They are good at any kind of game which is native in the North, but their great value to the Esquimaux is as seal hunters. The surface of the Arctic Ocean freezes in winter to a depth of from seven to nine feet. Now the seal, while he lives a great deal under water, is obliged to come to the surface to breathe. In the winter time he has blow holes, which are conical in shape, the apex, which is perhaps not more than an inch in diameter, coming through the surface of the ice. This may be covered with snow even a coating of thin ice, which the seal is to thaw if he wishes to blow there.

It is utterly impossible for a man to find one of these holes. He couldn't tell if they were standing right on it, but the scent of a dog for them is unerring. When the dog located a blow hole for him the Esquimaux cuts it large enough to admit his harpoon stakes the dog out and sits down to wait for the seal. When he appears he is harpooned then enough ice is cut away to allow the seal to be lifted out.

"The Esquimaux dogs are insatiable hunters, and if, when they are attached to sledges they see deer or other large game it is utterly impossible to hold them in control. The hitch to the komitek is made with twine knowledge. You will notice that each dog has an individual leash in which he pulls. These are all gathered on one common hook, which is fastened to the komitek, or sled, by a half hitch. When the dogs sight game and become unmanageable the sledge driver simply pulls his hitch, they are loose and they go, each dog for himself.

"In the winter time the dogs cannot be trusted for themselves and the provident Esquimaux, who, however, are not numerous, have supplies of capelin for them. The capelin is a fish about a foot in length. It is the food of the cod, and after a big storm will be found washed upon the beaches in winnows. They were caught up there when the waves receded, were unable to get back into the ocean and died. All the Esquimaux have to do is

ring them up a little further so the water can't reach them again and let them dry

"But the Esquimaux are not only careless of their dog's future, but their own as well, and in the winter time many an Esquimaux finds himself reduced to the necessity of killing his dogs and eating them. This is one reason why the Esquimaux own so few dogs.

A man with a whole team of seven dogs is rich. Usually you will find one or two dogs in every family and about two full teams to a ribe.

"Another reason why they have so few dogs is that they run away. While ferocious among themselves, the dogs are naturally very affectionate to men, but the Esquimaux overwork them, underfeed them and treat them brutally. When they run away they join some pack of wild Arctic wolves. Nearly all of them have strains of wolf in them, and many of them have pure wolf blood in them. It is said that the ancient Esquimaux domesticated the Arctic wolf, and that the change brought about by domestication produced the Esquimaux dog.

"There is a strange tale told of the Esquimaux dogs, which would make it appear that they are superstitious, and I have had it told me many a time by an Esquimaux and by American and European hunters and missionaries. Kikkertavak Island is the place where the Esquimaux made their last stand against the invasion of the Montanier Indians, which occurred some time in 1820. There was a great slaughter of the Esquimaux and the remnant of the race fled far to the north, leaving their dead on the field. Even to-day you can walk around the island and frequently find skulls of both Esquimaux and Indians. But the point I was making is that the dogs will go near the place in the night.

"Why? Well the Esquimaux say that the dogs are able to see more than they do. According to the Esquimaux belief there is no upreme Deity, but death is only a transfiguration, and everything, animate and inanimate, has its spirit. They believe that the dogs experience fear because they see the spirits of the dead in such numbers. Of course this is only a remnant of the old superstition of the Esquimaux himself."

A TEMPERANCE LESSON.—Better than all the personal arguments of temperance advocates is the fact that self-preservation during the hot weather demands curtailment of the use of intoxicants. Scores of interviews have been printed in the *Republic* concerning the best way to pass through the hot spell. In every instance the physician advises abstinence.

City Hospital physicians have asserted that ninety-five per cent. of the patients treated here for stroke are users of intoxicants in one form or another. While the greatest danger is to those who have drunk to excess, the man or woman who attempts to find relief by drinking wine, whisky or beer, even in moderate quantities, has placed his system in first class shape for a subsequent visit to the isolation ward.

To those accustomed to beer, a cool glass of the beverage affords temporary relief and nothing more. It exhilarates the blood to an action that is nothing less than unhealthy

when the sun is hovering around the 100 mark. It is a shock to the system. Moral considerations aside, the physical harm of intoxicants should act as an effectual deterrent.

There are plenty of substitutes, the best of which is water. Ice cold water used in quantities is almost as harmful as beverages with an alcoholic basis. For men who are exercising, lemonade is found to stimulate thirst. Cool water—not cold—with a little oat meal soaked in it has stood the test on all occasions. It may not taste pleasant as some of the more popular drinks, but it at least has the basis of common sense, which should govern every hygienic consideration in the summer time.—*St. Louis Republic*.

Anti-Scriptural Titles and Degrees Condemned.

"How can ye believe, which receive honor one of another, and seek not the honor that cometh from God only (John v: 44).

John Wickliff, that chosen servant of Christ did witness against these anti-christian degrees, who saith—"The clergy do busily seek their own worship, and glory, and by gifts and costs, to be called Masters in divinity, and to sit at meat with great people; and not to teach truly the gospel to all manner of men, by an humble life and freely, as Christ bids."

Agai, saith Wickliff, "Every sect, state, and operation, which Christ doth not approve, in his gospel, is in reason to be rejected; and therefore seeing Christ doth not approve, but reprove the forenamed heathenish doctorship, it is manifest that it is to be discharged, and cast out of the church."—*Wickliff, Tractat, in cap. 23, Matt.*

John Huss saith—"They who take to themselves academical degrees, and titles answerable, do go in the apparel and harness of the mystical body of Antichrist, who is the king of all the children of pride, to wit of the Masters and Doctors in Divinity." Again Huss says—"Christ saith, John viii., 'Neither came I of myself, but the father sent me;' so the saints have come in the manner of the Lord Jesus and in the name of Jesus they have a spiritual priesthood, and He is the crown of their glory; and by this, they are distinguished from those who are crowned as masters, and bachelors and doctors, and others of other kind of titles, according to the wisdom of this world; for these excellant others by their pains, and through their own science and learning, are notably beautified with their own titles and crowns! and, therefore do rather perform their office in their own name, than in Christ's."—*John Huss, Lib. de regno etc, Antichrist, chap. 14.*

Zuinglius on that Scripture, Matt. xxiii. "Be ye not called doctors, for One is your Master Christ, etc., saith, 'Thou hearest here, that these titles of Masters and doctors, are not of God, seeing Christ forbids them.' (Audi hic hujusmodi titulus magistrorum et doctorum non ex Deo esse, quam Christus hoc vetat.)"—*Zuingle*.

Conradus Pellican, a godly preacher, having the sense of the anti-christian character of all titles, and degrees of honor in the Church of Christ, "desired his friends that he might by no means be buried, as the manner then was in the habit of a doctor, because he hoped he should rise to judgment, not as a doctor, but

as an humble Christian."—*Life of Conrad Pellican by Adam*.

Pellican was born in Alsace, in 1478. He entered into the order of Cordeliers, and was chief of a convent at Basle; but on renouncing popery, he went to Zurich, where he preached the gospel. He died in 1556. His works, chiefly illustrations of the Scriptures, make seven volumes folio.

"I am come in my Father's name, and ye receive me not: if another come in his own name, him will ye receive" (John v: 43.)

"See here some plain and evident marks that they were not animated with the love of God, and that therefore they were under great delusion. The first is, that they have received persons who come in their own name, and rejected those who were authorized by the gifts of the Holy Ghost," etc.

"The second mark is that pride, and the love of vain glory, two vices most opposite to faith and salvation, have been their distinguishing character; whereas that of the Apostles, and of apostolical men, consisted in humility and in carefully avoiding all human glory."—*Quenesel's Reflections on the Gospels*.

Pasquier Quenesel was a French Roman Catholic priest, he was born at Paris, in 1634. He published the work above quoted, which received the formal or official approval of the Cardinal de Noailles, and even had the Royal privilege, but when the book reached Rome, it was denounced—it displayed the truth of God in a manner dangerous to the papal faith—and was formally condemned at Rome in 1713 by the Bull called "Unigenitus."

The Busy Bee.

The school-boys who have dealings with the bee will realize that the tiny creature has something sharper than a tongue. Still the account the scientists give of the wonderful jaws and curious tongue of the bee, form interesting reading.

With the closest scrutiny it becomes evident that the bee does not, like other creatures, house its tongue in its mouth, but neatly folds it back beneath its head. Bumblebees, when disturbed, have a way of threatening with their jaws, while the honeybee has the more direct method of settling intruders with her sting.

The jaws of the bee can give quite a formidable nip. Catch a bee in a net and see how viciously it will bite at the meshes, working its jaws sideways instead of up and down.

We call this wonderful implement of the bee a tongue, but in reality it is more than this for the whole arrangement consists of two slender filaments called maxilla, the under lip and the actual tongue. If a drop of honey lies near the surface of a flower, the slender, active tongue darting out from the case formed by the maxilla, licks it up with the same ease that a dog licks a plate. Should the tube of the flower be elongated the bee has at command another length of tongue, which is shot out from within and shuts up like a telescope when no longer wanted.

To appreciate fully this delicate organ you should watch the bee separate it into its component parts and clean it out. The lengthening process of the proboscis as the tongue and its allied parts are sometimes called, is accomplished by a series of springs and hinges.

In addition to this telescoping power, the tongue is a hairy member, the hairs arranged in rings, the longest ones toward the center. They assist in lifting in the nectar and in pumping it into the mouth. Thence it goes to the honey sack.

Curvature of the Spine.

In infancy and childhood lateral curvature of the spine develops very readily. In some cases, as will be presently shown, the causes are very slight; so that, to use the words of one of our most eminent medical authors, "It is really wonderful that most of us are tolerably straight."

A slight asymmetry of any one of the vertebrae of which the back-bone is built up, or an abnormal development or lack of development of one of the muscles which hold it upright, is sufficient to produce a deviation from its proper position.

This of itself would be of comparatively small moment if the organs contained within the trunk were not affected by any considerable change from its proper upright position. A lateral curvature cannot exist without a shortening of the trunk, just as a bow when bent measures less from tip to tip than when it is unstrung. This shortening in turn necessarily implies a crowding together of the organs contained within the trunk.

Constitutional weakness naturally tends to make lateral curvatures of the spine more readily acquired. Of specific disorders which produce the same effect, rickets is perhaps the chief.

With the knowledge that lateral deviation is thus easily caused, it is not to be wondered at that causes apparently very slight are frequently the only ones discoverable to account for certain of the many cases coming under the physicians' notice.

A baby can scarcely support its back before it is three or four months old. Yet the proud nurse or mother not infrequently sets it erect, or carries it on her arm without a proper support, at a much earlier age.

Children who go to school at six or seven years of age are often compelled to sit on a badly shaped bench sometimes with no support for the back, during school hours. The muscles become tired, and the child leans to one side, usually to the right.

A narrow space between the seat and the desk obliges the child to push between them, so that, in girls particularly, a drag is exerted on one shoulder; or the skirts form an uneven cushion, tilting the spinal column out of the perpendicular. Even in grown men and women, occupations requiring a one-sided muscular action affect the vertebrae, and, therefore, the shape of the spine. In children the much softer bones are still more readily affected.

Parents may therefore, be pardoned, if they insist on abundance of room and considerable lack of restraint for young children in the school room.

Teachers have frequently to take the initiative in matters of school hygiene, especially when their pupils are from homes in crowded, unsanitary city tenements.

Lateral curvature is rarely congenital. It is in most cases preventable, and cases taken in hand early are usually checked by strict

observance of hygienic measures.—*Youth's Companion.*

FOR "THE FRIEND."

Depths of Mercy.

I have somewhere read of a young woman belonging to an aristocratic city family who, while spending some time at a country place, and in one of her solitary rambles, came near a humble place of worship and heard the congregation singing the hymn beginning

"Depth of mercy, can it be,
That mercy is reserved for me."

This, through the accompanying visitations of the Holy Spirit, produced a great change in her views of life, she found herself attracted time and again to the place where she had been thus favored. And when she returned to her father's house it was with a set purpose to lead a distinctly religious life of simplicity and self-denial. She did not by any means cut herself off from social intercourse, but renouncing all ornaments and dressed in perfect simplicity she moved among her former gay companions, carefully abstaining from all that she saw to be wrong; and such was the measure of Divine sweetness—if I may use the term—that pervaded her presence, that all admired and paid a willing homage to that life of Christian holiness they could not resolve to adopt. The theatre was wholly declined, and social parties she would not attend. This was a great trial to her loving father, who had been used to take pride in seeing her admired of every assembly. Firmly she refused all his solicitations. At length a grand demonstration of this kind being about to come off at his house, the parent was importunate for her attendance, and here she felt it to be right for her to yield to his wish, he promising that if she would do so this once, on no future occasion would he ask it of her. She only stipulating for freedom from taking any part in the proceedings. Accordingly, arrayed in her sweet simplicity, she appeared among the gay throng. The song and the dance went forward, but she who had used to be the life of the assembly sat silent and apart. Knowing her possessed of great skill as a musician, the whole company now gathered around her, begging for a song with its accompaniment. Gently but firmly she refused, pleading her promised exemptions, until at last the father audibly laid his command upon her as parent and required obedience. Then she felt it her duty again to yield. Breathing a secret prayer for aid, she took her place at the instrument and played not the lively air they anticipated but the hymn,

"Depth of mercy, can it be,
That mercy is reserved for me."

The effect on all was overpowering as the strains ceased. The father came and taking her in his arms carried her into another apartment.

It was indeed the last concert he asked her to attend, the last ever held in his house. Henceforth father and daughter walked hand in hand in the way that leads to life.

Writing of daughterly influences reminds me of a case I was cognizant of. The young woman was gay and fashionable. All her delight, she told me was to attend balls and parties and so forth. Teaching school, she was

boarding away from home when she was suddenly taken ill and life was despaired of. Greatly alarmed she covenanted with her Maker for a change of life, it spared. In the extremity of the disease the people she lived with wished to send for their preacher to come, and see her; this she felt a repugnance toward. Yet as they were earnest Methodists, she yielded. But afterwards feeling that anything availing must be wrought between her own soul and her Saviour she was so distressed that when the man came she had to decline seeing him. The crisis soon passed, and with returning health she found worldly amusement fast regaining the ascendancy in her heart and she was led earnestly to supplicate that something might be permitted to overtake and stop her downward course, and in effect a disabling disease of years' continuance supervened, and she was obliged to return to her father's house. Himself and two daughters comprised the household. The father was not a meeting-going man, and had he been so E. could scarcely have accompanied him. She was not satisfied to go along with no attempt at worship, and so arranged for their sitting down First-day mornings, but often she said, neighbors would call in, and then father and daughter would fall to conversing while she would have to retire and finish her meeting alone. She thought it not right for their effort towards worship to be thus broken in upon, and so she arranged to have a fire in the spare room on First-days and sit there, while she would go to the door herself, if anyone knocked. It may well be believed that this all did not take place without deep feeling on the part of my friend.

Her countenance, she said, must have "betrayed her" on the first occasion of this kind, as the neighbor appeared "shocked" on seeing her. She informed him how they were engaged and that they did not wish to be disturbed, but he might come and sit with them. As she was not over twenty-five, I think it will be conceded that it required no little strength of purpose, and some added grace to have enabled her to stand her ground as she did among companions with whom she had been so thoughtless but a few months before. The father became religiously minded and perhaps it is not too much to believe that the daughter's faithfulness was instrumental to the salvation of his soul.

J. K.

ALUMINUM.—Aluminum is, at the present price, the cheapest metal in the market, with the exception of iron, zinc and lead. The metal is now extensively used in place of copper, brass, tin and in some cases even iron, especially when the reduction of dead weight is a question of great importance. Aluminum is also beginning to be used very largely for electrical conductors, as it gives nearly the same conductance as copper, weighs only half as much and costs less. The progress made in the use of aluminum in the past few years justifies the most sanguine expectations. Twenty years ago the total output in the world did not exceed more than four or five tons, and its price was thirty thousand dollars per ton, ten years ago its price was reduced to about ten thousand dollars per ton and the output increased to about thirty tons per annum; now the price is six hundred and fifty dollars to seven hundred dollars per

on, and the output during the last twelve months is reckoned at five thousand tons.—*Electricity.*

A BAD GIRL TO MARRY.—A bad daughter, says a writer, seldom makes a good wife. If a girl is ill-tempered at home, snarls at her parents, snaps at her brothers and sisters, and shrinks* her ordinary duties, the chances are on one to one that when she gets a home of her own she will make it wretched. There are girls who fancy themselves so far superior to their parents that the mere privilege of enjoying their society in the house ought to be all the old people should have the assurance to ask. While their mothers are busy with domestic duties they sit in the easiest chair or on the softest sofas, feeding on cheap and flashy novels, and cherish the notion that they are very literary individuals.

The household drudgery is too coarse for such ladies as these. Girls of this sort are generally very anxious to be married, that they may escape the disagreeableness of a home where they are held more or less under subjection. A caller, who doesn't have a chance to see how they behave as daughters, may be excused for fancying them lovely and valuable beings; but one who does see it is foolish if he commits himself by offering marriage to a girl of this sort. If she will not assist her mother in the domestic labors, is she not likely to be equally slothful and ill-tempered when she marries? If she now thinks herself too fine to work, is it safe to expect at her views as to that matter would radically change if she became a wife?—*Selected.*

FOR "THE FRIEND."

It was said of Abraham Lincoln that when inquired of as to his success in obtaining and holding the attention of a large and mixed audience, he answered something like this. That when speaking to such an audience, if two words presented to convey the same meaning, he would always take or choose that word the meaning of which was known to most people. In instance in speaking of the height of a mountain, he would not say "altitude," he would say "height."

Would it not be well for writers to observe the same rule?—W. P. T.

Notes from Others.

The Salvation Army has representatives at work forty-seven different countries, and issues forty-five periodicals printed in twenty-one languages.

In all big cities there are multitudes of folk who work in the night time. In London fully one hundred thousand inhabitants earn their bread by the sweat of their brows between sunset and sunrise.

PULPIT PRAYERS.—Sometimes "fools rush in where angels fear to tread." But necessity compels Sunday by Sunday we must offer public prayer that are good or indifferent or poor.—*F. B. Cooper.*

There are three hundred and seventy-eight millionaires in this country. In New York, men, alone, pay taxes on property, as valuable as all the property in the whole United States at the time of the Revolution.

Clergymen who can accept salaries for teaching

things contrary to their ordination vows have lately been called hire critics. But there are many others who are still "hampered with an old fashioned conscience."

In the eastern part of Maine is a sect known as the "Holy Ghost and Us." The head of that movement in Calais is Elder George W. Higgins, who was tarred and feathered in Levant in 1899. It appears that the members in case of sickness refuse to employ a physician or to administer any medicine.

The gospel according to Mark in Spanish and English, an edition prepared especially for the Pan-American Exposition, and taken from the Spanish and English New Testament, by the American Bible Society. This society has sent into Spanish-American countries since its organization in 1816, to the close of the year 1900, about two million volumes—Bibles, Testaments and Scripture portions.

The birds' nests which the Chinese eat, and which Li Hung Chang recently served to his guests, and which are considered such a delicacy, are built by a sort of cave swallow and are made of grass, seaweed, fibres and small twigs, and are glued to the rocky sides of caves by a saliva which comes out of the bird's bill. Men go with ladders and ropes and gather the nests after the young ones have flown, three times a year, and sell them at from ten to thirty dollars a pound. Wealthy Chinamen buy them and make a soup of them, which is said to be very wholesome and nourishing.

The *Missionary Herald* expresses its regret that Great Britain is unwilling to consent to an increase of the duties on opium by the Chinese government. It is said that China has long desired to increase the duty on opium as a means of lessening its consumption by her people, while she is naturally looking round for means for increased revenue to enable her to meet the large indemnity she is to pay the allies on account of the Boxer war, but the cultivation of the poppy is so important a matter to Indian finances that the opposition is not unexpected, however lamentable. But any one who pays attention to the long drawn out negotiations at Peking must recognize the all-controlling influence exerted by the lust for gain, even when so solemn a matter as peace or war is at stake.

In giving some reminiscences of Joseph McCreery, the *Free Methodist* quotes a characteristic speech of his, given in a ministerial conference, as follows:—"When I was a little boy I lived on the farm with my grandfather. They had a hired girl by the name of Peggy. Grandfather and Uncle John would go over the hill to work and when Peggy had dinner about ready she would take a great conch-shell and give a tremendous blast to call grandfather and Uncle John to dinner. They had a little yellow dog, and when Peggy would give a blast on the conch-shell the little yellow dog would whine and cry and lie down and roll over and take on fearfully. Finally some one told Peggy to put some soft soap in the conch-shell and then when she blew on it the yellow dog wouldn't take on so. The next time Peggy went to blow on the conch-shell she put in some soft soap and blew a great blubber. The yellow dog didn't whine or cry, but grandfather and Uncle John didn't come to dinner. Now," said he "boys, whatever you do, don't put any soft soap in the gospel horn; let the yellow dogs howl, but have the trumpet give the certain sound."

AN ANGLO-AMERICAN ALLIANCE FOR UNIVERSAL PEACE.—The Anglo-American idea of unity in the near future between all communities of the English speaking race has taken firm hold in Great Britain and to some extent has been implanted in

the minds of thinking men and women in the United States. Whether erroneous or not, the idea is vital and working, and it is well worth while to take cognizance of the fact. What is looked upon by some as rather a whimsical development or outcome of this idea was the formation in London last year of the Atlantic Union for the promotion of peace on earth, good will to man, among the Anglo-Saxon and the Anglo-Saxon-American peoples. It is expressly stated that its name is not quite adequate because it is by no means restricted by the seaboard of the Atlantic ocean, but, on the contrary, would include within its confines all the English speaking communities in every quarter of the world. The most prominent of the Atlantic Unionists are Dr. Stopford, A. Brooke, Dean Farrar, Lord Coleridge, Sir Michael Foster, and Dean Hyde, all of whom are fairly well known in this country.

RARE RELIGIOUS SPEECH IN A PARLIAMENT.—A movement in Austria called "Away from Rome," has excited much interest in Europe for a year or more past. The following is the part of a confession of faith representing the new movement, as pronounced by Dr. Eisenkolb in the Austrian Parliament:—"We have joined this movement out of the inner convictions of the heart. We do not intend to act dishonestly in the adoption of our new confession. We have taken our catechism in the hand and we have been learning what the true character of Christian faith is. Our hearts have been opened to the influences of the Gospel, and we now belong to Jesus Christ, our Saviour. We will not allow that anybody, be he clerical or lay, step between us and our Saviour and claim to be the mediator. We are happy in being able to take up the battle for true Christianity for the Gospel, because our hearts belong to the Saviour. There was a time when Austria was at the point of becoming Protestant, but the murder of John Hus and the slaughter of many thousands of the Czechs and the battle of the White Mountain forced our ancestors into the folds of Rome. We are now determined to carry this propaganda for Protestantism to all the corners of the empire, but it is not done for the purpose of offending the Roman Catholics, and least of all out of personal enmity to the priests and other church officials; but it is done for the cause of the Gospel truth."

Items Concerning the Society.

Ohio Yearly Meeting, held at Barnesville, commences on Seventh-day the 28th inst. Meeting of Ministers and Elders on the day previous.

One of the smaller Yearly Meetings records that its members are careful to avoid the use of spirituous liquors "with possibly one exception."

Does it not seem to be a time when the leavening influence in the world of such a people as our high and holy profession calls us to be, was never more needed?—*Ohio to N. England Yearly Meeting.*

A TYPICAL INSTANCE.—We observe in the Knightstown (Indiana) *Banner* of Eighth Month 16th among its church notices the following natural outcome of the pastorate system—one of those instances such as a few years ago it was pronounced uncharitable for Friends to predict:

"Friends Church—Services will be held at the regular hours next Sunday. Preaching at 10.30 A. M. and 7.30 P. M. We are especially anxious that those who are members of the church shall be present next Sunday. Loyalty to God and the church makes good men and women and also makes the church strong. In the absence of Dr. Carson, we cordially invite our Presbyterian friends to join us in our services. We will make you welcome. We also invite all others to come and enjoy the Sabbath with us. Our music will be good and the sermons will be helpful. We have a subject of special interest for evening service. Hear it."

Entered as second-class matter at Philadelphia P. O.

THE Christlike utterance of our beloved President, "May God forgive him!" which he spoke when pierced by an assassin's bullet, will disarm more Anarchists than all that man's vengeance or gibbets can deter. That fine expression dates from Christ on the cross and has done more than all wars to temper and civilize mankind. The winged power of Him who was so lifted up as to draw all men unto Him, is still potent, and it is a boon to this generation that the wrath of man can still praise Him in showing to the nation an evidence of the Spirit of Him who said, "I will forgive them, for they know not at what they do." President McKinley has not added in vain if only to have been brought to the place of such gospel preaching, which will come again historic.

But how blind sin makes the foolhardy, who set always find that for every head of a government which they cut off, another forthwith springs up in its place. Rebels to civil government because rebels to the word of Divine grace in their hearts, may they be tendered some sense of the virtue of Christ's spirit as shown in William McKinley's words, which for he knew, were dying words.

We know not the result thus early in the things, but can only wish blessing to our President's life, and if that be inevitable, his death.

MIRACLES OF GRACE CONTINUED.—The following extract from the Boston *Congregationalist* failed of being appended to our last week's marks entitled, "How to begin miracles?" The church can maintain its supremacy in the world only by the evidence of Divine authority within it. And the evidence of that authority in its members which ever has convinced the world has been "the Lord working with them, and confirming the words by signs that followed." The company of believers in

Christ will impress the world only by showing that they have power which the world has not. Men will pray when they see that prayer brings answer in gifts of power. Men will learn and obey the words of Christ when they see that knowledge of Him enriches and transfigures life. The Church must show itself different from and above the world if it is to transform the world. And all that the Church needs for this purpose is the gift of the Holy Spirit. That gift is promised to them that ask. The result of his indwelling will be signs which will demonstrate his presence. Whether or not they shall include manifest banishing of disease from the body we do not affirm. But they do include transformations of character which are miracles of grace, and which enable and purify the body. They include self-denial for Christ's sake and sacrifice for others for the sake of mankind for whom Christ died, which are the fruit only of the Holy Spirit, and which are the deeds always wrought in men through complete surrender to that indwelling Spirit. These are the miracles which the church imperatively needs. She can have them for the asking.

Pay in Kind.

We have nothing to say against human labor, or the exercise of the natural faculties of man, being employed and paid for by man, and with man-made money. The Scriptures have something to say for it, in the words, "The laborer is worthy of his hire;" pay of the kind that he and his work is; also the needful maintenance of the bodies of men when spiritually engaged under conditions that make such maintenance on their own part out of the question. When self-support was practicable, even in religious journeyings Paul manfully undertook it by his trade or handicraft. And as a usual practice the Society of Friends assumes the needful expense of an approved religious journey in the cause of the gospel.

"The laborer is worthy of his hire."—This is indeed true for the labor of the natural parts, and when so accepted for a minister's work amounts to a confession that his is the ministry of the natural parts. But the hire of the man spiritual is not of the carnal order. The verdict upon a laborer that he is "worthy of his hire" when that hire is in carnal form seems for such ministers as are willing to put their ministry on that kind of estimate, like a withering sarcasm; as if that is just what they are worthy of,—carnal hire if their preaching is man-made; but spiritual hire

when it is of the immediate Divine hiring, inspiration and authority. And it is of that gospel "the power of God unto salvation" that they who preach the gospel will live. Without living of it they could not have the true life to preach it however highly salaried they might preach about it.

Money and articles of exchange get all their exchangeable value between men from man's labor which they cost. Money buys man's labor only; it never purchases the directly Divine labor, operation or spiritual gift. Peter denounced a seeker for power as having no part or lot in gospel work because he "thought the gift of God could be purchased for money." Therefore that can be no immediate Divine gift, but merely man's work, that is hireable by man. Human talents about Divine things may be hired, but the effectual operation of the Divine gift is the Divine prerogative only, and not for sale. Lectures may indeed be paid for, and the taking pay for discourses confesses that they are lecturers, not the Divine ministry, preaching, or message from above, but human products. In short, the kind of pay one asks for his labor is a confession of the nature of his labor.

These remarks have been written after a reading of words in an exchange contending that the Apostle Paul applies the maxim quoted to the work of the ministry. The article, however, goes on to say:

But that is not saying that it is right for them to labor just for the support. Thus they would become mere hirelings, like a man who puts in his day and gets his money and departs. Such a hiring ministry would soon ruin the Church of Christ and turn it into a money-getting machine. The true minister will work for souls and let the hire take care of itself. Neither Christ or any of his apostles fulfilled the office of the ministry for the money they could get out of it. Judas was the only one who labored for money, and he made a bad wreck. The hiring ministry will not work unless they are paid in actual cash. The true ministry will work whether paid or not. They cannot cease from preaching the gospel as they have opportunity and authority. These principles need to be kept to the front continually, so carnal and selfish is the human mind. It will therefore be readily seen how spiritually-minded the work of the ministry requires us to be. The old priests said: "Put me into the priest's office that I may eat a piece of bread." It was the reign of that priesthood that scattered the chosen people to the four winds.

Poverty and Plenty Among the Anglican Clergy.

The London correspondent of *The New York Evening Post* writes in a pathetic strain of the pecuniary distress of the clergy of the Established Church in England. He said that the condition of poverty of many clergymen of the State Church is simply deplorable, and that this is due almost entirely to the system of "livings" from which the Church suffers. In the Established Church there are fourteen thousand benefices, seven thousand of which are worth less than \$650 a year; fifteen hundred more of them less than \$500 a year, while about three hundred others furnish an income under \$250 a year. There are sixty-one livings in the diocese of Petersborough furnishing an average annual income of \$225, while the occupants of several in the diocese of Newcastle receive about \$125 a year.

When one considers what is demanded of a minister of the Established Church in the way of education and preparation of various kinds for his peculiar work, it does not need a mathematical demonstration to prove that it is difficult and practically impossible for a man to live within the bounds of decency upon such meagre income. The bachelor clergymen find it extremely difficult to make both ends meet under these circumstances, but when the clergyman has a wife and children and other dependents it is not strange that a condition of absolute penury ensues.

In striking contrast with the paltry salaries furnished in thousands of these livings are the stipends which are given to the archbishops and bishops of the Church. While the average annual value of many of the English livings runs from \$125 to \$200 the stipend received by the Archbishop of Canterbury in addition to his historic London abode, Lambeth Palace, and his London residence in the neighborhood of the Croydon suburbs, is \$75,000. The Archbishop of York and the Bishop of London receive \$50,000 each, while the other bishops of whom there are thirty-two, receive stipends ranging from \$25,000 to \$7,500.

The *Post's* correspondent says that one class of reformers is demanding an equalization of these stipends in order to relieve the destitution of the poorer clergy. The bishop of Southampton is represented as informing his clergy, however, that even if the bishop's incomes were divided among their poorer brethren, the incomes of the latter would be increased by only \$55 per annum. On the other hand many of the clergy insist that the fault lies with the laity, who are woefully wanting in the broader and deeper manifestations of the spirit of beneficence. It is not at all remarkable that a spirited controversy is raging because of the existence of these great extremes of poverty and wealth in the Anglican Church, and that the authorities of the Church may feel compelled at an early date to institute practical measures for the relief of their humbler, and not less worthy, though poverty-stricken, brethren.—*Christian Advocate*.

"ONE member of the body may seem to profit at the expense of another for a time; but sooner or later the whole organism will suffer on account of the weakening or destruction of the neglected or abused member."

The Mississippi River.

"I have been very much impressed with the importance of small things in late years," said an old steamboat man, "and the Mississippi River has furnished me some rather good examples. I can understand now why Cæsar looked out upon the Nile in such curious amazement and offered all that he stood for to the Egyptian priest if he would show him the source of that wonderful river. But the antics of the Nile look like insignificant nothings to me when compared with the strange conduct of the stream that oozes out of the earth at Itasca and hurries on its murky and devious way toward the Gulf of Mexico. Towns along the Mississippi that stood right on the bank of the river have been isolated even in my day, and there are, too, all along the course of the stream little empires in view where the river has encroached upon small centers of population, finally eating the earth away and forcing the inhabitants to seek other quarters. There are hundreds of these places that are almost forgotten now, even by the men who are constantly on the river.

"What brings about these violent changes along the banks of the river? Not floods. It is just the ordinary doings of the stream. In the first place the current of the Mississippi is wonderfully swift, and the sediment deposited at any point where resistance to the flow is offered is very great. Tie a string to the neck of a bottle and sink it with the mouth of the bottle up and open.

"If held in one place where the flow is normal in an extremely short period of time the bottle will fill with sediment. Stretch a net across the river, a net so finely woven that nothing but the pure water of the river can pass through, and on account of the rapidity of the flow and the greatness of the deposit of sediment, almost in a twinkling the river would be dammed at that point. Experts have admitted this. This brings me to the point of my narrative.

"The flow of currents is frequently interfered with by sunken boats, perhaps by a jackstaff sticking up above the surface. The current is diverted by degrees, generally touching the far side of the stream a mile from the point where it again meets resistance, and immediately begins the building of a sandbar. I have seen a thousand examples of this sort during my career on the river, and I have known of instances where the root of a tree or the mere twig of a willow have brought about similar conditions. These things have tended to make a riddle out of the river; yet the stream after a while will be handled so as to undo all that it has accomplished in this way."—*New Orleans Times-Democrat*.

HABITS OF COURTESY.—"A boy who is polite to his father and mother is likely to be polite to everyone else. A boy lacking politeness to his parents may have the resemblance of courtesy in society, but is never truly polite in spirit, and is in danger as he becomes familiar of betraying his real want of courtesy. We are all in danger of living too much for the outside world, the impression which we make in society; not coveting the good opinion of those who are in a sense part of ourselves and continue to sustain and be interested in us notwithstanding these defects of

deportment and character. We say to ever boy and girl, cultivate habits of courtesy and propriety at home—in the sitting room, in the kitchen as well as in the parlor—and you will be sure in other places, to deport yourself in becoming and attractive manner."—*L. G. B. in Herald of Truth*.

Something About Prunes.

Prunes are just now, says the *Presbyterian*, being recommended by some physicians, the mothers whose children are very fond of candy. These doctors say that prunes, especially the delicious ones that grow in California, are not only as good to the taste as candy, but keep the stomach in much better condition, while still supplying the needed sugar to the system.

The prune grows in California, Washington, Oregon, Idaho, and some parts of Europe, but the soil and climate of California seem especially adapted to it. The prune tree, which looks much like a plum tree, grows from seed, but in a very odd way. A peach or apricot seed is planted, and when the little tree is one year old it is cut off close to the ground. A piece of live prune wood is fastened to it. That is called grafting. By and by the stem of the little peach tree and the piece of prune tree grow together. Then it is a prune tree.

The trees begin to bear fruit when they are about three years old. The trees bloom in the third month and are virtually covered with blossoms somewhat smaller than white apple blossoms. A prune orchard in bloom looks just as if it were covered with snow, and is pretty sight.

The prunes are green at first, then they are red, but when they are ripe they are a deep blue. They ripen mostly in Eighth Month.

As soon as they are ripe they fall off. Then the boys and girls and other people pick them up and put them in boxes. The boxes are put in a wagon, the wagon goes to the packing house, and at the packing house the prunes are graded and placed together according to size, like the soldiers in a company. The prunes are dipped in a hot liquid so the skins crack a little. Then they have a cold water bath. After that the prunes are put out on trays to dry in the sunshine. It does not rain on them, because in California it does not rain in summer. It rains hardly any except from Eleventh Month to Third Month. After the prunes have been in the sun four or five days, they are put in stacks for a few days. Then the prunes are sorted into different lots. Of some lots it takes from twenty to thirty to make a pound, of other thirty to forty, of others forty to fifty, of others fifty to sixty, of others sixty to seventy of others seventy to eighty, and so on. The are heated so like molasses taffy they won't go to sugar. They are then packed for shipment.

"God answers prayer; sometimes, when hearts are weak,

He gives the very gifts believers seek. But often faith must learn a deeper rest, And trust God's silence when He does not speak; For He, whose name is love, will send the best. Stars may burn out, nor mountain walls endure, But God is true, his promises are sure

To those who seek."

Some Brief Extracts From a Manuscript.

(Continued from page 44.)

Benjamin Kite writing to John Letchworth: Within the last week there have come from Alexandria and settled among us Thomas and Sarah Matthews, Friends in the ministry, who from their appearance will be likely to prove a valuable addition to our meeting. The sinking of the many Friends leaving the Southern States has brought to my mind the words of the pious Cowper:

"He hears the wheels of an offended God
Groan heavily along the distant road."

Many Friends voted at the late election. I never voted for several years. I never voted for Governor,* but once for Mifflin. . . . Thy reflections about dabbling in politics are very similar to those which have often occurred to my mind. Yet I by no means censure those who are free to vote even for Governor, which I am restrained from doing. My desire of being less confined by employment increases, and of leaving the city decreases. I think I just stay and suffer with our "degenerate church," as Jas. Pemberton calls it, though I say not be able to do much for its assistance. I have often thought that if some of our goodly young men would now and then put a shoulder to the wheel, it would be of singular service. Oh! it is of good savor when words spoken to the discipline are not spoken from habit but necessity. J. M. has several times appeared as a minister since I wrote, so that Jerusalem is not yet forsaken, thanks to her unslumbering shepherd. Not all who rightly open their mouths in public testimony become established living ministers of the Gospel. In some cases the call to this exposure may have been but to trouble and prove them. But I apprehend that in most of such cases, those set aside have failed in dedication in other things—unqualified submission to the heart-cleansing operation of the baptism of fire and of the Holy Ghost has not been abode in, and so the ring of spiritual nourishment has gradually faded up. Though like a tree whose main branches have been cut off they may still for a season show some greenness, yet too often the leaves cover barren branches, or those which do not perfect their fruit. If the love of the world in any form gets into the heart, if any of the corrupt propensities of the man there obtain dominion, the gift and grace of the Spirit must wither, must weaken, must die. What then can be expected but that that was committed to them be taken away?" John Letchworth having returned from a visit in Maryland wrote of Baltimore Yearly Meeting: "There was but one subject which seemed much to agitate the minds of some, that of receiving persons into membership without regard to nation or color. As I had once passed through such a scene in our own Yearly Meeting, I was enabled to enjoy a calm that shall I say?—in the midst of a storm—believing the time would come when they, too, would settle calmly under it. What seemed a little singular was that it was not so much Marylanders who objected as Pennsylvanians who had removed there before we had gotten so far along as at present. Poor things! they seem not to have progressed an inch since. . . . Such is the instability of thy weak brother

that twice has been reproved by an elder for being too cheerful. It is not always easy to wash and anoint when fasting is our portion, and I have not yet learned always to look grave and sober when my heart is merry. I was in company with those I loved and could make free with, and I suppose I was off my guard. As thou sees that I am tolerably honest I hope thou wilt bear with me . . .

Just here I will state having heard my father speak of being at a Monthly Meeting, where the case of, a colored applicant was adversely decided, when a zealous young man being requested to inform him of the result, arose saying, "Well, Friends, what shall I tell him! That he is too black to become a member amongst us?" That worthy minister Micajah Collins related that a colored man having at times appeared—in the meeting he was a member of—the elders waited upon him with a request that he withhold his exercises. After sitting a time in solemn silence the colored man said, "I shall be obedient to your commands but I have this to testify to you. 'As you have rejected the messenger sent, so there shall no ministry be raised up among you while the present heads of the meeting remain in mutability.'" or words to this effect, and Micajah added, "It proved a true prediction. I was the first." Alas for human prejudice!

Benjamin Kite replies to the foregoing: "Beloved brother, thy letter was more than agreeable to me, it was cause of rejoicing, and let who will, chide, I wish neither of us may pretend to be grave when we do not really feel so. How can I do other than rejoice when I find that one so dear to me has performed through Divine assistance a weighty undertaking to his own solid peace . . . It will no doubt be cause of wonder to thee that thy timid brother is about to involve himself in debt. Thomas (his son) and I expect to be in business pretty largely in the spring. As a first step we mean to publish an interesting little piece—"Life of E. Ashbridge," which we hope will sell, as it will come home to the bosoms of those who experience domestic afflictions."

John Letchworth writes to his nephew Thomas: "Thy father hints that he has a prospect of entering into business with thee. I hope, indeed, I expect that it has been well considered. I was going to hint that as thou has served a regular apprenticeship and has a pretty large acquaintance, perhaps by this time thou hast large ideas of doing business; for youth is sanguine, and wonderful instances of this your city has produced. Thy father styles himself, and perhaps justly so, timid. Now I wish if there is any portion of rashness in thy composition, this timidity may act as a just counterpoise, that so you may get along with reputation." . . . To this Thomas Kite replies: "Thy letter and the concern it expressed for my welfare were both acceptable to me, and I hope thou wilt never omit communicating whatever thou may think beneficial. Youth, as thou observest, is rash and oftentimes exposed to temptation, which renders the advice and counsel of those who have already trodden the slippery path both safe and useful. Independently of wishing to form an establishment which may afford a livelihood, can my attention be turned to a more proper

object than relieving my beloved father from the laborious and irksome employment from which he feels himself much released? I hope in accordance with thy advice to pay proper attention to his caution and not undertake anything of importance without his concurrence." Soon after this Benjamin Kite resigned his school.

Although actively engaged in prosecuting his temporal business, Thomas Kite had given evidence of dedication to what he considered his religious duties; and from the time of the remarkable dream, heretofore related, his father had believed that he was under preparation for usefulness in the church and would, if faithful, have a gift in the ministry conferred upon him. Thus he heard with joy of his first appearance, which was at Frankford Meeting, to which he went in company with that true-hearted elder Mary Harper, who on the way believed it right to incite him to faithfulness, saying, "Thomas, if thou hast anything for us to-day, be faithful." Strengthened doubtless by the sympathy of his honored friend, he expressed a few words in great fear. His growth in the gift received was gradual and solid, until he attained the stature of a strong man in Christ Jesus. And here I may remark that I apprehend that few since Samuel Emlen's day, who said of himself that "by jobbing he earned his daily bread," were more engaged in visits to the sick and afflicted than was Thomas Kite. An inmate of his family said that often of evenings while engaged in reading they would notice the book was laid aside and after sitting awhile in silence he would get ready and go out. They knew that he had felt drawn to some mission of consolation. The late William Kite told me that in earlier life he was accosted by a stranger attracted by his, at that time, infirm health, who after some remarks in relation to futurity, and finding out his name, asked if he was related to Thomas Kite, and then said "Ah! you don't know what you have lost as we missionaries do." (To be continued.)

THE VITAL PROBLEM OF CIVILIZATION.—In Plato's "Republic" one may see an up-to-date editorial satire on the faults and foibles of democracy as exemplified in Tammany Hall, the principles of education involved in such current topics as the kindergarten, the elective system, physical culture and many other things. The reason so much remains of Plato's theory of education is that the problem to him is one of making good men and women. For a good man or woman is a good citizen and a good citizen is the vital problem of civilization . . . not the sacrifice of the weak to the strong, but the devotion of the strong to the weak. This is the only law of progress. To-day the world needs prophets, saints and heroes more than ever before. The splendid ideal of citizenship and fraternity which Plato narrowed to an aristocratic privilege our modern civilization has extended to all. Our democratic ideal is far nobler than Plato or any ancient ever dreamed of. It demands great things, for the crisis of our civilization is at hand. The miracles of industrial progress in the nineteenth century must be followed by miracles of moral progress in the twentieth, else all our wealth, leisure and opportunity will be our ruin.—Edward Cummings.

*His objection to this was that according to the Constitution he is a military officer.

Romance of the Sponge.

Sponges are not so cheap as they look, though one can buy an inferior quality for very little money. The best sponges in the market come from the Mediterranean, and a few, almost as good, come from the north coast of Cuba. The quantity of the latter is so small that they make little impression upon the market. Four-fifths of the sponges brought to New York are from Key West and the West Indies, the very cheapest grade being imported in great quantities from the Bahamas. Nassau, the capital of the Bahamas, is the greatest sponge market of the world, and about nine hundred thousand pounds of sponges are shipped from there to the United States every year. New York dealers who absolutely control this output, ship a large share of the sponges to European markets.

"Sponging used to be a very interesting and picturesque performance," said a New York wholesale dealer to a *Sun* reporter. About nine-tenths of the native population of the Bahamas is interested in one way or another in this industry, and in the old days the natives owned their boats and were spongers on their own hook.

"They took small schooners provisioned for five or six weeks, loaded their wives and children aboard, and set sail for the sponging grounds. Sometimes they got a load in a week or two. Sometimes they were out six weeks. If the weather was good, everything went easily and the excursion was one festive and protracted picnic. Cooking was done over a fire built upon the sand in a box lashed to the side of the boat. When the weather was bad no cooking was done, but in good weather the fire flamed up from every boat all the evening, and, as there were usually a good many boats on the sponge grounds at once, the sight was picturesque. The Nassau Sponge Exchange runs the whole business now, and some of the zest seems to have gone out of it.

"There are no sponges right around Nassau, but the Exchange is there and each of its members sends out his own fleet, which is busy all the year round. The merchant has a number of schooners of from ten to twenty tons. Sometimes he owns two boats. Sometimes he owns thirty. He engages the negro captain for his boat, and the captain chooses his own crew. The owner provisions the boat, and the provision included in the contract is always the same—so many pounds of flour, rice and salt pork, and so many quarts of gin for each sponger. If a man takes wife or children along, he must provide the extra food for them.

"The boats are made with heavy glass set in their bottoms, and the water down there is so clear that one can look through this square of glass right down to the bottom of the sea. Sometimes instead of the glass in the boat the men carry a glass box, that is a wooden box with a glass bottom. They hold this over the side of the boat with the glass just below the level of the surface; and no matter how rough the water is the bottom may be seen through the glass. The boat cruises around until it strikes a place where the sponges are thick. Then it anchors.

"If the water is shallow the sponges are

raked up with rakes a good deal like those used for oysters. If the water is deep the spongers strip and dive for the sponges. A man will dive down in two hundred feet of water, and then come up again, having gathered all the sponges for two or three yards around.

"The waters are full of sharks, but nobody seems to mind them. If one happens to be swimming along right beside the boat the men wait until he passes before they dive. That's all. When there are children on board they frequently fall overboard, but even the babies can swim.

"When the live sponge is brought up and thrown on deck it looks more like a lot of uncommonly nasty liver than like anything else, and it smells rankly. Right there's where sponging ceases to be attractive. The spongers drink quantities of gin, to keep them from being chilled by being so much in the water.

"As soon as a good number of sponges have been collected the boats put into the nearest land and the sponges which are dry and dead by this time, are put in kraals. That is they are put where salt water can reach them, but are picketed so that they cannot be washed away. After a day or two of that they are washed by hand and laid out in the sun to bleach. Part of the men stay and watch them while others go off after more.

When a full load is ready the boats put back to Nassau. There the sponges are sorted according to quality and put in piles on the floor of the exchange. The dealers walk around, examine the lots and write the prices they are willing to pay on slips of paper, which are handed to the clerk. He reads out the names of the highest bidder on each lot. There is no bargaining, no talking, no second chance. It is perhaps, the most quiet market in the world.

"Each dealer carries his purchases off to his own sponge yard, a place enclosed in stone walls and partly covered by a shed. There hosts of colored people, men, women and children, clip the sponges, cut away the roots, wash out or cut out the lumps of hard sand, etc. There is a great art in sponge clipping. The aim must be to cut out all objectionable matter with as little injury to the shape and size and texture of the sponge as possible. Often the cuts are invisibly sewed together, so that no ragged hole will show. The bits of sponge clipped off are used for packing purposes or for fertilizer.

"The sponges would in their normal state take up too much room in shipping, so they are pressed into bales, and the degree to which they are capable of compression may be understood from the fact that the natives boast they can pack a bushel of sponges into a cigar box. The sheep's wool sponge, which is the finest variety, sells in Nassau, for about \$1.15 a pound, while the cheapest quality brings about twenty-five cents a pound. The owner of the boat takes half the profit of the load, and the crew divides the other half, so the men's earnings vary, but they seldom exceed forty cents a day.

Modern doctors are inclined to frown upon the sponge. They say it is a refuge for microbes, big and little, and that the lack of care in regard to bath sponges, is responsible for much trouble.

"It is simply astounding that decent people can use sponges as they do," said a New York doctor. "A sponge should always be carefully washed, in very hot water, after being used, and every few days it should be washed in an antiseptic."

The World's Largest Telescopes.

It has long been known that if telescope could be produced large enough and with lenses powerful enough an intimate acquaintance might be gained with worlds now separated from us by immensity of space. To this end the philosophers and astronomers have been working for centuries and with comparatively good results. The first telescope, it is said was made in Holland about 1608, practically applied by Galileo in 1610 and gradually improved upon from the time of Sir Isaac Newton to that of Herschel. Great telescope may be said to have made their appearance with Sir William Herschel's big forty-footer finished in 1789, with which he, first of all astronomers, discovered the volcanoes of the moon. England took the lead and held it for years, while good work was also done in Europe. But lately the English astronomers admit that while America has advanced, their country has fallen behind in this regard. It was in 1828 that Lord Ross built the first gigantic reflecting telescope, with a focal length of fifty-two feet, the tube being fifty-six feet long and seven feet in diameter and its mirror six feet across. This telescope and its mounting cost all of \$100,000, but at its best worked imperfectly and is now obsolete though still in occasional use.

It may be debatable whether the reflecting, or refracting telescopes are to be of greater service in the future, for, while the largest "reflector"—that of Paris—was the latest made, the largest "refractor"—the Yerkes telescope of the Chicago university—immediately preceded it, and both have fully realized the expectations of their constructors. Less than eighty years ago the largest refracting telescope had an object glass only five inches in diameter, yet it was with this one that Sir John Herschel made his famous observation of double stars. Soon after, object glasses of nine inches, then of fifteen inches, were manufactured and mounted, one of the latter being placed in the Harvard college observatory in 1847. Then followed the Princeton telescope with a twenty-three inch aperture, the Washington Naval observatory with one of twenty-six, Greenwich, England, with twenty eight inches; Meudon and Nice, France, each with one of twenty-nine inches; Meudon again with a thirty-two inch, the Lick, California with its big thirty-six inch, and the Yerkes at Geneva Lake, Wis., with the largest of its kind ever produced—forty inches in diameter. The largest reflector of recent times is the telescope first exhibited at the Paris exposition of 1900, with object glass forty-nine inches across, and which is nearly duplicated by that of Melbourne University, Australia.

If the makers of lenses or object glass could keep pace with the demands of the astronomers, it would not be very long before all the important heavenly bodies would be brought, visually, within a few miles of the earth; but there is a limit to the size of the

uses they can cast and polish, and that it, it is thought, has been nearly reached. The process is complicated and costly, and there are but few successful makers of telescopic lenses in the world. There is none, in fact, who can surpass the Clarks of Cambridgeport, Mass., who shaped and polished the immense disks for the Yerkes telescope. The firm, at present represented by Alvan G. Clark, was founded by his father, Alvan Clark, nearly fifty years ago. Experiments begun as early as 1846 resulted in a world-wide celebrity, and culminating in the grinding of the lenses for the thirty-six inch Lick, the largest attempted, and later of the forty-inch lens for the Yerkes telescope. Yerkes paid over than \$20,000 for the rough disks of the telescope that bears his name, and paid Clark \$6,000 for working and insuring them. As new lenses are fractured in the grinding and have to be replaced, sometimes again and again, the business of polishing is attended with enormous risk.

In a comparison of the world's telescopes to the present time, there is no doubt that the United States is in advance both as to the number and size. With the sole exception of the Paris telescope of 1900, which has a tube of one hundred and eight-six feet in length, the Yerkes telescope, with its focal length of thirty-four feet, is the largest in the world, the second largest being the Lick, which is only seven feet ten inches. It should be said that the Paris instrument, however, that it differs from the American telescopes in being mounted horizontally on a rigid bed and in having a reflector instead of a refracting lens.

The United States, then, still holds the honors for refracting telescopes and, moreover, it is admitted by all that if the French instrument were mounted in some elevated position, having the clearer atmosphere of America, it would do much more for science than has been done already. It is the advantageous situation of the Lick observatory, situated as it is four thousand three hundred feet above sea level in the clear atmosphere of California, that has caused an English scientific writer to write out the fact of its having done more for modern astronomy than any other instrument in the world. The Lick telescope weighs thirty tons and the Yerkes seventy-five tons. For the construction and mounting of the former a fund of \$700,000 was available, and for the latter \$1,000,000. The lens of the great Yerkes telescope weighs seven hundred pounds, and casting and polishing being looked upon as a miracle of ingenuity. The Yerkes object, as mounted in its iron cell, weighs one hundred pounds.

One of the world's curiosities is the "elliptical telescope" of the Paris university, the use of which is bent, with a reflecting mirror at the angle, into which the observer looks through the eyepiece.

It is the opinion of an acknowledged astronomical expert that the giant astrophysical telescope of the future is to be of the reflecting class, owing to the fact that it gives brighter images, both in the visual and the photographic regions, with an aperture more than forty inches in diameter and also can be erected and mounted at less cost and trouble than the refractor.—*Brookton Enterprise*.

TOO LATE.

NORA PERRY.

What silences we keep, year after year,
With those who are most near to us and dear!
We live beside each other day by day
And speak of myriad things, but seldom say
The full, sweet word that lies just in our reach
Beneath the commonplace of common speech.

Then out of sight and out of reach they go—
These close, familiar friends who loved us so;
And, sitting in the shadow they have left,
Alone with loneliness and sore bereft,
We think with vain regret of some fond word
That once we might have said and they have heard.

For weak and poor the love that we express
Now seems beside the vast, sweet unexpressed,
And slight the deeds we did to those undone,
And small the service spent to treasures won,
And undeserved the praise for word and deed
That should have overflowed the simple need.

This is the cruel cross of life, to be
Full-visioned only when the ministry
Of death has been fulfilled, and in the place
Of some dear presence is but empty space.
What recollected service e'er can then
Give consolation for the might have been?

—Independent.

PRAYER.

There is an unseen battle-field
In every human breast,
Where two opposing forces meet,
And where they seldom rest.

That field is hid from mortal sight
'Tis only seen by One
Who knows alone where victory lies
When each day's fight is done.

He speaks to all a glorious truth,
A truth as great as sure,
That, to be victors, they must learn
To love, to confide, to endure.

This faith sublime, in wildest strife,
Imparts a holy calm;
For every deadly blow a shield,
For every wound a balm.

—Anonymous.

WORKING AGAINST THE TRUTH, BUT FOR IT.
—The *New York Observer* records the following instance where the opposition of a learned Jew was overruled to the diffusion of the gospel.

"It is not anything new, but it is well worth reminding this generation that more than one hundred and fifty years ago a learned Jew in Syria believed he could make a translation of the New Testament into Hebrew, and then use his translation to refute it. It was admirably and faithfully done, as he was a master of the Hebrew language; not a passage was knowingly perverted. He relied upon his ability to refute the whole, and so gain a grand triumph! At the end he calls heaven and earth to witness that he had done it with the special view of opposing the Christians. But an unseen hand was in the matter. This translation was brought to England and published, and is the one now in common use, and is doing, not the work the Jewish translator designed, but the opposite, making known the blessing of redeeming love to his Hebrew brethren. The British and Foreign Bible Society is giving it a wider flight in the world than the gospel-opposing Jew, as he labored upon the translation, ever conceived. He would have made it

a weapon of destruction, but the Divine purpose overruled, and the hand that would have ruined was made to save."

The Element of Simplicity Too Little Accounted Of.

To many men of the present day faith appears, as it did to the man in the parable, as a hidden treasure—to obtain it they would sacrifice all that they have. Like the Jews and the Greeks of the Corinthian church, they require a sign and seek after knowledge. They rush to scientific men to hear about miracles, and to historians that they may witness the weighing of evidence. Science and history, like art, are long, life is short, death pursues and faith eludes them—they have sought early, but they have not found. Is it not possible that they have mistaken what faith is and have looked for it too far afield? St. Paul, when he tried to steady the wavering faith of the intellectual Corinthians threw down, as it were, his intellectual arms altogether, realizing that among such gladiators of controversy as the Greek learning could produce they were powerless to help him. The church in Corinth was divided, some saying, "I am of Paul," some "I am of Apollos," some "I am of Christ." Some, as we gather from the epistle, trusted in ceremonies and were very superstitious, while others renounced the supernatural altogether, declaring that "there is no resurrection," no new birth, unless in a moral sense, in which case it "is past already." To quiet this strife of tongues, to ease these searchings of heart, St. Paul came "in weakness and fear and trembling," and offered to them all alike "the foolishness of the thing preached," that their "faith might not stand in the wisdom of men, but in the power of God"; and he resolved to know nothing among them but "Christ and Him crucified," by which phrase we suppose him to have meant that he would set forth only the precepts of Christ unsupported as they were, by the arguments of human wisdom and the humiliating fact of his crucifixion and apparent failure, out of which two things would spring, he knew, the strongest moral impetus the world had ever received, the surest hope of immortality mankind had ever known. For, he said the "foolishness" which is of "God is wiser than men and the weakness of God is stronger than men." At the time of St. Paul it was said by the Greeks that "at Corinth you may learn and hear even from inanimate objects so great are the treasures of learning and literature in every direction."

Speaking of the apostle's teaching in that city, Dean Stanley says that its simplicity "was a rebuke to the superstitious craving of the Oriental and the Jew, and also to the intellectual demands of the European Greek. The charm which the former found in outward miracles the latter sought in theories of philosophy. The subtleties of discussion which had appeared already in the numerous schools of Greek speculation, and which appeared afterward in the theological divisions of the third and fourth centuries, needed not now, as in the time of Socrates, to be put down by a truer philosophy, but by something which should give them fact instead of speculation, words and theories."

According to Dean Stanley, and, so far as

we can find, his dictum has never been reversed, the two epistles to the Corinthians are the earliest of the Christian Scriptures, written within thirty years of the passing away of our Lord and before the oral tradition of his teaching had been committed to paper. It is a noticeable thing that St. Paul, while the tradition was still fresh, while its proportions were still perfect in the minds of those to whom he must have talked, should have been so struck by the element of simplicity in Christianity; and we cannot but be impressed by this same element as we read the far less perfect account of the "good news" which has been preserved for us. Our Lord, we may remember, thanks God at the beginning of his ministry that the greatest revelation of his spirit should have been hidden "from the wise and prudent and revealed to babes." St. Paul most likely had this saying in his mind when he tells the Greeks that "the world in its wisdom knew not God." Again, Christ continually points to childhood as if the lessons to be learned from the eager simplicity of children were an essential part of his teaching. He never displays the least subtlety of dialectic, and seldom upholds a precept by an argument, but almost always makes a frank appeal to the moral instinct of men, to the "commandment which ye have had from the beginning," to the light of conscience which is in men of single mind rather than to the light of reason. "Take heed," he says, "that the light which is in you be not darkness."

Apparently this light is not so much something which we are to work to obtain, as something which we are to dread to lose. All Christ's teaching suggests that good is somehow in human nature. Our Lord distinctly implies that children are born not without light and good, and his sternest condemnations are reserved for those who lead them astray. He says "Become as children," with very little explanation—far less than nowadays we desire. Yet hitherto the church has not spent much thought on his meaning—singularly little, considering how reiterated is his teaching on the subject, and how directly it appeals to men's hearts. He does not explain why the poor in heart are blessed or in what sense they shall see God, but "the spirit beareth witness with our spirit," and we all know that even if there were no God to see, a good man is in some very true sense more blessed than a bad one. No sane man is without a conscience, and without a witness within himself to the kingdom of God. It is this kingdom within us to which Christ bids us surrender allegiance, without calculation of earthly consequences, not even "fearing them which kill the body and afterward have no more which they can do." In this surrender lies the germ of faith, and a faith thus generated is the only faith which can save a man's character. Without it he may be convinced of every miracle in the Bible as firmly as he is convinced of the miracle of this year's spring, and yet such certainty may be utterly dead and unproductive, the mere summing up of certain items of intellectual conviction. Religion cannot consist in a calculation of probabilities, however accurately worked out. Such intellectual exercises belong to the wisdom of the world, not the simplicity of the

"things preached." Christ's counsels against giving away to anxiety, against "thinking beforehand what ye shall speak," his warnings against the Scribes and Pharisees all suggest to us to preserve a simple attitude of mind, just as his injunction to "think little about dress and food, always making them subordinate to health"—"is not the life more than meat, and the body than raiment?"—suggests a simple manner of living. Salvation comes to men through a spiritual life not through argument, and if a man has Christ for his living standard he has believed on him," and he that believes has "that which shall raise him up at the last day," that is, he has begun a spiritual life in obedience to a power not himself in which he has faith. To use our Lord's simile, he has obtained the small grain of seed, whose powers of development are not understood by men.

Many people who are not accounted "spiritually minded" are, nevertheless, led by the spirit. A "spiritual mind" too often means a keen interest in religious controversy. The captain of a sinking ship who some years ago gave up the last place in the last boat to a little stowaway, whose very existence he had been unaware of two minutes before showed "the same mind which was in Christ," whether he had been accustomed to say unto Him "Lord, Lord," or not. And the stewardess on board the Stella, who gave up her lifebelt to a woman passenger on whom it had been her duty to attend, obeyed an impulse which we can only consider to have been Divine, and which controlled in an instant the instinct of human nature, the instinct of self-preservation. These people were not actuated by the "wisdom of the world," but by the "power of God." Probably both gave up their lives for the sake of their moral inferiors—for the sake of two persons who would be of less use in the world than they. But it is by such unreasonable actions, by such Divine folly as these people committed, that a nation is made great, and the equally unreasoning admiration which they awake in the hearts of men is a greater testimony to the truth of Christianity than any that can be evoked by "the scribes and disputers of this world."—*London Spectator*.

MAY our American system of social and political life, by far the best ever yet enjoyed upon earth, be placed upon the broad and enduring basis of true religion and true patriotism, and then at last the nation long foretold may appear, whose foundations are laid in fair colors and whose borders are of pleasant stones, and to it the promise of the prophet may be redeemed: "All their children shall be taught of the Lord and great shall be the peace of their children."—*Mac Veagh*.

TO BE in accord with the will of God is all that any of his children need desire. We admire the ability possessed by some of those around us, but we need not envy them, for it is a matter of daily observation that they are not necessarily more happy than others. To lie passive in the hand of God is the high privilege of his children, and to use the gifts with which we are endowed to his glory is the highest success to which we need aspire.—*Ep. Recorder*.

Low Wages and Low Life.

The Pennsylvania Bankers' Association held a convention in the first part of Seventh Month in Erie. Thomas B. Chantler, of Pittsburgh, gave an address on "The Banker and the Criminal." We extract a few passages.

"The laborer is worthy of his hire." As long as the earnings of the laborer, in mill or shop, or store, in any vocation, are not sufficient to enable the honest workman to feed and clothe his family and give them at least a few of the comforts of life, injustice is done him, and a readjustment should be made in the distribution of the products of labor. Need we be surprised at the discontent among the working classes, and with their belief that too many of the employers are growing opulent at the expense of the employed, that there is too much money at the top and too little at the bottom? Many millions are in these days donated by the rich for the people's advancement along many lines; but an increase of wages up to the living point would do more to wards lessening crime, closing slums and haunts of vice than does building unnumbered libraries, museums and conservatories. We find no fault with these generous gifts of noble men, but we do contend that there should be a readjustment of the distribution of wealth and the rewards of labor, that poverty and pauperism could not longer enslave honest labor.

"Inadequate wages brings poverty. With poverty comes want, and with want unsatisfied comes the commission of theft. And with self respect and ambition gone, good impulses vanish and all manner of crimes are committed. And out of the hovel comes the embry criminal who eventually becomes the professional law breaker. Again I contend that much of the crime that inflicts our country is traceable to the reduction of wages below the living point.

"Without trespassing on your time, I refer to but a few of the evils of society that must bear the onus of the creation of the great majority of this class of criminals. At the head society should awake to the necessity of some better regulation of a traffic that causes so much of our crime and misery?

"Society is also responsible for that manner of living that breeds social castes that stir up envious and competitions that are the root of embezzlements, forgeries and other crimes against property. So many single offenders are embezzlers. Low salaries with family social ambitions, have caused the downfall of countless men of promise. Foolish striving to ascend the social scale on the part of those whose means are scant, often causes the pilfering that ends in vast embezzling or forgery.

"Society's worship of the almighty dollar, and admiration for those who possess it, whether obtained by prolonged and honest effort or by sudden means or questionable methods, go a long way in influencing the young of the day to acquire wealth, either by fair means or foul. And when once in the race for gold, fine sense of honor and the whole moral fibre often seems to weaken and when the emergency arises when money must be had in order that one continue in the race, the hitherto seemingly honest man suddenly startles the community by his monstrous acts of embezzlement or forgery or bank wrecking."

Indian Maple Sugar Making.

Very few of the people to whom maple sugar is an entirely familiar and commonplace are aware of the fact that the method of making sugar was taught to the white people by the Indians, and that they made sugar before the discovery of America. This is only one of the many things that the white people learned from the Indians. Others were the weaving of cotton, the cultivation of Indian corn and the use of tobacco.

Some of the early writers tell us that the Indians were the first to make this sugar, and that they learned how to make it from the Indian women. The sap was collected in a certain way, a gash being cut in the tree and then this stick was thrust, down which the slowly-flowing sap dripped into a vessel of birch-bark, or a gourd, or into wooden troughs hollowed out by fire or the axe. Then the larger wooden troughs full of the sap, and hot stones were thrown,—just as in old times they used to be thrown into the water which food was boiled—and by constantly stirring in hot stones and taking out those that had become cool the sap was boiled and evaporated, and at length syrup was made, which later became sugar.

This manufacture of the sugar was not confined to any one tribe, but was practised by many of the northern Indians, and was known to those as far south as Florida and Texas. Among the sugar-making tribes a special festival was held, which was called the maple festival, which was undoubtedly a religious festival in the nature of a prayer or propitiatory ceremony, asking for an abundant flow of sap for good fortune in collecting it.

Among many if not all the Indians inhabiting the northern United States, maple sugar was not merely a luxury—something eaten because it was toothsome—but was actually an important part of their support. Mixed with Indian, parched corn, it was put up in small quantities and was a concentrated form of nutrient, not much less valuable in respect to the quality of support than the pemican which was used almost down to our own times.

Among the older writers who had much familiarity with the customs of the Indians, accounts are given of the manufacture of sugar, and this custom was so general that among many tribes the month in which the sap ran was called the sugar month. By the Iroquois the name Ratirontaks, meaning tree-makers, was applied to the Algonquin tribes as an eminent authority, Dr. Brinton has suggested that they were probably "so called in their love of the product of the sugar tree." On the other hand, A. F. Chamberlain has very plausibly said: "That it is hardly likely that the Iroquois distinguished their tribes by this term, if its origin be as suggested, they themselves were sugar makers and eaters." A more probable origin of the word is that given by Schoolcraft, in substance as follows: "Ratirontaks, whence Aridackas, was applied chiefly to the Montagnais tribes, north of the St. Lawrence, and has a derivative term indicating a well known habit of these tribes of eating the inner bark of trees in winter when food was scarce, or on long excursions." This habit of eating the inner bark of trees was, as is well

known common to many tribes of Indians, both those who inhabit the country where the sugar maple grows and also those in other parts of the country where the maple is unknown.

On the western prairies sugar was made also from the box elder, which trees were tapped by the Indians and the sap boiled down for sugar, and to-day the Cheyenne Indians tell us that it was from this tree that they derived all the sugar that they had until the arrival of the white man on the plains something more than fifty years ago.

It is interesting to observe that in many tribes to-day the word for sugar is precisely the word which they applied to the product of the maple tree before they knew the white man's sugar. It is interesting, also, to see that among many tribes the general term for sugar means wood or tree water—that is to say, tree sap. This is true of the Omahas and Poncas, according to J. O. Dorsey, and also of the Kansas, Osage and Iowa, Winnebago, Tuscarora and Pawnees. The Cheyennes, on the other hand, call it box elder water. A. F. Chamberlain, who has gone with great care into the question of the meaning of the words which designate the maple tree and its products, is disposed to believe that the name of the maple means the tree—in other words, the real or actual tree, or the tree which stands above all others.—*Forest and Stream.*

THE wise life is that of avoidance of wrong. The wisest life is that of abundance in good, memories of which will yield sweetness and gladness. Fidelity to truth, adherence to righteousness, discharge of duty, sacrifice in loving helpfulness will never color the cheek with the blush of shame or moisten the eye with the tears of sorrow. On the contrary such deeds will prove well-springs of joy.

Notes from Others.

The edict of the Governor of Kansas that all tramps in the State must go to work in the grain-fields, was the setting up as an economical principle, the old declaration, "If any man will not work, neither shall he eat." The result of such a promulgation was clearly foreseen. The tramp wants to eat, but he insists on some other man paying for his food. In this case, when he found that he must work, every Weary Willie in the State crossed the border.

The action of the librarian of the Boston Public Library in refusing to allow a woman patron to take from the shelves certain books of questionable morals, has roused much comment. Some persons denounce the librarian on the ground that an adult woman should be as free to read what she pleases as an adult man; others think the official rightly reserved the books in question from general circulation. Others still, criticise the authority by which such books are permitted in libraries maintained by taxation, while there are those who insist that the literary quality of a book should take precedence over everything else in the mind of the committee of selection. Numbers attack the books excepted to, and others shrug their shoulders and remind us, "Honi soit qui mal y pense." It is significant, however, that no one actually defends the objectionable books.—*Presbyterian.*

SUCCESSFUL ENFORCEMENT OF THE MAINE LAW.—Sheriff Pearson of Portland thus replies to a Pennsylvania correspondent who has asked him whether a newspaper item alleging that Prohibition in Portland did not prohibit, was true:

"Dear Doctor:—I take pleasure in replying to your letter of the 22nd inst., with newspaper clipping enclosed. Since the enforcement of the law began, the first of the year, the closing of the rum shops has driven the traffic into somewhat unusual channels, and the method of pocket peddling referred to in this clipping has been, and is, practised to some extent. My deputies are constantly on the watch for such offenders, and a special form of warrant for their apprehension is being used. I assure you that this form of the traffic is being pursued relentlessly. The latter part of this clipping is not only misleading, but absolutely false. The cost of enforcement to date will be more than offset by the amount of fines which will be imposed at the present term of the Superior Court. The grand jury during their recent session, returned nearly fifty indictments for the unlawful sale of liquors, and these are now being successfully prosecuted in court. The arrests for drunkenness since January 1st have fallen off more than sixty per cent., as compared with the same period for the preceding year, and the number of prisoners in the jail has decreased more than forty per cent. during the same time. Grocers, coal dealers and others furnishing family supplies find their trade increasing among the poor. A coal dealer, whose place is in a poor part of the city, tells me that he is now selling coal in ton quantities to families who formerly had only sufficient money to purchase it by the basketful. The proprietor of a candy store assures me that my enforcement is worth \$1,000 per year to him, because of the increase in penny trade from the children of the poor. A man and woman recently visited a furniture store and purchased a chamber set. The wife said to the salesman, 'We would not have been able to have this but for my husband saving the money he spent for drink before S. Pearson's time.' These are some of the facts of enforcement. I think they are misrepresentations, and dispose of effectually the misrepresentations in this newspaper squib. Very sincerely yours,

SAMUEL F. PEARSON."

It is alleged by certain lovers of birds that nighthawks, otherwise known as whippoorwills, and swallows, and above all, purple martins, hunger for mosquitoes as a steady article for breakfast, luncheon, five o'clock tea, dinner, supper, and frequent snacks and appetizers in the course of every twenty-four hours in the summer. If this is true, societies for the increase of the numbers of these graceful couriers of the air should be organized without delay. More birds and fewer mosquitoes—that's what we want.

The *Christian Observer* relates the following telling fact: "Recently at a church service a stranger dropped in. His presence led one of the regular worshippers to describe him. 'Years ago that man asked me to endorse for him to the extent of five thousand dollars, and I did it. Soon afterwards his partner mismanaged and his firm made a bad failure. That man got a position as bookkeeper at fifty dollars a month: he rented a cottage, denied himself new clothing, bought meat for his table only twice a week, and at the end of a year, out of that salary of six hundred a year, repaid me the whole five thousand dollars.' That is honesty—whole-souled honesty. Would there were a hundred times as much of it in the world."

The National Reform Association is an organization of American citizens which seeks to maintain and promote the influence of the Christian religion in the American government. This movement assumes that a nation and its government may and ought to be Christian. It accepts the fact that this nation and its government are, in a certain sense, Christian; and the equally important fact that we are far from being what a Christian nation ought to be, and that it is only by the in-

telligent and united efforts of favoring citizens that this or any other feature of the national life can be maintained and perfected.

Fundamental principles.—Like every historic movement, this movement proceeds upon well-defined principles. These are the following:

1. Nations are moral beings, capable of doing right and wrong, subjects, therefore, of moral law and accountable to God for their conduct.

2. Nations, like all other moral beings, are under the authority of the Lord Jesus Christ, the moral Governor of the world, and ought to acknowledge and serve Him.

3. The will of God, however revealed and especially in the Holy Scriptures, is the supreme standard for deciding moral questions in the life of nations.

Prepared petitions in sets of three, to be used in petitioning Senators and Representatives to work and vote for the proposed Anti-Polygamy Constitutional Amendment are to be had, at twenty-five cents for ten sets, of the Willet Press, 142 Fifth Avenue, New York City.

Causes for dissatisfaction with the Protestant churches are touched upon in an article in the New York *Evangelist* under the caption "Is the Church Christian?" In conclusion the *Evangelist* says: Christ came not to destroy but fulfil the law. He had no idea of turning the wheels of time backward, or of starting a social process which would be antagonistic to the process of law. Nevertheless his special care was for those damaged in the splendid struggle of the survival of the fittest—those we call to-day the poor, the dependent, the defective, the weak, the prisoners, the broken-in-heart. He went so far as to say that he had no immediate interest in the successful, the well-to-do and prosperous—"those who are whole need no physician, but those who are sick." Christ did not call every one to follow Him in his peculiar ministry, but He did call certain chosen ones—the twelve and [all] Christian ministers. It is strange to think how to-day, in almost direct antagonism to the purpose of Christ, the church had been completely taken possession of by the successful and respected classes, and how far the work of his chief ministers has departed from the kind of life he portrayed in the gospels. It is futile to point in rebuttal to all our missions and settlements among the poor. The church is not of them nor for them. It is supported by and composed of the successful and the prosperous. Its ministers are a professional class, able, efficient, honest—but their work and life is exceedingly unlike the work and life of Christ. Can it be said that such a church is in any vital sense a Christian church?

FOR AUTHORS ONLY.—There is near Philadelphia a really wealthy publishing house that brings out only worthless books; volumes of verse and of prose fiction which have no literary value, and which the house issues at the authors' expense, says the Philadelphia *Record*. These volumes do not sell; they never appear on the bookstands; their editions are about large enough to supply five hundred copies to the newspapers to review and five hundred copies to the authors for distribution among their friends. The contents of the volumes never fail to include the author's portraits and brief biographies.—*N. Bedford Standard*.

The New York State Household Economic Association proposes to discover how many steps a housewife takes in a day. It is estimated that the two thousand steps make a mile, and the proposition is to compute how many miles are covered a day by the housewife in the preparation of her meals and washing of dishes. The object of the proposed investigation is to discover how often two steps must serve instead of three, and to use the statistics as a basis of reform.

SUMMARY OF EVENTS.

UNITED STATES.—On the 6th inst, about 4 o'clock P.M., President McKinley was shot twice by an assassin at the Buffalo Exposition, while engaged in receiving callers in the Temple of Music. He was quickly removed to a hospital, where one of the bullets was extracted; the other had penetrated deeply into the abdomen. In the evening he was taken to the residence of the Milburn family in the city, where he and his wife had been entertained. The assassin was immediately arrested, and conveyed through an infuriated crowd to prison. He gave his name as Leon Czolgosz, lately residing at Cleveland, Ohio, a man of about twenty-nine years of age. The present condition of his case encourages the hope of his recovery. Vice President Roosevelt and members of the Cabinet hastened to Buffalo to consult upon measures required by this sorrowful and sudden emergency.

Offers have been made by the Associated Steel companies to President Shaffer, of the Amalgamated Association, looking towards a settlement, which have failed, the latter holding to make better terms. In the meantime a number of men have returned to work. It is estimated that on the twenty-first of Eighth Month the corporation was sending out about seventy-five per cent. of its normal amount.

The negro population of the United States is not diminishing, but increasing. The figure, according to the latest census, are: Colored population, 8,500,000; increase, 1,023,950. This is the largest increase shown by any census since 1790, excepting that of 1880, when the gain was 1,700,784.

Estimates have been made of the probable yield of corn in the country the present year, which indicates a probable yield of at least 1,400,000,000 bushels. The present would be a decline of about 700,000,000 bushels as compared with 1900, and a reduction of about 600,000,000 from the estimates made before the drought.

The cotton crop of the United States for 1900-1901 amounts to 10,383,422 bales, against 9,436,416 last year, and 11,274,840 the year before. Its value is nearly \$500,000,000, a larger sum than ever obtained for any crop in the South.

A Pittsburg dispatch says: All the bituminous coal mining companies of Pennsylvania, Ohio, Indiana, Illinois, West Virginia and Kentucky are to be consolidated into one great corporation by the J. P. Morgan syndicate. The completion of this great project will mean the consolidation of from \$20,000,000 to \$30,000,000 of invested capital. This will represent not only the undeveloped properties in the six States, but also the actual coal properties under development.

The Chicago *Tribune* has preserved statistics of the number of deaths by lynching in the United States for the past century, and it appears that 1313 persons were thus executed without due process of law. Fifty-one were women and 2465 men; 1678 were negroes, 801 white, 21 Indians, 9 Chinese and 7 Mexicans.

Two hundred atrocious coal miners at Jeddo, Pa., have joined in a pledge to abstain from the use of intoxicating liquors. The wives of the men were a factor in bringing about the present change of conduct.

The postal authorities of Chicago recently made a test of automobile vehicles for carrying the mails. The results are reported to have been entirely satisfactory.

At the Broad Street, Philadelphia, and Camden stations of the Pennsylvania line an average of 631 trains and more than 54,000 passengers arrive and depart daily during the year. On an average 141 trains arrive and 141 trains depart from and at 214 arrive at the Terminal daily.

There were 399 deaths in this city last week, reported to the Board of Health. This is 11 less than the previous week and 29 more than the corresponding week of 1900. Of the foregoing, 205 were males and 194 females; 42 died of cancer; 10 of cancer of the stomach; 16 of inflammation of the lungs and surrounding membrane; 4 of diphtheria; 14 of cancer; 13 of apoplexy; 12 of typhoid fever and 4 of small-pox.

COTTON closed on a basis of 8½c. per pound for midling uplands.

FLOUR.—Winter, spot, \$2.15 to \$2.30; Penna. roller, straight, \$3.20 to \$3.30; winter wheat, straight, \$3.25 to \$3.35; spring, straight, \$3.40 to \$3.65.

GRAIN.—No. 2 red wheat, 73 to 73½c.
No. 2 mixed corn, 59 to 60c.
No. 2 white oats, clipped, 41c.

BEEF CATTLE.—Best, 5½ to 6½c.; good, 5 to 5½c.; medium, 4½ to 5½c.

SHEEP AND LAMBS.—Cheyres, 3½ to 4c.; good, 3 to 3½c.; common, 1½ to 2½c.; lambs, 4 to 6c.

HOGS.—Western, 9 to 9½c.

FOREIGN.—The Chinese embassy to Germany, headed by Prince Chun, the brother of the Emperor of China, sent to apologize for the murder of Baron von Ketteler, the German minister in Peking, has had an interview with

the German Emperor. A letter from the Chinese Emperor was presented by Prince Chun, contained the following: "We regret most deeply that Baron von Ketteler so terrible an end among us. The fact that we were not in a position to take due protective measures was painful to our sense of responsibility. It was the feeling of responsibility to which we must ascribe a measure of blame. We are now endeavoring to take steps to prevent such a crime from being repeated. Further, we have sent to Germany with this letter, the Imperial Prince Chuu Tsai Fong, heading special mission. Prince Chun, our own brother, will assure your Majesty how deeply the events of the past year have grieved us, and how deeply feelings of penitence share still animate us. The matter was so emphasized in the reception" was marked with all the severity consistent with an audience anomalously friendly, but apparently he manifested a kindly spirit and visited Prince Chun at his stopping place, and has shown him other attentions.

The Government of France is said to be determined to compel Turkey to fulfill her entire obligations. The Sultan has appealed to Germany to use her good offices to settle the dispute with France, and Germany, it is understood will advise the Porte to settle as soon as possible.

King Edward has appointed a Commission to investigate Professor Koch's tuberculosis theory. The scope of the inquiry is to be whether animal and human tuberculosis are identical, whether animals and humans can be reciprocally infected and under what conditions, if at a transmission to man occurs and the means of combating.

A despatch from Colon, Columbia, says the revolution in Venezuela is spreading over the whole country.

The Paris Fire Department has adopted automobile fire engines and hook and ladder trucks, and the newly arrived to the old apparatus. The engines are run by storage batteries. The electricity is used in only to propel the engine, but to work the pumps also. There is no delay getting up steam, and one charge of 10 accumulators will keep the pumps going five hours.

RECEIPTS.

Unless otherwise specified, two dollars have been received from each person, paying for vol. 75.

Benj. F. Starbuck, agent, \$10 for Edmund Bundy, John Starbuck, Lewis C. Steer and Lindie B. Steer, \$4; Phoebe E. Hall, agent, \$10 for Ellis C. Hall, \$10 for John W. Hall, \$10 for J. C. Clayton Haines, N. J.; Nathaniel Pearson, Ed. Rachel F. Parker, Pa.; Elizabeth Taylor, Pa.; J. Anna Peele, N. C.; Edmund S. Fowler, agent, \$10 for B. J. Hobson; John W. Garwood, agent, \$10 for William H. Cook; Aaron Meekel, agent, N.Y. for Elizabeth Meekel, and Mary J. Wood, for Charles W. Wood, \$10 for Robert C. Hulme, Pa.; Edwin A. Hoopes, Pa.; Ruth K. Smedie Fark'd; Elizabeth S. Brinton, Fk'd; Marian Darnell, N. J.; Susan H. Sharpless, Pa.; B. F. Coppock, agent, Ia., \$8 for himself, Mary Briggs Albert Emmions, Edward Edgerton, Ruth Edmondson, Lydia Elmhurst, David Holloway, E. C. Hootch, Eliza H. David Sears, Thome E. Smith, John O. Spencer, Lydia S. Worthington and Edward G. Vail; John G. Haines, Pa., \$8 for himself, Levi S. Thomas, Thomas W. Fisher, Wm. T. Zook; Alva J. Smith, agent, Kans., Sarah Ann Hinshaw and Hannah A. Hinshaw Jesse Negus, agent, Ia., \$5 for James H. Okerly, Wis., \$10 for John C. Hansen, \$10 for Thomas W. Newby, Ind.; Amelia Bedell, Cal. Ruhama J. Barnett, Wash., \$10 for No. 27; R. H. Gibbons, Del.; Mary Hodgson, Gtn.; Richard W. Hutton, Pa.; Lindley M. H. Reynolds, N. C.; Ben F. Brown, agt., N. C., \$10, for Walter J. Brown, \$2, and Joseph A. Fell, Va., \$10.

Remittances received after Third-day noon will appear in the Receipts until the following week.

NOTICES.

FRIENDS' SELECT SCHOOL will re-open Ninth Month 1 1901.
J. HENRY BARTLETT, Sup't.

OHIO YEARLY MEETING.—Reduced rates from Philadelphia and points west to attend Ohio Yearly Meeting, be held at Barnesville, Ohio, can be obtained via B. & R. R. for a fare and a third—that is the round trip Philadelphia to Barnesville and return for \$15.50, a regular fare being \$25.20. The most convenient time to start is on the 22nd inst. The meeting will be held at Barnesville, and are good only until Ninth Month 7th, inclusive giving the purchaser two full weeks from Ninth Mo. 23d, in which to make the trip. For further information call or address BERNARD ASHBY, 834 Chestnut St., Phila. or T. C. HOGUE, West Chester, Pa.

JOHN H. DILLINGHAM.

No. 140 N. SIXTEENTH STREET, PHILA.

Entered as second-class matter at Philadelphia P. O.

THE hour of death is an honest hour, and it is in such an hour that the end of our late president's life crowned all his other hours of deeds with the most solemn and valuable testimony of his life: "Nearer My God, to be" and "It is God's way. His will be done, not ours." While last words are not Power that justifies, yet the momentous events of the past two years have turned the attention of a world-wide audience now to such a sermon, under conditions which must make it sink most deeply into all men's hearts.

So the Most High evinces his power to get the victory of every weapon wielded against will. So He proves that not every deed erred for good is good, else an assassin's end might sometimes in the light of some consequences be mislabeled good; even as wars, which are multiplied assassinations, are so scaled when seeming to have been overruled for benefit.

And who shall say that this appalling event not one of the reactions of war which makes re-taking a familiar thought and bloodshed cheap, and the instinctive remedy for its real or fancied, where the carnal mind, blinded of its moral light, learns too readily the method of nations.

We are not, however, the judge of William McKinley's course or Christian condition; and would place hope elsewhere than on last words for the Atonement, though prizing their testimony where man is brought low. As for us we have deemed he approached it with sincere reluctance, and sought to postpone his declaration for time enough to prove the unnecessary, as it is seen now that a few weeks would have shown, but was overruled by legislative authority. He acted in regard to us as he had ever been popularly taught, according to the light he had or recognized that respect. Yet we as Friends, must deem

the popular vision of such light, which seems to let the people adopt war, an impaired vision.

If our warfare is to entail upon us coming evils, we may yet have to acknowledge that President McKinley, who did not covet the war, is mercifully taken away from such evil to come. We can be thankful that he left to the world the legacy of such dying words, that will live. We have desired that he upon whom his mantle falls, as the successor of Elijah stooped to take up his, may be so bowed in heart and soul while taking up the great responsibility, that he too, may reflect those dying words of submission to the Divine will and way, and feel the grace of his Saviour in saying, "I came not to do my own will, but the will of Him that sent me."

WE trust the righteous concern of the Friend who, since visiting Egypt with his wife on a gospel mission, has felt a burden to plead for the help of the blind and destitute children of that land, will be met by a Christian responsiveness in such funds as Friends and others can spare. The method of help and instruction proposed is commended to the sympathy and attention of readers, as printed in another column. May Friends be blessed in having some practical part in making good those words uttered on the Egyptian shore: "Take this child and nurse it, and I will give thee thy wages."

George Whitehead.

Probably there are few Friends of the present generation who steadily prod through George Whitehead's "Christian Progress," and Samuel Tuke's "Memoirs of George Whitehead" were published so long ago that there was ample room for the little book recently prepared by William Beck* on one of the most remarkable of the early Friends, and probably the last survivor of the valiant band of "sixty," who in the year 1650 went forth from their northern homes on the mission which originated the Society of Friends. In efforts on behalf of suffering Friends no man was more persistent, probably none so abundant in labors, in his appearances before royalty and Parliament, as George Whitehead. As long as he lived, if King or Queen or Parliament were to be approached on behalf of Friends, he was almost certain to be among the ranks of the deputation, were it large or small. After early life he suffered less from the bitterness of persecution than many of his fellow-believers, compared with many of whom his terms of imprisonment were light. This comparative immunity was not selfishly used,

but his liberty devoted with untiring zeal to the service of his brethren.

Early in the reign of Charles II., we find George Whitehead as one of a deputation of four Friends, led by Edward Burrough, who appeared at the bar of the House of Commons to plead against the contemplated Act for repressing all forms of worship other than that of the Established Church. The deputation and the bold words of Edward Burrough evidently made an impression on the House, and as he withdrew, several members gently pulled the coat-sleeve of George Whitehead for the pleasure of a close view of his features. He was then a young man of twenty-four.

In the year 1672 the condition of about four hundred Friends languishing in the prisons of England and Wales came as a deep concern on the mind of George Whitehead. Some of them had endured ten or eleven years' imprisonment. After preliminary negotiations, and a short interview with the King, in company with two others he appeared before the King and full council at Whitehall. After some argument, a "pardon" was granted for four hundred and ninety-one persons then lying in prison on account of their religious convictions. The document on which the pardon was written consists of eleven skins of largest size vellum, and several copies were issued. Each of the four hundred and ninety-one names appears eleven times in the documents, among the names of those pardoned being John Bunyan, who although not a Friend and having strongly opposed their teaching, did not apparently object to be released from Bedford gaol through their intercession. A copy of this historic document, which bears as its initial letter a portrait of King Charles, lies among the archives at Devonshire House. The serving of the document upon the different sheriffs was a work of time, but before it was completed a meeting of all the sheriffs in London afforded an opportunity which George Whitehead was quick to seize.

Relief, as the result of this pardon, was but temporary and a year or two later Thomas Moor and George Whitehead were at Hampton Court pleading for the release of their beloved leader, George Fox, from Worcester gaol. Though the mission was not immediately successful, release soon followed. Again and again thereafter George Whitehead, in company with others, appeared before King and Council; and he was probably the last Friend who ever spoke to King Charles II. on this account. When Charles died, about fifteen hundred men and women Friends were lying in gaol. Early application was, of course, made to James on behalf of these sufferers, with considerable success.

What was obtained by royal favor from the Stuarts was placed on a more secure founda-

* "George Whitehead: His Work and Service as a Minister for Sixty-eight Years in the Society of Friends." Compiled by William Beck. (Headley Bros.; 2s. 6d.)

tion when the House of Orange ruled. At the beginning of the new reign, George Whitehead, with two other Friends, attended the House of Commons in Committee on an Act for the relief of Nonconformists. Both before King and Parliament in this reign George Whitehead was prominent in his services on behalf of suffering Friends. Again before Queen Anne the same Friend appeared on more than one occasion; and when the House of Hanover succeeded to the throne, George Whitehead was the leader of the band of Friends who offered their congratulations to King and Crown Prince. His last appearance at court was when, a few years later, the Yearly Meeting sent a deputation to the King congratulating him on the suppression of an insurrection on behalf of the reputed son of James II.; his apt words in introducing the deputation are characteristic of his courteous style. He said,—

"That in their annual assembly, held for the religious concerns of their Society, endeavoring to promote and put in practice the duties of religion professed by them, the sense of the great deliverance had such weight upon their minds, that they were willing to express it in an address to King George whom God by his Providence had brought hither and preserved, so that he could well say, he was George, by the grace of God, King of Great Britain. And that as men carried that saying, stamp on the money in their pockets, so it was to be wished it might be imprinted in the hearts of the subjects."—*London Friend*.

How Penguins Train Their Young.

We can scarcely imagine the solemn looking penguin having any fun in him, but a recent observer, who is a member of the Royal Geographical Society, has described entertainingly the manner in which these birds amuse themselves by sporting in the water. He also tells of their social customs, wherein they show many human attributes. These, taken in connection with their almost human appearance when walking over the snow, seemed incredible to him, until closer observation convinced him of the truth of what he saw.

In their rookeries the visitors found crowds of young penguins, whose plumage was still too delicate for them to enter the water and swim. Their parents went away to seek food, and then jumped out of the water one after another, and brought morsels to the young ones. The coming and going were incessant, but in order to prevent the youngsters from following their parents or otherwise getting into the water and coming to harm, a number of old birds kept watch over them. These were drawn up in line some distance from the edge of the ice, and remained impassable each in his place. The adventurous youth who ran risks received punishment by strokes from the wings of these grave elders. The explorers often met companies of six or eight or more penguins promenade on the ice pack in the sunshine. The birds generally exhibited curiosity, and approached to get a nearer view. They occasionally became very aggressive. One would first approach and reconnoitre, and then on his order the others would advance with a menacing air, and the battle began—a battle in which the sailors sometimes had

trouble to demonstrate effectively their superior strength. The interest these strange birds displayed in music is also worth noting. One of the sailors delighted to exercise himself on the trumpet, and the penguins came in great numbers and from a long distance to listen to him.

HOW TO LIVE.

By thine own soul's laws learn to live
And if men thwart thee, take no heed,
And if men hate thee, have no care;
Sing thou thy song and do thy deed,
Hope thou thy hope and pray thy prayer,
And claim no crown they will not give,
Nor bays they grudge thee for thy hair.

Keep thou thy soul-sworn steadfast oath,
And to thy heart be true thy heart;
What thy soul teacheth learn to know,
And play out thine appointed part;
And thou shalt reap as thou shalt sow;
Nor helped nor hindered in thy growth,
To thy full stature thou shalt grow.

Fix on the future's goal thy face,
And let thy feet be lured to stray,
No whither, but be swift to run,
And nowhere tarry by the way
Until at last the end is won,
And then mayst look back from thy place
And see thy long day's journey done.

—*The Spectator*.

Some Brief Extracts From a Manuscript.

LIFE OF BENJAMIN KITE.

(Continued from page 67)

John Bailly, from New England, being concerned to visit the meetings in New Jersey, and wanting a companion, Benjamin Kite thought it right to accompany him. At Salem they dined with Elizabeth Miller, who though entirely deaf, joined in the conversation, being able from the motion of the lips to understand much that was said. When a young woman, finding that her hearing was likely to fail, she practised speaking before a glass, carefully noting the motion of her lips, and finally became so skilful in reading their language that many persons have conversed with her without becoming at all aware of her deprivation. Many a secret whispered in her presence she might have told had she been so disposed. At one time a Friend having preached in their meeting, observed afterwards that there was a very rudely behaved girl that kept making mouths at a Friend in the gallery; this was a relative of Elizabeth's, who was silently repeating the sermon for her benefit. Micajah Collins, who was also visiting in New Jersey, came to one of John's meetings to see, as he expresses it, "how the battle went." In reply to this observation Benjamin Kite said, "John's gun goes hard upon the trigger." At Upper Evesham they attended a Monthly Meeting at which were twenty strangers, fourteen of whom were ministers. "The meeting was opened in a rousing testimony by M. Collins. I hope that I at least, may profit by it. At Rahway M. Collins had much service in the morning and J. Bailly in the afternoon. He was principally engaged in showing religion in her simple loveliness, without trappings and ordinances which man has disguised her with." Of J. Bailly Benjamin Kite, wrote: "He was truly an interesting companion. The gravity of his behavior ought to have a tendency to cor-

rect the lightness of mine. Though reserved in mixed company, he was remarkably free with me and I could but marvel at the soundness of his judgments and the depth of his reasoning. . . ." In a letter to Benjamin Kite, Micajah Collins says: "Though we are cautioned against being troubled at the sound of wars and rumors of wars, yet gloomy indeed is the prospect when we see the preparation making for rapine and bloodshed; when we see men forget that they are brethren—'interposed making enemies of nations.' The depredations already committed are but too sorrowful to view and what will be the result is not easy to foresee. Privateering has already commenced and prize armies are entering our ports. Many are running to and fro in these days, and I wonder that knowledge might cover the earth as the waters do the sea. May the Master of the harvest prosper the work of their hands. . . . John Heald wrote: Thy acceptable letter was received. To my mind it savored of a living concern to be found filling up thy allotted portion of duty. I wish to be one with thee in this. Peace will flow through the mind sweetly, and at times a well-grounded hope that we shall be permitted to enter into rest that has no end. The comfort who can know that has not felt it? If our public labors in whatever time they may be called for are accepted what a favor! I do not doubt that many mis of precious enjoyment for want of faithfulness in the little things. Sometimes by not denying themselves little gratification; sometimes by not carefully attending to little duties, John Letchworth was plunged into deep bitterness because in a concern he had opened his Monthly Meeting to go west no one had offered to accompany him. Of this he wrote his brother, Benjamin Kite: "Thus is on faith sometimes tried to an hair's breadth perhaps to see whether we will place our dependence upon the arm of flesh. I may acknowledge that if I was disappointed I was not much cast down; or if I cast down not despair. I have believed and do so still that the Master put me forth to go on this errand and his gracious promises are yea and amen forever, and if He goes before He can remove the hills of discouragement out of the way of his dependent little ones. That I may be on of these is my earnest desire" . . . To this was replied: "Though this failure is trying there is no reason for despair; there is a cause for thee to doubt the rightfulness of thy concern and I have no fear but that a comparison will be provided for thee through the western country." . . . This was the case as it was during the visit now paid that the account of the first Yearly Meeting in Ohio was written as was related out of place. While on this visit Benjamin Kite wrote him: "Will thou think me superstitious if I relate the following dream? I had been like Nebuchadnezzar musing on what should be hereafter when I fell asleep and dreamed that a large book was brought for my information, which on inspecting I found to be the proceedings of a Yearly Meeting of all the inhabitants of the earth for the year from 2200 to 2296 inclusive. From this I inferred that all the world was at that time of one religion. This book contained an account of the inhabitants of the earth by houses; these regularly but rapidly

lined from hundreds of millions to millions, hundreds of thousands to thousands, and on. The minute for the last named year so impressed on my mind that I give it verbatim in as near the character as I can, as my stand on my memory. "At a Yearly Meeting for the year of our Lord 2296 the inhabitants of the world being now reduced to seven houses it is not probable that another Yearly Meeting will ever be held." Whereon I awakened wondering being informed what was to become of the world when bereft of its inhabitants?" . . .

On the subject of giving money to provide blankets, etc., for the soldiers and in aid of poor families, John Letchworth holds some unfashionable views. "We often hear large contributions to relieve our fellow men. It looks well, it sounds well, and we speak well of it. And yet there is a more excellent way, a way that does not indeed make a show but which yet will yield a peace to the world can not give: 'Let not our right and know what our left hand doeth.' Not that I am against public contributions on certain occasions. Many are thus drawn to give purse-strings would otherwise remain sed. Of these may we not safely conclude that what they do is to be seen of men, they who give to the poor lend to the Lord, and I believe He will repay it. But let the gift be pure; some may talk of their contributions until every avenue of charity is clogged up. . .

"Thou wilt not doubt anticipate my opinion. Thou hast assisted all thy relatives and acquaintances who need it, all the peaceable men who have come to thy knowledge, and thy purse and thy benevolence remain unexhausted, then thou may freely give to the needy warrior. Here thou may say, 'what! let these poor fellows be but last, the very best?' I answer 'Yes! I believe war ought to be banished from the Christian borders.'"

B. K. writes to his brother, 1814:—"Having mentioned that dear old servant, John Ly, I may inform that I have a copy of a letter of his addressed to all Select Meetings of the two quarters he had attended. It contains weighty counsel to all,—describes the master self in its various forms according to scripture figures, as that Leviathan whom no instrument can pierce, save the sword of him who made him—neither spear, nor dart, nor habergeon can avail against him. . .

"Micajah Collins has been in the city several times lately, but has attended no meeting. Why should a gospel minister be afraid of trembling among us? But it is natural to shrink from the cup of bitterness. And even the great Master's human nature revolted from the dreadful cup of trembling handed out to him."

John Letchworth heard that John Heald was in New Jersey and not getting along as fast as expected, remarks: "I said in my heart, let him alone; he is no doubt doing what he can. It is possible to make more haste than speed. I have known some to be so swift in their movements as to appear as if they were going to their outward affairs. Yet I do not approve of loitering our time away."

. . .—It must be understood that I only use scattering paragraphs as observations from pertinent.—"Thus death continues his

wanted work of thinning our ranks. Sarah M. Watson has passed away. Seldom, very seldom, has a purer spirit left a more afflicted tabernacle. 'Precious in the sight of the Lord is the death of his saints.'"

(To be continued.)

Riches People in the World.

The popular conception of the Indian even in this city, so near to the "nation," is that he is an ignorant chap, with a blanket and squaw, and that all he has in the world is a government ration and a pipe. This is true, too, of some of the noble red men, but, in the language of the day, "there are others," and they are not squalid, poor, or unthrifty, either.

The Osages are not only the richest Indians in the world, but there is no other people on the globe that compares with them in this respect—white, black, red, yellow. They live in Oklahoma, and they have more money than they know what to do with. So a man from their country, Major A. E. Whiting, says, and he ought to know, for he has been trading with them for years.

"I was recently in Washington," said Major Whiting the other day, "and I learned while there that the Osages have made new contracts for the rental of their pasture lands. They have eight hundred thousand acres of land altogether, and of these six hundred thousand acres are leased for grazing at an annual rental of \$120,000. The Osages now have on deposit in Washington with the United States something like \$8,000,000, for which they sold their lands in Kansas, and this brings them annually \$400,000 income. Besides they own more than one million five hundred thousand acres yet, easily worth five dollars an acre. Their land holdings are worth nearly \$8,000,000 all told. There are one thousand nine hundred and seventy-two Indians in the tribe, and they have all their holdings in common—men, women and children. When a child is born it becomes a joint owner with all the rest. Thus there is a continual incentive for the individual family to increase."

"The profits from the money in the United States Treasury, the recent leasing of lands, and other sources of revenue, give the tribe about \$600,000 annually as an income. This figures out a little more than three hundred dollars for every man, woman and child. When a family consists of half a dozen or eight or ten, as it often does, you can figure for yourself that it is a pretty good thing. The realty holdings of the tribe have a per capita value of about \$4,000, and that means for a small family of five—and that is a small one—about \$20,000."

"As might be expected this wealth has attracted to the reservation many white men who seek alliances with the Indian maidens. The foxy old governors, however, have foreseen this and they collect a poll tax of \$1 per month from every white man there. This keeps the white population down and makes it really desirable. The adventurer is given a cold greeting, let me tell you."

"These Osages have not failed to profit mentally from their prosperity. They have fine homes and schools, and the sons and daughters are sent east to college, and their homes are richly and tastefully furnished with car-

pets, pianos, and good furniture. Of course, a few families still live in the old fashion, but they are becoming fewer and fewer all the time. In the main, the Osages are well worthy of their inheritance, and when, in a few years, they become citizens in full they will not be the worst we have, by any means."—*Chicago Inter-Ocean.*

New York's Midnight Bread Line.

Toward midnight, when all New York, with the exception of the comparatively few people whose callings keep them up at that hour, is fast asleep, and the great avenues of trade are silent and deserted, any pedestrian who happens to walk in the vicinity of Tenth Street and Broadway witnesses a singular sight. The *Christian Herald* thus describes it:

Along the sidewalk on the northerly side of Tenth Street may be seen a long line of men, poorly clad, with hungry looking, eager faces and a general air of hopeless poverty. This line, usually of about three hundred persons, but sometimes of nearly five hundred, is formed every night at the same hour. By 12 o'clock it is completed. Sometimes there are a few destitute looking women in the line, but the great majority are men. The head of the line is midway between Fourth avenue and Broadway.

At the stroke of midnight a door opens and light streams out on the dark sidewalk. The crowded line presses up toward the open doorway, where several white capped and white aproned men stand beside great piles of loaves of bread. There is a grateful odor of coffee, too, and it is soon apparent that the outside crowd is appreciative of the fact, for they press harder as one after another at the head of the line receives from the white capped men a loaf and a mug of hot coffee, and then, mumbling his thanks, marches off to make room for the next. Some receive half a loaf, others a whole one, and if the night is chill and frosty, the coffee is in as much demand as the bread.

The distribution proceeds until all are supplied. Some carry their loaves home to wife or children, hungrier perhaps than themselves. Others begin to eat their portion at once, and gulp down their steaming coffee. By one o'clock the crowd has vanished, the door has closed, and Tenth Street has resumed its wonted quiet.

This unique scene, the only midnight charity in America, has been enacted nightly for twenty years. Louis Fleischman decided twenty years ago to give to the poor all the bread that was left undisposed of after his wagons came in for the night to his bakery in West Tenth Street.

He gave away a few dozen loaves at first, but the demand for them grew, and the gift brought blessing, for his business steadily increased. The midnight distribution is made all the year round, in the hot, sweltering nights of summer and in the arctic chill of winter.

There are never any discords in the quiet line that gathers nightly, and which encircles nearly half the block. The men know that a disturbance might mean the stoppage of the benefaction, and such a loss they cannot afford to risk. A loaf of bread means much to a penniless, homeless man in New York.

A Concern for Egypt.

For "THE FRIEND."

In the year 1895, John S. Fowler, a member of the Society of Friends in America, being in Egypt with his wife, upon a religious errand, was deeply impressed with the constant sight of neglected, destitute children, wandering in the streets of the cities; and with the extraordinary number of blind persons, without occupation for their support. In Cairo, alone, it is believed there are more than five thousand blind people, for whom there appears to be no public provision for education or for their training for any industrial pursuit.

John S. Fowler and his wife had visited the Protestant Mission Schools in Cairo, to which they had felt a call for religious service. In the American Mission building they found an enrollment of over six hundred pupils; among them, more than sixty young men, who were being educated as teachers for their own people. The marked difference in the countenances of these students, as well as in many of the children in the different schools visited, from those to be seen without, was very striking.

On the return voyage from Alexandria to Marseilles, the distressed condition of these thousands of destitute children, and especially of the blind, strongly impressed the mind of John S. Fowler, followed by the conviction, after his arrival in America, that the duty was laid upon him by his Divine Master, to endeavor to interest the religiously minded both in America and in Great Britain, to furnish means sufficient to provide for a large number of these children; to clothe, feed and educate them, and to introduce into Egypt the methods for training the blind to useful pursuits which have proved so effective in Christian communities.

The American United Presbyterian Mission for North America, who have an educational establishment already in successful operation in Cairo, have heartily entered into sympathy with the concern, as will be seen by the accompanying circular letter.

The field of labor being so large, it is thought that the sum of \$150,000 will not be an over estimate, and \$200,000 would be very desirable, for erecting the buildings and for a proper endowment of this benevolent work. Although the raising of this sum seems like a great undertaking, it is hoped that when the Christian reader contrasts his own favored condition with the forlorn and benighted state of these poor outcasts, equally with himself the children of one Almighty Creator, his heart may be so moved with pity that he will resolve to do what lies in his power to alleviate their condition, and to remove some of the obstacles existing in that dark land to the spread of the Redeemer's kingdom.

"Inasmuch as ye have done it unto one of the least of these my brethren, ye have done it unto me."

ARTICLES OF AGREEMENT.

Whereas, John S. Fowler, of Winona, Ohio,

having a few years since, visited the city of Cairo in Egypt, was much impressed whilst there with the great number of destitute and outcast children, and the prevalence of diseases of the eyes, and blindness, among both children and adults, and he having since felt an impression of mind that it is the will of the Lord that he should use efforts to raise a sum of money by the contributions of charitable and benevolent people for the building and establishment in the said city of Cairo or vicinity, of an Orphanage for the relief of this class of children, and a Hospital for blind persons, or those with diseased eyes as above mentioned;

And whereas the United Presbyterian Church of North America have for several years had and maintained a mission in Cairo for the propagation of Christianity; and the said John S. Fowler in a recent interview with the Board of Foreign Missions of the United Presbyterian Church aforesaid, at one of their meetings held in Philadelphia, laid before them his concern for the aforesaid class of people in Cairo, and requested said Board to undertake the care and administration of such funds as he, the said John S. Fowler, might raise for those objects; Whereupon after due consideration, the said Board accepted the proposition of the said John S. Fowler, and it is understood and agreed between them as follows, relative to the same, to wit:

First.—That whilst the said Board of Foreign Missions of the United Presbyterian Church of North America, cordially approve of the objects and plan of the said John S. Fowler in this proposition, and recommend to the benevolent and charitable everywhere to contribute to their establishment and endowment, they do not make the said Board or their successors or constituents peculiarly responsible for any expenses that may be incurred in carrying them out, only so far as moneys may come into their hands from contributions raised expressly for the said purposes through the solicitations of the said John S. Fowler or other persons.

Second.—When such a sum of money has been subscribed and paid in as in the judgment of said Board will justify them in proceeding in the above project, the said Board agrees to accept the same upon the above and following trusts and conditions, and hold it and all other sums of money paid over to them for these objects as a special deposit in a bank or Trust Company separate and distinct from their other funds.

Third.—It shall be the duty of the said Board, whenever in their discretion a sufficient sum of money has been paid over to them, to select suitable pieces of land in or near the said city of Cairo, and to purchase them and erect buildings thereon and furnish them for the purposes herein expressed. They will forever thereafter use and apply all moneys donated to them for these purposes, both principal and income, to the maintenance and carrying on of such orphanage for the relief, support and education of the destitute, abandoned, and orphan children of the said city of Cairo and vicinity in Egypt, and the hospital for the help and education of the blind, or those afflicted with diseased eyes, whether children or adults, who are in poverty, so far as the means thus raised will extend; with the desire that the blind which were so much the object of his compassion when He walked amongst men, might be

enabled to trace with their fingers the account of the coming of Christ as foretold in the Old Testament, and fulfilled in the New Testament, thereby hastening the day spoken of by the prophet: when the "knowledge of the Lord shall cover the earth as the waters cover the sea." Said Institutions and their management to be under the sole direction and control of the Board of Foreign Missions of the United Presbyterian Church of North America, and their successors in office. Provided, however, that the said Board will consult and advise with the said John S. Fowler, whilst he may be living and able to co-operate with them, with regard to the site and building and such details respecting the prosecution of the work as may be practicable, and will give his view and suggestions due consideration, but reserving to said Board the ultimate decision in all cases. It is provided, however, that the Institution shall always be kept under the influence, care and superintendence of Protestant Christian officers and teachers, who shall endeavor to instruct the inmates in the precept of the New Testament; and that war or military drill shall never be taught therein. In case of the death of John S. Fowler before the objects and plan as herein described have been carried out, the Board of Foreign Missions desired to confer with such members of the Society of Friends in, or in the neighborhood of Philadelphia as may have subscribed to the fund, or to such individual or individuals: they may select, as to the steps it may be necessary for them to take to complete the benevolent purposes herein indicated, and represent his interests in advising with the Board.

Fourth.—And further, that we, whose donations are hereto attached, reserve the right and privilege for ourselves, our heirs, or a sign forever, to draw out the amount of our donations to the endowment fund and our relative proportion of the cash value of all buildings, lands, or any other rights or privileges belonging to the aforesaid Institutions, provided, they should come into possession of, under the control of any people, or religious denomination claiming Protestantism but the same time not holding either in doctrine or practice a full belief that our Lord as Saviour Jesus Christ, came into the world testified of in the New Testament, and who He had finished the work here given unto Him of the Father to do, gave his life a propitiatory sacrifice for the sins of all mankind.

Fifth.—And further, That there be a record of the names of such of the donors, as may be willing to have their names so exposed, with the amounts given by each, placed in the reception room of said Institutions, for the observation of Christian tourists and philanthropists of other lands, with the hope that it may impress upon them the language, "Go thou also likewise."

Sixth.—In case at any time, in the judgment of the Board, there has been raised a sufficient fund to warrant them in renting a building a land and furnishing it for the above purpose but not adequate to buying land and building a house on it, they may do so, and carry the Institution in such rented premises, long as they may think best.

In testimony whereof the said Board of Foreign Missions of the United Presbyteri

nurch of North America, have affixed their common or corporate seal hereto, attested by the signatures of their President and Secretary, and the said John S. Fowler has signed these articles dated at Philadelphia, in the State of Pennsylvania this ninth day of Ninth month. A. D., 1901.

Subscriptions may be sent to the Provident Life & Trust Co., 409 Chestnut Street, Philadelphia, with the address of the donor.

THE BOARD OF FOREIGN MISSIONS OF THE UNITED PRESBYTERIAN CHURCH OF NORTH AMERICA.

PHILA., PA., July 12th, 1901.

The Board of Foreign Missions of the United Presbyterian Church of North America. To Brethren in our Lord Jesus Christ everywhere, greeting.

Dear Brethren:—Friend John S. Fowler, after a visit to the land of Egypt, has represented to us the deep and abiding impression made upon his heart by the need in that dark land of those blessed influences and fruits of the gospel found in Christian lands, and especially by the peculiar destitution and distress of the orphaned and the blind little ones, for whom a non-Christian civilization makes no provision. Moved as he believes, and as we believe, by the Spirit of God, after interviews with our Board as the great missionary agency in that land, he has entered into a written agreement, a copy of which he holds, which is designed to give effect to his benevolent desires and intentions for the relief and support of the little ones whose condition has so tenderly moved him to sympathy and effort in their behalf.

We desire as a Board to express most emphatically our approval of Friend Fowler's object and plan. The distress he seeks to relieve in both souls and bodies is truly appalling beyond description, and the blind constitute a proportion of the population in that land awful to contemplate. Without some special provision made, it is scarcely possible to carry into their dark lives the light which Christianity and Christian civilization gives. Moreover, from an examination of our Charter and our annual Reports, which may be obtained through John S. Fowler, it will be seen that the proposed work is exactly in line with the broad Christian work of evangelization and education, which for nearly half a century we have been carrying on in the great valley from Alexandria to the First Cataract.

We believe the undertaking of this Friend is brotherly to be of God, and most cordially commend his laudable work to the charitable and benevolent everywhere.

Given by order of the Board of Foreign Missions of the United Presbyterian Church of North America, at Philadelphia, Pa., this 12th day of July 1901.

M. G. KYLE, President.

C. S. CLELAND, Rec. Secretary.

As the winter season is the time for prosecuting building work, in Egypt, to the best advantage if the benevolent-hearted to whom these lines may come should feel it their duty to send in their subscriptions in time for it, the work may be entered upon during the next coming winter.

JOHN S. FOWLER.

For "THE FRIEND."

Some Reminiscences of a Good Man—Ebenezer Worth.

It may, perhaps, be both interesting and instructive to revive a few of the incidents, trials and exercises that our dear Friend passed through, as well as the Divine support under them, in his long continued care and interest for the natives of our land, whom he met unfrequently referred to as "Brethren and Sisters."

The following is a letter, or part of one, to his friend, Joseph Elkinton, Sr., dated:

"TUNESASSAH, Ninth Month 13, 1849.

"I have once more in unmerited mercy been favored to reach this place in good health, after passing through some trials. Before reaching Auburn, I felt unwell. Passing along I saw in large letters on the wall, 'Beware of pickpockets.' The man who sat next me on the same seat said he thought there had been two attempts to take his pocketbook in Albany. I felt for mine, and to my surprise, found it was gone. I had a little money in my purse. When I got to Rochester my pain was so great that I did not know whether I was able to go any further. I thought I had strong symptoms of dysentery. Perhaps thou can form as correct an idea of my feelings, by supposing thyself in similar circumstances as by anything I could write thee. Sick, far from home, among strangers, and having but a dollar and a half in money. The agent told me there had been an accident on the railroad out west and the cars would be detained. I got a cup of warm coffee, took some medicine I had with me, put on my overcoat, seated myself and thought seriously of my situation. The pain gradually abated, and before I got to Buffalo I felt pretty well; in looking back at the gloomy prospects which, but a few hours before, were mine, and thinking of the feelings of those passengers in the cars that had collided I felt thankful and comfortable."

"TUNESASSAH, Eleventh Month ad.

"To J. E. . . . I continue to feel a deep interest in the welfare of our poor brethren, for there are times when they feel like brethren to me. There are such floods of obstruction thrown in the way of their improvement by the whites as at times to make it very discouraging. Yet I am sometimes comforted in believing there is a Power that can overrule the designs of the wicked one, and that we do not serve a hard Master. If we do what he requires of us, we shall be clear and our reward sure. It feels to me, at times, it is enough to know we have done our Blessed Master's will! The riches and honors of the world are mere bubbles compared to it. Oh! the peace, the quietness of mind, and perfect enjoyment which it affords."

I am comforted in believing that the labors of Friends in this place have not been lost; some of the elder ones have spoken to me of the benefit it has been to take the advice Friends have given them a long time ago.

W. P. T.

In a recent private letter appears this language:—"The further I advance in age the more I feel how necessary it is to learn to 'become as a little child' in the kingdom of the Father."

Mount Desert Island's Highest Peak.

Probably no mountain in America, says President William De Witt Hyde in the *Congregationalist*, draws each summer to the resorts at its base a larger or more select group of college-trained men and women than Green mountain, the highest peak on Mt. Desert island. Yet of all the wealthy and learned people who throng the famous harbors of the island, certainly no one has—venture to say no one could—give as fine an expression of the scientific and spiritual significance of its chief mountain as the following "Ode to Green Mountain," one of a number of poems which Livy Penney, my neighbor, in a little red farmhouse, has contributed to the *Mt. Desert Herald*, and which I leave as a monument to the education a farmer, a stonemason and a digger of wells has been able to acquire through fourscore years of kindly human fellowship and reverent communion with nature in a simple life of honest toil.

Stupendous pile, I gaze on thee with rapture,

Thy cold bald summit turbaned in a cloud.

In nature's volume vast thou art a chapter

That speaks the wisdom of Thy God aloud.

Ancient beyond all human comprehension,

No history notes the date when thou wast born;

Man's epochs are too trivial to mention,

Too limited to reach thy natal morn.

The solid crust of earth was rent asunder

To give thee passage to the upper air.

Thy birth cry was the earthquake's sullen thunder,

Thy christening lull the red volcano's glare.

Those deep-grooved furrows on thy ribs of granite

Were plowed by icebergs countless years of yore;

When unrelenting winter ruled our planet,

And icy mountains scoured the ocean floor.

The storm-gods fierce from winter's arctic regions

Rave in their madness round thy head in vain;

Thy granite buckler foils their wildest legions,

And halts at will the heading hurricane.

Hail! ancient coast-guard, even the mighty ocean,

Whose haughty challenge bids thee to retreat,

At thy stern bidding curbs his wild commotion,

And piles his waves in thunder at thy feet.

Ah, thou shalt stand when this frail frame shall

molten!

Back to the formless dust from which it rose,

Affording theme for many a new beholder,

Yet resting still thyself in cold repose.

THE OLD PLACE WAS NOT SOLD.—We have heard of an old farmer who became tired of farming and had a longing for town life. He engaged a real estate agent to advertise and sell the old homestead. This man had little sentiment about him, but he knew what appealed to buyers, and he wrote a description of the farm and printed it. When the paper containing the advertisement came and the wife read it aloud, the old farmer sat silent in his easy-chair for a long time. At last he said: "Mother, that's a description of our farm is it? The grand old lane,—fine orchard of all kinds of fruits—cozy homestead, surrounded with magnificent trees and shrubs—an ideal spot in nature, eh?" "That's what it says here," answered the wife, as she looked out on the sloping green pasture field at the cows contentedly chewing their cud under the shade of an elm tree. "Well," said the farmer, "I'll countermand the order, for Old Elms farm is not for sale. If others see all

these attractions on the old farm, why, they must be here. We've kinder grown up with them, and didn't notice 'em. I guess it's good enough place for us to end our days on, too." There was a man whose life had grown on so softly and slowly amid familiar scenes that he could hardly realize the beauty and peacefulness of his home until they were pointed out by others. It is a sad thing that so few farmers can fully enjoy and appreciate nature in all its bountiful beauty. The dollar and cent vision will, if we permit it, cloud over and obscure the best things of farm life—best because something better than gold must be paid for them."

Perjury Increasing in American Courts.

At the annual meeting of the Iowa Bar Association at Council Bluffs, Iowa, on the 16th of Seventh Month, the President, J. J. McCarthy, of Dubuque, made a startling statement regarding the prevalence of perjury in American courts. "Where," he asked, "is there a lawyer who has not seen a guilty criminal pass out of the court room acquitted and set free because of perjured testimony? What one of us but has seen sacrificed the rights of prisoners, and property sacrificed and trampled under foot, presumably under due form of law, but really and truly by the use of corrupt, false and sometimes purchased testimony?"

"One judge of long experience upon the bench, writes me, that in his opinion, about one-half of all the evidence received on behalf of the defence in criminal cases is false. Another judge of equally high repute says that he believes that seventy-five per cent. of the evidence offered in divorce cases approaches deliberate perjury. Another writes that perjury is committed in many important law suits, and that the crime is increasing. In short, with reference to the prevalence of perjury, the time has come when, in the words of another, justice must wear a veil, not that she may be impartial, but that she may hide her face for shame."

"These are the things," exclaimed the speaker, "that beget distrust and disrespect for the Courts and for verdicts, and for our boasted forms of law. These are the things that produce anarchy and lynching, and invite a just contempt, as well as a lack of confidence, in those tribunals called courts of justice."

"Who can blame a poor outcast of society for false swearing when presumably reputable citizens do the same thing? Why do we expend time and money in prosecuting some poor tramp for stealing another's overcoat to keep from freezing when the wrecker of a bank, the despoiler of a home, the taker of a human life or the embezzler of thousands goes unwhipped of justice."

"Why should a nation or a State cry out against discriminations, trusts, corporations and 'watered' stocks when the very crime that makes them possible is passed unnoticed? Why does the press of a country write volumes on the Constitution 'following the flag' when the sanctity of an oath that gives both the Constitution and the flag their real significance is almost ignored?"

The speaker discussed the causes for this prevalence of false swearing. "Some place

the blame upon the skeptical and free thinking spirit of the times; some censure the courts for the careless, flippant, meaningless and indifferent manner in which oaths are permitted to be administered; others severely censure the county attorneys and grand juries for their indifference or apparent incapacity to effectually and properly indict and prosecute those guilty of the crime. Blame is also laid at the door of a class of attorneys who advise or encourage, or at least condone perjury; and still another very respectable number say this because of the lack of fear of prosecution and certain temporal punishment for the crime."

"It is doubtless true that all these, and perhaps other causes, combine in creating the evil complained of. The grasping and commercializing spirit of the age, where every man's standard seems to be measured by the amount of money he has accumulated, might well be added to the catalogue."

As to remedies, J. J. McCarthy said oaths were too common, and favored "the abolition of all official oaths and the emphatic administration of the judicial oath. He believed the judge himself should administer all oaths, that it should be done with gravity and solemnity, and that witnesses should be told that extreme punishment would be meted out to perjurers. Then the law should be enforced. Perjury should be swiftly and severely punished, and if it was so punished a strong public sentiment would rapidly grow up against it, and men would hesitate before committing this most heinous, wicked and cruel crime."

[The above remarks, taken from the *Christian Statesman*, show how one more failure to observe Christ's law comes to grief. But the remedies proposed by the speaker fail to reach the root of the matter. Agree with Christ in abolishing all oaths and swearing "not at all," and punish every violation of the affirmation in testimony with the penalties prescribed for perjury, and we shall go far in bringing false witness under disrepute, and elevating the popular valuing of simple truth. But we do not get down to the root of the matter short of fidelity to the witness for truth in man's heart. A general inculcation of this doctrine by religious teachers, and churches would forward the day when men's yea would be yea, and their nay, nay.]

TALKING TO GOD.—A few years ago Dr. Leonard Bacon, the venerable patriarch among Congregationalists, was travelling with one of his sons in the far interior of Asia, on their way to the ruins of ancient Nineveh. I believe it was along the same path which the prophet Jonah took, ages ago, to that famed city. They had passed safely through many perils along that dangerous road, and had crossed a large river which intervened, and were proceeding on their way to Nineveh. Suddenly they were met by a band of robbers which roamed over that wild country, and who took them captive,—prisoners at the mercy of these marauders.

The little helpless caravan was placed under the shade of a large tree to await their destiny or doom. The band of robbers were a few rods off, deliberating on their fate. The captives were in momentary expectation of hearing the crack of the guns whose balls

would end their pilgrimage on earth, and the were anxiously watching the looks and movements of the robbers, who often turned their eager eyes towards their victims.

In these moments of deadly peril their only resource was the power and providence of God for protection. They all knelt down in the attitude of prayer and looked up, and Dr. Bacon prayed earnestly, while the robbers were watching. "What are they doing?" said the robbers among themselves. The guide, an interpreter of the caravan replied, "They are talking to God!" The robbers, doubtless influenced by a Divine power, thought it was not best to shoot and kill persons who could talk thus to God. The captive prisoners were released and saved. Dr. Bacon and his so faced about and made the best of their way back to Europe and to London, where the write of this met them at the dinner-table of an eminent American, and heard from the lips of Dr. Bacon this exciting narrative which is now written, with some exactness, from the memory of by-gone years.—*Advance*.

Events Concerning the Society.

Eastern Quarterly Meeting, recently held at Rice Square, N. C., is reported as having been a satisfactory occasion. Mary J. Pretlow, from Back Creek, Va., and Abbie Hollowell from New Monthly Meeting, N. C., were in attendance. C. First-day at Cedar Grove, Henry T. Outland was exercised with the language, "What doest thou here, Elijah?"

The new meeting-house which has been in preparation for a few months past in Merchantville, I. J., was opened for Divine worship on last First-day the 15th instant. Some two hundred are reported as attending on that occasion, with the ministers who have been prominent in the concern to provide a place where any ministers of orthodox belief and the name of Friends may be free to participate under right authority.

THE FRIENDS' SCHOOL IN ATLANTIC CITY.—V. willingly give place to the following appeal of trustees of the Atlantic City Meeting-house property. Such a school under the fostering care the Yearly Meetings committee is properly described as a providential opening for inculcating our principles, and we trust it may have the needed financial support.—Ed.

"Through a brief notice in THE FRIEND, a some mention in the report of Anna Walton before Friends' Educational Association at its meeting the Fifth Month last, it has been somewhat generally known that a Friends' School was established in Atlantic City last year, under the superintendence of the Educational Committee of Philadelphia Yearly Meeting. The Trustees of the Meeting-house were appealed to for accommodations for the school and they granted the use of the Meeting-house for the first year. Naturally, such provision would have been made by a Preparative or Monthly Meeting, but in the case of Atlantic City, there is no such body with jurisdiction. The property was placed in the hands of a board of trustees by late John M. Whitall and his co-adjutors, so that it might be held for the use of Friends without any special limitation to the membership of the meeting. The trustees, however, recognize responsibility of providing for all right demands upon the property for meeting uses. That of school seems to them one of the most important these, so that now the appeal of the school committee for suitable school rooms has induced trustees to have plans made and to proceed carry them into effect.

"A second story to the meeting-house will provide three nice school rooms and the necessary toilet arrangements. This is all the accommo-

in that a first-class elementary school would seem to require, and the ambition of the committee is to go beyond this, but to depend upon Western or other large schools already established by Friends for secondary education.

"The estimated cost of this improvement is but \$5,000. This includes a new roof and a new heating plant, both of which are now required by the meeting-house, so that the whole sum can be chargeable to the school. The trustees have now \$2,000 of the \$5,000 guaranteed. Their appeal then is to Friends and others who will be interested for the remaining \$3,000. The interests of education, especially of elementary education, deeply concern every true Friend. By no other process can we so well expect the propagation of our principles, and the promising school in Atlantic City seems to the trustees one more providential opening for this work. Large sums are constantly contributed by Philadelphia Friends for educational objects within our own borders and beyond them, and we have confidence on this very account that a worthy opening as the present will not be neglected. The experience of the school last year gives every promise that it can be easily self-supporting, so that this appeal is for an investment and not for money to be spent on a deficit.

"Checks may be mailed to David Roberts, treasurer, Moorestown, N. J.

"Alex. C. Wood, Joshua Wills, David Roberts, Harry W. Leeds, Charles Evans, Walter Smedley, Henry Bartlett, Trustees.

"ATLANTIC CITY, N. J., Ninth Month 2nd, 1901."

BI-CENTENNIAL OF WILLIAM PENN'S GIFT.—The age of Brick Meeting-house, in Cecil County, Maryland, suggested and laid out in 1701 by Wm. Penn, the first Governor of Maryland, on the Seventh-day, Ninth Month 14th. For more than a century the village bore the name of "Brick Meeting-house," until in 1878 the Post Office Department gave the name of Calvert to the locality, in brevity.

The following historical information appeared in *Philadelphia Ledger* of the 9th inst.:

"Two hundred years ago a company of Friends came forth from Chester into the wilderness to select a site for a new Quaker settlement at the head of the water of Chesapeake Bay. On the second day of their journey through the forest they reached their destination. Well pleased with its beauty and evident fertility, they gave several days to the examination of the region. On the last day Wm. Penn, who had led the company, assembled them on a knoll overlooking the ground, and in the words of an old chronicle, 'in acknowledgment of the overruling Providence by whom they had been led in the wilderness, he 'then and there apart and dedicated forty acres of land to them and their successors forever, for the combined purpose of public worship, the right of burial and the village of education.'

The bicentennial celebration of this gift of land will be held at the 'Brick' Meeting House, at Nottingham, Cecil County, Maryland. But the celebration will, in fact, commemorate an event of greater historical importance than the giving of the ground for community purposes of worship, burial and education. In leading this company of seekers to a new home, William Penn intended, by his possession, to assert his right to the territory at the head of Chesapeake Bay, as being his Pennsylvania charter. To this ground posing claims had been made by Lord Baltimore, and, as King William had shown unfriendliness, the founder of Pennsylvania was fearful of it.

When Penn made his purchases of land from the Indians in 1683 he believed that the land under the head of Chesapeake Bay was included. On a visit to England, he had some difficulty with the Crown, and learned that Lord Baltimore was laying claim to that territory.

"Upon his return in 1699 he found that a company of Friends from Chester had penetrated through what was then a trackless wilderness to the remotest parts of Chester county, and, finding there a beautiful and fertile country, were minded to form a new settlement, on the Pequa, Conestoga and Octoraro creeks. But they were averse to losing the peace and tranquillity, to enjoy which they had crossed the Atlantic, by coming into conflict with Lord Baltimore. Perceiving the advantage of possession, and understanding the value of the region as giving another outlet to the sea for trade and commerce, Penn prevailed upon his hesitating followers to go under his lead and occupy the land. Therefore it was that in 1701 the company of Chester Quakers set out on horseback to journey into the wilderness, for the purpose of establishing a new settlement.

"With Penn rode Andrew Job, a former sheriff of Chester County, who had united in urging that they take possession of the ground, and behind, among others, came James and William Brown, of whom J. A. M. Passmore, of this city, is a lineal descendant; John Churchman, Joel Baily, Edward Beeson, Henry Reynolds, Cornelius and Ebenezer Emson, John Richardson and James Cooper. They carried provisions for a week and were equipped for a night's camping in the woods. Arriving at their destination, they found there a camp of Susquehannock Indians, who received them kindly, and they took possession of the land without encountering opposition.

"The territory thus possessed and later called Nottingham Quarter was in length ten miles, in greatest width three miles, and contained 18,000 acres. Its beginning was seven and one-half miles from the northeast corner of Maryland, as the Friends made the boundaries of that State. It now lies, however, about one-third in Maryland and two-thirds in Pennsylvania. This tract was divided by a road running east and west through the middle, and other roads vertical to this, into thirty-seven parts, of which one was allotted to each of the company which followed Penn. It was not until 1702 that the first Friend settled upon it. He was William Brown, and he gave the settlement the name of Nottingham.

"In 1706, probably the first meeting-house, built of logs, was raised on the plot of forty acres given by William Penn. No record was kept, but in that year Thomas Chalkley, a Friend, who traveled through that region, makes mention of the building. A quaint and interesting account Chalkley kept of his journey through the woods, an account which gives a view of the Indians quite different from that ordinarily taken. 'We spread our food on the grass,' he says, 'and went on cheerfully and with good-will and much love to the poor Indians, but when we came they received us kindly, treating us civilly in their way. We treated about having a meeting with them in a religious way, upon which they called a council, in which they were grave, and spoke one after another without any heat or jarring; and some of the most esteemed of their women do sometimes speak in the council. I asked our interpreter why they suffered women to speak in their councils. His answer was that some women are wiser than some men.

" 'At this meeting an Indian woman spoke as follows: she 'looked upon our coming to be more than natural, because we did not come to buy or sell or get gain, but came in love and respect to them, and desired their well being, both here and hereafter.'

"In 1724 a brick meeting-house was erected, the bricks being imported from England. That was destroyed by fire in 1751, and the following year it was rebuilt, with a stone addition of equal dimensions with the brick main structure. In 1810 this was also burned, and was rebuilt in the same way, half stone and half brick. The name 'Brick Meeting-house' has endured, however, from the

first. For awhile during the Revolution the meeting-house which then stood was used as a hospital by a division of the American forces. On his march to Yorktown Lafayette encamped on the grounds."

The *Baltimore Sun* says: "Here a large company worshipped, and of it John Griffith, a traveling minister who had visited all the meetings in America and England wrote: 'It was a very large meeting and a zealous body of Friends then belonged thereto, amongst whom I had good service and great unity of the Spirit being lovingly enjoyed.'

"It was Andrew Job's son Thomas who, in 1725, married Elizabeth Maxwell, niece of Daniel Defoe, she having run away from her mother and uncle in London when but eighteen years of age, on account of being refused encouragement in a matrimonial engagement. She agreed with the captain of the ship, having no money to pay her passage, to be sold on arriving in America for a term of years, the purchase money to go to the captain for her fare. Andrew Job was a visitor in Philadelphia the day Elizabeth Maxwell was offered for sale, and he bought her for a term of years. After her marriage, Elizabeth Job wrote her mother and uncle of her surroundings. Her uncle replied to her letter, stating that her mother was dead and had left considerable property. Among it were several pieces of furniture, some that Defoe had used in his study while writing the story of 'Robinson Crusoe.' Some of this furniture was sent to his niece, and one of the chairs is now in the family of Hannah Griffith, of Brick Meeting-house, a descendant.

"Elizabeth Job died in 1782, at the age of eighty-two years, and all of her descendants have worshipped in the meeting-house, and only one of the name, Haines Job, remains in the village.

"Brick Meeting-house proper is in an excellent state of preservation and stands upon a knoll from which six roads course. The arched hoods over the doors, the quaint locks and heavy handles belong to other times. The benches are highbacks, and the clerk's leaf-desk is ink-spotted. A gallery runs around the room, and back of its open front of narrow wood are rude, heavy benches without backs, which tradition says were used in the meeting during Penn's day."

The exercises of Seventh-day, the 14th, included the reading of a history of the meeting by Kirk Brown, of Baltimore, an address by Edward R. Buffington, of Rising Sun, Md., on "Quakerism as a Factor in Modern Thought," address by Charles S. Pennypacker of West Chester, Pa., on "What have Friends Accomplished," and one by Dr. Pettyman on "The Influence of the Settlement of Friends in Maryland and Pennsylvania."

SUMMARY OF EVENTS.

UNITED STATES.—President McKinley died about 2:15 o'clock on the 14th inst. at the Elmhurst, the Millburn home, in Buffalo, New York. His invalid wife, who had been cherished with the warmest affection, remained with him at intervals until consciousness ceased. Among his last words were: "It is God's will. Let his will, not ours, be done." He was in his fifty-ninth year. The remains were taken to Washington on the 16th, and the interment is to be at Canton, Ohio, the President's former home.

Theodore Roosevelt entered upon the Presidency on the afternoon of the 14th inst. at Buffalo. He was born in New York City in 1858, and is the youngest of the Presidents of the United States. At his request the members of the Cabinet retain their positions for the present. Emma Goldman and Johann Most, Anarchist leaders, have been arrested, the former in Chicago, the latter in New York City.

The steel strike has been settled at a conference of representatives of the Amalgamated Association and officials of the Steel Corporation held on the 14th inst.

Census returns show that in Pennsylvania there are: Males, 3,204,541; females, 3,097,574; foreign born, 985,250; colored, 160,451, including 156,445 negroes, 1927 Chinese, 40 Japanese and 1639 Indians. The males predominate, there being 50.8 per cent. of males, as against 49.2 per cent. of females. The foreign born element constitutes 15.6 per cent. of the total population of the State.

Advices received at the railroad offices from points west concerning freight traffic are to the effect that never before has such a freight tonnage been carried or the demand for cars been so great.

Fifty-six men were rescued by life-saving crews from vessels wrecked on Lake Huron during a fierce gale on the 7th inst.

Elaborate experiments in feeding wheat to farm animals and swine have been made this year at the Kansas experiment station, and also in other States of the corn belt. The experts conclude that wheat has greater nutritive value than corn, and may be used either crushed, mixed with oats or corn, or in connection with straw in time of extreme scarcity.

Phoebe Hearst has agreed to pay all the expenses of a department of anthropology at the University of California, which will be devoted especially to the study of Indians of the Pacific coast. The cost will be about \$50,000 a year.

The Peary exploring expedition has been heard from under date of Fourth Month 4th, 1901. In a summary of last year's work Lieutenant Peary mentions: "The rounding of the northern limit of the Greenland archipelago, the most northerly known land in the world," and the attaining of the highest latitude yet attained in the Western Hemisphere 83° 50' north.

To-day there are 195,000 miles of main track of railroads in the United States, as compared with 271,000 miles in all the rest of the globe.

There were 130 deaths in this city last week, reported to the Board of Health. This is 31 more than the previous week and 10 more than the corresponding week of 1900. Of the foregoing, 220 were males and 210 females; 47 died of consumption of the lungs; 32 of inflammation of the lungs and surrounding membranes; 4 of diphtheria; 14 of cancer; 16 of apoplexy; 11 of typhoid fever and 1 of scarlet fever.

CORROX—Closed on a basis of 88c. per pound for midling uplands.

FLOUR.—Winter, super, \$2.15 to \$2.30; Penna. roller, straight, \$3.20 to \$3.30; Western winter, straight, \$3.25 to \$3.35; spring, straight, \$3.40 to \$3.65.

GRAIN.—No. 2 red wheat, 73½ to 74c.

No. 2 white corn, 60½ to 61c.

No. 2 wheat, clovered, 41½c.

BEEF CATTLE.—Best, 5½ to 6½c.; good, 5½ to 5½c.; medium, 4½ to 5½c.

SHEEP—Choice, 3¼ to 3½c.; good, 3 to 3¼c.; common, 1½ to 2½c.

LAUNDS—4 to 6c.

HONGS.—Western, 9 to 9½c.

FOREIGN.—The Chinese protocol has been signed by the Powers at Peking. Minister Rockhill, who conducted the negotiations for the United States, has started for home. A despatch from Peking of the 9th, says: "The importance of the Chinese protocol, providing for reform of the examination system, seems to indicate that the Liberals are in control of the court, and its importance, if enforced, is difficult to overestimate. It provides that the examinations must include Western history, Western sciences and industrial methods. It abolishes the traditional eight part classical essays and verbatim reproduction of the classics, professions in which has been the chief qualification for office holding."

Reports from Shanghai of Seventh Month 25th state that the most disastrous floods were prevailing in the valley of the Yang-tse River. The farms, especially in the rice-growing region about Wu, have been completely flooded, and that no rice is to be raised this year. In addition to this, thousands of lives have been lost and unknown numbers rendered homeless by the overflow. The stoppage of trade is very serious. The destruction of the crops in the fields and particularly the probable loss of the rice crop in the region of Wu, the great rice exporting center, will probably add to the difficulties besetting the empire.

The total number of professing Christians in China (according to the *Catholic Champion*) is 700,000, of whom more than 500,000 are Roman Catholics. At the present time the foreign missionaries number some 3000 men, half of these being Roman Catholics, and 16000 women, 300 being Roman Catholic Sisters.

The population of Manchuria is estimated at about 20,000,000. For a distance of four hundred miles, extending from the Sungari River to New Chwang, the railroad passes through a level, well watered region, densely crowded with population and under a high state of cultivation.

A meeting of the Czar of Russia and the Emperor of Germany has taken place at Hela, Prussia, and the former with his wife and children have been warmly welcomed during a brief stay in Germany. This visit is regarded as an indication of friendly relations which it is hoped will strengthen the peace of Europe.

The head of the Fire Department of Rouen has suggested to the Mayor a novel project in the fire extinguishing service. Inasmuch as this city is traversed everywhere by electric street-car wires, it is suggested there should be provided pumps, driven by dynamos, to take currents by means of a trolley hooked to the street-car wires at the nearest point to the fire.

Most of the Berlin papers protest against the retention of the astronomic instruments from the Peking Observatory that were brought to Germany recently.

In a report to the Ecumenical Methodist Conference, lately in session in London, it was stated that there were 24,839,421 adherents of Methodism in the world.

The *Sun* recently carried an article which was being made for a most extensive crusade against vice in London, more than one thousand prominent persons, representing every borough in the metropolis, have associated themselves together for this purpose. They will undertake to repress public immorality, disorderly houses, obscene language, periscopic pictures, publications and plays.

The protest of Prince Lowenstein, President of the German Catholic Union, against dancing has been signed by one hundred and forty-one members of the German nobility and gentry, mainly Catholics. Fresh signatures continue to arrive daily.

Cards are being used in Switzerland and Germany to check profanity. People go about with the cards in their pockets, and whoever they hear bad language, present one to the speaker to sign. The card has printed on it a pledge to abstain from swearing for a specified time or to pay a small fine for each oath to some charity. Nearly 40,000 of these cards have been distributed in Switzerland alone.

Prof. O. T. Mason says that there are in the Philippines 130 native tribes with names; and the population of about 7,000,000 contains races of the colors, black, brown, red, yellow and white, and that the mingling of these races has produced a great variety in the character and appearance of the inhabitants.

The municipalities of Stockholm and other cities of Sweden have entered into contract with the Salvation Army to look after the poor and distressed and to take care of the tramps and other floating population. There are similar arrangements between the Salvation Army and the city governments of Melbourne and Sydney, Australia.

RECEIPTS.

Unless otherwise specified, two dollars have been received from each person, paying for vol. 75.

Longest B. Smith and for Susanna Britton, Pa.; Hannah P. Rudolph, N. J.; Wm. W. Cooper, N. J.; Sarah A. L. Strenth, Phila.; Margaret J. Jones, Canada; Sarah Ellen Garrett, N. J.; E. Mendenhall, Pa., to No. 27 Vol. 76; Alvin Thorp, Pa.; S. Eliza Spencer, N. C., \$1.50 to No. 24; Ann Shoemaker, G'n; Edith Sharpless, Pa., to No. 17 Vol. 76; Lewis Harvey, Pa., for Jas. Elkinton; David G. Alopp, Phila.; James Edgerton, O.; Mary J. Renner, Ill., to No. 27; Joshua Brantingham, agt., O., \$6; Jonathan Brown, Griffith Dewees and Geo. G. Megrall; Seth Nathan Brown, Griffith Dewees and Geo. G. Megrall; Charles Blackburne and Linton Hall; Edward G. Smedley, Pa.; George Rorke and for Sarah V. Rorke, Canada; Susan R. Williams, Phila., \$6.50 for herself, Mary Roberts, N. J., and James Hunt, England; Elizabeth L. Thomas, Pa.; George Vaux, Phila., and for Caroline W. M. Mott, Pa.; Robert H. Russell for J. W. Russell, Calif.; J. A. Scattergood and for Anna P. Sharpless, M. D., Phila.; Hamilton Haines, N. J.; Wesley Haldeman, Pa.; Henry B. Leeds, agt., N. J., \$10, for Margaret C. Venable, Elizabeth G. Buzby, Hannah R. Manie, Amos Ashbed and Morris Linton; Elizabeth P. Darnell, N. J.; Thomas H. Whitson, agt., Pa., \$6, for Sidney J. Henry, Pa.; Mary Ridge and Roland Smiley; Sam J. Henry, Pa.; Mary C. Scattergood and for Abiah Cope, Pa.; Abel McCarty, Pa., for Anna Walton.

Remittances received after Third-day noon will not appear in the Receipts until the following week.

NOTICES.

BIBLE ASSOCIATION OF FRIENDS IN AMERICA.—Agents are requested to send their annual reports at once to

EDWIN P. SELLERS

207 Walnut Place, Phila.

WESTTOWN BOARDING SCHOOL.—For conveniences of persons coming to Westtown School, the stage will meet trains leaving Philadelphia 7.17 and 8.19 A. M., and 2.50 and 4.32 P. M. Other trains are met when requested. Stage fare, fifteen cents; after 7.30 P. M., twenty-five cents each way. To reach school by telegraph, write Westtown Station or West Chester, Phone 85.

EDWARD G. SMEDLEY, Sup't.

WANTED.—A position, to care for children, or an invalid. Testimonials given and expected in return.

Address F. E. G.

Office of "THE FRIEND."

Family of two desire woman to assist in housekeeping suburb of Philadelphia; Friend preferred.

Address L.

Office of "THE FRIEND."

WESTTOWN BOARDING SCHOOL.—Applications for admission of pupils to the school, and letters in regard to instruction and discipline should be addressed to WILLIAM T. WICKESMAN, Principal.

Payments on account of board and tuition, and communications in regard to business should be forwarded to EDWARD G. SMEDLEY, Superintendent.

Address, Westtown P. O., Chester Co., Pa.

All members of the Westtown Old Scholars' Association, who have paid or will pay their annual dues to William T. Elkinton, Treasurer, No. 121 South Third Street Philadelphia, are invited to attend the Fifth Annual Union to be held at Westtown Seventh-day, Tenth Month 5th, 1901. Those who prefer to bear their individual share in the "Expenses of the day," are encouraged to add one dollar to their annual dues. The program of entertainment and exercises extends from 9 A. M. to 2 P. M. At the meeting in the tent, the condition of various departments will be presented by those best able, and a dressess will be given.

For the Undergraduates, by WALTER S. THOMAS;

For the Friends of the School, by AGNES L. TIERNE;

For the Old Scholars, by JOHN B. GARRETT.

DIED, at his residence in West Falmouth, Mass., the twenty-ninth of Twelfth Month, 1900, JAMES E. D. FORD, a member of Sandwich Monthly Meeting, aged fifty-eight years. Endowed with strong natural powers which he made his personality felt, and who peculiarly mine throughout his neighborhood, he rose to places of distinction in public affairs of his town and State. Used also in the clerkship and other business of his Month Meeting, yet he set before him too high a standard of moral rectitude. He was anxious to accept of an appointment to the principles of the Society of Friends, as one of the signs thereof deemed by him as of val would stand alone in his public adherence to the "d and thou of the Friends," whether as a frequent administrator before courts, in public life as a postmaster, moderator of the town-meetings, or as a member of the State Legislature. He was suffered through much of the view of the latter years of his life under burdens of severe bodily suffering. Yet his mind seemed continually go out to a larger life in the thoughts of the great and was and was as one expanding to a higher sphere. His suffering under the ministry of suffering was steadily been sweetened and mellowed, and his last day continued bright with his joyful words and cheer for those about him. He was a devoted and cheerful actor of household care "he was not, for God took him."

—, at the residence of her son-in-law, St. David, on the sixth of Second Month, 1901, MARY R. DEACON, the ninety-fourth year of her age; a beloved member of Burlington Monthly Meeting, N. J. The advanced disposition made this dear Friend a truly noble character. She was exercised for the welfare of the church and for those around her; and was also concerned to found faithful herself in the performance of all her religious duties, especially in the attendance of all her meetings; in this she was an example until near the end of her life. Beloved by relatives and friends, she has, we reverently believe, been gathered to her eternal rest.

—, at the residence of James E. Gibbons, his son-in-law, near Barnesville, Ohio, DANIEL STEPHEN, on fourth of Fourth Month, 1901, in the eighty-third year of his life. He had been this life a member of the Society of Friends, and also endeavored to be careful not to speak in a carnal way of the failings and shortcomings of his fellow-men, and to live in love and unity with all good and godly people, thus endeavoring to keep a clear conscience. He might be ready when the solemn summons came. He left to his children and family a most comforting hope, and his only passed to one of the mansions of the blessed world, where there is no more sorrow, and no inhabitants never say, "I am sick."

No. 140 N. SIXTEENTH STREET, PHILA.

Considered as second-class matter at Philadelphia P. O.

A Popular Testimony to Silence.

It was reported to us by an eye-witness that the hour when the remains of our beloved friend were committed to the tomb on the 11th inst., a great throng of people entirely surrounded Independence Hall, in Philadelphia, and filled the square in front of it, so that one could hardly find standing room. As he well announced the moving of the funeral procession a wonderful silence spread over the great throng, and for ten minutes, at least, men and women stood with bowed heads that seemed to our informant "the great Friends' Meeting" he had ever witnessed. Similar reports were printed in the newspapers from other cities over the land.

There reverence was felt in its true depth, and silence alone is found as its worthy companion, and words and sounds do violence to the sacred covering that hushes the spirit of men as under the Divine Majesty. So the manifestation has once in one of the soberest moments of his history, set its seal to the validity of the Friends' principle of Divine worship.

An Improving Deposit.

It is a practice of some on departing from home for a sojourn in the summer season, to deposit their valuables in a trusted place for safe-keeping. Sometimes these are not returned to them unblemished by moth or rust, and sometimes thieves break in and steal. But it is enough for the depositors if their things trusted for a season out of sight are restored to their hands unimpaired.

Like one taking a far journey our Lord presented in his well-known parable as entrusting valuable talents to us, his servants; and disappointed, if when the season of the harvest is over, he does not find his own returned with increase and improvement.

His expectation of finding his trusts to us enriched and enlarged when he comes to claim them, comforts us with the thought that He who is more righteous and beneficent than we, proceeds by the same rule and minds the same thing which in matters of trust He commends to us. We are at times brought to where we must consign to his holy keeping precious interests, and especially precious ones for whom we can ourselves no longer have the care.

We go out of their sight, or they depart from ours. We may see them no more in time. But whether it be in time or eternity that a precious object of trust, once in whole-hearted faith committed to our Lord's care, is again beheld, will He not be found to justify our trust with a better increase and a higher glorifying of its object than we could have asked or thought? Will He merely lay up our trusts in a napkin? Shall we not be abundantly satisfied when we see the result, that it was in his keeping rather than in ours? Did any one ever trust in the Lord for safe-keeping, and was disappointed in the increase of his blessing? Shall we be afraid to "commit the keeping of our own souls also unto Him, as unto a faithful Creator?"

IMPARTIAL MERCY.—An esteemed Friend questions a passage in our last week's number, page 75, where John Letchworth said: "If thou hast assisted all thy relatives and acquaintances who need it, all the peaceable poor who have come to thy knowledge, and thy purse and thy benevolence remain unexhausted, then thou mayest freely give to the necessitous warrior." Our correspondent remarks, "The Apostle says: 'As we have opportunity let us do good to all men,' none excepted. If the course he recommended were pursued, might we not let a Daniel Wheeler perish, or helpless women and children?"

Difference in sentiment or practice or distance in kindred, seems not a gospel ground for slowness to render relief. Witness the good Samaritan, and the example of our Heavenly Father in sending his rain and sunshine on evil and good, just and unjust. "Whoso seeth his brother (fellow-man) have need, and shutteth up his compassions from him, how dwelleth the love of God in him?"

GOODNESS may win gold, but gold will never win goodness.

Walk in the Spirit.

As walking after the flesh is yielding habitually to its dominion, even so to "walk in the spirit" is to yield ourselves habitually to the guidance and control of the Holy Spirit. It is to keep the heavenly Comforter consciously enthroned in the heart, and at every point in the life to consult his guidance and give him absolute control over our choices, relations, associations and doings. It is to keep the Holy Spirit with us and to realize its quickening, illuminating, guiding, inspiring, comforting, and empowering presence and ministry in the details and routine work of daily life as well as in the more exclusively religious service. It means to be spiritually minded in the performance of what are generally called secular duties—in the kitchen, the shop, the office, the store, the school room, on the farm, or wherever one's daily avocation may call him.

There are many who receive remarkable manifestations of the Holy Spirit at times, but who have not learned the secret of *living in the Spirit and walking in the Spirit* in daily life. On this account the influences of the Spirit bestowed upon them, even on those occasions of particular spiritual quickening and uplift to which we have referred, are largely lost. On certain occasions they rise to an exalted spiritual level, only to lapse a little later into their former semi-carnal state. In the assemblies of the saints and under favorable religious conditions they are blessed, quickened, strengthened and even used of the Lord in a goodly degree for the promotion of his work; but when back amid the cares, labors and petty annoyances of the home, the farm, the shop, or the store they fail to keep in the Spirit and to retain their exalted and heavenly frame. All this lapsing and failure is discouraging and weakening, and not unfrequently it ends in utter backsliding.

Such a vacillating, up-and-down life, however, is by no means a necessity. We may and we should learn to "live in the Spirit" and "walk in the Spirit." To do this we must as a first condition receive the Holy Spirit as our indwelling Comforter and Sanctifier. He must become the central, abiding and all-controlling force within our lives. Then we must cherish his presence and ministry and beware of everything in spirit and life which will grieve that tender, holy guest. Also we must remember that a life of holiness can be lived only by his indwelling and inspiration, and so must learn to rely upon him and to keep in communion with Him by the moment, that He is at all times our light, our life, our guide, our strength, our holy, heavenly Comforter. Thus we shall "live by the Spirit" and living by the Spirit, by the Spirit we shall walk.

As a result of this walking in the Spirit we

shall ever walk in truth, in love, in faith, in hope, in charity, in peace, in patience and in all the graces of saintly character. Not that we shall always be in ecstatic frames, or ravished with transfiguration glories, but we shall become established in holiness, and, amid the most wearying toil and the most vexatious cares incident to the daily routine of our lives we shall preserve a spiritual frame, and our peace shall be like a river and our righteousness like the waves of the sea.—*Free Methodist*.

What is Your Boy Reading?

"Oh, he reads everything he can get a hold of—novels, story papers, sea voyages, robber exploits, pirate yarns, and everything to make him discontented with his home, sick of his work, and ready for any sort of crazy adventure."

But what have you given your boy to read, which has left his mind open for such occupation as this? Let us look over the bookshelf. Here are patent office reports, agricultural documents, dissertations on bugs and beetles, pages of statistics concerning corn and swine, "public documents" which the farmer gets because they are given away and cost him nothing; all very important no doubt, but not the most interesting reading for young persons. Then here are political and sectarian newspapers, containing some wheat and not a little chaff, gospel in fine print, and staring advertisements of patent purgative pills, compound cereals; exhortations to repentance and remedies for diseases, side by side; and these are not what usually attract the attention of the young and rising generation.

There is many a father who has a good house, fine barn, well-stocked farm, and money at interest who has not a dozen books in the house worth reading. An intelligent child would read on the average at least twenty ordinary volumes in a year, without interfering with his usual duties. Of course those books should not be the thrilling compounds of love and murder, blood and thunder, which once taken up can not be laid aside until they are finished, and which people sit up in bed till past midnight to read; nor should they be the average novel, nor the goody goody, wishy washy Sunday school tale, of which you can read a score without gaining a new thought or finding a new fact; but something sensible, instructive and interesting, which gives the mind matter to think of, and the tongue something to talk about when the hands are employed; which can be taken up and laid down again without sitting up all night to see how it comes out, and which will instruct, encourage, and profit those who read.

Twenty-five such well-chosen books purchased every year, and costing perhaps a few shillings each, would keep a family out of mischief, cultivate a taste for good reading and loathing for trash, and in ten years would give children more help in the line of education than they could obtain for five times the cost in schools, which after all do little more than teach children how to study and read outside; and would give a family such a start in general education, information, and fitness for the duties of life as could never be obtained by mere academic training. Children

would thus be taught lessons of wisdom, intelligence, virtue, and purity, and the whole expense of the operation would be less than many a man has gladly paid to get a wayward son or daughter out of some dirty scrape into which they had been led by the wretched trash which they had devoured because their parents provided nothing that was really fit for them to read, as lambs eat laurel leaves when the snows cover up the grass.

It is not enough to say to a child, you should not read this, or you must not read that. The better way is to surround children with plenty of safe and proper reading, and then a gentle hint will serve to restrain them from the wrong and guide them in the right path.

Books are silent teachers, and there is no other method of instruction so cheap; and it is not easy to find any method more important, or more fruitful of good results. Give your children something to read that is worth reading, and avoid the shame and misery which a child left to himself is sure to bring upon those who have neglected him.

The time occupied in reading a book is worth more than the money spent in buying it. Many a child has wasted years in reading books full of wishy washy drivel and half-baked fancies, which have left them soft, silly, sappy, and full of romantic nonsense, when a small sum of money invested in good, pure healthy literature, would have endowed them with knowledge, good principles, solid facts, sound judgment and common sense. Children will read,—give them something worth reading; they will learn, give them something worth learning. More books in the library and fewer pigs in the pen, may mean less money and more brains, a smaller stock of dumb beasts and a far better grade of sons and daughters—clear-headed, strong-handed and pure-hearted, ready to serve their God and serve their generation by his will.—*Common People*.

THE LANGUAGES OF MAN, AND OF THE SPIRIT.—I went to my old friend John Bevan's house (in Wales) with whom I had been well acquainted in Pennsylvania. He received me kindly, and I attended their meeting, which was small. Although eighty years of age, he went twenty-two miles with me to Pentypoll, and that evening we had a meeting among the Friends there. He spoke Welsh, and, tho' I understood not that language, yet I was much comforted in the Truth by which I perceived his ministry was from the right ground. His speech flowed very free and smooth, carrying a proportion and satisfaction to the ear not easily expressed, for though the languages of man differ greatly, yet the language of Truth as to the comfort of it are one in all nations.—*Thomas Story, in 1717*.

"I HAVE observed that health and longevity are indissolubly connected with work. Work furnishes the ozone for the lungs, the appetite, and the digestion which support vigorous life, the occupation which keeps the brain active and expansive. When a man from fifty upwards retires, as he says, for rest, his intellectual powers become turbid, his circulation sluggish, his stomach a burden, and the coffin his home.—*Chauncey M. Depew*.

"Nearer, My God, to Thee."

The use of the hymn murmured by the dying President, usually with very slight alteration but often with the omission of the last stanza is very general in all English-speaking countries. It has been translated into many foreign languages. Like many a song that I become famous, it was the upspringing gratitude in a reverent soul, written with any expectation that it would become a popular hymn.

Sarah Flower Adams, author of the hymn was a daughter of Benjamin Flower, an English writer and editor of *The Cambridge Intelligencer*. She was born at Harlow, Essex, England, in 1805. Her mother, a woman of refinement, died early in life. There were two daughters, Sarah and Eliza. Both possessed the fine feelings of their mother, and were fond of books, music, poetry and art.

The pastor of this estimable lady was William Johnston Fox, known as the founder of the *Westminster Review*. He was an Independent, usually classed among the Unitarians and by some considered a deist rather than a rationalist. This fact and also the fact that her father was a very liberal writer, he availed to place this author among Unitarians but in her later years she is said to have come a Baptist.

Though her other writings are reported, having been much read, poems and art criticisms having been considered quite valuable, nothing has come across the sea into popular recognition except this piece, which is, indeed more a poem than a hymn. It first appeared in the volume published by her pastor, titled "Hymns and Anthems," 1841. To Sarah Adams contributed no less than thirty poems, and her sister sixty-two tunes.

It is a beautiful study of Jacob's vision. Luz. In the second verse the young wandering Jacob, going out from home sad at heart, with a burden of sin upon him and all the future looking dark and yet longing somehow to find his way back to God, is very strikingly portrayed.

And nothing could be finer than the spiritualizing of the old Scriptural record which tells the story of Jacob's waking in the morning, and realizing then even that lonely place was a Bethel to him because of the presence of God. Multitudes of burdened and sorrowing souls lying down lonely in their despair, have been encouraged to mount up as wings on her splendid song—

"Then with my waking thoughts,
Bright with Thy praise;
Out of my stormy griefs
Bethel I'll raise;
So by my woes to be
Nearer, my God, to Thee;
Nearer to Thee."

The hymn is such a universal favorite that there are many incidents telling of the cheer and comfort it has brought in times of trial. Bishop Marvin relates that during the War of the Rebellion he was once travelling in a wild region in Arkansas. He had been driven from his home by the Union troops, and was greatly depressed. But as he drew out a dilapidated log cabin he heard some one singing, "Nearer, My God, to Thee." He got down from his horse and entered the house. There he found an old widow woman

ing in the midst of such poverty as he had never before seen. His fears and despondency vanished, and he went on his way happy and trustful because of the faith which he had held and the hymn which he had heard. After the battle of Fort Donelson, as the hospital corps went over the field searching for the wounded, they discovered a little drummer boy, one of the many lads who ought to have been at home with their mothers, but who in those terrible days of carnage found their way hundreds to the front. He had been fearfully wounded, one arm having been entirely carried away by a cannon ball. The brave boy died before they could carry him off the field, but he kept up a cheerful heart, and comforted himself by singing Sarah Adams' precious hymn. Up from the blood-stained battlefield and through the murky clouds of powder smoke rang the half-childish voice as he sang—

"There let the way appear
Steps unto heaven :
All that Thou sendest me
In mercy given ;
Angels to beckon me
Nearer, my God, to Thee ;
Nearer to Thee."

This hymn is always sung by caravans of pilgrims from Christian lands when in making a tour of Palestine they camp at Bethel.

A touching incident occurred on the day Washington, when the bier of our late beloved President passed up Pennsylvania avenue, amid the mass of anxious mourners; hardly a whisper could be heard when suddenly a woman softly and tenderly started to sing Nearer, My God, to Thee." Instantly every voice took it up.

The author died young, and the prayer of our hymn was answered in that she passed away from earth with trustful song upon her lips, thus fulfilling the glad expectation of the first verse of her noblest poem:

"Or if, on joyful wing,
Cleaving the sky,
Sun, moon and stars forgot,
Upward I fly—
Still all my song shall be,
Nearer, my God, to Thee ;
Nearer to Thee."

—The Record.

GOODNESS is the purpose of religion, and its first proof. Conduct is the end of faith and its strongest support. God has revealed himself in Christ in order that we may love Him and live with Him and be like Him. If we do this we shall be sure of Him and help others to be sure of Him too. The best evidences of religion are holy and kind and useful and goodly lives, really moulded and controlled by the Divine Christ. The world sits and we must pray and labor, not for a more complete and logical theology, but for a more real and true and living Christianity. The best thing we can do to help the world to believe in a Divine Revelation is simply this: Just in Jesus Christ, love our fellow men, and trust Him in the path of daily duty.—*Henry Van Dyke.*

How many great lives distinguished in the earth, have had their birth because of some obscure soul speaking at the right time the right word.—*Meyer.*

ABIDE WITH US.

(The following lines appeared in THE FRIEND several years since, but are so pleasing as to bear republishing. W. F. T.)

The tender light is fading where
We pause to linger still,
And through the dim and saddened air,
We feel the evening chill.

Long hast thou journeyed with us, Lord,
Ere we thy face did know ;
Oh! still thy fellowship afford,
While dark the shadows grow.

For passed is many a beauteous field,
Beside our morning road ;
And many a fount to us is sealed
That once so freely flowed.

It is not now as in the glow
Of life's impassioned heat,
When to the heart there seemed to flow,
All that of earth was sweet.

Something has faded—something died,
Without us and within ;
We more than ever need a guide,
Blinded and weak with sin.

The weight is heavy that we bear,
Our strength more feeble grows ;
Weary with toil and pain and care,
We long for sweet repose.

Stay with us gracious Saviour, stay
While friends and hope depart ;
Fainting, oh, these we wish to lay
The burden of our heart.

Abide with us, dear Lord ; remain,
Our Life, our Truth, our Way ;
So shall our loss be turned to gain—
Night down to endless day.

LETTERS ON TISSUE PAPER.—"In looking over some old papers the other day," said a wholesale merchant, "I ran across a very singular document. It was a letter of instruction sent forty years ago by one of my uncles, then in St. Louis, to his agent in San Francisco. It related to the disposal of a lot of goods which had been shipped by way of the Horn, and although it contained over fifteen thousand words and a copy of a good-sized invoice, it was written on just two sheets of paper. The paper itself was a sort of tough, opaque tissue, very thin and light, and when folded the letter slipped easily into an envelope about three inches wide.

"Why it was gotten up in such a peculiar style was explained by the stamp in the corner, which was one of the old 'pony express' series and was embellished with a picture of a man on horseback, spurring at a dead gallop across the plains. I knew, of course, that the Pacific mail of the period was carried by relay express riders, but I never before realized what great pains were taken to reduce the weight to the lowest possible point. I am told that the letters were stored in little flat pouches under the flaps of the saddle and that they were always written on a specially prepared tissue.

"The one I have described must have occupied an expert clerk several days, for the penmanship, while microscopic, is beautifully executed, and as clear and as legible as print. The stamp was of the denomination of fifty cents, and taken altogether, it would be hard to find a more striking reminder of the astonishing progress that has been made in this

country in a trifle over one generation. Everything about the little brown letter—its lightness, its compactness, and the cost of its carriage—spoke of dangers, difficulties, and rude, primitive conditions. It is difficult to realize that the route it travelled is now the great highway of a thousand rushing trains bearing the transcontinental commerce of the nation."—*Philadelphia Times.*

New Methods of Nature Study.

It is refreshing to note that nature study is becoming more and more a common feature of school and college work, and also that the methods used are somewhat different from those in vogue some years ago. Time was when the study of birds meant shooting them, or collecting their eggs and nests, and when the ardent student of quadrupeds, insects, reptiles, or any other living thing, felt it necessary to prove his love for his subject by knocking it in the head, and to measure his knowledge by the size of his collection. Thanks to the camera and common sense, things are different now. The naturalist has learned that he can find out more about birds and animals by making friends with them when alive than by dissecting them dead.

At least half of the popular books on nature study which have appeared in the past few years have evidently been the work of the out-of-door naturalist. The lover of nature takes his camera, his opera-glass, his text-book and his note-book, and hies him to the woods or fields, where he quietly sits down on the ground or props himself against a tree, and keeps very still. It is not his purpose to interrupt, but to watch, the housekeeping of his friends in fur or feathers. He knows that the report of a gun or the smell of blood will effectually put a stop to the kind of studying he desires to do. It is not practicable to kill a person and make friends with him at one and the same time, and the rule holds just as good if the person is a squirrel or a robin.

The nature-lover, therefore, sits for hours in his chosen place, tramps for miles over wood-paths or through untrodden wilderness, not for the sake of bringing home a well-filled bag of game, but in order to store his head with interesting information. He wants to find out, perhaps, what the habits of a certain bird are, and how its song at certain seasons of the year differs from the mere twitter heard at other seasons; what it lives on, and how far north it ranges. Can he discover all these things by lying in wait for the bird and shooting it, or taking it home to live the rest of its short life in a cage? Nothing of the kind; this is a case in which he, not the bird, must pay for his knowledge. So like an honest man, he pays, and in return learns more not only about that bird, but about various other creatures met in his travels, than the mere sportsman would know if he hunted a hundred years.

Old woodsmen, it is true, often know a great deal of the habits of wild things, not only from the hunter's but the naturalist's point of view; but it is well known that they seldom hunt for mere sport, and never kill more than they need for actual consumption or for sale. One does not find an Adirondack guide running amuck in the woods, blazing away at everything he sees. Powder and shot

are too precious, for one thing. Consequently the people in fur and feathers, not desired by him for food and other purposes, soon learn to know him, and he understands them.—*N. Carolina Friend.*

Some Brief Extracts From a Manuscript.

LIFE OF BENJAMIN KITE.

(Continued from page 75)

"Old Daniel Haviland attended our meeting and I believe he intends to be at all our meetings this week. He was engaged in preaching, praying and exhorting nearly the whole time. Said that it seemed as if he could not die in peace without again visiting us in this favored city, many of whose inhabitants were very dear to him, a place in which he had borne heavy burdens and been grievously afflicted."

The following anecdotes may be here related:

Accompanied by his daughter Hannah, then quite a child, Daniel attended a neighboring meeting. The young girl was impressed that her father ought to preach from a certain text. Soon to her great comfort he arose with it, and she was enabled to travel along with him in his exercise up to a certain point where she thought he ought to stop. But to her great grief he continued on. They went home with a Friend and after dinner Daniel got into a corner with his pipe, as if desirous to avoid conversation, evidently feeling distressed and likely not fully realizing why. On the way home the little damsel cast about in her mind for some dutiful way of making him know her distress and began by asking how he felt. But he was not disposed for conversation so she finally told him plainly how it had been with her, how comforted she had been during the first part and where she thought he should have stopped. As she finished the conscience-stricken parent laid his hand upon her head and said, "Flesh and blood has not revealed this to thee, but thy Father who is in heaven." Hannah (Wanser) became an acceptable minister and died in peace.

A writer on infidelity (Cunningham) records that an association was formed in the part of New York where Daniel Haviland lived, most of avowed infidels, who also held themselves absolved from obligations to any moral law. He says, "D. Haviland arose in a public meeting with tears streaming down his face and said, 'I have seen a vision of those who conspire against my Master. Friends, keep from them! Keep your children from them! I saw the wild boar of the forest making inroads upon them and their steps were tracked with blood. I shall think it strange if they do not come to some untimely end.'" And he goes on to describe the fearful deaths that overtook them. "Not one being permitted to die a natural death, or to survive by three years the prophecy of D. Haviland. 'I can,' he says, 'give the names of those who thus sacrificed themselves to the philosophy you call liberal.'"

Towards the close of the summer of 1819 John Letchworth again felt it his duty to pay a religious visit in the west, this time extending his trip so as to embrace the Indian settlements in New York and Ohio. His pictures of their then situation may afford a not un-

pleasant view of the progress since made under the Yearly Meeting's concern: "My mind has been much drawn into sympathy for the poor inhabitants of the wilderness since my late little tour among them. To hear our annual report and understand that they are progressing in the useful arts of civilization is pleasing. I wish not to cast an unnecessary gloom over the picture. The morning is gloomy, peradventure I am more so, but to thee I trust I may unburden my mind with the freedom of a brother. When I consider the length of time we have had the Indians under care and the little apparent result I am lost in wonder. Think not I romance. If we go to Cataaugus and find the women and old men dressed in blankets, the young men and boys either hunting or playing ball, the houses not much larger, nor so clean as our corncrib, surely we shall think there is room for some improvement! If we go to Cold Spring or Tunesboro, how are things there? A most delightful situation, but the dirt much the same. If we go to Pipetown we may find a dozen Indians drunk by the wayside, and galloping for more whiskey and five or six waiting to buy it, and if we look into their huts the same wretched appearance. At Upper Sandusky, we may find them returning from the chase with blood-stained venison on their horses. This does not look like civilization.

"At Solomon's-town though one woman has near one hundred bushels of corn, yet except R. Armstrong's family none seriously engaged in farming, and in other places it is much the same." John Letchworth then refers to the Indians' kindness to our forefathers, and the debt we owe them.

Amongst those whose poverty and affliction recommend them to the benevolent care of Rebecca Kite, was Ellen ——. She had been from childhood confined to a sitting position, and though not remarkably short yet so little flesh inclosed the limbs that an attendant could carry her about as easily as if a child. When Rebecca Kite had anything on the table which she thought would tempt the sluggish appetite of an invalid, a portion was laid aside for Ellen, and she or her ever-ready daughter soon conveyed it to the bedside of the sufferer. As a skilful nurse she knew that often when the patient feels a loathing for the ordinary fare some little delicacy brought unexpectedly by the hands of a loving friend may be eaten with relish. A few days before Ellen's death she sent for some of those whose kindness had often cheered and succored her. She was looking forward to her release with rejoicing and her grateful heart prompted her to take a kindly farewell of some whose benevolence had enabled her to partake of many earthly comforts her own family could not have afforded her. Eighteen years of affliction were ended, and she thankfully believed herself just about to enter—through the mercy of God in Christ Jesus—that city where sickness and suffering are unknown. As an acquaintance wrote of her:

"She died as one who wished to die,
In hope of Heavenly rest.
To wake to immortality,
To be supremely blest."

Benjamin Kite says: "Jesse Kersey was silent at our meeting in a very crowded house. In the evening he gave us a very close lecture,

showing the necessity of our becoming a more humble and simple people, more weighty and serious in all our movements. Solomon W. Conrad gave us a very precious discourse from: "I will not hold him guiltless that taketh my name in vain." He thought there was more in it than some were aware of. It did not only mean a profane use, but affecting to be religious when we were not so, was taking the great Name in vain." In regard to iterating religious discourse a Friend told me that when that wise man and true minister Micajah Collins, was in Salem, Ohio, on a visit, a female elder annoyed him so with such talk in season and out of season, that a length in the midst he broke in with an exposure of its nature. And it seems to me that there is also a writing hy rote on religion subjects, in which there is such a lack of action that although the words be good it is the veriest husks on which one can find. A dear quaint old Christopher Healey said on such a production, "I can hear the bells, but cannot taste aught of the savor of the pomegranate."

William Williams being in Philadelphia on religious visit, accompanied by his son, Ezekiah, Benjamin Kite accompanied him through Chester county. Of a meeting at Willistown he writes: "It was a very crowded house. Many out of doors. William was led in a very close line. I have no doubt it was right that the trumpet should sound an alarm in an awful manner. The meeting ended solemnly.

Some object to any pleasantries in a minister. After William Jackson had been very seriously and weightily and seriously engaged in a meeting, he was very free and pleasant after it; and when taken to task in regard to an apparent incongruity, after a solemn pause replied, "I find that I can keep a variety of stock on my small farm by keeping good strong fences between them." This is the important point, to keep up strong fences that things may not go astray. Of Goshen Benjamin Kite says, "William spoke, I believe, two hours to a crowded house, on the whole encouragingly." I have heard it said that W. Williams seldom stood less than two hours. Speaking of this to a Friend, he remarked, "A sermon ought to be very good to be two hours long. And surely it should be. William had of to treat on deep and weighty matters. On one occasion at Wilmington, Delaware, was a slavery both coming before him in a large assembly, he was so fearful of his ability to treat them properly, that he begged for excuse and struggled long before standing. Sitting on a Friend's porch after the meeting, Solomon Bailey, a worthy colored man, a member of the Society—came by, and being invited in he said, "No, he only wished to speak to the Friend," and addressing William said, "Master required a great work of thee to do. Thou wast unwilling to give up to it, but wilt thou yielded He brought thee through with honor. I thought I had this much for thee—always trust Master." This showing that a colored man had been enabled to travail with him in spirit, was a great comfort and encouragement to the oft deeply exercised minister.

I copy from the manuscript, "Life about with serious exercise and of trial from which no situation is exempt. The Most High leads his way in the clouds and the dispensation of

is wisdom are often inscrutable to man. In his case are astonishment and consternation are awakened than where true-hearted disciples of the Lord Jesus are removed from among us by those awful providences we are wont to call accidents. On the morning of second Month 5th, 1820, Henry Warrington,

Westfield, N. J., left his residence to drive Ann Edwards, Esther Collins and Ann Stokes to sit some sick friends in Byberry. The weather had been severely cold, the Delaware as frozen over, and there was no way of crossing short of Trenton, except on the ice. At last as teams had been passing for some time no danger was apprehended. When they had reached the middle of the river the ice suddenly gave way. Henry Warrington instinctively sprang out, Ann Stokes who was on the front seat, did so likewise, but the carriage with the other two passed down under the ice and they were lost. Ann Edwards, though but forty-eight, was a valuable minister who had done much in her Master's cause. Esther Collins, aged sixty-nine, was a valuable, clear-headed elder, and a mother in Israel. To have been the driver of the carriage in such circumstances would have been trying to anyone, but for Henry, with his tenderly sensitive feelings, it was acutely and overwhelmingly so. His friends, while sorrowing for the loss sustained by the church, did not fail to console him under his peculiar trial. His cousin, Benjamin Kite, sympathized deeply with him, and under a concern that he might not be too much cast down, wrote him as follows:—"It is a settled conviction in my mind that there is a dispensation of Divine Providence, however afflictive, from which the religiously attentive and may not draw instruction, and even consolation. In the late severe trial there are sources of consolation, and causes for devout resignation. The life of one of those who have been removed was one of almost continual suffering from bodily disease and she had been so devoted a servant that we cannot for a moment doubt that she was accepted in the Beloved. The other, whom I consider as truly a mother in our Israel, I consider as having done her day's work, and having been faithful in life has doubtless received her reward. You who survive, when I look at your millions and at the church, it appears to me evident that you have not yet fulfilled the duties of your day. I have felt much for thee, owing that from the tenderness of thy mind thou must be afflicted. But I beseech thee, do not brood over the distressing circumstances. Thou was doing what thou thought right and the event was kindly hidden from thee. I know thy ingenious mind will be fruitful in afflicting thyself. Thou art as well as I am as I can be that this will answer no valuable purpose. Would it not be better to say, 'Thou doest all things well. Oh, strengthen me with calm resignation to submit?' . . .

(To be continued.)

To the man who is bent upon the highest personal efficiency through the most complete development a large part of life must be aside for that relaxation which, by relief from tension and from concentration, puts the worker into relation with the influences and forces that nourish and inspire the spirit. The more one can gain in his passive moods

the more will he have to give in his active moods; for the greater the range of one's thought the truer one's insight, and the deeper one's force of imagination the more will one's skill express and convey. A man's life ought to be immensely in excess of his expression, and a man's life has its springs far below the plane of his work.—*H. W. Mahie.*

UNSTUDIED PRAISE.

A Friend feeling moved to take up a pencil, unexpectedly found herself writing lines without conscious mental effort, and the following are the verses which appeared:

Jesus, spread thyself within me,
Stretch Thy arms and make These space,
Closer let me feel Thee with me,
Saviour of the human race.

Condescending Love unbounded,
Fallen man to reinstate
On the Rock Christ Jesus,
Open wide the pearly gate.

Making us thy habitation,
With Father, Son and Holy Ghost,
Bows us down in deep contrition,
Numbered with the heavenly host.

Heaven unites with earth its glory,
Fills our souls with Life divine,
Eternity must tell the story,
Tongues will cease for want of time!

THE LITTLE FENCE.—A good lawyer learns many lessons in the school of human nature; and thus it was that Lawyer Hackett did not fear to purchase the tract of land which had been "laved over" for years. Some of the people wondered why he wanted to get hold of property with such an incubus of uncertainty upon it. Others thought that perhaps he wanted some legal knitting work, and would push in red hot to fight that line fence question on his own hook.

That's what the owner of the adjoining land thought. So he braced himself for trouble when he saw Hackett coming across the field one day.

Said Hackett: "What's your claim here, anyway, as to this fence?"

"I insist," replied his neighbor, "that your fence is over on my land two feet at one end and one foot, at least, at the other end."

"Well," replied Hackett, "you go ahead, just as quick as you can, and set your fence over. At the end where you say that I encroach on your land two feet set the fence on my land four feet."

"But," persisted the neighbor, "that's twice what I claim."

"I don't care about that," said Hackett. "There's been fight enough over this land. I want you to take enough so you are perfectly satisfied, and then we can get along pleasantly. Go ahead and help yourself."

The man paused, abashed. He had been ready to commence the old struggle, tooth and nail, but this move of the new neighbor stunned him. Yet he wasn't to be outdone in generosity. He looked at Hackett.

"Squire," said he, "that fence ain't going to be moved an inch. I don't want the land; there was nothing in the fight anyway but the principle of the thing."—*Christian Observer.*

A PURE, sincere and stable spirit is not distracted though it be employed in many works; for that it works all to the honor of God, and inwardly being still and quiet, seeks not itself in anything it doeth.—*Thomas à Kempis.*

Prince Albert and his Son.

The young Prince of Wales was standing one day in one of the long windows of the Royal Palace, studying his lesson. But his eyes wandered constantly from his book towards the lovely grounds outside, and with his fingers he was drumming on the window. His governess, the gentle and pious—Hillyard, observing his behavior, asked him kindly to study his lesson attentively. The young prince answered: "I do not want to." "I will have to place you in a corner," replied the teacher. "I will neither learn nor stand in a corner, for I am the Prince of Wales," and saying this he knocked his foot through the window pane. Leaving her seat and walking up to the prince, she said: "You must study your lesson; or I will be obliged to put you in a corner." "I will not," he repeated, and the foot went through another pane. The lady now rung the bell, and sent for Prince Albert, requesting his Royal Highness to come immediately to the room, since she needed advice. The faithful father came, and after hearing of the disobedience of the young scholar, turning to him and pointing to a low seat said: "Sit down there till I come back." Fetching a Bible from the adjoining apartment, and seating himself near the son, the father said: "Listen now what Paul says to you and other children of your rank." Then he read Gal. iv. 1, 2: "Now I say, that the heir, so long as he is a child, differeth nothing from a servant, though he be lord of all; but is under tutors and governors until the time appointed of the father." Then he added: "It is true you are the Prince of Wales, and if you conduct yourself properly you may become a great man; yes you may become King of England after the death of your beloved mother (whom may God long preserve to us). But now you are a little boy under governors and tutors whom you must obey. And again Solomon says, Prov. xiii. 24: 'He that spareth his rod hateth his son; but he that loveth him chasteneth him betimes.' Thereupon the father took the rod, and punished the heir-apparent of the mightiest kingdom of Christendom in a manner which he felt. Then placing him in a corner, he said: 'Here you will remain standing and learn your lesson until—Hillyard gives you freedom; and never forget that you are now under tutors and governors, and always under the law of God.'—*From the German.*

SIMPLICITY OF DISCOURSE.—I came across a nice little anecdote the other day. A child was asked if she would like to stay with her Aunt Mary or her Aunt Jane; both aunts were very kind. She said she would like to stay with Aunt Jane best, because, though both aunts made some tarts and cakes, Aunt Jane always set them on a low shelf, and she could easily get at them. Some teachers have very good addresses and talks to children, but they are rather stylish—upon a high shelf. Others are so simple that they can get the cakes! and children like that. Have you never heard of the minister who used such big words in his sermon that one said to him, "I thought your Master sent you to feed sheep, but you preach as though he had sent you to feed giraffes." Very few of our children are giraffes. Put your cakes low.—*Spurgeon.*

Maxims from "The Inner Life."

BY T. C. UPHAM.

Our spiritual strength will be nearly in proportion to the absence of self-dependence and self-confidence. When we are weak in ourselves, we shall not fail if we apply to the right source for help to be found strong in the Lord. Madame Guyon, speaking of certain temptations to which she had been exposed, says, "I then comprehended what power a soul has which is entirely annihilated." This is strong language! but when it is properly understood it conveys important truth. When we sink in ourselves we rest in God. When we have no strength in ourselves, we have Divine power in Him who can subdue all his adversaries. "The Lord is my rock and my fortress, and my deliverer, my God, my strength, in whom I will trust; my buckler, and the horn of my salvation, and my high tower."

Speak not often of your own actions, nor even when it can be properly avoided, make allusion to yourself, as an agent in transactions which are calculated to attract notice. We do not suppose, as some may be inclined to do, that frequent speaking of our actions is necessarily a proof, although it may furnish a presumption of inordinate self-love, or vanity; but it cannot be denied that by such a course we expose ourselves to temptations and dangers in that direction. It is much safer, and is certainly much more profitable to speak of what has been done for us, and wrought in us—to speak for instance, of ourselves as the recipients of God's goodness, than to speak of what we have ourselves done. But even here, also, there is need of deliberation and caution.

There are many persons who would willingly be Christians, and eminent Christians too, if Christianity were limited to great occasions. For such occasions they call forth whatever pious and devotional resources they have or seem to have and not only place them in the best light, but inspire them for the time being, with the greatest possible efficiency. But on smaller occasions, in the every-day occurrences and events of life the religious principle is in a state of dormancy; giving no signs of effective vitality nor movement. The life of such persons is not like that of the sun—equable, constant, diffusive and beneficent, though attracting, but little noticed, but like the eruptive and glaring blaze of volcanoes, which come forth at remote periods, in company with great thunderings and shaking of the earth and yet the heart of the people is not made glad by it. Such religion is vain! and its possessors know not what manner of spirit they are of.

THE RIGHT SORT OF SOLDIER.—The current *Our Mission*, referring to the picture of a Malagasy soldier, says: "He reminds us that we too ought to be soldiers; that just as he is doing his duty in his poor, blind way, so we ought to be up and doing ours. The more we believe all war between man and man to be wrong, the more we need to remember that there is a warfare of spirit that is right. If men fight so faithfully in a wrong cause, how faithfully ought not we to be who fight rightfully, not blindly, but in the light; who are soldiers of no earthly captain, but of Christ?"

ONLY.

Only a little seed, but it chanced to fall
In a little cleft of a city wall,
And taking root, grew bravely up
Till a tiny blossom crowned its top.

Only a flower, but it chanced that day
That a burdened heart passed by that way,
And the message that thro' that flower was sent,
Brought the weary soul a sweet content.

For it spoke of the lilies so wondrously clad,
And the heart that was tired grew strangely glad.
As the thought of a tender care over all,
That noted even a sparrow's fall.

Only a thought—but the work it wrought
Could never by tongue or pen be taught;
For it ran through a life like a thread of gold,
And the life here fruit a hundred fold.

Only a word, but it was spoken in love,
With a whispered prayer to the Lord above,
And the angels in heaven rejoiced once more;
For a new-born soul entered in by the door.

An Island Owned by Birds.

Laysan island is one of the wonder spots of the world.

On this little lump of rock and land, poking up its nose in mid-Pacific, so many thousands of birds gather year by year to lay their eggs and rear their young that one can scarcely step anywhere on the narrow confines of the isle without treading on a bird, a bird's nest, or a bird's egg.

On the map, Laysan, or Moller island, will be found among a number of small isles, rocks and reefs that stretch away in a northwesterly direction from the Sandwich group—Necker, French Frigate shoals, Gardner, Maro reef and Lisiansky.

Laysan is three miles in length, and two and a half miles in breadth. It is sprinkled with vegetation in the form of strong, bushy grass and some low shrubs, between which a few pigmy palms struggle for existence. A long lagoon stretches across, filled with remarkably salt water—no fresh water exists on the island, a curious fact, considering the number of land birds who make it their nesting place.

And everywhere there are birds—thousands upon thousands of albatrosses, white and brown, in great, distinct colonies; great rookeries of terns and petrels and frigate birds; countless rail run everywhere in the long grass; bright red tropical honey birds, bright yellow finches flutter in the shrubs; curlews scream; ducks quack; crake chirp all the day.

Bird lovers hearing of these wonders had cast longing eyes on little mid-Pacific Laysan long before Walter Rothschild—most ardent of naturalists—sent his collector, William Palmer, on a voyage of scientific exploration in these regions. The fame of Laysan had spread abroad from various sources—notably from an interesting general description given by the great German ornithologist, Von Kittlitz, who visited the island in 1834. But it remained for Rothschild's emissary to make a complete survey of Laysan's feathered world.

When Palmer reached Laysan—sailing from Honolulu by way of Bird island or Nihaui, and visiting the other rocky islets to Laysan's north—he was astounded, bewildered—the place was alive with birds. His foot sank in birds' burrows at every step. He had been

told that rail were "tolerably plentiful" wherever he walked these little creatures hurried out of his way. Acres of albatrosses m his gaze. Where to begin the work of cataloging was a bewildering problem.

At this time a Laysan Guano company managed by Gov. Freeth, of the island. I had built a tram line on his guano field—but when he took his visitors for a ride he had sent a man on before to clear the line of young birds!

The albatrosses on Laysan are absolute fearless. They take not the slightest notice of the raiders who come to despoil them their eggs, and all the other birds are as tame as pet canaries, with the exception of the curlews and the ducks—these alone cannot be caught in a hand-net.—*Pearson's Magazine*.

A Single Idle Word.

"I was not a bad little man," said a dapper gentleman lately, "but was given to frequently enjoying a good time, and while not usually vulgar or low in my conversation, had a keen sense of the ludicrous, and could not always resist the temptation to make an apt rejoinder, even when it involved some coarseness."

"A party of us were camping, mostly young fellows but one or two were middle-aged men. We had a good time and there was only one thing to regret, and that I have regretted my life. We sat around the fire the first evening, telling stories, and a story which of the older men told suggested an obscene comment, which I uttered before I thought twice."

"I could have bitten my tongue off the instant. The man simply looked straight at me for a moment across the fire, and I knew that he judged me by that remark. I knew that I did not deserve the opinion which that instant he formed of me; but I knew also that I had given him just cause to estimate me as he did. That one careless word did not fairly represent me, but I could deny that it was my own."

"All that night I lay looking up at the stars and thinking over what I had said. I could almost have counted on my fingers all the other sentences of like character that I had ever spoken. I was not habitually vulgar, but for that one word, and all like words, thoughts, I despised myself."

"I determined to be so careful during the remainder of the week as to redeem myself in the sight of that man; the others knew me better. But a telegram called him back to the city the next morning, and I saw him infrequently after that."

"He always treated me civilly when we met, but I never saw him without feeling that he still measured me by that word. I had opportunities to show him that I was not what he thought, but there were too few to give a comprehensive view of my character, or really to influence his opinion of me."

"In a strange way, after a year or two had passed, my name was mentioned for a position that was desirable, and which I seemed likely to secure, but this man was one of those to decide the matter. Without positively knowing how it came about, I could not doubt that a quiet intimation that he considered me unfit was what defeated me."

"Later I found a situation which, although

ood one, was in a very different line of k' from what I had chosen, and I have er doubted that my whole life was changed that idle word.

"Did I learn the lesson? Yes, I did. My it, now almost life-long, has made impurity, n in its milder forms, repulsive. The nory of that incident has stopped many a ty utterance, and in the years that fol- ed it the warning of the Divine Searcher added a sense of responsibility to the se of shame. 'I say unto you, that every word that men shall speak, they shall give out thereof in the day of judgment.'"—*uth's Companion*.

OU can never tell when God will take a le word you may drop, like an arrow shot a venture, and cause it to strike some rarer between the joints of the harness and ng him down.—*Schauffler*.

Notes from Others.

n closing his sermon to an audience on a steam- , Wm. H. Milburn, then at the age of twenty- two, turned to a group of congressmen whose ts and conduct on the voyage had burdened pirit, and told them that he had supposed that representatives of the nation at its capital a representatives of its character as well as of intellect. "But," he said, "I am to judge nation by you, I can come to no other con- clusion that it is composed of profane swearers, players and drunkards. As a preacher of the el I am commissioned to tell you that unless renounce your evil courses, repent of your and believe on the Lord Jesus Christ with hearts unto repentance you will certainly be ned."

n unexpected result of this act of faithfulness at these congressmen presented his name at next election for chaplain of Congress, and e chosen. He held the position a number of s, and was held in high esteem by lawmakers, gh he fearlessly rebuked them for their sins.

the nineteenth century there were fifty as- nations of ruling statesmen and crowned heads.

om time to time people ask what "Mother ton's Prophecy" was. The original version: "Carriages without horses shall go, And accidents fill the world with woe. Around the world thoughts shall fly In the twinkling of an eye. Waters shall yet more wonders do, Now strange, yet shall be true. The world upside down shall be, And gold be found at root of tree. Through hills man shall ride, And no horse nor ass be at his side. Under water man shall walk, Shall ride, shall sleep, shall talk. In the air men shall be seen, In white, in black, in green. Iron in the water shall float, As easy as a wooden boat. Gold shall be found 'mid stone, In a land that's now unknown. Fire and water shall wonders do, England shall at last admit a Jew, And this world to an end shall come. In eighteen hundred and eighty-one." ere is some doubt as to the time when this was written, but according to the common it it was first published in England in 1485, e the discovery of America.

le will of Judge Frederick Stump, as reported Elkhon, Md., Ninth Month 17th, who for

thirty-four years was on the bench in this judicial district, reads in part as follows:

"Disgusted with the foolish display almost universally made at funerals, to the great gain of undertakers and to the deprivation of many families of even the necessities of life for a long time thereafter, I hereby direct that I be buried in a white pine coffin (because the wood decays more rapidly underground than any other I know of), without any stain, paint, covering or other emblems of woe on it. . . . I direct that I be buried in a suit of clothes I have worn, as I do not see the sense of wearing old clothes when alive and being buried in a new suit, when it is of no use to me. I desire that my executor see that all my wishes are fully carried out."

THE PASSING OF THE SHAKERS.—The Shakers, the oldest, most unique and most successful co-operative communities in this country, are going the way of all similar organizations. At New Lebanon, Hancock and West Pittsfield there has been such a loss of membership that it has been necessary to hire help to carry on the business of the communities, and this not being profitable, it is proposed to sell lands and withdraw from many of the industries that in former years yielded large profits. The strong personalities of the founders of the communities and their immediate successors in leadership and their unquestioning acceptance of the peculiar religious trusts of the sect were a vitalizing force that kept the communities inspired with the belief that it was a good thing to live apart from the world. When the strong leaders died off, there was no one to take their places, and then the disintegration of the communities began, members leaving them to go out in the world and few converts coming to take their places.—*The Kingston Leader*.

"MEN! HIGH-MINDED MEN!"—The Empress Dowager of China in a reformatory edict lately issued inculcates these wholesome sentiments:

"The most important principle of government is the selection of men. It cannot be possible that in all this great empire there are no talented men. If there be those of earnest purpose and pure loyalty, of broad mold and extensive learning, versed in foreign and domestic affairs, let the presidents and vice presidents of the boards, the viceroys and governors and provincial directors of education, prepare a statement of their qualities and recommend them, and let the Board of Reforms devise a system of examinations and submit the same for the imperial approval. The court is eager for all sorts of suggestions to promote the prosperity of the Empire. Mother and son are one in the purpose to correct the mistakes of the past, and long to obtain talent to assist the government."

Dr. McConnell of Brooklyn said in his discourse after the assassination, that the teachings of Christ were making progress, although after twenty centuries of Christianity only one-half the world had been touched by them, and although even in the Christian countries themselves great evils exist, and great crimes, like that at Buffalo, are committed. But Dr. McConnell called attention to the moral and religious condition of the world one hundred years ago as compared with the present time as proof of the steady progress that is being made.

The attributing of motives, the attacks upon character, the suggestion of wrong purposes, the reckless and random assaults upon those in authority, are sapping the sense not only of reverence for rulers, but of recognition of the rightfulness and needfulness of rule. Who shall dare to say, tracing things back to their spring and source, how far this thoughtlessness of harsh judgment and the irresponsibility of contemptuous speech are the seed and the root from which have sprung

the horror of this attempt upon an invaluable life?—*W. C. Doon*.

BIBLE PUBLICATION STATISTICS.—Heavier than the entire population of Liverpool are the 165,000,000 copies of the Scriptures distributed during the nineteenth century by the British and Foreign Bible society. They weighed about 30,700 tons. To transport this mountain of Bibles a train 16 miles long, drawn by 150 locomotives, would be necessary. The area of the printed pages would furnish standing room for twice as many persons as are now living throughout the world. If all the Bibles were made into a single volume, the book would be 202 feet high (as high as the London monument), 140 feet wide and 41 feet thick, each page would weigh sixty tons and to turn one of them over would take the strength of 1,200 men or 40 horses. Further, the Bibles would make 197 1-3 columns, each as high as Mount Everest (29,000 feet).—*Pittsburg Bulletin*.

A TECHNICAL DICTIONARY.—A complete dictionary of technical terms would be a welcome addition to the library alike of the scientist and the technical man. The Society of German Engineers of Berlin has undertaken to provide such a dictionary in German, French and English. The name of this work will be "Technolexikon." The society has already established editorial offices, Dr. Hubert Jansen, the well known lexicographer, being editor-in-chief of the work. The society asks for co-operation in the effort to make the "Technolexikon" a complete work in the three languages named and invites help from individual contributors.—*Dry Goods Economist*.

MOST DURABLE BINDING FOR BOOKS.—The recently published report of the committee appointed by the Society of Arts on bookbinding condemns the use of calfskin and Russia leather as most liable to decay. Of replies from thirty-nine libraries thirty-one recommend morocco and pigskin as the most durable. There is a general agreement that the use of gas in libraries has a most deteriorating effect on the bindings, the electric light being preferable.

Items Concerning the Society.

Haddonfield Quarterly Meeting was held at Medford, on Fifth-day, Ninth Month 12th, being the last in order of the eight Quarterly Meetings belonging to Philadelphia Yearly Meeting to hold its session. As the time drew near for the holding of this meeting, no doubt the hearts of many of its members were raised in secret prayer to the Giver of all good, that He might please to make the occasion one of renewed visitation of his love to the company which might assemble. In this they were not disappointed, for it was indeed a time of rich spiritual blessing, wherein the weary traveller in Zion's road was endowed with fresh strength to pursue his course with faithfulness, having regard to the end of the journey, even the spread of the Redeemer's kingdom, and the salvation of his own soul.

The deep silence that overspread the large assembly, when gathered, was broken by an earnest supplication for the Divine blessing and an outpouring of the Holy Spirit; that old and young might lay hold upon the opportunity afforded, and by allowing their thoughts to dwell only upon the object of the meeting, experience the uplifting influence that would reward their patience and faithfulness in this engagement. A number of exhortations followed. We were reminded that a talent had been committed to each of us, for the keeping of which in full weight and purity we would be held accountable at the day of reckoning. Others were led to speak of the spirituality of the Redeemer's kingdom, and of the necessity for the true child of God to seek earnestly those things which are from above; not allowing ourselves to be led captive by

the manifold temptations which surround us, by the necessities of our existence here that we should endeavor to pursue with as much eagerness those things which pertain to our spiritual development as most are apt to do with regard to that which tends to promote their comfort and advancement in this life.

Near the close of the Meeting for Worship a beloved minister from another Quarterly Meeting was led out in fervent supplication, in which the faithful were encouraged to hold on their way, the indifferent stirred up to a fuller consciousness of their jeopardy, and all to remember their accountability for the manifold blessings which of latter time have been poured out upon the members of this Quarterly Meeting. Under the baptizing influence of these several exercises, the meeting proceeded to the business claiming its attention. In the course of the replies to the state of Society, as shown by the replies to the Queries, some excellent counsel was delivered. Tale-bearing could be efficiently discouraged through the attitude of the listener. If he betrayed his unwillingness to listen to any recital defaming the character of another, the would-be tale-bearer would to that extent be discouraged from further spreading this kind of information.

Another Friend spoke of the importance of those who were faithful in the attendance of meetings, showing forth to those who might be careless or indifferent in this matter, that these opportunities had produced a work upon their souls, which manifested itself unmistakably in their lives and conversation.

The committee which for more than four years has had the oversight of the indulged meeting held at Merchantville upon First-day afternoons, having made report that it believed the time had come for that meeting to be discontinued, its judgment was united in by the Quarterly Meeting.

Under a quickened sense of our individual responsibility, arising from this favored opportunity, in which we had been permitted to receive afresh tokens of the watchful care of our Heavenly Father, the Meeting closed.

Harvey H. Haight, a minister, has been liberated by Norwich Quarterly Meeting, Canada, to attend Western and Kansas Yearly Meetings.

Anna B. Crawford has been liberated by Western District Monthly Meeting, Philadelphia, to attend Ohio Yearly Meeting and some service in its vicinity.

Joshua Smith, a minister, and his companion, William Smith, from Ohio, who have been engaged in religious service in parts of North Carolina, have attended meetings in Philadelphia while on their return to Ohio.

Correspondence.

I have just finished re-perusing "Paradise Regained," and marked the passage in Book IV:

"Who reads
Incessantly, and to his reading brings not
A spirit and judgment equal or superior,
(And what he brings, what needs he else perceive seek?)
Uncertain and unsettled still remains
Deep-versed in books and shallow in himself."

It seems to me, however, that one cannot be "deep-versed" in the Bible till we realize its true purpose of purpose, and how the letter, so to speak, vacates itself in pointing beyond itself.

As in one person Christ once came to bless,
So now in many comes He none the less.

I have thought that the American people would do well to consider the meaning of the calamity which has come upon the nation, and for what it is a reproof.

I believe we who take part in government affairs by voting have not only a right of judgment, but a duty to criticize the doings of the officers elected, irrespective of the degrees of office. I consider their case different in this respect from that of private individuals.

SUMMARY OF EVENTS.

UNITED STATES.—The funeral of the late President took place at Canton, Ohio, on the 19th instant. The sorrow of the people has been strikingly manifested throughout the country. Business was largely suspended during the day, places of worship were attended by great numbers and at the time of the interment railroad trains, street cars and other vehicles were stopped for five minutes in various centers of population. Upon orders from the officials of the different telegraph companies, or upon the common impulse of the operators where direct instructions were not received, the entire telegraph system of the United States was suddenly hushed for five minutes, at 2.30 P. M., the hour set for lowering the President's body into the grave at Canton. Evidence of sympathy has been shown by perhaps all the civilized nations in the world, and especially by the King and people of Great Britain. The day of the funeral was also observed in India and in China. No evidence has been found that the bullets used by the assassin were poisoned.

President Roosevelt has announced that "it shall be my aim to conduct an absolutely unbroken policy of President McKinley for the peace, prosperity and honor of the country." Among the subjects which he has expressed himself as favoring is the use of conciliatory methods of arbitration in all disputes with foreign nations, so as to avoid armed strife. These and other utterances have established feelings of confidence in commercial circles, and tended to allay anxiety in this country and elsewhere.

The assassin of President McKinley, Leon F. Czolgosz, was indicted in Buffalo on the 16th instant for the crime of murder in the first degree. He maintained a sullen silence in the court room.

In New York city a resolution has been adopted that "any saloon keeper who shall be charged by the police with harboring anarchists, or permitting them to hold meetings in their places of business, and make speeches against the Government and the good order of community, shall be deemed to be not the kind of person to conduct a business of this character, and any person guilty of such an offence shall suffer the revocation of his license and be debarred from again receiving a license to do business in this city."

The loss in wages by the men during the late strike of the steel workers is estimated at \$7,000,000, and that of the employers at a rather larger sum. A few thousand men who are dissatisfied with the late settlement made by President Shafer of the Amalgamated Association propose to form a new organization and continue the strike in certain mills.

There were 379 deaths in this city last week, reported to the Board of Health. This is 51 less than the previous week and 23 more than the corresponding week of 1900. Of the foregoing, 182 were males and 197 females: 42 died of consumption of the lungs; 22 of inflammation of the lungs and surrounding membranes; 6 of diphtheria; 11 of cancer; 14 of apoplexy; 11 of typhoid fever and 1 of scarlet fever, and 4 of smallpox.

COTTON closed on a basis of 5½¢ per pound for middling uplands.

FLOUR.—Winter, super, \$2.15 to \$2.30; Penna. roller, straight, \$3.20 to \$3.30; Western winter, straight, \$3.25 to \$3.35; spring, straight, \$3.40 to \$3.65.

GRAIN.—No. 2 red wheat, 73½ to 74c.
No. 2 mixed corn, 62½ to 62c.
No. 2 white oats, clipped, 42 to 42c.

BEEF CATTLE.—Best, 5½ to 5½c; good, 5½ to 5½c; medium, 4½ to 5c.

SHEEP AND LAMBS.—Choice, 3½ to 3½c; good, 3 to 3½c; common, 1½ to 2½c. Lambs, 4 to 6c.

HOGS.—Western, 9½ to 10c.

FOREIGN.—The foreign troops lately in Peking have withdrawn, and given the city into the hands of the Chinese.

The Car and his wife have been the guests of France, for several days. When travelling by trains the railroad is said to be lined on either side throughout the whole way by armed soldiers. The effect of this visit, it is believed, will be to strengthen the bonds of amity, and tend to the peace of Europe.

It is officially reported that the deaths among the British troops from the war in South Africa number 26,000. Recent encounters between the Boers and British have resulted in serious losses to both, and have shown that the former are not disposed to surrender. They have appealed to the Hague tribunal for arbitration.

Cairo is the greatest town of Africa. Its inhabitants number 400,000, 25,000 being Europeans.

The Government of New Zealand is successfully providing allotments near the large towns for workmen's homes, in the hope that this may relieve poor men from the excessive, almost prohibitory, rents of cities. A man who has an acre of fertile land near a town at an almost nominal price can partly keep his family by growing vegetables and working at his garden in his spare time.

It is announced that the Department of Agriculture and Commerce of Japan will send eighty-four students abroad this month for practical training. Of these twenty-five will go to America and twenty-seven to Europe.

RECEIPTS.

Unless otherwise specified, two dollars have been received from each person, except for vol. 75.

James E. Meloney, Phila.; Ebanah Zook and for R. Zook, Pa.; Homer Child, Ia.; John W. Garwood, agt. 1 for Abner L. Newlin; Mark H. Buzby, N. J.; Carl Cope, California; Anna Freeman, Ind.; Alonzo Moss, Ia.; John R. Tatam, Del.; Wm. D. Smith, Kans.; Susan S. Kite, Gt. Br.; Maria S. Reeve, N. J.; R. S. Rye, Phila.; Rose M. Osburn, Ore.; Henry B. Leeds, agent, N. C.; Elizabeth T. Engle and Louisa Lippincott; Wm. Stant; Agnes O., for Mary P. Taber and Esther S. Sears; Thos. H. Whitson, agent, Pa.; \$13 for James Davis, Albert Estrin, Edward Savery, Thomas B. Taylor, Lydia Darlington, Sibella S. Cope, and \$1 for Dr. Joseph Beahm; Elizabeth K. Reeve, Pa.

Remittances received for Third-day note will appear in the Receipts next following week.

CORRECTION.—In last week's receipts William Cooper should have been Warner W. Cooper.

NOTICES.

BIBLE ASSOCIATION OF FRIENDS IN AMERICA.—Agts are requested to send their annual reports at once to EDWIN P. SELLEW,

207 Walnut Place, Phila.

WESTOWN BOARDING SCHOOL.—For convenience of sons coming to Westtown School, the stage will go from Philadelphia 7.16 and 8.18 A. M., and at 4.32 P. M. Other trains are met when requested. Stage fare, fifteen cents; after 7.30 P. M., twenty cents each way. To reach the school by telegraph, West Chester, Phone 114x.

EDWARD G. SMEDLEY, Sup.

WANTED.—A position, to care for children, or a valid. Testimonials given and expected in return.

Address F. E. G.,
Office of "THE FRIEND."

Family of two desire woman to assist in housekeeping suburb of Philadelphia; Friend preferred.

Address L.,
Office of "THE FRIEND."

WESTOWN BOARDING SCHOOL.—Applications for admission of pupils to the school, and letters in regard to instruction and discipline should be addressed to Wm. F. WICKERSHAM, Principal.

Payments on account of board and tuition, and communications in regard to business should be forwarded to EDWARD G. SMEDLEY, Superintendent.

Address, Westtown P. O., Chester Co., Pa.

All members of the Westtown Old Scholars' Association, who have paid or shall pay their annual dues to Dean T. Elkington, Treasurer, No. 121 South Third St., Philadelphia, are invited to attend the Fifth Annual meeting to be held at Westtown Seventh-day, Tenth M. 5th, 1901. Those who prefer to bear their individual share in the "Expenses of the day," are encouraged to add one dollar to their annual dues. The program of entertainment and exercises extends from 9 A. M. to P. M. At the meeting in the tent, the condition of various departments will be presented by their best able, and addresses will be given.
For the Undergraduates, by WALTER S. THOMAS;
For the Friends of the School, by AGNES L. TIER;
For the Old Scholars, by JOHN B. GARRETT.

THE CORPORATION OF HAVESFORD COLLEGE.—The annual meeting will be held in the Committee Room, Arch Street Meeting-house, Philadelphia, on Third-day, 9th Month 8th, 1901, at 3 o'clock, P. M.

The Larger Anarchy.

To teach the people of France that the Christian religion is the spirit and practice which their prevailing church and priesthood inhibit, has been to extinguish in many their faith in Christianity. Christ makes no inroads; but we cannot say that of the professing church where it fails to represent his Spirit. Whatever we may be similarly said of certain governments being the provokers of their own anarchists, or manufactories of them for oppressive states, we deem the larger truth should come into view that both the unscrupulous oppressed and unscrupulous oppressors derive their characters from insubordination to that higher Potentate, the Spirit of Divine grace offered within their hearts. We behold under the same system of human laws the evil choice of anarchism made by one portion of inhabitants, and that noble choice the better part made by the suffering Douk-bours.

Accordingly we do not regard anarchism as chargeable to any system of government, but proceeds from within, out of the perverted heart of man, which disinclined to be subject to the law of God, naturally continues the same insubordination to the law of civil government. We ought not, however, to overlook the fact that home government also, whether by its license or its arbitrariness may be no small factor in the making of repudiators of all government. In quoting typical antecedents of a political Anarchist, we call no names. Not only are we told that the parents "were inclined to anarchy and rebellion under the hand of Russian tyranny," but that "his mother brought him up with the unsparing use of the strap," and other home conditions inclined him to hate a discipline devoid of

love. Said to be "a physical degenerate also and hence a man of unbalanced mind," and with the saloon as an early educator, he became such a criminal as we could expect though never excuse. Where sin abounded, grace, if heeded, could much more abound. His is the responsibility, how great soever is that of state, home or society. But the root of the matter in him, in them, and in us is anarchy towards God.

According as we will not, at points where it is inconvenient, have this One to rule over us, so all are concluded under sin by repudiating government at its source. Sin takes diverse forms in divers persons, but in every case it is that one thing,—rebellion against the Seat of Government, "the Head of all principality and power;" who even so accommodates himself to our condition as to be the witness for Truth in every man's heart. He who stifles this, suppresses for himself the Head of government. For that mental anarchy, or lack of control of thoughts, which is called bewilderment or insanity, there may in some be no blame. But moral anarchy which is named vice or license of natural passions; and spiritual anarchy which seems when complete another name for perdition, are the outcome of guilt and sin. The political anarchism is but a phase of the spiritual or moral, and the gospel is its true remedy.

Rightfully our Father's by creation and by our indebtedness to Him ever since for all things, we are in addition to that mercifully "bought with a price," and are not our own. What more reasonable service than to serve Him in our body and our spirit which are his? What higher privilege? Surely the Christ who has tasted death, the wages of sin, for every man, has fairly earned the government of man. The irreconcilables to government are not to be found among those who are reconciled to God by the death of his Son. The government of these is upon His shoulders, and He ordains civil government as his minister to us for good. "Of the increase of his government and peace there shall be no end." To Him eventually "every knee shall bow and every tongue confess." "For every eye shall see Him, and they also who pierced Him."

It is well after a man has stood in the forefront of his people for years on the summit of national place, power and human ambi-

tion, if he can sum up his best conclusion of the whole matter in the words, "God's will, not ours, be done." Usually when dying men use these words, it has not been the first time. They have known a bowing to the Divine will before. Else such words would not be the ready breath of an outgoing life.

But our last submission is best made possible by beginning now. How knows the reader of any later season possible? An early sacrifice is loved of the Lord and without it no late dedication may be known. Because one owned not the day of her visitation, the things that belonged to her peace were finally hidden from her eyes. "Blessed are the dead who die in the Lord," saith the Spirit concerning the living who lived in the Lord.

FOR "THE FRIEND."

Some Reminiscences of a Good Man—Ebenezer Worth.

Ebenezer Worth writes in his diary under date of 1858, First Month 23rd:

"Another week of my precious time is almost past, a solemn subject when properly considered. I feel very unworthy of the many precious seasons I have been favored with of late. May I be more grateful and faithful.

"14th. We have been much favored (I think I may say) with the presence of the Great Head of the Church in our meeting to-day. When thus favored how sweet, solemn and precious are our meetings. His life-giving presence, with a sense of his Divine approbation, is a feast to the soul that is alive to a sense of good. Oh! what an unmerited mercy that our Divine Master, after all our backsliding, continues to visit us with a sense of his loving kindness. May these mercies not be slighted, but increase in love, gratitude and obedience to our dear Master.

"Second Month 4th. Monthly Meeting. All the Queries were read and I think deliberately considered. I think some of the concerned members were brought to feel for the welfare of our religious Society and their own responsibility, which I esteem a blessing. Oh! that we may be preserved in that state, comparable to little children, walking in obedience to all the Divine requirements. I think it more to be sought after, than length of days. There is a precious peace in a life of dedication to our dear Master.

"Sixth Month 11th. I have passed through some close trials on account of heaviness in meetings, sometimes attended with pain in my head. I hope it has in some degree had an humbling effect. I have also had some comfortable and very encouraging seasons."

"To Joseph Elkinton.—In regard to A. H.

Blackburne's inquiry I have always thought it was no disadvantage to lend a little to the Indians, making it clear that they were to use the article and return it soon.

"Such small acts of kindness are felt by them, and seen at times, through the blessing of our Divine Master to open the way to use much freedom and plainness in explaining to them the great advantage there would be in their owning all necessary articles themselves, and being industrious in using them; and they have sometimes afforded favored opportunities, when the minds of those who are laboring amongst them are religiously concerned for their best welfare, to advise them against the evils of intemperance and other immoral practices which are amongst them. . . .

"1860. Eighth Month 24th. May the writing down of the many blessings and kind dealings of a Merciful Providence to me, a poor unworthy sinner, be of some use to myself, if spared, in days to come; they are worthy to be held in sweet remembrance with deep feelings of gratitude to the Giver of all our blessings.

"1861. First Month 16. I think I have been favored of late to feel a quiet, settled state of mind in our religious meeting, and I trust at seasons, through unmerited mercy, have felt my mind clothed with the spirit of supplication, for myself and for those assembled with us."

East Bradford, Fifth Month 18, 1862.
To Joseph Elkinton:

"Dear Friend—Thou hast at times been the companion of my mind, since we parted at Downingtown, and I have felt much sympathy with thee, and sincerely desire thou may be preserved and favored to perform the service required of thee to the peace and comfort of thy own mind; or may I, in other words, say, be favored with a sense of Divine approbation, which gives that sweet and precious peace, that the Christian so much desires. I believe services required by the Great Head of the Church and faithfully performed in the ability which He is graciously pleased to give unto those who humbly look unto Him and wait for it, will often leave behind them a sweet and precious savor, that may be long felt by those laboring with. May it be so with thine. That thy Indian brothers and sisters and all with whom thou may feel it right to labor, may feel the sweet savor of the Master's Spirit whilst thou art laboring with them, and remember it when thou hast returned to thy home and friends, that thy fruits may be to the praise of his excellent name, which is forever worthy, is the desire of

"Thy friend,
"EBENEZER WORTH."

Earth is old, and time is hoary;
Systems to confusion slide;
God forbid that I should glory,
Save in Jesus crucified!

"I am glad to think
I am not bound to make the wrong go right;
But only to discover and to do
With cheerful hand the work that He appoints."

We rail at Time and Chance, and break our hearts
To make the glory of to-day endure.

Is the sun dead because the day departs?

And are the sons of Life and Love less sure?

—Richard Hovey.

EVENING DEVOTION.

S. T. COLERIDGE.

Ere on my bed my limbs I lay,
It hath not been my use to pray
With moving lips or bended knees;
But silently, by slow degrees,
My spirit I to love compose,
In humble trust mine eyelids close,
With reverential resignation.
No wish conceived, no thought expressed!
Only a sense of supplication,
A sense o'er all my soul impart
That I am weak, yet not unblest,
Since in me, round me, everywhere,
Eternal Strength and Wisdom are.

Concerning Antiseptics.

Since the general acceptance of the germ theory of disease, the class of remedies called antiseptics has become a very important one. This class includes all those agencies which have the power to destroy or at least to arrest the growth of bacteria.

Many of these, salt and heat, for example, were employed as preservatives of food long before the germ theory came into existence, and therefore before an explanation of their action was possible. The two agencies mentioned afford examples of the two forms of antiseptics—those which kill the germ, such as heat, and those which only prevent their growth and further development, such as salt.

There is no hard and fast line between the two classes, however, for the difference is often one of degree only; a substance which in concentrated form will kill the germs, being then a true germicide, may in more dilute solution act only in a repressive manner upon the growth of bacteria. All antiseptics are not of equal power, nor do they act upon all bacteria in equal degree. Some antiseptics are harmless to man; others are virulent poisons, which must be used with the utmost caution. The most commonly employed antiseptics are, in the general order of their strength, the salts of mercury, especially corrosive sublimate, and of silver, peroxide of hydrogen, carbolic acid, creosote, formaldehyde gas, chlorine, thymol, salicylic acid, benzoic acid, chloride of zinc, quinine, boric acid and borax, alcohol, sulphate of iron, common salt, sugar and glycerine. Heat, cold, sunlight and air (oxygen) are nature's antiseptics, and most effective ones they are, when acting under favorable circumstances. In addition to their use as food preservatives (most of them should never be employed for that purpose) and as disinfectants, antiseptics have a wide field of usefulness in surgery, although they are now less freely employed than formerly, as it has been found that, if the instruments are clean, washing the wound with sterilized water will answer the same purpose as deluging it with antiseptic solutions. The instruments are boiled, and the surgeon's hands are cleaned with soap and alcohol, while the water used for washing the wound is previously boiled or distilled.

As to the value of antiseptics given internally, physicians are not agreed, some regarding them as most serviceable in the treatment of typhoid fever, diphtheria and certain other infectious diseases, as well of intestinal indigestion, while others think all such attempts at internal antiseptics are futile.—*Youth's Companion*.

Maxims from "The Inner Life."

BY T. C. UPHAM.

If earthly plants are permitted to spring in the heart, how is it possible for the tree holiness to flourish? With the ground already occupied by earthly products, the roots sanctification, deprived of the nourishment which should sustain them, necessarily wither and die. There is not nourishment enough to sustain both. Hence it is that our Saviour, his Divine Wisdom, tells us of those who are choked with the riches, cares and pleasures of this life, and bring no fruit to perfection.

The power of Satan is great; and it is a most appropriate business continually to assault the saints of God. If then in some guard moment (by thy own fault, be it remembered) he gain an advantage, lament over it deep, but do not be discouraged. Remember, if thy great enemy gets from thee thy resolute thy fixed purpose, he gets all. To be defeated is not to be wholly destroyed. But, on the contrary, he, and he only has victory written upon his forehead, who in the moment of his severest overthrow has still the heart to say, "With the Lord helping me, I will try again."

It is a melancholy fact that the religion many persons is not constantly operated, it is manifested periodically, or at some particular times. 'Tis assumed, for instance, the "Sabbath," but is laid aside on the Sunday during the week days.

But true holiness, be it remembered, is a thing to be worn for occasions, to be put on or put on, with an easy accommodation to circumstances, or to one's private convenience. It takes too deep a root in the heart to be easily disposed of as such a course would imply. It is meat, with which we are fed, clothing with which we are clothed; the inner and permanent principle of life, which a mate and sustains the whole man.

THE KINGDOM OF GOD.—The kingdom of God is within you, saith the Lord. Turn yourselves with all your heart to the Lord, and unify your affections from this sinful world, and you shall find rest for your soul. Let to think little of external things, and to give your thoughts to the things internal, and you will find that the kingdom of God will enter into you; for the kingdom of God is righteousness, peace and joy in the Holy Ghost and this is not given to the unholy. Christ will come to you giving you his own consolation, if you prepare him a worthy mansion within. All His glory and honor are for within, and there it pleaseth Him to dwell. He who frequently entertains Christ will have sweet discourse with Him, comfort and consolation, much peace, a friendship too wonderful for the heart of man to have conceived. *Thomas à Kempis*.

UNDoubtedly the after half of life is the best working time. Beautiful is youth's enthusiasm and grand are its achievements, but the most solid and permanent good is done the persistent strength and wide experience of middle life. Contentment rarely comes then; not mere resignation, a passive acquiescence in what cannot be removed, but a true contentment.—*Dinah M. Craik*.

The State of the Church.

The Methodist Bishop R. S. Foster thus denotes the decline of spiritual life in his church:—

"The Church of God is to-day courting the world. Its members are trying to bring it down to the level of the ungodly. The ball, theatre, nude and lewd art, social luxuries, with all their loose moralities, are making roads into the sacred inclosure of the church, and as a satisfaction for all this worldliness, Christians are making a great deal of Lent, and Easter and Good Friday, and church ornamentalions. It is the old trick of San. The Jewish Church struck on that rock, the Romish church was wrecked on the same, and the Protestant Church is fast reaching the same doom.

Our great dangers as we see them, are assimilation to the world, neglect of the poor, substitution of the form for the fact of godliness, abandonment of discipline, a hireling ministry, an impure gospel, which summed up in a fashionable church. That Methodists should be liable to such an outcome, and that there should be signs of it in a hundred years from the "sail loft," seems almost the miracle of history; but who that looks about him today can fail to see the fact?

Do not Methodists, in violation of God's law and their own discipline, dress as extravagantly and as fashionably as any other class? Do not the ladies and often the wives and daughters of the ministry, put on "gold and pearls and costly array?" Would not the dress insisted upon by John Wesley, Bishop Asbury, and worn by Hester Annagers, Lady Huntingdon and many others, be distinguished, be now regarded in Methodist circles as fanaticism? Can anyone living in a Methodist Church in any of our great cities distinguish the attire of the communicants from that of the theatre and ball-ers?

Is not worldliness seen in the music? Elaborately dressed and ornamented choirs, who in many cases make no profession of religion and often sneering skeptics, go through a cold, stilted, or operatic performance, which is as much in harmony with spiritual worship as opera or theatre. Under such worldly performances spirituality is frozen to death. Formerly every Methodist attended "class" and gave testimony of experimental religion. Now the class-meeting is attended by very few, and in many churches abandoned. Select the stewards, trustees and leaders of the church attend class. Formerly, nearly every Methodist prayed, testified or exhorted in every meeting. Now but very few are heard. Formerly shouts and praises were heard, now the demonstration of holy enthusiasm and joy are regarded as fanaticism.

Worldly socials, fairs, festivals, concerts, and such like, have taken the place of the religious gatherings, revival meetings, class and every-meetings of earlier days.

How true that the Methodist discipline is a dead letter. Its rules forbid the wearing of gold or pearls, or costly array; yet no one ever thinks of disciplining its members for violating them. They forbid the reading of books and the taking of such diversions as do not minister to godliness, yet the church itself goes to shows, and frolics and

festivals and fairs, which destroy the spiritual life of the young as well as the old. The extent to which this is now carried on is appalling. The spiritual death it carries in its train will only be known when the millions it has swept into hell stand before the judgment.

The early Methodist ministers went forth to sacrifice and suffer for Christ. They sought not places of ease and affluence, but of privation and suffering. They gloried not in their big salaries, fine parsonages and refined congregations, but in the souls that had been won for Jesus. Oh how changed! A hireling ministry will be a feeble, a timid, a truckling, a time-serving ministry, without faith, endurance and holy power. Methodism formerly dealt in the great central truth. Now the pulpits deal largely in generalities, and in popular lectures. The glorious doctrine of Entire Sanctification is rarely heard and seldom witnessed to in the pulpits.

The Railroad as a Civilizer.

Sir Guilford Molesworth has expressed the following opinion concerning the effect of the railway in the development of this great country: "In East Africa the railway takes the place of roads, which are practically valueless owing to the absence of water and the mortality in transport animals.

"It must be borne in mind that the construction of a railway in a new country often develops traffic from entirely unexpected sources, more especially by checking lawlessness, which might previously put a stop to small trading.

"As one of the numerous cases which has come under my own official experience I would instance the Rajputana railway. This was made for political purposes, and was never expected to pay its working expenses; yet, by enabling the petty trader to pass through the various small states without ruinous blackmail, which had previously put a stop to all enterprise, it immediately after opening, stimulated traffic which made the railway a complete success financially, as well as politically.

"Broken up as East Africa is into various petty tribes perpetually at war with one another, it has been hitherto impossible to carry on any trade, except by means of large and well armed caravans, and even then at great risk. Some tribes have subsisted to a great extent on plunder from their weaker neighbors, so that there has been no stimulus to the more peaceable to produce anything beyond the smaller requirements of their own tribe.

"With the completion of the railway, the whole lake coastline of eight hundred to one thousand miles, with the adjoining fertile and populous districts will be opened up by water communication to railway traffic. And as the Uganda railway will be the first to tap the lake, the trade of these districts will naturally gravitate into this channel."—F. W. Emmet, in the *Engineering Magazine*.

The warlike attitude of the nations is indeed deplorable, and bears sad evidence, that there is much in the world of so-called Christianity, that is not of Christ, and remains to be destroyed by that stone that was cut out of the mountain without hands, which destroyed all else that came in opposition to it, and became a great mountain and filled the whole earth.—*Kansas Epistle*.

MY YOUTH AND MY AGE.

Days of my youth, ye have glided,
Hairs of my youth ye are frosted and gray;
Eyes of my youth, your keen sight is no more;
Cheeks of my youth, you are furrowed all o'er;
Strength of my youth, all your vigor is gone!
Thoughts of my youth, your gay visions have flown.

Days of my youth, I wish not your recall,
Hour of my youth, I'm content you should fall;
Eyes of my youth, ye much evil have seen,
Cheek of my youth, bathed in tears ye have been;
Thoughts of my youth, ye have led me astray,
Strength of my youth, why lament thy decay?

Days of my age, yet will shortly be passed,
Pains of my age, yet awhile ye can last;
Joys of my age, in true wisdom delight;
Eyes of my age, be religion your light;
Thoughts of my age, dread ye not the cold sod;
Hopes of my age, be ye fixed on your God.

NO MORE SEA.

BY F. C. T.

The wrecks that strew life's strand with desolation,
Upon that distant shore shall never be,
No watching eye shall ache with expectation,
"There shall be no more sea."

No ships shall sail into the rosy distance,
With snowy sail, and pennons floating free,
To come back worn and scarred by sharp resistance;
"There shall be no more sea."

No thickening fog, dark cloud, nor fierce wind blowing,
No shifting sands, where treacherous depths may be;
No changeful tides, with ebbing and with flowing,
"There shall be no more sea."

Oh hearts, sore tried with earthly change and losses,
Look forward! to "the land where you would be,"
Where crowns of joy replace these heavy crosses,
And there is "no more sea."

EACH time has its burden, and that which may justly work our weariness, yet infancy lengthen after youth, and youth after more age; and he that is very old, as he is a child for simplicity, so he would be for years. I account old age the best of the three; partly for that it hath passed through the folly and disorders of the others, partly for that the inconveniences of this are but bodily, with a bettered state of the mind; and partly for that it is nearest to dissolution.—*Joseph Hall*.

THOUGHT HE WAS DRIVING.—A father and his little son were once riding along a familiar road with a gentle horse. To gratify the child the father placed the reins in his hands, but at the same time, unseen, retained his own hold upon them. As they rode on they saw approaching them at a terrific speed a runaway team. The danger was great and imminent. But the father guided his horse so that a collision was avoided and the danger escaped.

When all was over the little son looked at his father, and with choked utterance said, "I thought I was driving, but I wasn't; was I, papa?"

So often does the child of God, when some peril has been escaped or deliverance has been vouchsafed in ways unseen and unthought of, have occasion to say, "Father, I thought I was driving, but I wasn't."—*Zion's Watchman*.

Some Brief Extracts From a Manuscript.

LIFE OF BENJAMIN KITE.

(Concluded from page 85.)

That Anne Edwards had some foreboding of what was impending, appears from her remarking, when it was proposed she should take more money with her. "It will only help to drown me if I get in the river." Also it is said that Esther Collins, who was sitting on the front seat, had shortly before requested Anne Stokes to change places with her. Thus she who doubtless was fittest for the heavenly garner was taken, and the other left. As in the case of a vessel which in a storm was being drawn upon the rocks, a little lad was heard praying, "That only the ripest might be taken" and it doubtless was so, for he only lost his life. During the summer of 1821 there was a long, dry spell, in which vegetation suffered much, prayers had been made by the "clergy" for rain. This was followed by a severe storm causing much damage. Of this Rebecca Kite writes to her brother, John Letchworth, and he replies, "How much did they pray for? Was it to come down in gentle showers with the sun shining between, or in a continual downpour? . . . Shall we continue to have our affections so set upon temporal blessings,—be so perverse as to endeavor to put the unslumbering Shepherd of Israel in mind of his duty? Him who ever has sent and as we rightly put our trust in Him ever will send rain in due season."

There is an Oriental tale of two Anchorites to each of whom was given a fine young olive tree. One planted his and, when he thought it needed rain, he prayed for rain and it came. When he thought it would be better for the warm sunshine he got that for it; and so of the cool bracing wind. But for all that his tree died. Visiting his brother hermit he found his tree flourishing vigorously. "How had he managed it?" "He had planted it and commended it to Allah to give what it needed." And yet it is still true that the effectual, fervent prayer of a righteous man availeth much and may in many ways.

As an illustration of John Letchworth's sometimes pleasantry I quote from a letter: "Dear Brother—As I have attended an astronomical lecture, a lecture on mineralogy,—viewed an orrery and seen the Schynkill water-works, I may be supposed to be a philosopher, all but. This "but" is sometimes a very important word and is so in the present instance. I find I know but little, very little indeed. To increase one's knowledge I know no better way than to ask questions and be attentive to the answers. Do plants breathe? Perhaps it may not be amiss to state my reason for this inquiry. On coming from the city I remarked to a neighbor how well our grain fields were covered with snow compared with those about Chester. He said it was not the right kind; there was an icy crust which sometimes smothered the wheat, etc. Reflecting on this the aforesaid query was suggested. This I submit to thy superior wisdom, not doubting that with thy charity thou will pass by my ignorance and give me thy opinion." . . . R. Kite thus answers: . . . "It seems that notwithstanding thy many advantages, the mortifying truth forces itself upon thee that thou knowest but little—very little. Very well, if thou hadst taken up the

contrary opinion I should have had small hope of thee, for

"Who thinks himself already wise,

Of course, all further knowledge will despise."

"Do plants breathe? Though we may not understand how, yet I have no doubt that they do, at least, air is as necessary for their life as it is for ours. But as to the suppositions that an icy crust will be injurious, I have no idea that it is correct, and I have never seen the grain look better than when it had been covered for a month or more with so hard a crust that we could walk upon it. Interstices sufficient to admit air will always be found." . . .

As sometime during the year 1823 J. Letchworth, feeling himself much relieved from service at Fallowfield, removed to Philadelphia, so his correspondence ceases. He had not been called to travel extensively and appears to have passed the remaining twenty years of his life quietly in that city, taking his part in the troubles of that exercising time. One incident may be thus briefly told as a fitting close to this meagre account of a worthy and—though in an humble way—favored instrument. A Friend having purchased a lot of land in the southern part of the city, borrowed \$5,000 to improve it with. Before he was enabled to realize anything on it the troubles connected with President Jackson's veto of the U. S. Bank charter causing a panic, this money was suddenly demanded of him. He was greatly distressed, apparent ruin staring him in the face, at a forced sale, and he had no other way of raising the amount, the improved property would not bring enough to pay the incumbrance. He could not accuse himself of having acted rashly. The property was valuable, but a state of the money market had arisen that could not be foreseen. Of this money \$3,000 had been borrowed of an individual, \$2,000 of an insurance company. Both demands reached him in one day, and the measure of his distress was full. At meeting that day J. Letchworth arose with a message of consolation for some one, and held forth this language: "Do not be cast down. The money will come before thou needs it." The Friend felt much relieved and yet a disposition prevailed to put off to some one else what had been said. Going at the appointed time to the office where his principal creditor's business was done to see if the evil day could be put off and inquiring for his creditor, he was met with this remark: "He sailed to-day for Europe. We know you owe him money, but as he left no word about it, you may take your own time in paying it." So far it was well, but he knew the other must be paid. As he walked musingly along, the late Thos. Stewardson met and addressed him abruptly thus: "Dost thou want to borrow two thousand dollars?" Thus the worthy Friend was saved from financial ruin.

The correspondence of B. Kite during the ensuing ten years is rather voluminous, but it is as might be expected, much filled with the difficulties attendant upon the spread of un-sound sentiment over which I think it best to draw a veil. Some extracts, however, from the last letter received from his life-long friend and correspondent, John Heald, may be given: "I received two letters from thee

that I am thankful for. I do not expect to write much, my inability is too great. You are dear friends whom I look back to with affectionate remembrance. The precious feeling I am permitted to enjoy when remembering, some who I am not likely again to meet is mutability is comfortable. . . . When John the divine saw a Lamb standing on Mount Zion, there were many thousands with Him who had come out of great tribulation. He had known a preparation to stand with thorns in their hands and we ought to know being redeemed and prepared to stand in the place allotted us. . . . My scribble must close my course draws towards its end. Infirmities attend, bodily ability fails. I am not in haste to go, nor crave to stay long. My employ has been in little things. When the time comes may I be ready, having done and sundered my allotted portion. 'It is done!' This when applied to life, how solemn! I would willingly send sincere love and good will to you, my dear friends, as this is likely the last time I shall write. May that love which is pure be yours to enjoy. Fare ye well, if I should prove a long and last farewell. This is far past, the long home is at hand. There seems to be great need of healing in our Society. When will our defilement cease? We have need to do our firm works. We have need to repent. What more could have been done for us to recover the hurts, the bruises, the putrifying sores? I thought years ago that I should have been in another state of being before this. Still here I am. An uncertain stay, but sure to go. May the Divine will be done." . . .

My MS. continues somewhat as follows: "Benjamin Kite continued to the last to take a deep interest in everything that concerned our religious Society and was never absent from meetings where he could possibly attend. In these he was an example of reverent waiting. No symptoms of drowsiness were ever apparent upon him. He was often much affected in reading the Scriptures and gave evidence that his religious faculties continued in lively exercise. In the Seventh Month 1838, he was disabled by a fall, from taking his usual exercise, on which his appetite failed. Thus without marked sickness and with little pain he weakened from day to day. To one of his sons he said, "Though I enter the valley of the shadow of death, with awe yet it is not with fear." Thus in serene and holy trust the hours of his earthly life wasted slowly away. When the last sigh was over and the spirit liberated from its frail tabernacle, to partake of the inheritance (redeemed, in the quietude of holy feeling the spirit of supplication and thanksgiving came upon us, and was openly poured forth) He was nearly eighty-five years of age.

I close with two versified—I will not say poetical—tributes. His son Joseph says in the "Arm Chair."

"Ye who by being gave, ye too have flown
To join the ransomed round the eternal Throne.
The venerable sire, as death drew near,
Saw the vale awful, but devoid of fear.
Before thee, mother, rose a brilliant path,
For thee thy Saviour had no look of wrath;
Oh, ye had owned him long and at the last
His arm supported, as ye Jordan passed."

The other (by my father) is more pretentious:—

old arm chair, I sing, but not to prove
as title to the muses' love,
yet an envious spirit to display
ing praise for that greets a brother's lay.
From far off come the motive springs—
wife requests it and the husband sings—
for me five and twenty years has given
love, her labor, everything but heaven,
e in trust to keep till time shall fade,
and this tribute, and it must be paid.

old arm chair, twin with that honored seat,
re as a brother sang, in calm retreat
scented worthies sat at even tide,
spoke of Him who for a lost world died;
s thine to grow beneath his skillful arm
left his workshop 'midst the wild alarm,
re yellow fever's burning breath was sent
d our town her coward deeds repent.
left it not with coward feet to fly,
thousand others fearing but to die.
called by duty's voice, he sought to give
suffering victims aid, to bid them live.
when death's work was done, by pity led,
igned their relics to earth's narrow bed.
of the few he who stood between
iving and the dead, with placid mien;
to die, if death their warrants bore,
ent to live, if earth required them more.

ar fifty varying years have passed away,
s first that yellow scourge sought here its prey,
of that noble hand to memory dear,
stchworth and a Wistar still are here.
oman senate would a civic crown
to ease him, in token of renown,
Philadelphia gave a deed of praise
eased on parchment, thus her debt she pays.
have I seen those marks by fingers made,
ing with varnish, on the parchment laid.
in Letchworth took the scroll and stood to bear
governor's praises sounded in his ear.
'twas no hope of human praise that led
Footsteps near contagion's sickly bed,
as his meat to do his Maker's will,
as his drink to do his bidding still.
In blessed with strength he preached that Sav-
iour's love,
ch now in weakness it is his to prove.
lengthened day of labor nearly o'er,
waits his summons to the heavenly shore,
re is for him who Jesus' love has shared
anion in his Father's house prepared.

old arm chair, thou for a friend was wrought,
ore than friend, brother in word in thought,
my father, guiltless was his heart;
Mary, too, he chose the better part,
though he was not called to preach the Word,
dignified joins still bore the gospel sword.
feet were shod with peace, and o'er his head
heavenly canopy was oftentimes spread.
s score and four the years to him were given.
ank to sleep on earth to wake in heaven.
ow have I known whom sympathy has led
t beside the sick man's bed,
he my mother, many a midnight hour
e some sick man's couch. With magic power
hand was felt, her gentle hand was known
as the sufferer's pangs, to soothe his moan,
atch with skillful eye the time to give
healing balm, that bids the sick man live.
s vigils o'er, her daily labor done,
ight to the gates of day, the setting sun;
in too, this evening hour, devoid of care
mother nodding in this old arm chair.
mother! Ah, that name recalls to mind,
that we ask or wish in parent kind.
s was the form that stood erect to meet
the dark waves that broke around her feet.
s her the heart that meekly bowed to hear
that her heavenly Father gave to share.
s too, to find when outward sight grew dim,
lamp of truth replenished still by Him

Who sells the oil, that each wise virgin's flame
Might not go out before the Bridgroom came.
He came; 't he found her waiting with the last,
Ready to enter the marriage feast.
So died my mother, what of hers I share,
I value not the least her old arm chair."

NOTE.—We had (and in it I am now sitting) an arm
chair made by John Letchworth for my grandfather in
1792; and so when the Arm Chair was published, my
mother said to my father, "Now thee must write a verse
on our chair." The above is the result.

J. K.

The Gophers.

In *St. Nicholas* we find a description of a
little underground worker, whose habits are
not widely known.

Gophers had no lovable traits to strongly
attract us. At least, when untamed, they are
very vicious. When caught in traps they
fight with astonishing ferocity, biting the
steel so fiercely as to break off their teeth.
They can easily bite through a shoe, and will
attack a foe with utmost fury, never manifest-
ing fear in a fight. The fierce little animals
can lay no claim to beauty except in the per-
fect fitness to the life they lead, for there is
no grace of form, nor pleasing contrast of col-
ors. However, their coats of fine hair har-
monize in color with the soil, and are so
smooth and glossy as to repel the dirt, which
keeps the animals bright and clean.

In making the underground tunnels, a gop-
her uses its front teeth as a pick to loosen
the soil, which it throws back by the front
feet. Occasionally the little digger turns in
its burrow and places the palms of its "hands"
under its chin and pushes the accumulated
loose earth out, thus forming a little "gopher
hill." It adds to the burrows year by year,
one animal digging as much as a mile in
length of the crooked tunnels. The eyes of a
gopher are small and the sight is not very
keen. The large teeth grow so long as ac-
tually to prevent shutting the mouth, thus ad-
ding greatly to the unattractive appearance.

On each side of the mouth is a big hairy
pocket that is used for carrying food. As
you all know, squirrels can take food in their
mouths and with their tongues push it out
between their teeth into elastic pouches as
boys put marbles in their cheeks. But with
the gopher the pouch opens from the outside
and extends back to the shoulders. In empty-
ing these pouches the animal brings its fore-
feet along the side of its head to the rear of
the pouch, and then the "hands" are pressed
firmly against the head and carried rapidly
forward, thus squeezing out on the ground the
contents of leaves, stems and roots, to be
eaten at leisure. Sometimes several such
strokes are necessary, "like a boy playing a
jews'-harp," as the young folks would describe
it, except that both hands are used in the for-
ward strokes.

Gophers have never been known to drink.
Evidently no water is needed other than
that contained in the plants that are eaten.
If a gopher is captured when very young it
may become tame and gentle.

We have been repeatedly admonished to at-
tend to our intimations of duty in small
things, that we may receive strength and
ability to perform the more extended service
that may be made manifest to us.—*Western to
New England Y. M.*

Peculiar Times.

Selected.

We often hear it said, the times in which
we live are peculiar; without sufficiently con-
sidering that in every age of the Church there
have been afflictions deemed peculiar by those
on whom they fell; therefore the Apostle
Peter says, "Beloved, think it not strange
concerning the fiery trial which is to try you,
as though some strange thing happened unto
you." What are our sufferings when com-
pared to those of the first followers of Christ?
They endured a great fight of afflictions; and
how? Not by giving way to gloomy fears,
uttering doleful complaints, or casting re-
proaches one upon another. They put on
"the breastplate of faith and of love, and for
a helmet the hope of salvation," and nobly
pressed toward the mark for the prize of their
high calling; and surely it is with the same
heavenly armor we must be equipped if we
would maintain our posts as good soldiers of
Christ Jesus. Let us not then pore over each
others errors, but rather seek for more of
that grace which will enable us to detect our
own. I think I never felt more strongly than at
present the necessity for all who seek the
welfare of our Society to endeavor to follow
diligently their individual path of duty, as it
may be clearly made known to them, looking
as little as possible to the right hand or to
the left. Oh for a single eye and a simple
heart! but how deficient am I herein! We
know who it is that hath said, "If therefore
thine eye be single thy whole body shall be
full of light." With change of place our
circumstances vary; and, if exempted from
some trials that have formerly attended our
path, it is to be expected new ones will arise
and the enemy also will change his tempta-
tions and adopt fresh methods of assault.
This life is to the Christian the scene of his
warfare, not of his rest. Self may be fed by
recounting our trials, which we are apt to
dwell upon. If they spring in any measure
from our attachment to what appears to us
important principles, we are in danger of con-
sidering all our disquiet as sufferings for the
Truth's sake; whereas they may be partly pro-
duced by our indulgence of an unchristian dis-
position or by the prevalence of unfortified
self-love. In this way we may increase our
discouragement; whilst an endeavor to num-
ber our blessings and stir up the mind to a
grateful remembrance of the Lord's mercies
is both animating and humbling. Oh, how
craftily does the adversary work! represent-
ing that as all important to one which, with
equal success, he exhibits to another as of no
importance at all. He cares not in what di-
rection we wander if he can but turn us out
of the straight path and rob us of that peace
sought in simply following our heavenly Lead-
er in the obedience of faith. It is true there
are discouragements enough,—such a mass of
opinions and inconsistencies amongst men that
we might well sink at the view, were it not
for that consoling and strengthening assurance
of the Lord Jesus, that his sheep shall know
his voice, and that He will give them such a
discriminating knowledge of it as shall enable
them to distinguish it from the voice of the
stranger. It is the policy of the enemy to
raise a clamor, that men may not hear or at-
tend to this gentle inspeaking voice. He

knows how to take every advantage, and perhaps is now seeking to hinder the progress and to lessen the usefulness of some in our Society by unduly casting them down.

MARIA FOX.

The Discipline of the Sick Room.

While every important experience in life has its permanent effect on the character, perhaps the results of a period of severe illness are more marked than any other. One always comes forth a different being from the person that lay down in pain and prostration. The sick bed is God's crucible, especially we believe for God's children. Such are raised up with less dross and with clearer shining gold.

A remarkable instance of the Lord's dealings with one of his children in the method indicated, has been a subject of careful study of late to the writer. It has given new views of the comfort of the presence of the Saviour by the bedside, in full accord with the promise of Psalm xli: 3. It also intensifies the necessity of being prepared beforehand, in getting right with God for the solemn hour when repentance and trust may seemingly be too long delayed.

A friend has lain for weeks very ill with pneumonia, following an attack of la grippe. For two weeks the fever raged with this peculiar effect. Where ordinarily the mind is clouded or delirious, in this case it was most intensely clear, thoughtful, active. Not a suspicion of delirium, but just the opposite. The whole past life came up in review. Acts, words, scenes, everything that had long been forgotten, were beheld as if of yesterday. The memory was a recovered palimpsest that gave out clearly all the hidden past.

The sick man was one who had years ago made his peace with God through Jesus Christ, and while once a great sinner, had for a long period been an active worker for the Saviour. In this vision of the past, every sin of his life stood out. They were all there, of whatever kind, not one missing. But, thanks be to God, between them and him stood the Lord Jesus, with outstretched arms and a smiling face, yet clear, transparent, beautiful. The sins were seen, but Christ was this side of them all, and they were all behind the Saviour's back. He looked at the multitude of sins boldly. They gave him no atom of fear or pain, for they were all seen through the glorified body of a living Saviour. The good that he had been able to do did not appear. But in place thereof came an impression of heaven. Here on earth the sins appear; but there shall you find some laid up treasure. Wait for it patiently. While my friend cannot say that the Saviour spoke audibly to him in this vision, yet an overpowering impression rested upon him of gratitude that he had made his peace with God long ago, for now it would be too late. And he comes forth from his sick chamber determined to warn men as never before to get right with God, before it is too late. The bed of pain is a poor couch for an unrepentant sinner.

After this vision of ineffable comfort had passed away came a solemn consideration of the question of living or dying. Was he to recover, or did this very vision mean that he was to be taken from earth? At first, all the

dread of death pressed upon him heavily. When one thinks of the lonely grave, and the decaying form, it is impossible to disassociate all from the horror of being torn away from life and home and friends. He began to pray agonizingly that he might live. But he did not pray thus for any length of time. Again the power of the Saviour's presence was felt, and the sick man was quiet, merely breathing forth again and again, "Not my will, but Thine be done, O Christ, my Lord and Saviour." All fear of death passed away; and he was ready to accept anything that the Master might deem best. This very condition of fearless rest on God's will, seemed to have much to do with his recovery.

One more phase of his experience is worth quoting. All his life he has been troubled with doubts about a future. Probably many of us can understand this. And now as he lay there with an intensely quickened mind, all the old doubts came up as he looked forth beyond the grave. He might die soon. Much connected with this illness seemed to indicate a near solution of the question: "Does death end all?" The old arguments, pro and con, were all rehearsed. But yet again, came the blessed influence of the Saviour; not to answer his queries in the slightest degree, seemingly, in any logical argumentative way, but still bringing great rest and peace in the thought that this tangled problem, like all others, can be rolled off on the Christ. If there is, or is not, a future according to man's conception, what matters it, as long as there is a Saviour in whom we can trust. If he stands between me and my sins in the past, I may know that he will stand between me and my doubts in the future.

My friend has come out into the world again. Not yet strong, or ready to take up life's work; but with the promise of recovery. He is a changed man, however. Life has a new meaning. The discipline of the sick room, with its visions as indicated, has made him something like Paul after he was caught up into the third heaven. The Saviour stands up to him in new and most precious relations. But one great impression he brings forth with him, to warn his fellow men to make their peace with God now; to urge every one to examine his foundation principles and be sure they are right with God before illness comes. He does not hesitate to say, that if he had not already settled those matters long before his illness, he could not have done it then. He may be mistaken; but I am inclined to think that this too was a revelation from God, who has sent him back to the world to warn, urge, entreat, while freely declaring that now is the accepted time, and now the day of salvation. He loves to tell with beaming face of two verses that brought inexpressible blessing and comfort to him while undergoing the above peculiar experience. One was Psalm xli: 1.

"I waited patiently for the Lord, and He inclined unto me and heard my cry." The other verse was from the pen of Harriet Beecher Stowe, in that exquisite poem beginning:

"Still, still with Thee when purple morning breaketh
When the bird waketh and the shadows flee;
Fairer than morning, lovelier than the daylight,
Dawns the sweet consciousness, I am with Thee."

LEAVENWORTH, KANSAS.

—Wm. N. Page in N. Y. Observer.

TEMPER AND TONGUE.—A London merchant had a dispute with a Quaker about a bill. The merchant said he would go to law about the Quaker tried all means to keep him from doing so. One morning the Quaker resolved to make a last attempt, and he called at the merchant's house and asked the servant if the master was at home. The merchant heard him and knowing his voice, called out from the stairs: "Tell that rascal I am not at home." The Quaker looking up at him, calmly said: "Well, friend, God grant thee a better mind." The merchant was struck with the meekness of the reply, and he looked in the disputed bill, and found that the Quaker was right and he was wrong. He called to see him, and after confessing his errors, said: "I have one question to ask you: How were you able so often to bear my abuse with patience?" "Friend," said the Quaker, "will tell thee. I had once as bad a temper thou hast; I knew that to yield to this temper was sinful, and I found that it was unwise. I noticed that men in a passion always spoke loud, and I thought that if I could control my voice, I should keep my passion. I have therefore made it a rule never to let my voice rise above a certain key, and by carefully observing this rule I have, by God's help, mastered my temper."—Selected.

MY FIRST BOOK IN TANNESE.—An memorable event was the printing of my first book in Tannese. Thomas Binnie, Esq., Glasgow, gave me a printing-press and a font type. Printing was one of the things I had never tried; but having now prepared a book to let in Tannese, I got my press into order and began fingering the type. But book-printing turned out to be, for me, a much more difficult affair than house-building has been. Yet by dogged perseverance I succeeded at last.

My biggest difficulty was how to arrange the page properly. After many failures I folded a piece of paper into the number leaves wanted, cut the corners, folding the back, and numbering them as they would when correctly placed in the book; then, folding all back without cutting up the sheet, found now by these numbers how to arrange the pages in the frame or chase for printing as indicated on each side. And do you think me foolish when I confess that I shouted in ecstasy of joy when the first sheet came from the press all correct? It was about 9 o'clock in the morning. I was the only white man then on the island, and all the natives had been fast asleep for hours; yet I lit a torch, pitched my hat into the air, and danced like a school-boy round and round that printing-press till I began to think, Am I losing my reason? Would it not be like a missionary to be up my knees adoring God for this first portion of his blessed Book ever printed in this new language?

Friend, bear with me, and believe me, that was as true worship as ever was David's dancing before the ark of his God. Nor that that I did not, over that first sheet of Holy Scripture ever printed in the Tannese tongue upon my knees too, and then, and every day since, plead with the mighty Lord to create the light and joy of his own Holy Bible in every dark heart and benighted home in Tanna.—John G. Paton.

It is unbelief that begs and cries, pleads and teases and yet will not receive in simplicity the gift in the outstretched hand of God. It is always receptive.

MANY unregenerated people are willing to admit that Christianity has brought out the best and best there is in humanity, but they do not seem to realize that this is due to the fact that something that is better than humanity has been the agency through which the best in man has been brought out, and that it is their duty as well as their privilege come personally under the benign, Divine energy that makes all things new.—*Zion's Watchman.*

Notes from Others.

God and man have linked the nations together and no nation can any longer be indifferent to any other. And as we are brought more and more in touch with each other, the less occasion is there for misunderstanding and the stronger the disposition, when we have differences, to adjust them in Court of Arbitration, which is the noblest form the settlement of international disputes.

Let us ever remember that our real interest is in concord, not conflict, and that our real enmities are in the victories of peace, not those of war.—*President McKinley's last public speech.*

The late Governor Newell, of New Jersey, has been called the father of the Government life-saving service on the coast. He witnessed a wreck on Jersey coast in 1839, when a dozen or more were lost, which could have been saved had there been means at hand to throw a rope to the wrecked vessel. This led to experiments by him in firing a cannon a ball which carried the end of a rope, when in Congress in 1848 he made a speech he subject and finally secured an appropriation for a Government service on a section of the New Jersey coast, which should apply this means of saving wrecked vessels. From that beginning grown the great life-saving service as it exists today. Dr. Newell was supported in this by Abraham Lincoln, among others, Lincoln occupying a room next to Newell's in the House and boarding the same place with him in Washington.

Lord Melbourne is said once to have remarked simply, after hearing a very strenuous and earnest sermon on Christian duty: "No one has a more respect for the Church than I have," but I think things have come to a pretty pass when religion is allowed to invade the sphere of private life.

Items Concerning the Society.

The correspondent of the *Manchester Guardian* writes: "John S. Rowntree has prepared—a what have cost him great labor—a very suggestive statistical summary of the condition of the Society Friends in Great Britain during the past forty years. And yet who could tabulate the influence of the Society? For though its membership is comparatively small, its influence for good is as spread as that of any of the larger Free Churches. What a distinguished Cambridge scholar had been one of his pupils said of the late up of Durham—"Oh, Westcott is almost a perfect 'applies to thousands who are outside that unity. Taken as a whole, the membership had been comparatively good progress during the forty years."

The "Quinquennial Conference" is due to be held in 1902, and a sufficient number of American Yearly Meetings having now adopted the new constitution and discipline, the "Five-years' Meeting" thereby entitled to be held at the same time and place as the Yearly Meetings which have adopted the

constitution and discipline appointing the same delegates to both bodies.

A fuller account of Eastern Quarterly Meeting as held at Rich Square, N. C., Eighth Month 31st, than the sketch recently noted, is desired to be found in these columns by a correspondent who, with others, bears witness to the unusual and remarkable favors of the occasion.

The more select meeting of the preceding day was larger than usual. In the solemn waiting on the Lord there seemed overspread a precious covering of his presence, under which the meeting was gathered in one accord. The gospel was preached with power, the doctrines and principles of the Society were clearly set forth, and much pertinent counsel and advice meted out,—so that we were reminded of the early rise of the Society when Truth reigned over all."

On the next day, though it was rainy, the large house was filled. The silence which seemed spread over the entire congregation was first broken in an earnest, weighty supplication that the Master of assemblies would be pleased to pour out his Spirit upon them; after which the vocal ministry was earnestly engaged in directing all to the grace of God that bringeth salvation and has appeared unto all men. There seemed to be an earnest desire with many to seek a closer walk with God.

Under the same precious covering the business of the meeting for Discipline was prayerfully taken up. Minutes were read for two women Friends, one a minister from Baltimore Yearly Meeting, accompanied by her husband, and one a minister from Contentnea Quarterly Meeting, N. C., accompanied by two of her children, who were accepted to the ministry.

From Piney Woods Monthly Meeting, fifty miles distant, there were about forty present, who had driven over a difficult way,—the largest attendance for many years from there. A Friend from that Monthly Meeting was recorded as a minister. A young Friend from another Quarterly Meeting expressed in a weighty manner his thankfulness for the privilege of attending another Friends' meeting, held after the long established manner of our religious Society; and he entreated the young Friends in particular to hold fast to those precious testimonies and principles which were so near and dear to our early Friends that they were made willing to sacrifice their lives rather than give them up. This earnest appeal, coming from a young man who for several years had been surrounded by the active innovations of the modern unsettling movement, made a deep and, it was hoped, lasting impression on members of this Quarterly Meeting who have not been so exposed to the unsound proceedings which had surrounded this young Friend.

The meetings on First-day were largely attended by Friends and those of other denominations. So impressive was the outpouring of the Spirit vouchsafed that many hearts were tendered, and tears bathed the cheeks of many in both meetings, as held at Rich Square and at Cedar Grove. It was at Rich Square and not at Cedar Grove (as stated in our first account) that H. T. Outland was engaged. Under the weight and power which carried home the ministry of older and younger, many in both meetings were convinced of the Truth. In the view of not a few of other denominations the meeting at Cedar Grove was unprecedented in its interest to them.

A prominent Friend of another Yearly Meeting, who is not in the custom of speaking in public, was so reached that he arose and declared in that meeting what the Lord in great mercy had done for him,—that he had lived for most of his days a good moral life, and thought that would do. But about ten years ago he was left all alone and was three days and three nights with God, and saw that beautiful city, the New Jerusalem, and a great company who had washed their robes and made them white in the blood of the Lamb, praising God,

"But I was not in that company, said he, "for I was not worthy, but was trailing on behind; and it was clearly shown me that the Lord would be merciful to me and give me more time, if I would serve Him, which I promised to do; and at the next meeting I requested to become a member with Friends."

This declaration made a deep impression on the congregation, among whom there were those who were living as this man had lived,—without God in the world. It was deemed by some that this day was like early days of our religious Society. But such seasons are not at our command.

On Ninth Month 13th, Joshua P. Smith and his brother William of Kansas (formerly of Iowa), arrived in the limits of Rich Square, N. C., in time to attend the funeral of our beloved aged Friend, William C. Outland, father of Henry T. Outland. He departed this life at his home residence, on Fifth-day, Ninth Month 12th, where the meeting was held, which proved to be a favored one. Several lively testimonies were delivered to the excellency of that grace by which this dear Friend had endeavored to be led and guided through a long life of usefulness. These dear visiting Friends attended the regular morning meeting at Rich Square. On First-day we had an appointed meeting at Cedar Grove in the afternoon, which was largely attended, and was a precious season. They remained in the neighborhood, making calls on Friends until Fourth-day, when they left for Piney Woods, Perquimans County, N. C. After finishing their service in this quarter they expect to attend Ohio and Western Yearly Meeting, if consistent with the Divine Will. They expressed much satisfaction in their visit South in mingling with their friends and brethren who are earnestly concerned to uphold and maintain those precious doctrines and testimonies held by our worthy forefathers in the Truth.

Correspondence.

In the edition of *The Friend*, issued Ninth Month 21st, our attention is drawn to the sad condition of the native children in Egypt and of the extraordinary number of blind adults. Having spent two weeks in Egypt in the spring of the year 1900, the writer was very much impressed with the prevalence of a dangerous type of Ophthalmia in Alexandria, Cairo, and the villages of the upper Nile. Various theories have been advanced for this sad condition of the eyes of the native population of Egypt. The brilliant light, and the reflection from the sand of the desert, the high winds, which at certain seasons of the year blow for three or four days, carrying sand in the air as if it were dust, the superstition of the native population, which prevent them from killing the flies, which abound in great numbers in Egypt, so much so that nearly all the tourists who ascend the Nile, both men and women, wear veils to protect them from these troublesome insects, and which undoubtedly carry the infection amongst the native population; the dirt, destitution and suffering of the lower classes from this cause can only be appreciated by those who have witnessed it. The establishment of an orphanage in Cairo for the blind, and for the destitute children suffering from these causes would be a most worthy charity, and I trust that sufficient funds may be procured to erect the buildings and to form an endowment for carrying on this work.

Very truly,

HENRY S. WILLIAMS.

SUMMARY OF EVENTS.

UNITED STATES.—A new political party has been formed in Pennsylvania called the Union party, which has chosen candidates intended to represent the best sentiment and highest purpose of the community. Its platform says: "The sole purpose of the Union party is to restore the administration of the affairs of our city and State to an honest, efficient and economical basis. The only issues at stake are those which concern the moral and material well-being of the community. The present campaign is

FRIENDS.

Lightly we bear the name of Friend

With passing thought ;

And but too dimly comprehend

"Tis with deep meaning fraught.

"Ye are my friends if ye obey,"

Thus saith our Lord ;

We must obey him day by day

In thought, in deed, in word.

Friends of our God ! If we aspire

His friends to be,

Our hearts with zeal must be afire

To serve Him loyally.

No base design or selfish thought

May enter there ;

This world's ambition must be brought

Under his watchful care.

Each other's friend, love's tie unites ;

Oh, how the bond is blessed !

He who would greatest be delights

Humbly to serve the rest,

In sweet accord we here must live

Before His face,

Because He died that He might give

To us his piteous grace.

And we are friends to all mankind

If friends at all ;

The sick, the needy, and the blind,

We must attend their call.

To every weary sin-sick heart

Our Lord his message sends ;

How short the time to do our part

If truly we are friends !

ONTARIO, Tenth Month, 1901.

"My soul, be on thy guard ;

Ten thousand foes arise ;

The hosts of sin are pressing hard

To draw thee from the skies.

"O watch, and fight, and pray :

The battle ne'er give o'er ;

Renew it boldly every day,

And help divine implore."

We look for inward peace,

Yet will not look within ;

We would have misery cease,

Yet will not cease from sin.

The Infallible Teacher.

The following letter has appeared in an evening paper of this city:

Was Christ divine ? Yes ; then He was an infallible teacher. When He died, He left an infallible guide after Him, who at all times would announce the doctrines which He himself would announce if on earth. What means did Christ adopt to convey his thoughts to future ages ? He trusted to speech. If He was not divine, He adopted the most foolish method imaginable ; for committing thoughts to writing is by far the more secure method of transmitting ideas. Speech is the only method used by Christ to transmit infallible doctrines. Who is authorized to speak infallibly ? Somebody, and that somebody is the representative of Christ on earth. Who is that somebody ? Whoever he is, every man calling himself a Christian is bound in conscience to discover. Christ himself was the infallible teacher up to the day of his ascension ; after that day, his infallible successor. Who is that successor ? He must, of necessity, be as evident to the Christian world to-day, as was the infallible teacher himself, when Christ walked the earth. If Christ did not leave an infallible successor, He was not divine, for He did the very foolish thing of not writing his doctrines and putting them in such clear language that misinterpretation could not honestly be given them. This argument shows the necessity for the existence of an infallible teacher on earth.

There is a sense in which these statements, rightly interpreted, may be accepted, till we come to one more sentence which is the writer's conclusion, namely, that "There is no middle ground between an infallible church and no church at all."

Here it is assumed that the infallible Teacher must, since the ascension, be an infallible visible church. We doubt the identity of the infallible Teacher and any group of men "having infirmity." Let us rejoice that we do have an infallible Teacher and that we imperfect beings, if yielding to be his pupils and members, are of the Church to which the living Christ "is Head over all things," and that the best teaching which we as his fallible assistant teachers are commissioned with is to turn men to that infallible Teacher, "who will teach his people Himself." As said the Apostle John to Christians in general of Christ's Spirit:—"The anointing which ye have received of Him abideth in you, and ye need not that any man teach you ; but as the same anointing teacheth you of all things, and is truth, and is no lie, and even as it hath taught you, ye shall abide in Him."

We agree that "Christ Himself was the infallible teacher up to the day of his ascension ; after that day, his infallible successor

was." Then we are asked, "Who was that successor?" Let Peter answer as to the value of the ascension in affording us a successor: "Therefore being by the right hand of God exalted, and having received of the Father the promise of the Ghost Spirit, he hath shed forth this, which ye now see and hear" (Acts ii: 33). The descent of his Spirit was and is the descent of his successor and vicegerent on earth, to "take of mine," as Christ said, "and show it unto you." "If I depart, I will send Him unto you. And when he is come He will prove the world of sin of righteousness and of judgment. . . . I have yet many things to say unto you but ye cannot bear them now. Howbeit when He the Spirit of Truth is come, He will guide you into all the truth" (John xvi: 7-14). The same apostle who records this "expedient" going away of our Lord from outward sight that He might return all the more intimately to us by his Spirit, confirms afterwards in his general epistle to all believers the fulfilment of the promise ; saying to little children, to young men, and to fathers, "We know that the Son of God is come, and hath given us an understanding that we may know Him that is true."

In short, we must believe that Christ, by his immediate Spirit, is his own successor ; that all who are actuated by his Spirit make up his Church, whether in an outward organization or not ; and that "if any man," in any church organization, "have not the Spirit of Christ, he is none of his;" that the Church, though commanded to teach with baptizing power, has no member authorized to baptize a soul into the Divine name while he is personally out from under that living power and spirit.

"Christ Jesus, the same yesterday, to-day, and forever" remains to be the spiritual life, power, and teacher of men, "the light that lighteth every man that cometh into the world," the "one Mediator between God and men." The risen Christ still quickens our hearts to burn within us as He walks with us by the way, and opens to us the Scriptures as being himself the Word of God. Ever since the promise was made, "To them that look for Him shall He come the second time," it should have been fulfilled to all who did truly look for Him. The failure of any to recognize his spiritual appearing as Christ in them, the hope of glory, does not annul the fact that He came and comes to them.

Is it for this that churches have gone into business,—to keep the living, infallible Teacher out of sight, that they may have in all things the pre-eminence, the authority, the agency in Divine things, and the fees? Man is a power-loving animal. He naturally rejoices to see spirits made subject unto him rather than that his name is written in heaven. But what a difference the professing church, under all denominations could have made on the face of the earth ere now, had its concern been, not to be a substitute for Christ on earth, but to refer every man to the witness for Truth in the inward life and motives; to the Lamb of God that comes to take away every secret sin of the world; to the inspeaking word as a dis-cerner of the thoughts and intents of the heart; to the lusting of the Spirit against the flesh; to the coming of Christ himself to each heart as its "one Mediator;" to the allowing of "nothing to come between the soul and God but Christ." If there was a season when this principle of Christ's direct light and life made a small Society a light in the world and a "city set on a hill," the sooner that season can be repeated the better for the salvation of our country and the christianizing of churches, our own outwardness not excepted.

Religious Specialization.

The following incident and the reflections upon it, delivered to the graduating class of Wellesley College last Sixth Month, seem to us to have a very pertinent lesson. The Society of Friends has stood with some measure of faithfulness, for a protest against the division between the religious and the secular. What is perhaps more important than this, or possibly the same thought from a different standpoint, the Society should have a positive testimony in favor of inbuing all that domain of life generally known as the secular with a religious spirit. Whatsoever we do should be to the glory of God. There is a tendency however, even with Friends in some places, to measure religious life by special religious movements, and to censure a membership that can not join in such movements. With the world of religious feeling turning to the pole of everyday Christianity as practised in the duties of the hour, let us see to it that we are not turned in the opposite direction.

The quotation enforcing this lesson is as follows:

My husband has but a narrow income. We are not able to keep a servant unless we spend all his income, and I think now is the time to lay by a little for our old age. My boys are at school, and I want to spend a little time with them, entering into their studies, giving them what little help I can, assuring them at least of my sympathy. When my husband comes home at night, he is tired out, and I really do not see what better thing I can do than to read to him, for his eyes are rather

weak. And so with the housekeeping and the children and the husband, I have no time left to serve the Lord.

The speaker's comment to the class upon this incident was in part as follows:

I think there are many such women and a few such men—more women than men, for the simple reason that women are more conscientious. You have gone through your college course. You are going out into life, and the temptation is to say to yourself, "Now I must do something to justify the expenditure which has been put upon my education; I must find some mission to accomplish, some place to fill, some deed to do, else the time and money spent in school and college will have been spent in vain." This is an honorable feeling, but it is a mistaken one. We are not put into life for a mission; we are not put into life to do great things. We are put into life to be made men and women, and to do the things which God has put into our hands to do, be they great or be they little. No person can do a great work who says to herself, "Go to, I will do a great work." Great work is not done in that way. All great work is spontaneous. Out of our character grows our life; we do as we are.

B.

CORRECTION.—In number 11 of the present volume, in the account of Benjamin Kite, a statement attributed to William Jackson should be attributed to John Parker, as may be seen by referring to "Biographical Sketches and Anecdotes of Friends," p. 376, where the subject is mentioned in detail.

Thomas Letchworth on Forgiveness and Conversion.

The poor publican had nothing to plead, no merit to recommend him; and therefore, under the contemplation of the infinite Majesty he was about to approach, he had not courage to lift up his hands towards the habitation of his holiness; but sighing said, "Lord, be merciful to me a sinner!" If we possess these penitential affections, we shall become objects of that mercy which our Lord and Saviour Jesus Christ exemplified in his ministry, in his character, in his crucifixion, in his resurrection, and ascension into glory. It is a faithful saying, and worthy of all acceptance, that Jesus Christ came into the world to save sinners; and we have all sinned and fallen short of the glory of God; and we have done the things we ought not to have done, and left undone the things we ought to have done. And such is the marvellous condescension of Him who inhabits eternity, that He sent forth his Son, not with a message of unrelenting vengeance, not to assign to fallen spirits a habitation in those realms where the worm shall never die and the fire shall never be quenched, but with the glorious and interesting message, that whosoever forsakes his sins shall be forgiven of his Father who is in heaven; and whosoever frames his life and manners, in consequence of it, with this penitential affection, he shall possess that inheritance which is unspeakably glorious; his sins shall be cancelled from the book of the Divine remembrance, and shall not stand against him in the judgment of the last day. If we confess our sins, God is faithful and just to forgive our sins.

I distinguish between the forgiveness of sins, and the conversion of our souls. The forgiveness of sins is purely owing to the mediation and intercession of Jesus Christ but the work of conversion requires and calls upon the object to be a co-worker with the influence of grace to purify the soul, and turn it, feet into the just man's path, which is as the shining light that shineth more and more unto the perfect day. Therefore, saith our Lord "My Father worketh, and I work." Work ye also.

"He came to his own, and his own received him not; but to as many as received him, gave he power to become the sons of God, even to as many as believed on his name." Therefore we experience the remission of sins through the forbearance of God; but the work of sanctification is not yet completed; the office of the Mediator is not only to procure for us the remission of sins past, but it is to correct those vices in our very souls which the gospel aid is laid to the root of, the corrupt tree in us the root of our corrupt affections; and till this has effectually done its office, we shall not be cleansed from all unrighteousness.—From "Public Declaration by Thomas Letchworth, 1780."

FOR "THE FRIEND."

Life.

One morning in the Ninth Month I was walking in our garden in Rose Valley, when young night heron ran off the path in front of me into the standing corn. About four o'clock of the same day a pack of boys like hounds chased the same bird about the garden. We saved the bird, however, and I took it home where it was found to be sorely wounded and nearly starved.

We thought best to feed the bird and let rest till after supper and then dress the wound.

When the poor bird was again examined was found to be so weak it could not stand up so our entire family gathered about to feed and sympathize with the heron. A little mill some raw egg, a little meat and water were gotten down after much patient coaxing. Dr. Caroline Smith then examined the wound and found that the upper leg was shattered to pieces by shot, little pieces of bone could be seen looking something like a broken match stick.

The condition of the limb made it necessary to cut the leg off. We talked it over, won't it be kindness to kill the bird or try and save it? Was not life dear to the bird? Had we any right to take away what we could not give? The leg was cut off, the best care we knew about was bestowed, but the bird died.

A gunner caused several days of severe pain to a useful and beautiful creature.

Flocks of birds are being shot into by gunners in all parts of our country to day, until torture is borne by wounded birds who slowly die.

The above incident has caused the writer to reflect upon the sacredness of all life. Friends have always borne a testimony against war largely because it was the taking of human life. Should we not again with "old time vigor" renew our testimony on this subject and at the same time include a protest against the needless taking of any life? This testimony would not be full round if it ended with a protest against the killing of the body only. It should include all those tendencies of our

which help kill or stunt or starve the soul and mind of our brother man, and everything at cheapens human life.

Behold a dead President, many dead Philipinos and Samoans, many men, women and children working long hours in unhealthy and moralizing surroundings. Do not these things recall us to our mission, respecting the credence of life? NATHAN KITE.

The Girl Who Cleaned the Steps.

Thomas Champness, in an address at Exeter Hall, while speaking of the young servant girls in the west end of London, said, "I am the son of a household servant. My mother was a London servant maid, and I love these poor women and poor farmer's daughters who come to London. We see mothers coming to the station to see them off, and we know something of what they feel. Early in my ministry a gentleman said of me, 'His teaching is only fit for servant maids.' I've learned this lesson, that if there are no servant girls in the congregation it is a poor arterly collection!"

"We find that a girl that comes from the country, knows when there is a preacher who is alive, and a congregation that can worship. 'You have thousands of young girls who are doing service in the West End, for whom you could care. They make some of the grandest women in the world. I am proud that my other was of that class. I want to tell you my story. I find folks remember my stories even when they forget my sermons. I do not want to go to books for them. I meet with them in my daily walks."

"Some years ago there was in the North of England a family of farmers well-to-do. They came down in the world, as many farmers have done in recent years. The sons emigrated, and the girl said she would not emigrate, she would go out and seek a situation; and she came not a governess, not a companion, but just a straightforward servant girl. This girl did a nobler thing to come and work in a town and earn wages as a servant girl, than to idle at home."

"One day when she was cleaning the steps in the back-lay came by. He saw this nice girl cleaning the steps, and he said, 'I will see you again.' So he managed to find out what place of worship she went to, and it turned out to be a Methodist chapel. So he said, 'I will see you there.' And when he went there for something he liked, he got something he did not like; he found out he was a sinner and needed a Saviour. He gave himself to Jesus Christ, and then he asked her if he might see and see her a bit. And so they 'made up'—you understand what I mean—they were married."

"He worked at his trade some time, and then he began saving money, till by and by he said, 'I will build a house for myself.' His ambition was to build a house fit to receive Methodist preachers. He built his house, and when it was finished he took his wife and children in a sort of little procession from the old home to the new. When they got to the new house, he said to his wife,

"Dost thou see those steps, Mary?"

"Ay, surely!" said she.

"Well, Mary, then was the steps thou cleaning when first I saw thee, lass,"

The master's house was pulled down, and I went to the auction and bought the steps. I said, 'When thee has a house of thy own those steps shall be in the front for thee to walk over.'

"And up these steps have walked Dr. Newton, Dr. Bunting, and the great and mighty men of the Methodist past."

"It is too long a story to tell now. Her son went into business with his father,—a smart Methodist lad, a local preacher, and he said one day to his father,

"We must not always be working like this; we must make some more money. Why should we not buy a clay field and make our own bricks?" The father said, 'Well,' and so he bought the field, and it turned out to be a field of gold. Some of the best bricks in England were made there. It made their fortunes, and the son of the woman who cleaned the steps when I saw him last, was living in a villa of his own, a rich man, and a great blessing to Methodism in his time."

A Discourse on Peace.

[By G. R. Mente, a native of Alsace, whose father was the last survivor of the guards of Napoleon Bonaparte. He was at the time of his death nearly one hundred years of age.]

All about us we hear of wars and rumors of war but the end is not yet. It does the soul good to turn away from these painful spectacles and think of that time when the sword shall be transformed into instruments useful for the peaceful pursuits of life.

We may dwell this morning on a word which opens the way of initiation into that great secret which constitutes the very foundation of a true Christian life; this word is "peace," whose soothing tones still the dismay of the heart and quiet the perturbations of the soul that listens to the voice and obeys the precepts of Him who said, "My Peace I give unto you." Let this Spirit of Peace take possession of our soul to-day, and our weary hearts and tired heads will find a resting place in the bosom of his love. The question uppermost in many minds is how to attain to this state of perfect rest and peace? While some seek to find it in the fading pleasures of the world, others are seeking their ideal in wealth or fame without being able to gratify their longings. Wanting to find a man of perfect peace I should not look for him among the people of great wealth, nor among the pleasure seekers of this world; but I should look for a man who has been in personal contact with Christ and has tasted the sublime essence of peace at the foot of the cross, resting in assurance of the same, because his mind is stayed on Christ, the great burden-bearer of the world.

A man of this class stands on the solid ground of conscious certainty respecting his salvation and hope, knowing of his acceptance into the Divine family, and conscious of the indwelling presence of God's Holy Spirit. Fear then gives way to spiritual freedom, and the dread of duty, haunting so many Christian lives, paralyzing the sensibilities of the soul, thus incapacitating the same for the full enjoyment of heavenly privileges here below, leaves the soul, changing crosses to delights, service into joy, and completely emancipating the soul from bondage. I sincerely believe

the chief reason why so many professing Christians hesitate to say, "My all is on the altar a living sacrifice to God," is a constant fear that they may have to say "Not my will but Thine be done." All this will be changed and the soul full of Divine peace adores God's sweet will, knowing full well that the Divine love of our Heavenly Father will choose for us only the things which are for our advancement in the spiritual life. The heart in possession of perfect peace is enabled, Divine grace upholding it, to live above the clouds and hardship on celestial altitudes of experience, although surrounded by pressing duties, cares and perplexities of this world. Thus by the power of the fulness of peace the soul not waiting for final dissolution may be lifted into experiences of tasting and living the heavenly life while still in the body. The soul thus animated sings out, "Oh, glorious, wondrous peace!" which enables us to know our heaven begun below." Each new sorrow should stir the longing, and each new conflict should make us glad to know that there exists a possibility of attaining to a state of peace.

THE KRAKATOA EARTHQUAKE.—The most terrible earthquake of modern times, that of 1883, in the straits of Sunda between Java and Sumatra, in which the island of Krakatoa was blown into space, has been very fully investigated by a committee sent out by the Royal Society of England. Their report has been published in a bulky volume of five hundred pages.

The cause of the explosion was the fact that for some time previously to Eighth Month 27th, 1883,—when the disaster took place,—the sea had been pouring into the craters of the volcano, and had thus chilled the lava, imprisoning the volcanic gases and a vast quantity of steam, and the pressure becoming greater, on the above date two-thirds of the island was blown into the air, and the remainder sank far under the sea. Myriads of tons of volcanic ashes, rocks and lava, combined with enormous volumes of steam, sea-water, and spray, were ejected to heights varying from twelve to twenty-three miles. These heights could be accurately calculated from the distances from which the phenomena were seen.

The earthquake wave swept over the whole of the neighboring regions, destroying many towns, and resulting in the death of 37,000 people. The coast line was altered. The sky was blackened for days. So terrifically powerful was the explosion, and into such minute particles did it divide the volcanic matter, that the air was charged with volcanic dust for many months after, during which time the sun and moon kept changing color, sometimes looking like silver and copper, and at other times being of a blue or green color. Indeed it was not until two years after, that this volcanic dust had entirely subsided. At sunset these peculiar phenomena could be seen until 1885.

The investigations of the Committee showed that the sound of the terrific explosion was heard three thousand miles away, and the agitation of the sea caused by it was carried right around the earth. The air-wave caused by the eruption was recorded at Greenwich fourteen hours after it took place.—*The Army.*

FOR "THE FRIEND."

"A GARDEN ENCLOSED" (Song of Solomon, iv: 12.)

Down in his enclosed garden
Gladdened by his smile
Walks He there among the lilies
Pure and free of guile.
Spices there and rarest perfumes
Poured out at his feet
Birds and blossoms intermingled,
Paying homage sweet.

Blow, thou south wind, on my garden,
Wake, wind of the north,
Let the sweet scent of the spices
Lure my Saviour forth;
Walk Thou, Jesus, in Thy garden;
Watch the tender vine,
Plenteous be within its borders,
Honey, milk and wine.

Every fruit of Holy Spirit
Plenteous there be found,
Every form of Love in fullness
Cause there to abound.
Drink, yea, drink, Oh my Beloved,
To thy heart's content.
Thine the fruitage of the garden
Only for thee meant.

All its fragrance, all its beauty
Spring, my Lord, from Thee.
Gladly shall heart's dearest treasures
Be poured back on Thee.
All for Thee, my Dove, my choice One,
Pure and undefiled,
Thou hast poured Thy heart's rich treasure
On Thy willing child.

EDGAR K. SELLEW.

EAST LONGMEADOW, MASS., NINTH MONTH 22, 1901.

AN EGG FOR EVOLUTIONISTS.—Frank Buckland, the naturalist, had very decided views in regard to the teachings of nature as the following will show:

"Birds that lay their eggs in holes have round eggs. There are, however, certain birds which incubate their eggs, without any nest at all, upon the ledges of rocks. In this position it is very possible that danger would occur to the egg by being accidentally moved by the parent bird, or maybe by the wind. If the egg were round it would very probably roll off the precipice, and falling to the bottom, be smashed.

"Let us now see how the difficult problem of the preservation of this egg is managed by creative wisdom. The egg of the guillemot, to take a good example, is not round, but elongated at one end. The consequence is, that when it is touched the egg will not roll away like a billiard ball, but it will simply turn round upon its axis.

"This peculiar structure can be seen, and the action of the force upon the egg illustrated by a very simple experiment. Take a common screw and place it near the edge of the table; touch it gently so as to set it in motion. You will observe that the screw, instead of running off the edge of the table will simply turn round on its small end—its own axis. I cannot conceive anything more beautiful than this arrangement of the eggs of birds which build on ledges of rocks, and which are very liable to destruction. This fact, will I think, afford excellent evidence if more witnesses were required, to show creative skill even in such simple things as birds' eggs."

William Penn's Movement Towards Pennsylvania.

We find the following sketch in the Boston Transcript:

"August 30th, 1682, William Penn embarked on the *Welcome* for America. In 1680 we find him moving to obtain from the crown a grant of the land in America which he was to call Pennsylvania. At first sight this might seem to be a rather sudden move on his part; but there is reason to believe that the project had been more or less in his mind for twenty years. His biographers have usually assigned to him the credit of originating this idea of establishing a Quaker colony. But the idea was not at all original with him, and if it originated with any one person it was with George Fox. Even the tract of land selected for the colony was not of Penn's choosing, for both Fox and the Quakers had had their attention directed towards it for a long time. Almost as soon as they were conscious of being a sect the Quakers had thought of establishing a refuge for themselves in the American wilderness. Suffering so severely from the laws made against them, it was natural that they should have this thought. The Puritans had gone out to Massachusetts, where they were having their own way, in religious matters, and the Roman Catholics, under the leadership of Lord Baltimore, had gone to Maryland. But where should the Quakers go? They must have a territory and colony of their own, for those of them who had gone to Massachusetts were being whipped at the cart's tail, and four of them were hung. . . . They did not care to go among the Churches in Virginia, nor among the Roman Catholics in Maryland, and the Dutch held New York.

"As early as the year 1650, certainly as early as 1656 or 1657, George Fox had fixed his thoughts on that great region which lay unoccupied just north of Maryland and behind New Jersey. . . . There was a Quaker in those days named Josiah Cole, who had already travelled in America and had been among the Indian tribes. Fox consulted with him, and when Cole made a second journey to America, in 1660, he was commissioned to treat with the Susquehanna Indians, who were supposed to be the red lords of that great space north of Maryland. Cole went among these Indians and told them his errand. But they were at war with other tribes, and William Fuller, a Maryland Quaker of much influence, who must be relied upon to make the purchase, was absent. Nothing could be done at that time. . . . Although nothing could be done, the subject was no doubt debated among the followers of Fox in England. . . .

"It was about this time that Penn received his first impulse towards the Quaker faith, from the preaching of Thomas Loe. The two great things of his life his religion and his colony were suggested to his mind at almost the same time, or at least within a year of each other, while he was a youth at college. The thought of starting life and religion afresh in the virgin forests of America would appeal strongly to Penn and carry him into enthusiasm. It must have touched him deeply when it first entered his young mind. He says it was an 'opening of joy.' But when his serious moral nature saw the vision of leading out a persecuted people to liberty and happiness,

delivering them from imprisonment, tithes an corruption, and establishing for them, far from contamination, the primitive religion of Christ we can understand why he describes it as 'a opening of joy.'

"It was a stupendous plan, an heroic gras for a whole world of light and truth by one who had been living for centuries in darkness for Penn was typical of his time: he was a voice of his time crying passionately, recklessly, for light after the long night of the Middle Ages. Men came to him at this time and said that they would organize a company and give him £6000 if he would give to them the monopoly of all the trade with the Indian in his province, but he refused it. 'As if Lord gave it (his province) me over all at great opposition. . . . I would not abuse his love, nor act unworthy of his providence, or so defile what came to me clean. No, let it Lord guide me by his wisdom and preserve me to honor his name and serve his truth as people, that an example and standard may be set up to the nations; there may be room there but none here.'

"He had peculiar opinions about the Indian opinions which were very peculiar in his time but shared with him by the Quakers. He accepted the law of that age, that Christians could take the land of heathen savages; but he added to it that the Christians must pay for every rod of the land, and in their trade and dealings with the Indians treat them with perfect fairness and honor. This idea scrupulously paying the Indians for their land was not original with him, but suggested, he tells us, by the bishop of London. It was easy enough to write or repeat a philanthropic proposition like this. Many have done so. But Penn lived up to it.

"At last, in the summer of 1682, a little more than a year after he had received his charter, he was ready to start for Pennsylvania. For his wife and children he left a letter farewell, which is the most beautiful thing ever wrote. He speaks with a reality a directness which seem to show that his nature was strongest and at its best when aroused tenderness and affection. From several passages in the letter one may infer that he had learned from experience that his tender side was also his weak side, and that he saw the danger of wasting one's energy in friendship 'Guard against encroaching friendships. Keep them at arm's ends; for it is giving away of power—age and self too, into the possession of another; and that which might seem engaged in the beginning may prove a yoke and burden too hard and heavy in the end. Wherefore keep dominion over thyself, and let thy children, good meetings, and friends be the pleasiest of thy life.'

"Another passage is of interest, not only for the natural way in which it is expressed, but because it gives us a glimpse of his wife the pretty Guli whom he had married with much love ten years before. 'Therefore hold and obey her, my dear children, as your mother and your father's love and delight; nay love her too, for she loved your father with a devoted and upright love, choosing him above all many suitors and though she be of a delicate constitution and noble spirit, yet she descended to the uttermost tenderness and care for you performing the plainest acts of service to you.'

your infancy, as a mother and a nurse, too, urge you before the Lord, honor and obey, and cherish, your dear mother.' From this letter we learn also that Penn at that time already in debt. He lived and his family and the public projects in which he was absorbed consumed more than a rather large income. So he begs his wife to save. 'Remember,' he says, 'thy father's example, when thy father's public needness had wasted his estate (which is case).'"—*Sydney George Fisher.*

"FOR THE FRIEND."

Precautions Against Anarchists.

An Anarchist is defined by Webster to be "who promotes disorder." In view of the sudden, distressing and unending attack upon President McKinley and, sad results, for which the whole nation mourns, the public mind naturally turns to the most feasible and legal means of preventing the recurrence of such distressing cases. This one differs in some respects from the two preceding ones on Presidents Johnson and Garfield, in that the poor, misguided man, without hesitation, avows himself an Anarchist, virtually a foreigner, whose object it is to destroy governments; what they do without one, does not appear. It is that more stringent naturalization are needed. There is no doubt however, a very close scrutiny on the part of the courts of our Courts before admitting immigrants to the right of citizenship should be exacted.

All Judges were to exercise the same close inquiry practised by Judge William Butler, or, whilst presiding over the United States District Court in Philadelphia, there would be less danger to be apprehended of this class of misguided men. During his legal career in that Court a man presented himself asking to be made a citizen of the United States. Judge Butler being a man of close observation had his suspicions aroused that this applicant belonged to a society whose avowed object is to overthrow all governments.

Usually, or frequently permitted the use of the Court to propound the proper questions to be asked applicants, but in this case he appears to have made the inquiries himself.

Nothing like the following in substance was asked: "Are you a member of any society? Yes, I belong to a benevolent society (such organization). Have you a copy of the Constitution of that society? No, not, but, but his friend who had come to see for his good character had. The Judge asked for it, and at his leisure carefully examined it, and found that this applicant, on being a member of that society, had taken upon him to use all his efforts to overthrow and destroy the government of the United States. On his appearance in Court the next morning, to learn the Judge's decision he was addressed by the Judge in language something like the following:

"I have examined the Constitution of the United States of which you admit yourself to be a member, and I find by that, you have bound yourself by oath to use all your efforts to overthrow and destroy this government. Now

you come here and propose to take an oath to support the government of the United States. I cannot permit you to perjure yourself—you may go." There were other instances of the same close scrutiny on the part of Judge Butler and to such extent as to bring upon him the censure of that class of men.

W. P. T.

Do a Little Work Well.

A gentleman seeking employment and assistance, writes a letter which it is a cross and a burden to read. It is scratched, and scrawled, and scribbled; it is hurried, and slovenly, and jumbled; the lines ascend and descend, and its whole aspect is that of carelessness haste, and disorder. And yet, this is not through ignorance or inexperience, for the writer is a graduate "with honors" of one of the most noted of English universities, and has been in respectable and responsible positions, and is intelligent and doubtless conscientious. What then is the cause of such an abominable scrawl as this, which in itself would be well-nigh sufficient to bar one's way and cause any application made to be received with disfavor? It is probably simply through haste, and such haste as hinders the proper performance of work which is undertaken. Such haste is wasteful. It results in turning out half finished and worthless work, and in causing careful men at a great expense of time and labor, to go over work, which, had it been properly done, they might have avoided to their great advantage. Is it any wonder that such men are unemployed?

It is an important lesson to learn that a little work done well is of more value than a large amount done in a slovenly, ill-adjusted, and half-finished manner. Probably thousands of people are out of work simply because everything they do needs to be done over again in order that it may be right. There are such marks of slovenliness and inaccuracy in all their doings that no prudent man would dare to accept what they had done without examination, or endorse their statements without verification. Such people do themselves great injustice, they are capable of much better work than they do; and the result is they lose positions which they might worthily fill if they would only use the careful diligence which is the prerequisite to all completeness and excellence.

Let the young especially learn the lesson of doing a little work well, so well that no one can find fault with it or with them. Let them, if they would avoid failure and disgrace, see to it that nothing leaves their hands until it is done as well as it is possible for them to do it. Then there may still be defects which only greater wisdom and greater experience can reveal, but they will not insult abler, more experienced, and intelligent persons, by asking them to correct errors which they themselves might easily have corrected if they had only taken ordinary pains to do this.

This slovenly haste betokens bad habits of thinking and acting, and a lack of that mental balance and composure without which no effective and permanent work for God can be wrought. A man who does his work in a hurried and slovenly manner, is likely to speak rashly, unwisely and carelessly, and this defect is likely to run through his entire nature, and

vitiates his life and all his actions. There is a deep meaning in that expression "he that believeth shall not make haste," and happy are the men who will not be hurried and driven out of their wits; who know how to let alone that which they are unable to accomplish; and whose work, wrought in God for time and for eternity, receives the Divine approval, and shall stand when the heaven and earth shall pass away.—*The Christian.*

The Mink:

If, in our walks we frequent the banks of small streams, or the ditches which drain the marshes, we may occasionally see a dark brown animal, about two feet long, with a slender body and a rather bushy tail, glide from behind a stone, under the bottom rail of a fence, from beneath the roots of a tree, or possibly from a hole in the bank, and then disappear—just where, we can never quite tell. This is a mink.

We may find that his body is perhaps twelve or fourteen inches in length, and his tail about seven or eight inches more.

His coat is dark brown on the back, and yellowish brown on the under parts, and probably we shall find a white patch on his chin, and a white stripe on his chest, between his front legs. The hair is of two kinds—a soft woolly fur, beneath, with longer and stiffer hairs interspersed. The latter, which are smooth and glossy almost conceal the finer hair below. Beginning with the head, we shall see that it is small, with a sharp nose, beady eyes, and short broad ears, almost concealed by the thick fur. The neck is long and much the same thickness as the body, the appearance of which is rather snake-like. The legs are short and sturdy, and the toes are connected by short webs, covered with hair both above and below.

How the small wild creatures fear the mink! And well they may, for he knows the flavor of them all. No animal save the white weasel is more bloodthirsty than he, and even the ermine, that prince of murderers, cannot capture his prey in the water. The mink is as much at home in the water as upon the land; swims and dives better than any other quadruped of his size, and the fact that he often dines upon trout, proves that fish are no match for him even when they are swimming for their lives. With incredible speed he pursues them through the water, under logs, and roots, and stones, twisting and turning as they attempt to double, and, finally victorious, he brings his prey out upon the shore to devour it.

But he often obtains food with much less trouble, for in the spring, when the suckers and alewives are running up into the shallow water in schools, all the mink has to do is to wait on the shore until they come near enough to be seized, or until some of them are crowded bodily out of the water. Then he often gets a chance to rob a human fisherman, and never fails to avail himself of it. Such opportunities arise when an angler, having caught a number of fish, leaves his "string" upon the bank, while he proceeds to whip another section of the stream. If there are minks about, his fish will be missing when he returns, and if he searches long enough he may find their partly eaten remains under

some overhanging bank, or beneath the half-submerged roots of a tree.

But the mink does not spend all his time fishing; he is one of the most skilful of hunters, and he makes the most of his ability. Like the ermine, he follows his game by scent, and generally kills it by cutting the main blood vessels of the neck with his teeth. His bill of fare is a long one, and includes rats and mice, squirrels, chipmunks, rabbits, muskrats, birds, birds' eggs, frogs, crawfish, and freshwater muskels. He is also a confirmed poultry thief and having a "narrow-gauge" body, he can enter the henhouse by a very small hole. But, he is said to his credit, he kills for food only; not for sheer love of slaughter, like his cousin the ermine; and where the latter will kill forty or fifty chickens in a night, one or two will usually satisfy the ambition of a mink. Ducks, both young and old, and fowls which drink from brooks and ponds, are particularly liable to attack; for their enemy studies their habits very closely, and the female mink often makes her nest near a stream at some point frequented by poultry. This nest may be among the rocks, in a hollow log, under the roots of a tree which overhangs the water; in a hole which the animal has made in the bank, or in the burrow of a muskrat which has been killed or driven away by the new occupant. From such a retreat she frequently rushes out to seize a hen or a duck for her little ones. When pursued she plunges into the water for safety. She can run very fast on land, however, moving at a gallop after the manner of her race. When shot in the water, she usually sinks, owing to the weight of her bones. She is very much smaller than the male, and this difference in size is said to be a provision of nature, where by the young are protected from their father, who were he not prevented by his greater size from entering the nest of the female would deliberately devour his own offspring.

In trapping the mink men have a double object—revenge for his depredations in the game preserves and poultry yards, and the gain to be acquired by the selling of a valuable fur. The skins are most valuable in the autumn and early winter; after that they rapidly decrease in value, and before spring they are practically worth nothing at all. There are several reasons for this. One is that the mink has a habit of pushing his way through small openings and narrow passages; by doing this he rubs down the hair on his shoulders, so as to spoil its appearance and lessen its value.

Mink skins range in price all the way from twenty-five cents to fifteen dollars apiece, according to their condition, the locality in which they were taken, and the popular demand for mink fur. This demand varies greatly, and skins which are worth from five to ten dollars apiece one year may not bring more than a dollar and a half the next. The best pelts come from cold countries such as Nova Scotia and Labrador, and, generally speaking, the darkest skins are the most valuable. Near the root of its tail the mink has a pair of glands which secrete a very disagreeable fetid odor, and this odor, greatly attenuated, often clings to the fur, even after the latter has been made up into garments.—*E. H. Baynes, in N. Bedford Standard.*

Nurse Maria's Story.

There are some trained English nurses in charge of our hospital in C—. One of them, while visiting at the minister's house one day, told us something of the cases that come under her care. She was a neat, alert woman, with sparkling black eyes set in a clean cut face; and in her close gray gown, white apron, and cap, gave one the idea of a swift machine.

"Do you ever read or pray with the poor creatures?" asked the minister.

"No," said Nurse Maria, "that is not my work. I have twenty-four beds, with night-watch until half-past four. Then I make up the ward, sponge and change my patients, make up twenty-four beds, and attend to twenty-four breakfasts. Four times a week I wash the floor. I have six hours for sleep, one for exercise, and am on duty at three P. M. I sometimes speak a good word to a patient when I can edge it in. But reading and prayer—that is somebody else's work," she replied, looking about her at us all.

"I used to wish sometimes," she said, "that some of my patients had such treatment. Now there was bed No. 36, in Casualty Ward. He was a newsboy—run over. I had him two months. Thursday is visitor's day, but he had no friends; nobody ever came. He had no pain to occupy his mind, either. "When it came to my watch, there was always 36 with his claw-like hands holding down the sheet, and his bright eyes watching me, go where I would. It was a dull life for the boy," she said meditatively. "Dull! yes; with nobody to speak to all day long. Medicine, beef-tea, milk—alternate, every two hours. Patients are not allowed to speak to each other.

"One day, as I gave him milk I tapped him on the cheek and laughed. Would you believe it? That boy trembled all over, and the drops of sweat came out on his face, he was so pleased. After that, when I came in the ward he'd watch me like a half-starved, caged animal, when it sees its food. You may be sure I never forgot to pat him, and joke a little. But he was moved into nurse Johanna's ward."

"Was she kind to him?" eagerly asked a lady who had lost a boy lately.

"A nurse who was not kind would soon be discharged. There never was a more skilful or faithful woman than Johanna; and for this reason she had more beds than any of the nurses. I am sure 36 got his milk and all regular, to the tick of the clock. But Johanna had no time for patting him or saying, 'Well, Bob! or the like.'"

She stopped as if the story was told.

"What became of the boy when he was discharged?" asked the lady, who had lost her son.

"When he?—Oh, you don't understand! There was no chance of the poor lad's recovery from the day of the accident. It was only a matter of time. I meant to go in and see him every day. But I actually had not a moment, and besides, nurses don't like interference, especially Johanna.

"One day she came to the office when I was there, and reported one dead. 'It is your 36,' she said to me.

"I asked her how he went, and she said, 'Quite quiet. He was always quiet. Never

had a word to say to me nor I to him. I wish they were all like him! He used to be waiting all the time, as if he expected somebody and when I came past the little fellow; now, he was lying, his eyes open, watch still. When I touched him, I found that he was dead."

"I went into her ward and there he was; lean little hands holding down the sheet by his chin, and his poor dead eyes still watch for something that never had come to him."

Nurse Maria's pleasant, sharp voice came a little. "I wish I had gone in sooner," said. "It was silly, but I tapped him on the cheek, and called, 'Why Bob! Bob!' But was too late."

The woman who was in mourning for a boy rose hastily to leave the room. But the door she turned and said vehemently, was not half a square from that hospitable idle and wishing God would send some work to do! And now the child is dead and she burst into tears.

"There are many others," said Nurse Maria quietly.—*The Earnest Worker.*

Who's Taking Notes?

"Hear, land o' cakes and brither Scots, From Maiden Kirk to Johnny Groats, If there's a hole in 'a' your coats,

I need you tent it;

A chiel's among ye ta'en notes,

And faith, he'll print it!"

It is said that no matter how well the grammar lessons may be learned at school, the children of parents who speak incorrectly with spite of better teachings, continue to speak incorrectly themselves if they keep on hearing defective language at home. We know that to be true. And so it proves with many people who go out from homes where careless and not refined little habits have been indulged in by parents or those who are in authority. A quick witted young man or woman, although perhaps, lean to avoid the crude or indelicate habit, but the world is a hard teacher, and but scant patience or excuse for what it deems should have been learned before launching forth for one's self into its broad and unsympathetic arena.

To our parents and housekeepers all, we would sound the old refrain, "do not forget that the 'chiel' who is in your midst is always silently taking notes, and if there is a hole in 'a' your coats," or, in other words, a faulty tone or habit being indulged in at home or at the table, if the child does not exactly print it, he will be pretty sure to reproduce it in some way, and perhaps all his life. It is a grand good thing to look upon the children as parrots. We are all more or less imitatively creatures of imitation. The remark has been made a hundred times. Acting upon this knowledge, should it not be regarded as a privilege to set up standards in the play place called Home, in hopes that the children and young people will take notice and follow the carefully set example.—*Christian Work.*

THE worthies in the rise of our religious society did not query, "What shall this land do?" but "Lord, what wilt thou have me to do?" This doing of his will is all that avail in this day.—*Ohio Women's Epistol to Canada Y. M.*

Truth as a Guide.

Truth is a favorite of the Scriptures and would be a word dear to all believers. It is very sacred word, for it is difficult and unnecessary to think of truth as an entity apart from the very being and character of God himself. God may not make truth, but God truth. Truth, when ascertained, must be a guiding principle of the career of a rational and immortal spirit. It must be structural life in all its organized forms. No soul can be happy that is out of harmony with the life of things. No earnest spirit can be indifferent to the truth, no candid soul will be "phrased in terms of common life, truth being describable as righteousness and rectitude. There are men about us whose characters are so just and holy that they are walking expositions of eternal things, by their very interpreting the ways of God to men. It is sad commentary upon the moral obliquity of mankind in general that such truth is actual, or personal righteousness, is so rare as an occasional remark when we see it, instead of being accepted as the rule which should be granted as the universal form of individual and social life. The need is for more heart-love for it, so that the heavenly light will be revealed so clearly and constantly in human lives that none can either resist its fact or refuse to yield to its winsome and persuasive call to like virtue, a like life.

Truth is meant for guidance. Truth as it is and up with the being of God, truth as expressed in his Divine revelation, truth as given in Spirit, can never safely be disregarded or neglected by any human soul. The wrath of God is already revealed from heaven against willful and obstinate rejectors of his truth, who make and who love truth's opposite, a but, conversely, no more blessed condition can be imagined than the state of the one who is coming more and more under the vision of heavenly realities, and no nobler can be desired or held by any man than that of a "truth seeker."—N. Y. Observer.

There is nothing faith cannot make noble in it touches it. You need not say, "I get to get away from my daily business or my domestic concerns in order to show faith." No, no, stop where you are and do it.—D. L. Moody.

Notes from Others.

Three hundred years the average length of human life has been doubled. In the sixteenth century it was between eighteen and twenty years; by the close of the eighteenth century it was a over thirty years, and to-day it is over forty years.—*Public Ledger*.

President Roosevelt die before Third Mo., the members of his Cabinet would be entitled to succeed him in the following order: Secretary of State, Secretary of the Treasury, Secretary of the Attorney-General, Postmaster-General, Secretary of the Navy, Secretary of the Interior.

Twenty-one missionaries will depart for heathen lands when the steamship *Devonian* quits her berth at East Boston and starts on her way for the world. Of the number twelve are married, and nine unmarried all are females except one. There are so many more single female than

male missionaries? Surely, the dangers and hardships and privations of the life of the average missionary are such as to require the greatest bravery, strength and physical endurance. Does it mean that women are more zealous than men, and that they are willing to make greater sacrifices for the upbuilding of the cause that is uppermost in their life work? It was nearly a century ago that Barrett wrote the lines that appear to be just as true and applicable to-day:

"She, while apostles shrank, could danger brave,
Last at his cross, and earliest at his grave."

—*Boston Herald*.

But really the outward joining with God's people is only a sign of what has already taken place, the inward taking of one place amongst those who delight to do God's will. The invisible Church precedes the visible. No man, is really, at heart, a member of the Church who has not become mother or sister or brother to Christ.—P. W. Tompkins.

FOR HAPPINESS IN MARRIAGE—BEGIN POOR.—So far from accepting the theory that marriage is justly to be regarded as a business transaction, I should claim it to be one of the best means of securing happiness in married life that young people should not only love each other warmly, but should begin, poor, if possible, and thus have the discipline of mutual sacrifices, and the pleasure of making their way upward in prosperity by gradual steps. It is one of the merits of human nature, or at least of American nature, that a young girl may be brought up to every luxury, and may still, after marrying the man she loves, take a positive delight in sacrificing, for his sake, all her previous ways of living; and she will do the honors of the log cabin as if it were an ancestral hall. I knew a young girl connected with a fashionable New York family, a person of whom her own aunt said to me that, of all the girls she had ever known, this one was at least fitted to be a poor man's wife. She became the wife of a young naval officer who was not even a lieutenant, but only an ensign; and she went and lived with him at a naval station, and managed so well as to save money on his first year's scanty pay. Such a beginning of married life seems to me very desirable (but let it be clear of war.—Ed.) I am conscious of no stoical aversion to wealth, but I think it is a bad thing for young people to begin with: that they are better off without it, and that it always gives them a sense of security to look back in later life on their day of small means.—*Thomas Wentworth Higginson* on "Success in Marriage," in this month's "Successes."

Items Concerning the Society.

A letter received from Joseph J. Neave, dated Longueville, Sydney, New South Wales, Eighth Month 16th, 1901, contains the following:

"I quote here that Friends in these Australian colonies have commenced a new and brighter era in their history. A conference was held in Melbourne in Fifth Month last, in which most of our scattered meetings were represented, and seems to have been a time of blessing and much helpful interest. We are quite hoping that London Yearly Meeting may grant the powers of a Quarterly Meeting to a gathering of this kind, meeting annually, as such a meeting might be very helpful in many ways to our various and widely scattered gatherings, with one exception all of them being four or five hundred miles from the next nearest one. While there is much among Friends in these colonies that may rightly cause a good deal of living concern for the right upholding of the Truth, yet I thankfully believe the Spirit of the Lord is working in our midst, and that in all our meetings there are those that honestly desire to know and to do the Lord's will. Just now we are having a very helpful visit in some parts from three dear

women Friends from England. S. J. Lury being in New Zealand, and Henrietta Brown and E. Maria Bishop in Queensland. Here in Sydney we have just lost our meeting-house and premises, as the Government required them for railway improvements, and we are meeting for the time being in a public hall, till we can get suitable premises.

"I was glad to hear of our Friend, John Bellows's visit to you, and enjoyed his address to your school children [in THE FRIEND].

"With this abundant wheat harvest in Canada, I hope the poorer Donnish laborers are past needing further care for bodily needs, but trust that the needed help in educational matters will be given them, as Friends on both sides of the Atlantic have great responsibilities and great privileges in this respect.

"I hope that Friends generally are growing and deepening in the Truth, and that the Truth prospers in your midst, and amongst others through you."

The uncommon longevity of members of the Society of Friends is noted by a correspondent of the *Times*, London. He says: "During the year ending in 1900 there were reported the deaths of two hundred and ninety-nine members of the Society of Friends in Great Britain and Ireland. The proportions were one hundred and fifty-nine males and one hundred and forty females. The average age at death was a little over sixty-one years and seven months. A table compiled from the returns show that there is a very limited mortality of children, and that it is chiefly in this respect that the death rate of the Society of Friends differs from that of the general population. Only fourteen deaths out of the two hundred and ninety-nine were reported as those of children under five years of age; between five and twenty years the number was nine; between twenty and thirty years the deaths were sixteen, and the same number was that of the deaths between thirty and forty years. From forty to fifty there were twenty-four deaths, and from sixty to seventy there were sixty-two deaths. From seventy to eighty the number was fifty-seven, and from eighty to ninety, sixty-nine. There were eight deaths of Friends between ninety and one hundred years of age, and there were two deaths of persons over one hundred. One of the latter died at Croydon in her one hundred and first year, and the other had passed one hundred and one years of age.—*Boston Evening Transcript*, Eighth Month 24, 1901.

A large and solemnized assembly was gathered last First-day morning, the 6th instant, in the Presbyterian meeting-house at Leed's Point, N. J., under the religious concern of Zebedee Haines, of West Grove, Pa., whose service to all the meetings of Haddonfield Quarter and four appointed meetings, seems now discharged.

The passing away of a beloved minister, John W. Foster, on the 5th instant, from his long service in the meeting of Friends held at Westbury, N. Y., is an event which claims widespread sympathy of Friends with the meeting thus sadly stripped, especially when we recall its late loss of another valued member, Barclay Foster, and are under the fresh sense of our own loss in this city, of our friend Thomas Elkinton, a useful counsellor and helper in many a good cause.

Harriet Green, from England, is about to resume her visit to this country to complete her work left behind some three years since, the steamship bearing her and her companion, S. M. Fry (a granddaughter of John Pease), being due at New York at the present date.

AN AGED FRIEND OF TRUTH.—The last column of THE FRIEND is open to the obituary and marriage notices of members only. But an account received from Ruthton, Kentucky, concerning a constant

reader of THE FRIEND, Henry Spahnower, who died at the age of ninety-two, contains features of interest to us. After settling in Kentucky, we are informed, "he took to reading the Bible, and it was no uncommon thing to hear him quoting passages of Scripture, such as, 'Let us not sleep as do others, but let us watch and be sober.' 'Watch thou in all things.' After heaving out his own path he then could see all kinds of professions leading this way and that way, but he said that he would read, think and act his part of this life the best he could. He bolted all denominations in this country. Some of his objections were church turmoil, hypocrisy and priestcraft. In latter days he rejected wine and water as having any virtue to save. He finally fell in love with the non-combatants, the Quakers, or Friends, and read a paper, THE FRIEND, for several years. So great an admirer was he of it that he would lay down all other papers for it." After his decease "I found quite a store of copies of THE FRIEND stored away nicely in a box."

Though driven from home twice and robbed three times by the rebel army, he returned after the war and "made friends of his enemies, for he loved all mankind, and for twenty-five years he had no thought of an enemy, and those who met him read him as if he was a book, and respected him."

SUMMARY OF EVENTS.

UNITED STATES.—A case has lately been decided by the Supreme Court in Kansas in which it was claimed that a saloon, being under the ban of the law, might be destroyed by any citizen without violation of law. In the opinion the Court says: "All places where intoxicating liquors are sold, or kept for sale, or places where persons are permitted to resort for the purpose of drinking the same, are declared by statute to be common nuisances. This fact, however, does not justify their abatement by any person or persons without process of law. They can be abated only by a prosecution instituted in behalf of the public by the proper officers. The destruction or injury to property used in the maintenance of such nuisances, except in the manner provided by the statute, is a trespass."

A report issued by the United States Geological Survey shows that the total value of minerals of all kinds produced in this country in 1900 was \$4,070,108,893. The total value of the metallic products was \$329,418,627; the non-metallic, \$516,690,262, and estimated value of mineral products unspecified, \$1,000,000. Among them are mentioned 5,200,000 pounds of aluminum, 9,715 pounds of nickel, and 400 troy ounces of platinum.

The city population of the United States during the ten years ending with the last census increased by nearly 37 per cent. In actual numbers 7,642,817, while the increase in the total population of the country during the same period was not quite 21 per cent.

There was an increase of 4160 miles in the railroad mileage of the United States for the fiscal year 1900. The total was 191,861 miles. The average interest paid on the bonded debt was 4.24 per cent, and the dividends paid on the combined capitalization aggregated 2.42 per cent. The increase in the earnings of the railroads the past year has been large.

The books of the postal service of the United States for the year ending Sixth Month 30th, 1901, show a net deficit in the year's business of \$3,581,521. The deficit is about \$1,500,000 smaller than for the preceding year. Owing to the extension of rural free delivery and other augmented appropriations in every department, the expenses of the service were \$8,200,000 greater than the preceding year. Receipts increased \$9,250,000.

A post-office has recently been established at Point Barrow in Alaska, on the Arctic Ocean, which is probably the northernmost post-office in the world. This place, where the northernmost newspaper in the world is published once a year, will receive the mails once a year by a United States revenue cutter. Heretofore the few natives in the vicinity have had to send for their mail about 700 miles and often much further.

The native population of the Aleutian Islands is said to be rapidly disappearing, the people succumbing to disease, mauls being particularly virulent among them.

The number of banks in the United States has increased since Third Month 14th, 1900, from 3,617 to 4,254. Texas has 90 banks, the greatest number in any one State. Pennsylvania has 80.

A despatch from Washington of the 2nd says: Reports to the Marine Hospital Service from all parts of the world

show a continued spread of the bubonic plague in most sections.

Arthur J. Eddy, of Chicago, has recently made a trip, accompanied by his wife, from Chicago to Boston and back, including some visits in Canada, etc., in an automobile. The distance covered was about 3000 miles, and the time occupied was sixty days.

Resolutions urging Christians everywhere to use every opportunity to discourage the use of First-day papers were lately adopted by the Philadelphia Baptist Association.

It is said that there are more than 25,000 Indians and Eskimos in Alaska, of whom 7600 are Protestants, 13,735 are under the care of the Greek Church and about 500 are Catholics.

An elevator is now in course of construction in Duluth for storing grain, which is to hold 5,000,000 bushels. Great pains have been taken to construct it of fireproof material, and the building is made of cement having built, each 105 feet high and 35 feet in diameter, which have together a capacity of 4,000,000 bushels.

There were 392 deaths in this city last week, reported to the Board of Health. This is 27 more than the previous week and 58 more than the corresponding week of 1900. Of the foregoing, 207 were males and 185 females: 49 died of consumption of the lungs; 26 of inflammation of the lungs and surrounding membranes; 10 of diphtheria; 15 of cancer; 20 of apoplexy; 9 of typhoid fever and 3 of scarlet fever.

COTTON closed on a basis of 82¢ per pound for middling uplands.

FLOOR.—Winter, super, \$2.15 to \$2.30; Penna. roller, straight, \$3.15 to \$3.25; Western winter, straight, \$3.20 to \$3.30; spring, straight, \$3.35 to \$3.60.

GRAIN.—No. 2 red wheat, 71 to 71½¢.

No. 2 mixed corn, 62 to 62½¢.

No. 2 white oats, clipped, 42¢.

BEEF CATTLE.—Best, 5½ to 6¢; good, 5½ to 5½¢; medium, 4½ to 5¢.

SWINE.—Choice, 3½ to 3¾¢; good, 3 to 3¼¢; common, 1½ to 2¢.

LAMBS.—¾ to 5½¢.

HOGS.—Best Western, 9½ to 10½¢.

FOREIGN.—Helen H. Stone, an American missionary in Macedonia, was recently captured with another woman companion and brigands, while traveling in Bulgaria, who demanded a ransom of \$110,000 for her, which her friends in Boston and its neighborhood have endeavored to raise and in which they expect to succeed. The United States Government has taken steps to secure her release through the Turkish Government.

The South African war has lasted about two years, and has now become caused by it to England is severely commented on. *The Times*, after reminding the Government of the "repeated blunders and miscalculations which have cost the empire such a terrible price," says: "A third campaign has now opened in South Africa, and there is no sign that the Government is doing anything to prepare for, possibly the dragging out of the war for several months more. In anticipation of the speedy termination of the war, it is said that the British Government does not propose to send further reinforcements."

Although it was asserted that when Prince Chun arrived in Germany that he would be the guest of Emperor William for only two days in Potsdam, it is ascertained that the Kaiser paid all his bills, while in Berlin and traveling abroad together with the expenses of the entire party until the expatriary mission crossed the Austrian frontier.

A London sanitary official, Dr. Shirley Murphy, found that the number of cases of consumption increased in exact proportion with the number of persons living in one room.

It is said that the French Government is having special automobiles built to travel over the Sahara.

The Island of Java supplies practically all the cinchona bark from which the world's supply of quinine is made. There are about 25,000 acres of this island used in growing cinchona.

The discovery of vanadium as a steel amalgam has long been recognized; the metal itself has been so rare that its utility has been merely theoretical. Within the last year, however, a mine of vanadium ore has been discovered in one of the Western States of America, and the discoverers have brought samples of their ore to England for chemical treatment.

In view of the criticism of the German action in removing astronomical instruments from Peking, the semi-official *North German Gazette* explains that after the final signature of the peace protocol Germany placed the instruments at the disposal of China. The latter, however, in view of the trouble in recovering and re-erecting the instruments, has not yet claimed them.

A Government decree in Austria in 1854, gave legal

permission to cut up and sell horse meat as an article of food. During the rest of that year and in 1855, horses were slaughtered for food in Vienna; the number in 1859 was the last year for which statistics are available—25,640 head.

In the island of Samar, one of the Philippines, attack was recently made by the natives upon American troops, in which the latter suffered, it is said, the heaviest loss which has occurred in any single engagement during the war. The natives of this island belong to the Visayas, who with the Tagals are the dominant tribes of the Philippine group. Mr. Mason of Washington, says of these tribes, "They are the Anglo-Saxons of the East, in traits, intensely patriotic, sincere and earnest. The fighting for the principle embodied in the sentence, 'Philippines for the Filipinos.' Hence, from a political standpoint, they are people of no mean order."

The London School Board has opened the first of a series of schools for crippled children. The children are taken to their homes to school in an ambulance, and afterwards taken home by ambulance. The school curriculum includes a substantial midday meal.

NOTICES.

WESTWON BOARDING SCHOOL.—For convenience of sons coming to Westwton School, the stage will be in operation leaving Philadelphia 7.16 and 8.13 A. M., and 4.32 P. M. Other meetings will be held when requested, three days, fifteen cents; after 7.30 P. M., twenty cents each way. To reach the school by telegraph, West Chester, Phone 1144.

EDWARD G. SMEDLEY, *Sgt.*

WESTWON BOARDING SCHOOL.—Applications for admission of pupils to the school, and letters in regard to instruction and discipline should be addressed to Wm. F. WICKHAM, *Principal*.

Payments on account of board and tuition, and communications in regard to business should be forwarded to EDWARD G. SMEDLEY, *Superintendent*, Westwton, Westwton P. O., Chester Co., Pa.

THE MOORESTOWN PEACE ASSOCIATION OF FRIENDS send, free of cost, well selected peace literature, such as popular use, to those who desire to distribute gratuitously. Address GRACE EVANS, Treasurer, 205 E. Central Ave., Moorestown, N. J.

WANTED, a Friend and wife or daughter to take care of meeting-house and grounds at Lansdowne. Compensation of five-room house on meeting-house grounds, and \$5 in spring and fall, when house is closed. Lansdowne is on the Media R. R., about seven miles from Philadelphia. Address J. R. ELFRETH, Lansdowne, Pa.

Friends' Library 142 N. 16th St., Philadelphia. Open on week-days from 11.30 A. M. to 2 P. M., and 3 P. M. to 6 P. M. Recent additions to the Library include:

BECK, William, comp.—George Whitehead.
GIBSON, W. H.—Blossom Hosts and Insect Guests.
GIBBER, H. A.—Empresses of France.
HARRIS, P. C.—American History Told by Contemporaries (v. 4).
HERCOMBE, Chester—Real Chinese Question.
LELOUT, BEANLIEU, Pierre—Awakening of the East.
LOTT, Pierre (pseud)—Story of a Child.
LYNCH, Hannah—French Life in Town and Country.
RICHARD, S. C.—With the Germans.
TABERLE—Life of Napoleon Bonaparte.

DIED, in Darlington, Indiana, at the home of the Rich, her daughter, Ninth Month 26, 1901, SALLY, widow of Henry Coate, aged ninety-seven years and months and seven days; a member of Westfield Meeting of Friends. A life-long member of the Society, she evinced by her quiet and inoffensive life that she was indeed a follower of the meek and lowly Jesus.

WILBIE, in his sixty-sixth year. He was a constant and esteemed member of and elder in Leeds Valley Meeting of Friends, Ontario. He died at his home in Athens, Ontario. The local paper bears this testimony: "Of a quiet and unassuming nature, he occupied positions of trust conferred upon him by the preference to him among his own people, with whom he was joined in his lifelong profession." He bore with patience a protracted illness, having been confined about eighteen weeks. As he had lived, so he died, in the mercy of God in Christ Jesus.

NOTE.—The last obituary account in No. 10 of the present volume gives the name "Daniel Stephen," but it should be DAVID STEPHENS.

'A Friend in Our Need is a Friend Indeed.'

The Holy Spirit is our Friend,—are we his friends? That is the name which our Society saw fit to adopt—"Friends of Truth,"—friends of the Spirit of Christ.

Let us look well to it. Are we Friends of the Spirit,—“doing whatsoever He commands;” friends of the *profession* of the Spirit?

The latter state is sadly too numerous in evidence as a substitute for the really sound friend,—who must be a friend of the Spirit. Truth in all the secret intimations of so

ly a Partner and Guide. His Spirit is our greatest need to-day. Our origin was as a Society of the Spirit. Our

existence and continuance must be in the same spirit, else, though dragging on for a while a mere life to live, we are dead. If we are not going to be practically, by

member for himself walking in the Truth, Society of the Spirit, we may indeed not have life enough left to be honest, but the best thing to do would be to resign the name of Friend. The Holy Spirit, our eminent need, is

it is to be again our eminent diadem of glory. It is not methods we need. It is this change of plan or that. It is Himself, will and to do of his own good pleasure in us with us. He has only to see us standing ready to be a willing people in the day of his power, to endure each of our surrendered souls will with might by his Spirit in the in-

Music as an Antidote to Anarchism.

Among the many medicines for anarchism which are of late suggested from many quarters (as if in a general “conspiracy of silence” about the Gospel being the one true remedy), music has occurred to some prescribers, whose memory has naturally turned to the following old verses:—

“That naught so stockish, hard, and full of rage,
But music for the time doth change his nature;
The man that hath no music in himself,
Nor is not moved with concord of sweet sounds,
Is fit for treasons, stratagems, and spoils;
The motions of his spirit are dull as night,
And his affections dark as Erebus.”

We would revive here a little of our former contention that the field of operation of music is the nervous system, and so, emotional rather than spiritual. “Every soldier,” says an investigator, “will testify to the inspiring influence of music in war. This, scientifically considered, means simply that sound-vibrations act directly upon the nerves;” similarly “under the power of an eight-foot organ pipe many a man has mistaken the shaking of his diaphragm for the trembling of his soul.”

What we have objected to is the mistaking of emotions, whether grossly or artistically manufactured, for the inspiration of the Holy One.

The purpose of these lines is to introduce an editorial found in last week's *Christian Advocate*, a leading Methodist paper, and entitled, “More than music needed:”

A convention of choirmasters and music teachers in England received a prophecy from their president that anarchism would “die a sweet natural death.” His theory is:

The softening influence of music is so delightful that the time will come when the inability to sing from sol fa will be as extraordinary as the inability to read or write. When the spread of music has reached the required degree anarchism will cease.”

Goldwin Smith in a recent article, attaches some importance to this.

Vegetarians are claiming that their method will put an end to anarchism and assassination. Against this is the fact that some of the most bloodthirsty peoples of antiquity were vegetarians, that the assassin of President McKinley hated meat, and for five or six weeks before his deed, lived on four quarts of milk and a few cakes per day. He could not bear the sight of pork.

The effect of music is undoubtedly refining, but it seems to help everything it is applied to. In a war, music stimulates people on the wrong as much as it does those on the right side. Some troops of brigands have been fa-

mous musicians, and have entered towns disguised as peripatetic performers on various instruments. Atheistic societies have made considerable use of music in their meetings. Music was by no means suspended during the first French Revolution. Few countries have made such progress in music or hear it more frequently than Italy. The people all sing, but they would hardly be regarded as unproductive of anarchists or as of a placid temperament indisposed to resort to violence. History records music in connection with the most oppressive persecution of religionists, and on Easter the people of Spain pass from the splendid music of the churches and cathedrals direct to the bull fights, whose season, in harmony with ancient custom, opens on Easter day.

We are aware that Napoleon said: “Of all the liberal arts music has the greatest influence over the passions, and is that to which the legislator ought to give the greatest encouragement. A well-composed song strikes and soothes the mind, and produces a greater effect than a small work, which convinces our reason but does not warm our feelings, nor effect the slightest alteration in our habits.”

But Napoleon said this at St. Helena when he was in a reflective mood. All the music he ever heard failed to change his essential character.

Musically inclined races have never been specially free from excesses, nor notably moral.

Music is [used for] assistance to true religion. But the feelings which it excites are often mistaken for deeper moral changes.

The teaching of music to both sexes is refining, but to bring it forward as in itself sufficient to destroy or check those elements of human nature from which anarchism arises, or as the main thing to be relied upon to mitigate human excesses of thought, feeling, action or speech, or to change the nature, except “for the time,” as Shakespeare says, is but to propose another panacea which will disappoint. Only a union of all methods of reformation—instruction in religion, morals and refinement—the constant employment of them, and the regeneration of the human heart by the Holy Spirit can prevent those convulsions of human nature which astound the world by sudden outbreaks, when a large majority of those who are thus astonished are more or less under the power of the same imperfect or distorted development.

The President's Last Words Attested.

As a matter of historical accuracy we desire to record a recently published communication from Dr. M. D. Mann, who was the President's operating surgeon.

BUFFALO, N. Y., Sept. 26, 1901.

MY DEAR SIR:—As President McKinley was

dying I stood behind a screen in his room and heard him say his last words. His wife came into the room, and he said to her, "Good-bye, all; good-bye. It is God's way. His will be done, not ours."

There was some further conversation with his wife in the way of leave-taking, but this should not be repeated. About an hour later he said to his wife, "'Nearer, my God, to Thee, e'en though it be a cross,' has been my constant prayer." He tried to say something more, but I could not catch it. I gave out at the time the first sentence as being the most appropriate to be remembered as his last words. I wrote them down at the time so that there can be no question about it.

Yours truly,

M. D. MANN.

Wanted: Inspired Readers.

That the Holy Scriptures are given by inspiration in the reader as well as in the writers, is declared by Herbert R. Ryle, President of Queen's College, Cambridge, England, in an address quoted by the *British Friend* as a modern treatment of the old Quaker belief that men need the life of the Spirit in themselves to make the Scriptures real to them as living messages from God. He said:—

A man will tell you he reads his Bible because it is inspired. Beware of using phrases that you do not really think. If you say that the Bible is inspired, be careful to say that it is inspired because to you it is inspired, because it does contain to your heart a breathing of the Holy Spirit, a true message from on high, a message which leads you to the feet of your Saviour. Unless that Bible which you call inspired has to you a message from God, what is the worth of your inspiration but a mere phrase by which you may drug your soul? I say again, if inspiration is indeed a truth to you, if in reading the books of the Holy Scriptures they are a source of blessing, a comfort, a help, a sustaining power, a guide, a direction, an elevating means by which in your prayers and in your desire to approach God you are given greater means of access, then, indeed, the books of Holy Scripture are to you inspired from on high. But if inspiration is but a mere name, it is but a mere label for a doctrine, what, I say, is the worth of inspiration to yourself? It is but a hypocrisy and a lie unto your soul.

Next Need of the Doukhobors.

In the London Meeting for Sufferings John Ashworth lately repeated his conviction that the only solution of the difficulty occasioned by the continued refusal of a large part of the Doukhobors to any form of registration under the Canadian government would be found in education. In the Saskatchewan district only one baby had as yet had its name registered. Their industrial condition was good, and their health very fair. What was chiefly needed was a supply of teachers to undertake their education. They could not afford to pay teachers themselves yet, but many of them were quite willing to receive men and women teachers from England, especially if these were Friends. They objected to being proselytized, but they had confidence in

Friends as they had in no one else. This laid upon the Society a special responsibility. Friends have already spent some £30,000 on them, and he thought they might well find the £2,000 or £3,000 required to carry on the education of the Doukhobor children till they were able to manage it for themselves. He earnestly hoped that some young Friends would be willing to come forward to help in this work.

The appeal of John Ashworth was warmly endorsed by John Bellows, and Edmund W. Brooks.

In the same number of the *British Friend* another need is brought to view in a letter from Anne W. Richardson, who says:

In the record of Rose Osborne's late visit to them, the most striking fact is the great need of nurses and doctors at the present time. As the result of what she has seen, Rose Osborne is about to train at an American hospital herself and to return to do what she can for these people. But she can do little among so many widely dispersed groups. Is it impossible that at this most critical time some friends trained as nurses or doctors should offer their services for a year or two? Both kinds of professional help are needed, and I gather that the Russian language is not an essential. As I am writing, I may mention that the need of teachers is very great, and perhaps ought to be still more strongly pressed, but at the present moment physical aid is the apparent necessity. The patience of these exiles under their many burdens is a very touching element in a case which, as a whole, ought to appeal strongly to Friends as such. Unless medical aid soon comes it is calculated that three per cent. will become blind.

IN AN English magazine entitled *Sunday at Home*, Hugh Price Hughes writes an article on "The Call of the New Century," in which he treats of "the seven deadly evils of the day"—mammonism, militarism, drunkenness, gambling, impurity, gluttony, and clericalism. In speaking of militarism he says:

It is high time that all Christians should learn from the Society of Friends that war is ultimately inconsistent with Christianity. I have never been able to accept the extreme Quaker position, but I have no doubt whatever that as Christianity has ultimately destroyed slavery, so it will ultimately destroy war; and we ought to be incessantly warning all men, and especially the young, against the favorite delusions by which the war spirit has been upheld in all ages. . . . If all Christian men hated war, for example, as Channing hated it, we never should have war. There is no worse form of atheism than that which asserts that because war has existed from the beginning, it must exist forever. When I was a boy that argument was still used with respect to slavery, but to-day slavery is happily condemned by the universal consent of all so-called Christian and civilized communities. It should be our holy endeavor to create a similar sentiment in relation to war. The line of Divine possibility is to encourage whenever possible the principle of arbitration.

For what are men better than sheep or goats That nourish a blind life within the brain, If, knowing God they stretch not hands of prayer Both for themselves and those who call them friend.

—Alfred Tennyson.

Concerning Prayer.

The following from a Washington paper contains food for reflection:

A religious weekly remarks apropos nothing in particular, that "Praying is our revered contemporary, we are moved to submit that a great deal—probably the major part, if measured by the words uttered at the time occupied in their delivery—of the praying by ministers in regular church service bears a striking resemblance to "preaching to God." Although there has been wholesome reform in this respect in the last four or five decades, there is still abundant room for improvement. There are many preachers of various denominations who wear their audiences by long discourses addressed to the "Throne of Grace." This is especially the case in churches where the audience stand during prayers. To a majority of persons standing still is far more fatiguing than walking or almost any other active exercise to which they are accustomed. No amount or degree of piety can render long prayer acceptable to the owners of tired legs aching backs standing before the man who praying.

It seems strange, in view of the admonition and example of the Founder of Christianity his condemnation of those who think that will be heard for their much speaking, a his incomparable model of an invocation "Our Father who art in heaven," that his a "bassorads should deem it necessary or even admissible to put a sermon, an oration, argument, or a general review of the war or, indeed, anything but a brief fervid, simple petition into their official supplications. There are thousands of clergymen, some of them in this city—men of learning, of observation, and experience—who stand before their congregations and really think they are devoutly praying to God while they are counting an infinite variety of events, putting their constructions and giving their opinion upon them.

It is this more than any other cause that commending ritualistic services to increase favor. It is not strange that devout churchgoers prefer a service in which they can stand part to one which requires them to stand or even sit or kneel, in silence, while the pastor puts a long, rambling talk into the form of prayer. The *Post*, as a secular newspaper expresses no opinion as to the comparative merits of various forms of service. The *P* is not advocating a ritual nor condemning the absence of fixed forms. But it is a fact that many of the original and presumably-temporary prayers of clergymen have tended to increase the number of Christians who favor the adoption of a plan of worship in which such praying is impossible.

In this connection it is interesting to note that, although the membership of the Society of Friends, or Quakers, is not increasing, the custom of silent prayer, which is the chief feature of their worship, is growing in favor.

ere is a more general realization of the
ce and beauty of this comprehensive definition
of the real meaning of the heart's appeal
the Father of Mercies.

"Prayer is the soul's sincere desire,
Uttered or unexpressed,
The emotion of a hidden fire,
That kindles in the breast."

FOR "THE FRIEND."

Rather Costly Charity.

By adherents of some of the secret lodges,
is held to be sufficient ground for affiliation
growth that they are charitable in their
character, being founded on a basis of practi-
cal benevolence. A careful examination of
its claim, however, goes to show that in very
many cases this charity is of a very costly de-
scription, the miscellaneous expenses for visit-
ing lodges, paying officials, cost of banquets
and celebrations of various sorts frequently
absorbing a large proportion of the lodge con-
tributions or assessments. The following ex-
tract from the annual report of the Grand
Master, at the State Grand Lodge of Odd Fel-
lows, held at Dallas, Texas, was quoted some
months ago by the *Globe Democrat*, of St. Louis:
The money paid into the subordinate lodges
last year amounted to \$134,393.40. There
was paid out for sick benefits to brothers, re-
lief of widowed families, educating orphans,
caring brothers and wives, support of wid-
ows and orphans' homes and for special re-
lief, \$28,362.48; leaving a balance of \$106,
9.98. Of this balance there was paid in
capita tax to the grand lodge, for ex-
cuses and for other purposes, \$100,225.07,
other words, taking this one year's busi-
ness, it cost us \$100,225.07 to pay out \$28,
2.47 in visiting the sick, relieving the dis-
served, burying the dead and educating the
orphan, and left us with only \$5,803.91 more
the treasury of all the subordinate lodges
than we had to begin with. Don't you think,
therefore, this sounds a little like giving \$1.00
the missionary fund and it taking 95 cents
to get it to the place where you want to use

J. W. L.

EDUCATION IN THE HOME.—There is a pro-
cess of education constantly going on in every
thing which care and thought can make an
unpeakable advantage, and at the same time
tribute to make a happy home. To keep
children of pure and high interest before the
children's minds, in a natural and suitable
way—to have them supplied with such books
will occupy with interest—to talk not so
much to them as with them about objects—to
be note of and encourage any advance they
make, and to direct the flow not of a part of,
but of the whole of their lives—physical,
mental, moral, without apparent interference
violence; this happy art—to be sought,
prayed for, labored for,—under God's bless-
ing, goes far to make a happy home.

The tastes of children are naturally simple.
Their child's wooden toy cut with your own
hand, perhaps, and made a link of connection
between your little boy and you may be more
valuable, more influential over his character,
more potent in binding his heart to you while
alive, his memory to you when you are dead,
than a costly gift that you ordered at the
store. And when you, living a loving, nat-

ural life before your children, and with them
are led to bend the knee in their midst, and
speak to God of them and of yourself, there
is a powerful restraint being put on natural
evil, there is a pleasant type of heaven where
the whole family that is named after Jesus
shall be gathered together.—*Dr. John Hall*

FOR "THE FRIEND."

Dreams.

Some of these will no doubt be familiar to
many readers, and yet they will bear repeti-
tion. The effect of an undue attachment to
the riches, the honors, and the enjoyments of
this life is well illustrated in a dream of S.
Fothergill. He says: "One night after re-
tiring to rest I was led to trace back the
transactions of my life from my youth to that
very time. The remembrance filled my soul
with thankfulness, in the assurance that if I
never opened my eyes more in this world, I
should be eternally happy. Falling into a nat-
ural sleep I thought the dissolution of the
world had come—that I heard the trumpet
sound at which the earth and sea were to give
up their dead, and they ascended in great
numbers before the presence of the Most High;
many on the right hand in white, and multitudes
on the left whose clothing was dark and gloomy.
I thought I accompanied those on the right hand
and we were borne away on the wings of archangels
to the regions of bliss. From thence I returned
to view those miserable objects on the left, for
whom all that was within me was concerned.
Some of these were clothed in white, individuals
now in the body. I said, 'Lord, what have
these done that they are left behind?' Then
instantly their white raiments fell off, and I
beheld them bound up with shackles of iron
and fastened to the earth." Among those
S. F. had seen thus fastened to the earth, were
cousins to whom under much concern he wrote
next morning: "I saw a variety of states and
many clothed in different colors. Those who
were in white were in different degrees of
lustre and beauty. I saw many whom I knew,
among whom were thyself and sisters. I
thought your garments appeared more white
than many; and as I mused on this tremen-
dous yet glorious day, the trumpet sounded
with distinguished energy and seemed to say,
'Come, ye blessed.'" I beheld multitudes
arise as from an eminence and ascend triumph-
antly. My eye descended to the mountain
from which many had risen. I thought I
clearly saw you remain on earth, clothed in
garments measurably white, and I queried in
my heart, 'Alas! how is it that these are left
behind?' I beheld chains which seemed fast-
ened about your necks and bound every part
but the head, and these were fastened to great
rings in the earth, and held you so secure as
to prevent you from joining those who had
taken wings and risen on high."

S. Fothergill also records in substance (for
I have not the book at hand) that he vis-
ited one on his deathbed, who related that in
earlier life he had had a dream in which he
saw a beautiful green meadow, enclosed by a
strong hedge, in the midst of which was a
beautiful clear spring of water, many sheep
and lambs were grazing upon the pasture;
that a new sharp weapon was given to him and
he was told that it was to be his business to

keep the hedge in order that none might stray
away, or any hurtful thing enter among them,
and in particular that he was to see that the
fountain was kept clear, that there might be
wholesome water for the flock. He had, how-
ever, suffered worldly things to take up his
mind, and now he said that on his sick bed he
had had the dream of his youth renewed. But
how awful the change. The hedge was broken
down, many of the sheep had strayed and for
those who remained there was little pasture.
Poor and diseased these presented a sad con-
trast to the healthy, vigorous flock which had
been committed to his care. The fountain was
still there, but rank weeds had overgrown
it and in the midst was a nest of serpents
poisoning the water. These hissed at him as
he came near, and as he viewed the sorrowful
scene his ear was addressed with these words:
"All this will I require at thy hand. And he
told Samuel that in looking forward he could
see nothing but the blackness of darkness fore-
ever."

There is still another dream, the signifi-
cation of which is certain, and the interpretation
sure, bearing strongly on those things which
hinder our gaining heaven. This dream may
be thus rendered, premising that it occurred
to a woman Friend during a time of illness.
"I thought I was dead, and beheld my body
lie like a corpse. There appeared one in the
form of a man whose raiment was of a bright
fawn color, who said: 'Follow me.' He as-
cended a hill on the top of which was a
large building of rough stones. I followed
my guide into the house but did not at first
perceive its beauty to the full; it was bright
and a large company sitting, such a number
as I never beheld before. The further we
went in the brighter everything appeared.
My guide made a halt, and I looked at the
countenances of those near me, which were
many, but could not see to the far end of the
house, because of the brightness, which ap-
peared greater than when the sun shines in its
greatest splendor. There appeared a sweet-
ness and composure in every countenance far
beyond what I ever saw in any one in the
body; their garments appeared as a plain sim-
ple robe in one piece. At my first entrance I
thought I had been at a meeting of solid
Friends. I looked to see where the light came
from, but could perceive neither window or
opening. I asked my guide, 'What is this
place?' and he answered, 'Heaven.' The
more I looked the more I admired and wanted
to sit with them. My guide turned about to
go out and looked at me to follow, but I was
so delighted I was unwilling. He then beck-
oned and said, 'come.' I soon stopped, when
he again beckoned and said, 'come.' I then
followed, often stopping to admire the inex-
pressible happiness and content I saw on every
countenance, until we got out. My guide
turned to the left and seemed to descend. We
soon came to a lofty dome of great wealth.
We entered a large room, grandly wainscoted
and beautifully painted. The first sight of
this beautiful room abated my sorrow at leav-
ing the other, which was great while we came
down the descent. I had just time to take a
view of this fine place before a number of per-
sons passed us, richly dressed, who smelled so
strongly of brimstone that I seemed almost
suffocated. All were talking to themselves.

They looked well at a distance, but as they came near there was a blackness in every face. I was seized with horror, and asked 'What is this place? Who are these?' He answered, 'these are miserable forever, they were in tumult in the body and will be so everlastingly.' At some distance sat an old woman in a chair, very fine, and powdered and grandly dressed. I made up to her to see if there was the same appearance of misery upon her, and was more shocked than before. Her lips were moving and from her eyelids came small flames of fire. Looking around I saw a woman Friend plainly dressed, whom I remembered well when young, often watching her solidity in meetings. I eagerly made up to her and said, 'What! art thou, too, among the miserable? tell me what brought thee hither?' She looked very sorrowful, wept, and said: 'It is no wrong I ever done to any; unfaithfulness and disobedience to my God brought me hither.' I thought I wept much, as well as she. I then turned to my guide and said, 'Tell me, am I to remain here forever? I thought in time past that had I died I should have an inheritance among those we first saw.' He looked steadily at me and said: 'thou art not to remain here, but to return to the world again. If thou art faithful to thy God thou mayst obtain a place among those we first saw. But I have more to show thee.' Then we went further, to where appeared something that divided this room from a large chapel where abundance of people were assembled to worship. These were saying, 'Lord, have mercy on us. Christ have mercy on us! These appeared more white and were plainer in dress. I said, 'these are not miserable, too?' 'These are they who thought to be saved by a profession of religion, but have not the white robe of righteousness; they all come by the way of this room. Some stay with these worshippers; others go on to those who smell of brimstone.' My distress was now greater than before, for I knew many of these, and I thought they appeared as if they worshipped. I entreated my guide to let me go. He walked gently out of this place and came again to the entrance of the house, and here I met an intimate friend—who died about a month after—coming toward the gate, two persons conducting him. He looked very sorrowfully on me, as I on him. I asked him if he was going among the miserable. 'What is thy offense? What hast thou done? tell me.' He answered, 'Beware of covetousness and the love of money; they brought me here.' We both wept much and were greatly troubled. We were now in a large inclosed field where I saw many persons, some of whom are since dead. Out of it I could see no road, but was led to a place where there was just room to pass out. My guide, looking earnestly at me, said: 'Thou art going into the world again; remember what thou hast seen. It is not enough to be honest to men, thou must be faithful to thy God, also.' The thought of returning to the world affected me greatly, for I doubted much being able to steer my course, so as to be deemed worthy of admittance among those we first saw. Standing speechless, faith suddenly sprang in my heart with the words, 'Lord, thou canst if thou wilt preserve me through all.' The horror and distress I felt on awaking I am not able to ex-

press. It seemed as if I drew my breath where sulphur was burning, and I thought I could not live many hours, nor do I believe I should, had not the Almighty in the extending of his goodness caused the suffocating smell to pass from me, and gave me power to trust in his name, after which my tossed mind was favored with a calm."

A dream related by Mary England may convey instruction. At the time she appeared in the ministry, several others in their meeting began also to speak. These all appeared to her to be growing in their gifts, and were branching out in their communications whilst she found nothing required of her but a few words. She became discouraged, thinking she was making little progress compared with them. Whilst in this state of depression her mind was relieved by a dream to this import. She thought she was in a room with the other young ministers, when a person of superior appearance came in, and giving to each a stone pitcher, bade them follow him. Glad to be near him she at once arose, treading carefully in his footsteps. He led the way down a descent to a spring of water, the purest she had ever seen, and which might be compared to that which John saw issuing from under the throne. He told her to put her pitcher in the spring. She did so, and when it was filled lifted it out and set it upon the ground. The water at once commenced bubbling over the top and continued to do so until it was empty. He then told her to put it in again, which she did, and drawing it out the water flowed over as before; this was several times repeated. She noticed that the longer she allowed the pitcher to continue in the spring the more water remained in it after the bubbling ceased. Her guide now told her to leave the pitcher in the spring until he told her to take it out. As it was some time before he did so both hands were requisite to hold it and she became almost overcome with fatigue. At last the word was given to lift it out, and this time it remained full. She now recollected that her director had not before bidden her withdraw it. Looking around she saw that not one of those young people who were called when she was had accompanied the guide to the spring. She was thus instructed to keep under exercise until the command was given to hand forth, and she experienced under it, feelings of fatigue similar to that of holding her pitcher. The young speakers referred to all branched out into words and never became established as ministers.

A most excellent man—a Methodist—whose memoirs I have read, records a dream to this effect. That in company with their minister he went up to the gates of the celestial city. The latter knocked loudly three times, when a door was opened and a hand stretched out which drew him in, whereupon it was shut against the minister, who cried out, "I am lost! I am lost!" many times until the sound died away in the distance. "The person who took me in was clothed in a white garment and said, 'Follow me.' We proceeded until we came to a large room where were two ranks of persons dressed in white robes, looking very happy and all singing. But the scene was strange and the words I could not understand. My angel guide again said, 'Follow me.'

We ascended higher and came where were multitudes arrayed as the other and singing tunes such as I had never heard. My kind leader said, 'You are not to stand with these, follow me.' We still ascended to a third large room, where were many singing words which I knew not. There were men and women also of whom it was said these are prophets and ministers of Christ; 'you must dwell with these.' Then I heard voice in my own tongue saying, 'Why did I tarry by the way? we expected you sooner. Looking around I saw my first wife, who had been taken from me twenty years before. This I awakened with joy unspeakable.'

The father of a near friend of mine living in Ohio, related as follows: "I dreamed I was standing in a wide field and saw a great building in the midst thereof. The building seemed to be of stone, very smooth, and beautiful to look upon. It was four square, its length and breadth and height were the same. A great multitude I saw standing round about looking upon it with great admiration. It was an open door and I entered to see well what was inside. And there appeared another building of the same likeness as the other, but smaller. On the corners I saw four trees, one on each corner, and the branches reached over to the other round about. On the inside of the outer wall were benches or seats, and on these were seated a few persons—some three or four women and two or three men, although there were so many on the outside. On the inner building there was the likeness of a wall clothed in a long white robe, who was looking round about thereon. I could not see his face for the branches of the trees hid it from view, but I heard him proclaim in a voice so sweet and melodious as I never before heard. I cannot describe it. The words were, 'My sheep hear my voice and they follow me.' I have often remembered this dream, and the great building, which so fitly represents an outward profession in which people come not into the inner temple, and when I had entered I found few; for true it is that many are called but few chosen."

I have somewhere read of a goodly Christian woman whose inordinate grief for the loss of a beloved and promising daughter, corrected, nay turned into rejoicing by a dream to this import. She thought a person of superior appearance came to her and said, "Would you see Martha?" "Yes, of all things she would see Martha." "Follow me," he said, "and you shall see her." They approached a magnificent building, the door of which flew open and revealed a group of young persons in the midst of a gay carousal, fluted with wine and in the excitement of giddy dance. Pointing with his index finger to the leader of the festive throng, her guide said, "Behold Martha." Awfully struck and appalled at the sight the mother said, "No, it cannot be. That is not Martha. I am bringing her up for Christ and for the Church; that cannot be Martha." "So you thought" was kindly answered. "But she had become your idol; you could deny her nothing. That is what she would have become under your care. Now we will see her as she is." Approaching another building he struck a second spring, when a door opened, revealing a far different scene, a group in joyous adoration—

the mercy seat. Among the happy throng the mother easily discerned Martha as she was, and as it was told her she ever would be, so the before heart-broken parent awoke, filled with thankfulness for the bereavement, on account of which she had so greatly grieved.

J. K.

The Moon and Weather.

A belief prevails that the moon's phases and changes have a controlling influence over the weather, but so great an authority as Professor C. A. Young, of Princeton, assures us that the moon has absolutely nothing to do with the weather.

Such a belief is in the strict sense of the word a superstition—"mere survival from the past credulity. It is quite certain that if there is any influence at all of the sort it is extremely slight—so slight that it cannot be demonstrated with certainty, although numerous investigations have been made expressly for the purpose of detecting it. We have never been able to ascertain, for instance, with certainty whether it is warmer or not, or less loud or not at the time of the full moon. Different investigations have led to contradictory results.

"As to the supposed connection between change of the moon' and changes of the weather, it should be enough to note that even within the United States the weather changes are not simultaneous (in Kansas and Maine, for instance), as they should be if they are due to the changing phases of the moon. Since, however, a change of the moon occurs every week, every weather change must necessarily occur within about three days and a half of lunar change, and half of them ought to fall within about forty-five hours, even if perfectly independent.

"Now it requires only a very slight prepossession in favor of a belief in the effectiveness of the moon's changes to make one forget a few of the weather changes that occur too far from the proper time. Coincidences though can easily be found to justify a pre-existing belief.

"From a very remote antiquity in the twilight of natural astrology, a belief arose that changes in the weather were occasioned by the moon. That the belief still exists is clear to anyone who is acquainted with current literature and common folklore. In fact, it must be admitted that even intelligent and well-informed people have been known to accept the theory."

THOUGH the spirit of discord and war brings the nations into a ferment, and like the restless sea it casts up its mire and its dirt, may we ever remember God ruler over all. The nations, with all the pride of pomp and power, are, in his sight, but as a drop in a bucket, for did not one Angel of God defy the might of Pharaoh, and slay the first born, on the king on his throne to that of the awer of water? And at another time Asria's host vanished as the morning dew before the rising sun. Let then the poets herald the earth strive together. In these wars God's judgments for the unrighteousness and pride of nations, but those, the children of God, who are called out of the world to love the Prince of Peace, are not for these

things to be troubled. Whilst wickedness and wicked counsels abound these must needs be. But may the end of war soon come and its dissolutions cease, and peace and love hold sway.

—Canada Y. Meeting.

American Grapes and the Discovery of the Concord.

"There are perhaps more Concord grapes grown in this country than all other varieties of native grapes combined," said the proprietor of a Chautauqua Lake vineyard. "There are many localities where other varieties are scarcely known, but there is not a nook or corner of the land where the Concord is not found and it appears abundantly even in the vineyards of France. Years and years ago Horace Greeley gave the Concord the name of 'the people's grape,' and in spite of the fact that since its discovery, nearly sixty years ago, many other excellent varieties have been put upon the market, the reliable old Concord has ever maintained its lead.

"A remarkable thing in the history of this grape is that the original vine—the parent of all the thousands and thousands of acres of Concord vineyards and of the untold numbers of the Concord vines that cover the arbors and trellises of home gardens throughout the country—is alive and vigorous yet, and bearing generously every year of the grape that has done more for the general advancement of viticulture as a great commercial industry than any other grape. The patriarch vine is on the old Ephraim Bull place, a mile from Concord, close by the historic home of Nathaniel Hawthorne.

"It is doubtful if even among vineyardists who have made fortunes out of the Concord grape there are many who know how the popular and profitable grape originated. It was the product of a chance wild grape vine. More than sixty years ago Ephraim W. Bull, an invalid, removed from Boston to Concord for the benefit of his health. His brother then lived in the Hawthorne house, and Ephraim bought the cottage and grounds nearby. He had some knowledge of grapes and grape growing and planted a number of Chasselas and Black Hamburg vines—both foreign varieties—and the native Isabella, but the season was so short that it was only with the greatest care and attention that he succeeded in getting ripe grapes from them. He tried other varieties in his experiments in raising a table grape successfully, but none could withstand the late spring and early autumn frosts of that locality. He then conceived the idea of producing a grape from seed.

"A neighbor of Bull's had two sons who were constantly in the woods or fields hunting or fishing. In the fall of 1840 they came home with a quantity of wild grapes, which they said grew on a vine in a piece of woods near the Concord river. They showed Bull where the vine was, but the grapes then upon it were not just in the condition he desired for his experiment. Not until the fall of 1843 did they bear and ripen in that condition, and that fall, early in October, Bull planted a number of the grapes whole. They were a large, sweet grape, tawny in color and with a 'foxy' after taste. They were unlike any wild grapes he had ever seen, and there were no others like them anywhere in the vicinity.

"The seedling vines that came up from the grapes were transplanted and cared for until 1849 without result, but in that year, on September 10th, E. W. Bull picked a large bunch of black grapes from one of them—the first bunch of Concord grapes that ever grew. Delicious as the grapes were he continued the cultivation of the vines until 1852 before he considered that the fruit had come to a state of perfection, and in that year he placed a basket of them on exhibition with the Massachusetts Horticultural Society, with the result that an instant demand for cuttings from his vines arose.

"The creating of the Concord grape was the first successful use of the seed of the wild grape in obtaining a new variety of table grapes. The name Concord was given to this grape by Ephraim Bull. The grape itself was not put into the market until 1854. It has been there ever since with a constantly increasing demand for it. Millions of dollars have been made from its sale and the sale of vines. Its discoverer died a few years ago at the age of nearly ninety years.

"New York city receives 25,000 tons of grapes from the vineyards of this state alone every season and the great bulk of that supply is made up of Concord grapes. The Chautauqua district of 12,000 acres grows comparatively few other grapes, and a great part of the vast Lake Keuka region is planted with Concord grapes. It is probably a fact little known outside the trade that the favorite Catawba grape, which is the latest native grape to come into the market, cannot be profitably grown elsewhere than in Lake Keuka district, owing to climatic and meteorological conditions. Hence the supply of Catawba that comes to this city is from that region.

"It was for many years a source of wonder to consumers of grapes why there was no standard variety of native white grape in the market, such as the Concord, Catawba, and Delaware were among black grapes. In the trade, all grapes that are not white are 'black' whether they are black, red or purple. Ever since grape culture became an industry in this country vineyardists and nurserymen have been striving to produce a native white grape which would possess qualities to commend it as profitable in the market.

"Many excellent white grapes are the result of these experiments, among them being the Lady Washington, Prentiss, Pocklington, Rebecca and Duchess. These are all grapes of fine quality, and when the Prentiss was discovered it was believed that the ideal American white grape had at last been found. It originated at Putney, Stephen County, N. Y., and the first year the vine was offered for sale 70,000 plants were sold by Prentiss, its discoverer, at \$2 per plant. The sale of plants continued to be large annually for two or three years, but when the grape came into general bearing it was found that, although it was a delicious fruit, it had not the qualities necessary to make it a profitable market grape.

"The trouble with all white grapes has been frailty of berry, lack of tenacity at the stem and a disposition to do well only in isolated places or localities of peculiar climatic influences. Thus the Duchess, one of the choicest of white grapes, can be grown to advantage

in only one locality in this country, and that is at Vine Valley, on Canandaigua Lake. The Duchess belt, even there, is limited, and the grape, few rods off that belt in any direction, cannot be successfully grown. The Lady Washington is a grape of delightful flavor, but it will not keep long after picking, and trifling agitation of the bunches tends to the shaking of the berries from the stem.

"These were faults in white grapes grown in this country that experimental vineyardists had been for years endeavoring to overcome. They were believed to be due to the presence of foreign strains in all the crossings by which the various vines had been produced. Thirty years ago, C. L. Hoag, of Lockport, began experimenting in producing a marketable white grape, and accepting the theory that the presence of foreign blood in all previously discovered white grapes was the cause of the failure, he used in his experiment no cross between grapes unless the pedigree of each vine was unmistakably known, and the absence of any foreign strain in its production was absolutely certain, and unless every precaution had been taken to prevent accidental cross-fertilization from foreign bred vines.

"Among the white grapes which previous experimenters had propagated was one known as the Cassady. The vine was not productive and the fruit was small in bunch and berry. But it was a pure native. This was crossed with the sturdy old Concord, and the result was the now familiar yellowish green grape known as the Niagara, the only really marketable grape that can be classed as white that has yet responded to the efforts of vineyardists, in although as a delight to the palate it can in no way compare with any of the white grapes that lack its necessary qualities, hardness and tenacity on the stem.

"If it could only be marketed, grape lovers in the North might enjoy the most delicious grape in my estimation that grows anywhere on earth, although Northern vineyards affect to deride it, and that is the Scuppernong of North Carolina. North Carolina, by the way, is a natural nursery of the grape, the like of which probably does not appear in any other State or Territory of the Union. In all the other grape growing districts of the United States the vineyards are of stock not native to their soils.

"North Carolina grapes, of which there are innumerable varieties, all originated in the State, and at least two important American grapes grown extensively in the North, the Catawba and the Isabella, are natives of North Carolina—the Catawba having its origin on Cane Creek, Buncombe County, one hundred years ago, and the Isabella near Wilmington, five or six years later. The Delaware grape is believed also to be the result of a graft on the vine of a wild summer grape native to North Carolina. But the pride of the Tar Heel State is the Scuppernong, which is a big russet-green berry full of meat and flavor.

"More than a century ago Charles Pettigrew, a clergyman and naturalist, roaming in the wilds of Tyrell county along the waters of the Scuppernong River, found a wild grape vine. He had a plantation in the county and he dug up the vine, translated it to his ground and cultivated it. The vine was a natural seedling of a muscadine or fox grape

and under cultivation it produced a grape the like of which is not known. From cuttings of that transplanted and domesticated vine the State of North Carolina was stocked with the grape which is now its pride, and to which Dominie Pettigrew gave the name of Scuppernong, for the river of that aboriginal name, the meaning of which no one seems to know.

"This grape will not grow north of the line of North Carolina, nor to any extent west of the central part of the State. It does not grow in bunches, but in separate groups of two or three and must be picked one at a time, as tree fruit is. For this reason Northern vineyardists declare that the Scuppernong is not a grape, but a plum.

"The Scuppernong will not be trimmed. It must run at its own sweet will. There are in North Carolina vineyards single Scuppernong vines that cover more than half an acre. The Scuppernong is never 'sick,' never fails of a crop, and is always a profuse bearer. But it will not keep any length of time after being picked, and will not stand shipment. For this reason the Northern market is bereft of the most delicious morsel of fruit in that line that grows beneath the sun.

"The table grapes that come to the New York market from California are chiefly Hungarian grapes of the Tokay variety, and the Spanish muscats. California grows only foreign grapes, and in no other vine region in the world are the rich varieties of grapes of every known foreign nativity found growing side by side, a fact that makes of California the wonderland of the vine.—*New York Sun.*

ASTERS.

DORA REED GOODALE.

Walled in with fire on either hand
I walked the lonely wood-road thro';
The maples flame above my head,
And spaces whence the wind has shed
About my feet the living red,
Are filled with broken blue.

And crowding close along the way
The purple asters blossom free;
In full profusion far and wide,
They fill the path on every side,
In loose confusion multiplied
To endless harmony!

The autumn wood the aster knows,
The empty nest, the wind that grieves,
The sunlight breaking thro' the shade,
The squirrel chattering overhead,
The timid rabbit's lighter tread
Among the rustling leaves.

And still beside the shadowy glen
She holds the color of the skies;
Along the purpling wayside steep
She hangs her fringes passing deep,
And meadows drowned in happy sleep
Are lit by starry eyes!

WE are called upon to uphold the very highest ideals as to the headship of Christ in his Church, and other allied truths. Our own failure to live in accordance with these ideals is one reason why others are so slow to accept them. It is only as we are individually kept in the place of death with Christ, only as we live in Him and are filled with his Spirit, that we can receive power to live and serve as He would have us.—*London Meeting on Ministry and Oversight.*

FOR "THE FRIEND"

The Way of Salvation.

Salvation means absolution from the guilt, sin, deliverance from the power of sin and restoration to the life and holiness lost as effect of sin.

God's covenant with Adam was in substance, "Obey my voice and walk with me and thou shalt live; but if thou disobey my voice, I do that which I forbid thee thou shalt die." It is in mercy towards man that God modifies this covenant suitably to man's changed condition. For in the weakness and frailty of man as man now finds himself, in Adam, as first nature, all have sinned and fallen short of the terms of this covenant. All have died and come short of the glory of God; therefore God hath included all under sin, that his mercy might extend to all and be over all.

Man being dead, God in mercy offers life to man. Not a natural life in a carnal body, which like the first would still be subject to death, such as that bestowed on Lazarus, but a Divine, a spiritual life, which whosoever receives, as Christ Jesus says, "shall never die." God in his love towards his creature man moved in mercy; himself provided a sacrifice acceptable, even that of his dear Son, through whom He opens wide a door of mercy towards all. The Lord as a quickening spirit revisits man, his voice speaks to the soul convicted in trespasses and sins. He opens man's spiritual ear to hear, and his eye to let man see himself, his lost condition and his alienation from God, as the effect of sin. God leads him in repentance, begetting in a man a heartfelt sorrow for sin and earnest desires to forgive it. By the testimony of his Spirit, He leads man to the foot of the cross, pointing to the suffering Saviour, who once on the cross bore every sinner's sins. The God of Truth speaks to the sinner and leads him into mercy who is "the way, the truth and the life." The sinner believed in God, who led him into repentance; still under condemnation, God would lead him to the Son. "Ye believe in God, believe also in me." No man can be justified into the presence of the Father and in through the Son, the only way to God. Through faith in Christ, led thereunto by the Spirit, man receives of Christ's spirit no power therewith; power not only to become a son of God, being born of his Spirit, and on having received the spirit of adoption, but he receives therewith absolution from all sins and from the guilt thereof, and also power to overcome sin in the future.

In Divine justice one sin lost all. In God's mercy many sins are forgiven and washed away, through and by virtue of that one offering of his dear Son, who is the Way to God. He does the Lord leave the sinner in doubt as regards his condition. Peter coming out of the dungeon led by the angel, half persuaded himself it was but a dream. Now the sinner emerging from the kingdom of darkness, sin and condemnation, comes into the light, joy and freedom from sin and its power, which salvation is the portion of God's children. Of condemnation into justification through faith. For Christ as the true light, condemnation wherever found, and justifies the righteous. This is no dream. God's Spirit beareth witness with those who are his and all truly convicted.

ners are such. And God's witness is true to justification, as it was before condemnation.

"Good and upright is the Lord; therefore He teach sinners in the way" (Ps. xlv. 8), as it safe to sit down then on the banks of grace, and presume that no more is needed of men? If the Israelites had done so the Red Sea, would they have inherited the land of promise?

No. This is but the beginning of the Christian pilgrim's journey. He is always liable to temptation, for even Christ was tempted. Now though grace received, the Christian is ended to be watchful, prayerful to receive the promised strength and receiving to overcome sin. He is called and chosen soldier of Christ He enters on "the good fight of faith."

Our Saviour, Jesus Christ, gave himself for that He might redeem us from all iniquity" (Tit. ii. 14). And He is able and willing to do, save to the uttermost those who come unto Him" (Heb. vii. 25).

But if through unwatchfulness and the frailty of the flesh I fall into a sin, do I necessarily all I have gained? Not so. Peter was for his Lord, in weakness denied Him. He granted him repentance, and he was forgiven. David, too, on repenting, was forgiven. He sinned not willingly, but is unguardedly caught in Satan's snares, Christ Jesus not willingly forgives, but the angels rejoice at the return of the repentant sinner. So John, the Apostle, who wrote, that those who read did not sin, yet did say: "If any man sin, we have an advocate with the Father, Jesus Christ, the Righteous." He never sinned, yet he tempted in all points as we are. Know how well our frailty, he pities his children, he is ever ready to forgive. Still no act of obedience goes without chastisement, and had any one refuse correction, he becomes hardened in sin, and forfeits God's proffered mercy. And who ever lives in any known sin, tempted of, and unforgiven and yet flatters self that he is Christ's may truly conclude Satan has blinded his eyes, and that unawakened he is sleeping the sleep of the dead.

Should any willingly sin, or being reprobate, remain in sin, Christ's propitiation can do him nothing, for so doing he is despising the Spirit of grace which would lead to repentance. "He that being often reproved, hardeneth his neck, shall suddenly be destroyed, and that without remedy" (Prov. i. 32).

The whole tenor of the gospel is the putting forth the arm of God's power in Christ to redeem the world from sin, purifying them from the filth of it, and enabling them to overcome their motions in themselves. As men yield themselves to this power, God works in them for this end. He who continues in sin, against the Spirit of God, and frustrates the purpose of Christ's coming in the flesh, who coming by the blessed invitation of the Spirit, he practically rejects God's offers of grace, and bringeth swift destruction on himself.

Those having been "servants of sin" and of unrighteousness, so now by the power of grace they become "servants to righteousness" free from sin. So Paul declares, "I am now made free from sin and become a servant to God, ye have your fruit unto holiness, and the end everlasting life. For the wages of sin is death; but the gift of God is eternal life, through Jesus Christ our Lord" (Rom. vi. 22, 23). Nor is he a faithful servant of Christ, who teaches others that a Christian, as long as he lives on earth must of necessity daily sin, in other words must serve Satan being subject to his will; for then would it be possible to serve two masters; but Christ Jesus says "No man can serve two masters; for either he will hate the one and love the other; or else he will hold to the one and despise the other. Ye cannot serve God and mammon" (Matt. vi. 24). Nor can any man serve Christ and Satan at the same time for "his servant a man is whom he obeys whether of sin unto death or of obedience to life eternal." Again the Apostle says, "How shall we that are dead to sin live any longer therein?" (Rom. vi. 2).

One becoming truly a Christian dies to sin and to the world, and lives to boldness and to Christ. Through faith he receives of Christ's Spirit, the Spirit of adoption, being made "a partaker of the Divine nature." Christ Jesus was the fulness, ours the measure according to the gift of God "in Christ." In Christ Jesus the Godhead dwelt bodily. God's glory was seen in Him. The fruits of the eternal Spirit, the attributes of Deity as found in Him were visible to God's children. These receiving of that same Spirit bring forth like fruits.

As God is love, so does love fill their souls; as "in his presence is fulness of joy;" so are they joyful in the Lord; as He is the God of peace, so does the Lord Jesus the Prince of Peace, who himself makes peace between God and man, give of his own peace to all who obey Him;" gently does the Lord deal with the children of men, so are God's children gentlemen above all others; as He is long suffering to sinners and restraineth his anger, so are his people long suffering to all who do them injury, and they are meek in heart. Good, honest and true are they, for they seek to obey the Spirit of God that beareth the witness to the truth. So by grace received are they enabled to walk even as Christ walked when he tabernacled in the flesh and walked amongst men.

This Christ Jesus, by Almighty power vested in Him for man's redemption forgives all sin, by his Spirit breathes into man the breath of life divine once lost; destroying the effects, pollution and power of sin He reconciles man to God, bringing him into a close communion with his Maker through the Spirit of his Son his appointed Mediator between Himself and man his creature. And because Christ lives in them they live in Him enjoying life eternal. Truly we regain more in Christ than what we lost in Adam for, if faithful unto death a crown of glory awaits each one who loves and serves Him here below.

W. W. B.

MANY Christians have to endure the solitude of unnoticed labor. They are serving God in a way which is exceedingly useful, but not at all noticeable. How very sweet to many workers are those little corners of the newspapers and magazines which describe their labors and successes; yet some who are doing what God will think a great deal more of at last, never saw their names in print. — *Surgeon.*

In the Bible there is more that finds me than I have experienced in all other books put together; the words of the Bible find me at greater depths of my being; and whatever finds me brings with it an irresistible evidence of its having proceeded from the Holy Spirit. — *Coleridge.*

The Practice of the Presence of God.

The following letter from Nicholas Herman, better known as Brother Lawrence, is nearly two hundred years old, but breathes a refreshing sweetness, and sets forth the exceeding riches of grace to a fully surrendered and trusting heart.

"I have taken this opportunity to communicate to you the sentiments of one of our society, concerning the admirable effects and continual assistance which he receives from the presence of God. Let you and me both profit by them.

"You must know his continual care has been, for about forty years past that he has spent in religion, to be always with God, and to do nothing, to say nothing, and think nothing which may displease Him; and this without any other view than purely for the love of Him, and because he deserves infinitely more.

"He is now so accustomed to that Divine presence, that he receives from it continual succors upon all occasions. For about thirty years, his soul has been filled with joys so continual, and sometimes so great, that he is forced to use means to moderate them, and to hinder their appearing outwardly.

"If sometimes he is a little too much absent from that Divine Presence, God presently makes himself to be felt in his soul to recall him, which often happens when he is most engaged in his outward business. He answers with exact fidelity to these inward drawings, either by an elevation of his heart towards God, or by a meek and fond regard to Him, or by such words as love forms upon these occasions, as for instance, My God, here am I all devoted to thee; Lord, make me according to thy heart. And then it seems to him (as in effect he feels it) that this God of Love, satisfied with such few words reposes again, and rests in the fund and center of his soul, that it renders him incapable of doubting it upon any account whatever.

"Judge by this what content and satisfaction he enjoys while he continually finds in himself so great a treasure. He is no longer in an anxious search after it, but has it open before him, and may take what he pleases of it.

"He complains much of our blindness, and cries often that we are to be pitied who content ourselves with so little. God, saith he, has infinite treasure to bestow, and we take up with a little sensible devotion, which passes in a moment. Blind as we are, we hinder God, and stop the current of his graces. But when He finds a soul penetrated with a lively faith, he pours into it his graces and favors plentifully; there they flow like a torrent, which, after being forcibly stopped against its ordinary course, when it has found a passage, spreads itself with impetuosity and abundance.

"Yes, we often stop this torrent by the little value we set upon it. But let us stop it no more; let us enter into ourselves and break down the bank which hinders it. Let us

make way for grace; let us redeem the lost time, for perhaps we have but little left. Death follows us close; let us be well prepared for it; for we die but once; and a miscarriage there is irremediable.

"I say again, let us enter into ourselves. The time presses, there is no room for delay; our souls are at stake. I believe you have taken such effectual measures that you will not be surprised. I commend you for it; it is the one thing necessary. We must, nevertheless, always work at it, because not to advance in the spiritual life is to go back. But those who have the gale of the Holy Spirit go forward even in sleep. If the vessel of our soul is still tossed with winds, and storms let us awake the Lord, who reposes in it, and He will quickly calm the sea.

"I have taken the liberty to impart to you these good sentiments, that you may compare them with your own. It will serve again to kindle and inflame them, if by misfortune (which God forbid, for it would be indeed a great misfortune) they should be, though never so little, cooled. Let us then both recall our first fervors. Let us profit by the example and the sentiments of this brother, who is little known to the world, but known of God, and extremely caressed by Him. I will pray for you; do you pray instantly for me, who am, in your Lord,

"Yours, &c."

SUMMARY OF EVENTS.

UNITED STATES.—President Roosevelt has lately stated to a Representative from Missouri: "I want I thoroughly understood that no Presidential appointee has a prescriptive right to hold office, and I intend to consult only the public welfare in making appointments. As long as a man proves himself fit and efficient his position is safe. When he shows himself unfit and inefficient he will be removed."

It is said that the President meets with the Dutch Reformed congregation in Washington for divine worship. His wife is a member of the Protestant Episcopal Church. The brigands who have captured Helen Stone, an American missionary, are said to have been located on the Mountain Guelpe, on the Turko-Bulgarian frontier, near Dubnitz. The United States Ambassador, Charlesagne Tower, at St. Petersburg, has had several interviews in regard to the case with the officials of the Foreign Office. The Russian Government is cordially supporting the effort being made to secure her release. In compliance with a request from Washington, the search by Ottoman troops for her abductors has been abandoned, it being feared that the brigands would kill her should they be closely pursued. Funds for her ransom have been sent to Constantinople.

Our report on Immigration shows that the number of aliens arrived at the port of New York during the fiscal year ended Sixth Month 30th, 1901, was 453,496. There were also 133,056 citizens of the United States who arrived from abroad. From a comparison of the steerage immigration for the last two years it is shown that nearly 30,000 of the increase of last year over the year before was in the immigration from Southern Italy alone; the report says: "The conclusion, unfortunately, is unavoidable that our immigration is constantly increasing in illiteracy. Not only are we drawing more and more from the countries where illiteracy is high, but also the immigrants themselves are showing higher percentage of illiteracy. Nearly one half of our steerage immigration now presents an illiteracy of from 40 to over 50 per cent. The Italians are by far the largest single element, furnishing over one-third of the whole, but the percentage of increase is much greater of the Rutenians, Armenians, Syrians, Greeks, Croatians and Dalmatians.

The cost of the war with Spain, and the occupation of the Philippines, thus far set down at \$189,000,000. The final census report on the population of the United States shows that the males number 39,059,242, or 51.2 per cent. of the total population in 1900. The increase of 13,233,631 in total population since 1890 is made up of 6,744,179 males and 6,489,452 females. The increase of 20.4 per cent. of males and 21.1 of females. The foreign born element have increased only 12.4 per cent. and the native born population 22.5 per cent. since 1890. As to color

and race the population in 1900 comprises 66,590,802 white persons and 9,312,585 colored persons, the latter comprising 8,840,785 persons of negro descent. The colored element as a whole shows an increase of 17.8 per cent. since 1890.

As soon as the weather will permit and proper locations can be selected, it is stated that there will be pitched near Boston the first of a number of camps for consumptives. This camp (and each succeeding camp to be like it) will consist of ten tents, arranged in a circle with an open-air fire in the centre, and surrounded by a duck wall eight feet high. Each of these tents will be a consumptive's home; a consumptive will sleep there, even through the coldest weather, with no other protection than plenty of felt blankets, felt sleeping boots and a two-gallon jug of hot water.

The flow of the oil wells in the Beaumont field in Texas is rapidly decreasing in volume, and the owners in some places are preparing to pump the oil from the wells.

The three States of New York, Pennsylvania and New Jersey alone consume 65 per cent. of the total output of hard coal. Pennsylvania, which possesses the mines, itself uses one-quarter of all the hard coal consumed in the United States.

A test used by the Department of Agriculture for distinguishing between pure butter and its substitutes, is the following: A piece the size of a small chestnut is placed in an iron spoon and held over the flame. As it melts and begins to boil it should be thoroughly stirred, particularly on the outer edges, with a splinter of wood. Genuine butter boils with very little noise, and produces abundances of foam. Oleomargarine and "renovated" butter boil noisily, spattering somewhat like a mixture of grease and water, and produces little or no foam.

A vein of ore containing gold in large quantity is reported to have been discovered in the Gallura Mountains in Arizona, about seventy miles north of Tucson.

Booker T. Washington thus speaks of the results of the training of colored youth in the Tuskegee Institute in Alabama: "The calls that come to us almost daily, not only from the negro race, but from whites, as well, for our graduates to enter various fields of usefulness are many—more than we can supply. The calls from white people for our graduates to take charge of various departments of agriculture are especially numerous. If we had the room and means, we could find opportunities for the greatest usefulness for many times more graduates than we are sending out."

The Governor of North Carolina has notified the people of that State that all petitions for the pardon of convicts must be first advertised for some length of time in the newspapers of the locality where the offender lived or where the crime was committed.

There are more Chinese (107,000) in the United States than Dutch (81,000), and almost as many as French (113,000).

There were 404 deaths in this city last week, reported to the Board of Health. This is 12 more than the previous week and 66 more than the corresponding week of 1900. Of the foregoing, 204 were males and 200 females; 51 died of consumption of the lungs; 29 of inflammation of the lungs and surrounding membranes; 15 of diphtheria; 18 of cancer; 16 of apoplexy; 10 of typhoid fever; 1 of scarlet fever, and 2 of small pox.

FLORIN closed on a basis of \$2.30 per pound for mill-

OTTOM.—Winter, super, \$2.15 to \$2.30; Penna. roller, straight, \$3.15 to \$3.25; Western winter, straight, \$3.20 to \$3.30; spring, straight, \$3.35 to \$3.60.

GRAIN.—No. 2 red wheat, 72½ to 73c.
No. 2 mixed corn, 62½ to 62c.

No. 2 white oats, clipped, 42c.
BEEF CATTLE.—Best, 5½ to 5½c.; good, 4½ to 4½c.; medium, 4½ to 4½c.

SHEEP.—Choice, 3½ to 3½c.; good, 3 to 3½c.; common, 1½ to 2½c.

LAMBS.—3½ to 5½c.
HOGS.—Best Western, 9 to 9c.

Foreign Consulars.—The Chinese Consulars at Peking have forwarded to the Spanish Minister, for the diplomatic corps, a bond for the indemnity of 450,000,000 taels, in accordance with the late terms of settlement.

A dispatch of the 7th from Peking says: "The Chinese officials are considering the desirability of protesting to the foreign consulars against the conduct of the Legation guards. The Chinese consulars, to treat the Chinese who have conquered people. Groups of soldiers roam about the city, wearing their side arms, often intoxicated, maltreating the natives and committing petty robberies. A party of Americans recently looted a silversmith's store, securing several hundred taels worth of property. The guilty men were confined to barracks until the guilty men were detected."

On account of recent legislation in France, directed

against Roman Catholic religious organizations, more than 10,000 members have left France, most of whom have gone to England to reside.

The effect of the South African war upon the people of England is thus described by a writer in that country: "The enormous drain of money and men is already beginning to tell upon society. Although employment, plentiful, prices are rising. The purchasing power, wages is not what it was, while the enormous pressure of the outlay of the British working classes devoted to the war—amounting in many cases to as much as 30 per cent. of the income—has increased the cost of living in Canada, with only one-fifteenth of the population of the United States, has a trade of more than one-sixth of this country.

Last year England imported nearly 5,000,000 tons of wheat of the 7,000,000 that were consumed.

Martial law lately has been extended in Cape Colony as to include the whole of the colony and men is already occupied by the natives. The Dutch population of the colony continues to be largely in sympathy with the Boers. By a recent statement the war office in England is providing supplies for 314,000 persons, directly or indirectly connected with the war; feeding 428,000 horses, mules and maintaining four months' reserves of food for men and animals.

The average increase in the length of railways throughout the world is about 11,000 miles per annum, equal nearly two and one-half per cent. of the total line of rail, which at the beginning of this century embraced nearly 480,000 miles. Of the increase during the years 1900 miles per annum are added to the British system, 3500 miles per annum to the American, while the addition in Asia is at the rate of 2250 miles per annum, Africa 1100 miles, and in Australia 160 miles per annum.

A Frenchman living at Genesee, near Paris, has a asylum for domestic animals. Among them are aged 25, a cow aged 36 and a mule aged 72 years.

NOTICES.

UWCLIAN MONTHLY MEETING.—J. Preston Thomas, correspondent, informs that Uwchlan Monthly Meeting, formerly held at Uwchlan, Pa., in the Sixth, Eighth and Tenth Months, is now held at Downingtown through the entire year.

WESTWON BOARDING SCHOOL.—A stated meeting of the general committee will be held in Philadelphia on the 25th at 10:30 a. m. The Committee on Revision will meet at 9 o'clock.

WM. B. HARVEY, Clk.

WESTWON BOARDING SCHOOL.—For convenience of persons coming to Westwton School, the stage will call at the following places: Philadelphia, 7:45 and 8:15 a. m. and 4:32 p. m. Other trains are met when requested. Stage fares, fifteen cents; after 7:30 p. m., twenty cents each way. To reach the school by telegraph, West Chester, Phone 114x.

EDWARD G. SNEYLEY, Secy.

WESTWON BOARDING SCHOOL.—Applications for admission of pupils to the school, and letters in relation to instruction and discipline should be addressed to W. F. WICKERSHAM, Principal.

Payments on account of board and tuition, and donations in regard to business, should be forwarded to EDWARD G. SNEYLEY, Superintendent.

Address, Westwton P. O., Chester Co., Pa.

THE MOORESTOWN PEACE ASSOCIATION OF FRIENDS send, free of cost, well selected peace literature, also for popular use, to all who desire it, and distribute it gratuitously. Address GRACE EVANS, Treasurer,

205 E. Central Ave.

Moorestown, N. J.

WANTED, a Friend and wife or daughter to take care of the pressing-board and grounds at Lansdowne, compensation—use of five-room house on meeting grounds, and \$5 in spring and fall, when house is closed. Lansdowne is on the Media R. R., about seven miles from Philadelphia. Address J. R. ELFRETH, Lansdowne.

DIED, at her residence, Mount Laurel, N. J., Sixth Month 1st, 1901, ESTHER J. DARNELL, wife of J. Darnell, aged sixty-four years; a member of the Friends of the Church of the Messiah, and a devoted follower of Jesus Christ. She was afflicted with illness with patience and resignation, and at the time of her dissolution drew near, fervent were her petitions to be released, having in mercy an assurance of mansion of rest and peace awaited her.

To slay our unchristian propensities and
to slay our country's enemies Here
a patriot's preeminent field for patriotism.
A model house-keeper may be made by train-
ing, but a home-maker is made by Christ's
spirit.

We sometimes speak of men as dead and
none. Not so of Christ, who "was dead" and
is come."

When the guess-work of interpreters be-
comes the revelation of the Spirit, then it will
be high time to receive it.

A MOST hurtful tare throughout a wheat-
field is the tare-hunter. The right selection
of tares from wheat is a work for angels.

ALL the dulness of a silent meeting for
worship is in the spiritually dull. Worship-
ers find no dulness in Christ who is in the
 midst of two or three gathered in his name.

WAR is consistent with itself on land and
a. Essentially Christless, its polish of honor
is to be punctured by investigation, to
love carnal warfare rotten at the core with
mutual jealousies, added to its native inhu-
manities and lusts.

"The law is made for the lawless, and not
for the righteous man." As the Divine law
written upon the heart comes into dominion
among men (which is the work of the new
covenant) and love becomes "the fulfilling of
the law," the need of outward systems of
government may, to that extent, be dispensed
with. Would that the hope of the anarchist
were turned to "the bringing in of a better
age," the "law of the spirit of life in Christ
Jesus," as the only true freedom there can
be from the necessity of outward law, and the
law "perfect law of liberty."

Not Grecian, but Christian Civilization.

The civilization of ancient Greece was far
in advance of that of surrounding nations,
and has left valuable reminders of its fame.
Out of it came a beneficent influence upon
Roman culture and refinement. The power
of its literature and art is felt even to the
present day. Some modern writers have be-
come so fascinated with a study of Grecian
civilization that they have published books,
not only in praise of it, but as furnishing a
model for our generation. They regard it as
ideal, and as a goal to which is to be directed
our highest practical efforts. The *Christian*
of London quotes one of them as saying that it
is "the record of the highest achievements of
the past, and the hope of the highest possi-
bilities of the future."

But those who are so enamored with the
civilization of ancient Greece overlook certain
facts which militate against it greatly as a
model attainment. While it had much that
was praiseworthy, it rested upon inequality
and injustice as a social organism. Slavery
and immorality disgraced it, and brought it
finally to ruin. Attica had over 40,000
slaves. Athens, the pride and glory of
Greece, had four times as many slaves as it
had citizens. At best Grecian philosophers
entertained a low conception of humanity,
and looked upon those in bondage among them
as only "living machines." Nor was there
among them a true and worthy conception of
womanhood, woman being considered as far
inferior to man. Humanitarianism, such as
obtains in the present age, was then neither
known nor inculcated. As far as the outside
world was concerned, no interest was shown
in man as man. The entire atmosphere of the
civil and social life was selfish. Everything
centered upon and about Greece alone, and
mostly upon her favored few. True equality
of citizenship and enlarged responsibility for
the world's welfare were unknown factors in
the body politic.

It remained for Christianity to introduce a
far higher, nobler and purer civilization.
Jesus Christ imparted grander and nobler
ideas of humanity. He embodied in Himself
the ideal of manhood. He taught perfection
of living. He laid down laws for human
well-being. He became the unifier and devel-
oper of the race. In and through Him man-
kind is to be blessed and exalted. The mid-
dle-wall of partition between Jew and Gentile,
man and man, nation and nation, has been
broken down. He gave a gospel for all peo-
ples. He started a socialism, in which all are
to share the temporal and spiritual benefits
which his religion confers. He attested by
his life and principles the nobility of labor.
He demanded the release of the captive. He
insisted upon human rights, and would have
body, mind and soul alike free. He taught

the brotherhood of man and proclaimed the
Gospel which bears in its wings healing for
the nations.

We are living amidst the privileges, oppor-
tunities and duties of a civilization which is the
outgrowth of his Christianity. We possess
advantages and enjoyments which Greece never
had; nay, which were impossible to her spirit
and genius. We have an aggressive and pre-
servative energy which she lacked. With our
Bible, our civil and religious liberty, our re-
formatory agencies, our moral concepts and
obligations, our life-giving and heart-renewing
Gospel, we have "the promise and potency"
of development in all directions, of which old
Greece never dreamed. She evinced a mar-
vellous intellectual activity, but it was limited
to certain classes, while ours affects all con-
ditions and relations. Hers was a physical
and mental culture, while ours is a culture of
the soul as well as of body and mind. She
had none of the regenerative, reformatory,
missionary and institutional genius which is
doing so much for human uplifting every-
where.

Having the God-man ideal of humanity as
it pertains to earth's relationships and activi-
ties, it becomes all who appreciate it to de-
vote all their energies to its larger realization
at home and abroad. What America and Eu-
rope need for the fulfilment of their destiny
as civilizers is, not more of Athens, but more
of Bethlehem and Calvary; not more of Plato
and Socrates, but more of Christ. A world
lying in ignorance, degradation and sin imper-
atively requires to its enlightenment, eleva-
tion and purification, a Gospel-filled and Spirit-
energized Christendom, not a revived Grecian-
ism.—*The Presbyterian*.

We find another writer concerned in a simi-
lar line, as follows:—"We live to-day in a
very revival of the Greek spirit. Art, philos-
ophy, music, culture, have asserted their
power as never before. We are conscious of
it everywhere—in our buildings, in the very
shape of things in the restless skepticism of
the age. The pulpit, the press, the whole
literature of the land testify to its sway. And
there are the same characteristics in the peo-
ple as in the Greeks of old.—the restlessness,
the intellectualism, the craving for excite-
ment, the weariness and the skepticism. How
are we going to meet it? There is but one
thing needful—that those who are called Chris-
tians will set themselves for Christ's sake to
live the Christlike life, striving to let men see
in everything the truth and purity and coura-
geous goodness of Jesus Christ—his gracious-
ness and lowliness; his patience, and yet his
indignation, too, against all evil; striving to
bring into the world the hope for all men, and
the help for all which comes from faith in God
and his self-sacrifice.

We have no right to sigh and think how

difficult it is to live such a life. If Christ fers us the power, where is the difficulty except only that we do not accept it? This christlike life alone is Christianity. Do not let us think of it as anything else; and it is power for such a life that is provided for each one of us.—*Mark Guy Pearse.*

Selections.

Science and Industry.

According to the director of the Geological Survey of Canada, at least one-third of the area of Canada remains to be explored. Nothing whatever is known of one large area, the interior of the peninsula of Labrador, which comprises at least two hundred and ninety thousand square miles. It is thought that the Dominion has dense forests of hardwood and mineral deposits of great value, all awaiting exploration and development.

The London Zoological Society has the photograph of a pair of elephant tusks that break the record. They belonged to an African elephant and measure, along the outer curve, ten feet and four inches. Though they measure the same they differ ten pounds in weight, one weighing two hundred and twenty-five pounds and the other two hundred and thirty-five. The elephant had more than his share to carry about—four hundred and sixty pounds of ivory, in addition to his trunk.

An English naturalist, traveling in the Malay Peninsula, has made two queer discoveries. One is a kind of bamboo, in which are stored, between the joints that connect the stems, large quantities of naturally filtered water. Emergencies might arise in which a knowledge of this might prove of great importance. The other discovery is two species of ferns, growing on trees, the thick stems of which are filled with galleries tunneled by ants; the ferns thus forming living nests for the ants.

The mining of phosphate rock constitutes the only real mineral industry of which Florida can boast, says George H. Eldredge, in *Mining and Metallurgy*. Some building brick is manufactured in the State, and Florida is our only important domestic source of supply for Fuller's earth, but these industries are comparatively unimportant. The first discovery of phosphate rock was made in the vicinity of Bartow, about thirteen years ago, and three thousand tons of rock were produced in that year. In the following year the pebble deposits of the Alafia and Peace Rivers were discovered, and a small portion of the four thousand and one hundred tons of phosphate shipped that year was river pebble. From this small beginning the industry has grown until in 1899 nearly three-quarters of a million tons of phosphate rocks was produced. This is nearly two hundred thousand tons, or about thirty per cent. more than the largest production ever obtained in South Carolina in any one year, although mining in that State has been carried on since 1867. In the twelve years from 1888 to 1899 inclusive, the production of phosphate rock has amounted to four million three hundred and sixty-two thousand seven hundred and ninety-nine long tons, valued at the shipping point at \$15,960,117.

TEN thousand of the greatest faults in our neighbors are of less consequence to us than one of the smallest in ourselves.—*Archbishop Whately.*

For "THE FRIEND."

A Substitutionary Saviour.

[She was a tall, rather thin-visaged woman, wearing glasses, her peculiar, unmodish bonnet betokening her comradeship with the Salvation Army. There entered the train with her, occupying the seat next in front, two young women gaily attired, sprightly in demeanor, and noticeably forward in their actions. The elder woman, apparently quite fatigued, leaned her head back, resting side-ways on her seat, and so continued while the train rattled evenly on for several miles; then, rousing up, addressed herself to the one of the girls before her who wore a scarlet bodice. The girl was very soon thrown on the defensive, speaking passionately, almost crying, the plain-bonneted woman talking quietly though earnestly. I could not hear what was said, though it seemed to me that the girl might be protesting that she meant no harm, and was better at heart than her behavior seemed to indicate. Evidently the arrow had lodged in a sure place, and the fleshly part was torn. They left the train at the same ocean-side station that I did. It was past "the season" of visitors. Seeking the home of a near relative to which I was destined, a pamphlet on "Popular Christianity," by Catherine Booth, was observed on a table. Following the little train incident which had just occurred, I read with approval, and now transcribe what was said by that wise woman just named of the so-called Salvation Army, upon the subject of a substitutionary Saviour.—J. W. L.]

Another modern representation of the Christ is that of a substitutionary Saviour—not in the sense of atonement merely, but in the way of obedience. This Christ is held up as embodying in Himself the sum and substance of the sinner's salvation, needing only to be believed in, that is, accepted by the mind as the atoning sacrifice, and trusted in as securing for the sinner all the benefits involved in His death, without respect to any unwrought change in the sinner himself. This Christ is held up as a justification and protection in sin, not as a deliverer from sin. Men and women are assured that no harm can overtake them if they believe in this Christ, whatever may be the state of their hearts, or however they may, in their actions, outrage the laws of righteousness and truth. In other words, men are taught that Christ obeyed the law for them, not only as necessary to the efficacy of his atonement for their justification, but that He has placed his obedience in the stead of, or as a substitution for, the sinner's own obedience or sanctification, which, in effect, is like saying: Though you may be untrue, Christ is your truth; though you may be unclean, Christ is your chastity; though you may be dishonest, Christ is your honesty; though you may be insincere, Christ is your sincerity.

The outcome of such a faith only produces outwardly the whited sepulchres of profession, while within are rottenness and dead men's bones. The Christ of God never undertook to perform any such offices for his people, but He did undertake to make them *new creatures*, and thus to enable them to perform them for themselves. He never undertook to be true instead of me, but to make me true to the

very core of my soul. He never undertook to make me pass for pure, either to God or man, but to enable me to be pure. He never undertook to make me pass for honest, or sincere, but to renew me in the spirit of my mind, so that I could not help but be both, as the result of the operation of his Spirit as he dwelt within me. He never undertook to love God within me. He never undertook to love God instead of my doing so with all my heart and mind and soul and strength, but He came on purpose to empower and inspire me to do this. The idea of a substitutionary Christ, accepted as an outward covering or refuge, instead of the power of an "endless life," is a cheat of the devil, and has been the ruin of thousands of souls. I fear this view of Christ, so persistently preached in the present day, encourages thousands in a false hope, while they are living in sin, and consequently under the curse, not only of a broken law, but of a Saviour denied and [contemned]. Let me ask you my hearers, what sort of a Christ is yours? Have you a Christ who *saves you*, who renews your heart, who enables you to live in obedience to God, or are you looking to this outside and imaginary Christ to do your obeying for you?

Without a Divine Christ, Christianity sinks into a mere system of philosophy, and becomes as powerless for the renovation and salvation of mankind as any of the philosophies which have preceded it. But no, our Joshua has come, our Deliverer is here; He is come, and is now literally fulfilling his promise to abide—"I and my Father will come unto you and make our abode with you." He comes not in the flesh of his true saints, just as really as He came first in the body prepared for Him and He comes for the same purpose, to renew and to save: He is knocking at the door of your hearts even now, through my feeble words, and will come into your hearts if you will let Him. As He came walking over the sea of Galilee to the men and women of his own day, He comes now to you, walking over the storm raised by your appetites, your inordinate desires, passions and sins—a storm only just gathering, waxing worse and worse, and which unless allayed, will grow to eternal thundering lightnings and billows; but He is able to allay it, He offers to pronounce "Peace, be still" and end this tempest of your soul forever. Will you let Him?

SELF-INDULGENCE (and all intemperance, self-indulgence) is innate weakness. It is the mark of the child, rather than of the man. It rules with undisputed sway in the lower orders of society, where men obey their own impulses as first law. It is among such the hate is more common than love, suspicion more common than frankness, deceit more common than honesty, and crime more common than unselfish helpfulness. The person whose chief characteristic is an inclination to indulge self shows himself thereby to be allied to the degree of his self-indulgence, with all the weak and low and unworthy in human nature.

ARE we living habitually in such nearness to the Lord Jesus that the gentlest intimations of his wish comes to us with the force of command, and with the consciousness that, at some way or other, it is possible to obey, so that we shall be carried through in any service to which He calls us?—*J. Hudson Taylor.*

FOR "THE FRIEND."

A Reminder.

Among the many valuable articles in *THE FRIEND* it seems to the writer that there might be a service in calling the attention of our readers again, to the article on page 93 (present volume); entitled "Peculiar Times." No doubt most of its readers are more or less deeply interested in their own and the Society's welfare, but the many and varied misdeeds of the Evil One are so well fitted to our individual weaknesses, that it is feared we must be, as it was of the Jews formerly, the things that belong to our everlasting well-being are hid from our view. And why? Truly, not from any lack on the Master's part. Did He not weep over Jerusalem? Alas! The love, the unbounded love, that drew our tears. And in another place where the young man queried of Him, what good thing might he do to inherit eternal life? when his duty was pointed out, in love, he went away sorrowful.

That there might be more of a willingness on the part of each of us to apply the query asked by the disciples formerly, each for himself, "Lord, is it I?" Not is it we, or is it they, but I; thus denoting that they were earnestly seeking to know each for himself, at the betrayal which had been announced is not laid at his own door. So may we be willing to search our individual hearts and find if we are building on the sure foundation, at which may abide in the day when every man's work shall be tried as with fire.

For great will be our loss if our work does not stand the test.

Many statements are made in the article referred to which are to the point.

And if this note should cause any one to read it and reconsider his standing, and to seek strength where availing strength can be found, remembering the injunction, "He that thinketh he standeth take heed lest he fall," the object of the writer would be thus far fulfilled.

HARRY E. MOORE.

WESTGROVE, Pa., Tenth Month 18th, 1901.

THE INNER SOUND.—The most potent element of strength in the human voice is the presence of the eternal spirit of God, which dwelling in the human heart, speaks in the ear as the embodiment of Divine truth, thus securing conviction in the minds of men. To men who speak as they are moved by the Holy Ghost, God gives a mouth of wisdom that no one can gainsay or resist; and that word tone speaks to the hearts of men with convicting and persuasive eloquence, the effect of which no human teacher can impart. It is hard to imagine a more empty farce in that which is exhibited when a man professing to be a messenger of God stands up before the people, with attitudes taught by the dancing master, and in tones prescribed by the elocutionist, utters the platitudes which have been taught at the feet of some worldly orator. Honest men grow sick at heart of this emptiness, and long for reality and sincerity, which if it is encumbered by false grammar, lame logic, and discordant rhetoric, relating the canons which the skill of men have laid down, still springs spontaneously from the depths of an honest heart, and carries conviction of integrity and truth to the hearts of those who hear.—*The Armory.*

Studying Autumn Leaves.

The government's new bureau of plant industry is taking up the problem of how our gorgeous autumnal foliage receives its variegated coloring. This is one object of the investigations which are now being made by Albert F. Woods, lately appointed pathologist and physiologist of the bureau.

To preserve autumn leaves A. F. Woods says the gatherer should immediately lay them flat between two sheets of new blotting paper spread upon a table top and covered by a stack of high books. It is essential that all moisture should be pressed out of them. By this simple process they should be dry within three or four hours. So treated they will retain their beautiful colors for years, provided they are not exposed in the direct light of the sun. If not thoroughly deprived of their normally large percentage of water they will soon assume a dirty brown tint.

The color of a leaf, said A. F. Woods, in explaining his investigations, is furnished by minute grains of pigment within its cells. What we see in the fresh leaf is not simple green, but a combination of many pigments, which when mixed appear as solid green.

Red is one of the color elements of fresh leaves. Reddish coloring matter is usually in liquid form, within the sap contained by the leaf cells. Yellow, another normal color, element, when combined with green, is the natural shade of the grains of pigment within each cell. Brown is the normal color of the walls of the cell. . . .

If an autumn leaf turns entirely red this tinting is due to the fact that only its red pigment is left. If it is yellow all of the other coloring has been destroyed, except the minute yellow grains. If the leaf turns brown it can be safely diagnosed as dead, all living tissues having disappeared, leaving only the brown walls of the cells. The brown leaf is a dingy ruin, within which every spark of life has been extinguished.

"There has long been a controversy as to the cause of the autumn leaf's coloration," said A. F. Woods. "Some botanists have attributed it to frosts. We are finding that light frosts, not sufficient to kill leaves, greatly facilitate their coloration by causing an increase within them of a normal chemical ferment, which attacks the color compounds or color generators in the cells. We are finding that the oxydation of these color compounds by this ferment causes the various shades of color, especially the purples, oranges, etc. The yellows are normally present in the leaf."

"Autumn leaves containing sugar, such as the maples, sumacs, gums, etc., easily oxydize, and thus form the rich reds, purples and violets so beautiful to the eye. That is why these, especially the hard maples, give the most beautiful autumn leaves. Autumnal oak leaves do not attract admiration because they contain much tannin. The oxydation color of tannin acid is dirty brown. Leaves which die quickly never give autumnal colors."

The most gorgeous autumn leaves are produced by a long-drawn-out-fall, whose days gradually cool from summer heat to winter snow. But if the frost should come early and the weather should be uneven this fall we need not expect the true autumn splendors. A heavy, sudden and early frost would kill all

leaves alike and turn them to a monotonous brown.

Crimson and scarlet autumn leaves, the most beautiful of all, are more abundant in the cooler parts of the country than elsewhere in the world.

European landscape gardeners are coveting the luxuriance of our autumnal foliage and are endeavoring to transplant cuttings of our most vari-colored trees in their own soil. But thus far those trees which produce the rich purples, crimsons and scarlets have firmly maintained a patriotic determination to beautify only the landscape of their native clime.

The East is much more productive of beautiful autumnal tints than is the West, according to botanists. Their explanation of this is that the more humid soil of the East has its beneficial effects.

Young Anarchists.

Anarchy means a state of lawlessness, an absence of government. While riding on a street car the day President McKinley was nearing death from the shot of an anarchist our attention was attracted by a gathering at a street corner. On close observation the cause of the assembling of the people was the sight of two boys about twelve years old, practicing anarchy. The dark, angry frowns on their faces, clenched fists and motions indicating an intent to harm each other, showed that they had learned well these lessons in satanic arts. A child of six years that has to be tied up because it cannot go with its father or mother when it desires, is a young anarchist. Parents who indulge such demands for the sake of peace against their better judgment are going to reap a crop of anarchists.

We once sat at a breakfast table with two of our small children. The baby boy of the family where we were entertained was about three years old. He was difficult to be suited with food, and when the father tried to quiet him by giving him the best on the table, he was not satisfied until his uncontrolled temper had full vent by screams, knocks, and at last by flinging a fork across the table. A big start toward prison and the gallows.

An infant allowed to have its own way a few times by crying for what it wants learns the art very rapidly, and the beauty of innocence on its face is transformed in an instant when control is attempted, to a wicked frown as rebellion asserts itself. That shows that in its heart it has the seed of anarchy right from the "Pit." Parents take warning and nip the evil in the bud.—*The Vanguard.*

"It is a great mistake to let anything be a substitute for a genuine Christian experience. Some are apparently satisfied if they can say that they are honest or charitable or agreeable to those about them. Some let a knowledge of science or philosophy or literature stand in the place of a personal knowledge of God's saving grace. Some are willing to take a little money, or a little honor, or a little amusement in the place of the eternal inheritance, or a part in the kingdom that passeth not away. Anything substituted for that which the Holy Spirit presses upon us must be only a delusion and a snare."

GOLDENROD.

When the wayside tangles blaze
In the low autumnal sun,
When the flowers of summer days
Droop and wither, one by one,
Reaching up through brush and briar,
Sumptuous brow and heart of fire,
Planting high its wind-rocked plume—
Brave with wealth of native bloom—
Goldenrod!

In the pasture's rude embrace,
All o'errun with tangled vines,
Where the thistle claims its place,
And the straggling hedge confines,
Bearing still the sweet impress
Of unfettered loveliness
In the field and by the wall—
Binding, clasping, crowning all—
Goldenrod!

Nature lies disheveled, pale,
With her feverish lips apart—
Day by day the pulses fail,
Nearer to her bounding heart;
Yet that slackened grasp doth hold
Store of pure and genuine gold;
Quick thou comest, strong and free,
Type of all the wealth to be—
Goldenrod!

—Kansas City Journal.

The golden rod is yellow,
The corn is turning brown,
The trees in apple orchards
With fruit are bending down.

The gentian's bluest fringes
Are curling in the sun,
In dusky pods the milkweed
Her hidden silk has spun.

The sedges flaunt their harvest
In every meadow nook,
And asters by the brookside
Make asters in the brook.

By all these lovely tokens,
September days are here,
With summer's best of weather,
And autumn's best of cheer.
—Helen Hunt Jackson.

BE NOT DISMAYED.—The Spiritual Head of his own Church worketh, and will work, in a way that human wisdom and foresight knoweth not; He will bring his own glorious work to pass, though He leads his faithful servants in a way they know not. You are entering again the field of Christian warfare; bear in mind you are one year nearer the end that crowns all than you were twelve months gone by. Let not go the right shield, and the battle axe. Everlasting mercy and help is on the side of the humble and devoted, though they have to pass through many tribulations. As far as condescending favor has led me to discern the work of Divine Grace in the soul, the internal evidence of Christ revealed is the true Light, the Life, the way to God the Father. O! I dare not enter into doubtful disputation. Often in the day my prayer is to be kept lowly, simple, dependent as a helpless child. My old age, now in my eightieth year, is calm with abundant cause to be content; yea, very thankful for innumerable blessings. I lack no earthly accommodation. You dear laborers who have yet to bear the heat and burden of the day, surely your rest will be glorious! This is the view rising before me.

MARY CAPPER.

Boys Who Are Needed.

"I don't know what we should do in this world without boys," said one of the members of a large business house. "There seem to be certain functions which only a boy can properly perform, and if a boy,—the right kind of a boy, I mean, of course—is not forthcoming, one feels at a loss how to get these things done at all. We have half a dozen first-rate boys connected with our establishment, and I don't know how we could run the business smoothly and successfully without them."

This testimony, I am sure, would be warmly endorsed by business men everywhere. The fact that there is hardly any commercial enterprise which doesn't employ at least one boy in its conduct, proves that boys are needed in the business world; and everybody knows that the world of education, the world of the home, the world of society, and the world of sport, would be utterly unable to wag without the versatile and indomitable boy.

The qualities which make a boy so indispensable to all departments of our modern life are not hard to distinguish or define. They are evident on the front of all the boy's activity—his frankness and honesty, his versatility, his abounding vitality and endurance, his teachableness, his obligingness, his good spirits, his readiness and enthusiasm for subordinate service. Because of these characteristic qualities, the right kind of a boy is a treasure to any employer. His cleverness and enthusiasm alone are a perpetual source of refreshment and help to a busy man. The managing editor of a great daily paper in New York City used to call in the printer's boy when he was tired or perplexed, and in the most chummy and confidential manner, state his difficulty to the boy. In nine cases out of ten the vivacity, the quick wit, the keen enthusiasm and unfagged nervous energy of the boy would either suggest or inspire a happy solution of the problem, or, at any rate, enliven and refresh the worn toiler in the sanctum.

Boys put new life into the enterprises of men. As a friend of the writer used to say, "They have so much magnetic 'go' in them that it makes a new man of one to come in contact with them." Although they lack the wisdom of experience, they have an undiminished share of that enthusiasm, and life, and push, which is like an injection of fresh life-blood into the veins that have been drained by the exactions of responsibility and excessive toil.

But, as I have already suggested, it is only the right kind of a boy that is needed in the serious enterprises of life. A spurious boy, a dishonest, selfish, lazy, uninterested boy, is worse than none, and will soon be sent packing by his employer.

The boy who is needed is the boy whose native moral quality has not been impaired by wrong thinking and wrong doing. He has honesty, obedience and loyalty in the glance of his eye and the inward feeling of his heart. There is something distinctly winning about his face and personality. He may be "green," inexperienced, awkward, at first, perhaps, but he is the kind of boy who is needed in the most earnest and important affairs, because his heart and will are pure and right. Details and methods are something which he can learn—that every employer

knows. None is so teachable, so quick to comprehend and acquire, as a bright, good boy, who is thoroughly in earnest about his work. He has no false pride. He will take hold of his simple and subordinate duties with an enthusiasm that seems to quicken the whole business with its overflow. The proud and most devoted employee of a great business concern is very likely to be the boy who takes care of the office and does the errand running. He is glad of a chance to serve and, in due time, to rise. His gratitude and loyalty constantly reinforce his native honesty and obedience. In a word, his whole intent and conduct are that of a good servant who needeth not to be ashamed.

Such is the boy who is needed everywhere in this busy and exacting world—not less in the educational and social world than in industrial and commercial life. His morality will be grounded in a natural, religious belief; natural, because religion is a fundamental germ in sound morality as soil is fundamental to the roots of growing things. If life will be as sincere and pure as the native disposition of the human heart, before it has been seduced and corrupted. A good boy is a natural boy, and that is why we are drawn toward him and feel the need of him, and go so much personal help out of the service and sympathy.—Pilgrim Visitor.

The Strain of Running Fast Express Trains.

Cleveland Moffett tells in the Tenth Month *S. Nicholas* the story of the locomotive drive. There followed some talk about fast runs, and all agreed that for out-and-out excitement there was nothing in railroading to equal man's sensations in one of those mad bursts of speed that are ventured upon now and then by locomotives in record breaking trials. "I heart never pounds with real apprehension a real accident as it does through imminent fear of an accident. And so great is the nerve strain and brain strain upon the men who drive our ordinary flyers that three hours at stretch is as much as the staunchest engine can endure running at fifty or sixty miles an hour. And the same is true of firemen as well as of locomotives, so that the fast mail and express service between New York and Chicago requires relays of fourteen engine drivers and fourteen firemen for every single round trip of a single train. And at a time it appears, when an engineer has fact the rush of one of these terrible flyers to the end of his relay, say, 150 miles, you will sometimes see him descend from the cab weak and unstrung."

"So you see," said one of the officials, "the problem of higher speeds than we have at present involves more than boiler power and strength of machinery and the swiftness of turning wheels; it involves the question of human endurance. We can build engines that will run one hundred and fifty miles an hour, but where shall we find the men to drive them? Already we have nearly reached the limit of what the eyes and nerves will endure. I think we'll have to find a new race of men to handle these locomotives of the future—that they talk so much about."

THE tests of life are given to make us, and to break us.

Principles and Men.

Recently there died in Chicago a man of remarkable character, better known in the West than the East, but not wholly unknown throughout the country—Doctor William Gray, editor of the *Interior* for thirty years. On his deathbed, knowing that his work was done, he left this message: "Tell the brethren that I always loved principles and never a man." That was a noble rule of life, he must have been a good man who could not that he had followed it in all the activities of a life that had been in a way public, and controversial, the life of an earnest editor of a denominational newspaper remarkably vigorous, militant, and fearless, of wide circulation and potent influence. The *Chicago Tribune* says that every person who knew him will subscribe to the truth in his dying words. "His sturdy blows for he conceived to be right often fell upon individuals, but never with the slightest animosity of personal enmity." N. D. Hillis says "he was a way of picking a man to pieces, oiling and putting him together again without marring his pride." In this fidelity to principle without a particle of compromising of truth, but without personal bitterness, the secret of his acknowledged power. It is a high standard, and few attain it. If those duty brings them into controversy on this rule, religion, politics, and business would wear a different aspect. Most of us are apt to identify a cause and its advocates so closely that we cannot love the one without loving the other, nor hate the one without hating the other. This accounts for reckless and savage personal vituperation which life tempts. But vituperation is argument, and, of course, it is not personal. Commonly, it gives satisfaction only to those who are of the same way of thinking, and to only a part of these. It puts into words the feelings they cherish, and are too polite or too cowardly to utter. It is not always manifested in ways so coarse as vituperation; but when it exists, it is not to make itself apparent. There are those who, although they feel it have the art to conceal it, being well aware that it is poorly to display it, because it repels more than it attracts.

Men seem unable to be sure of their duty to an idea or a principle unless they are intolerant toward all who favor it. They seek to break their opposition on something petty, and especially on something human. They are unable to discriminate disapprobation from enmity, they exaggerate their dislike, and make it emphatic, not perceiving the weakness of overstatement, and the point that the thoughtful always apply to such things savors of rancor. A great deal of what passes among the thoughtless is the vulgar for evidence of conviction is more account than so much profanity in disguising truth from error. It really has nothing to do with the merits of the question under consideration, and is probably offensive to the judicious. The great point, however, is to cherish hatreds. Wm. Gray did not say that he had never given expression to his hatred, but that he never hated a man. Of course, then, he had no need to guard his expression. It is out of the heart that the

mouth speaketh when men are sincere. It is possible to suppose that a person may be insincere in professing love and kindness; but more difficult to suspect one of dissembling when he utters the language of hatred, because hatred is not a quality that men desire to have attributed to them unjustly. The sense of its unloveliness is well-nigh universal. We believe it was Dr. Johnson who expressed a liking for "a good hater," but Dr. Johnson, learned and wise as he was in many ways, was not altogether a model of good disposition.

In the estimation of some, indulgence in personal hatreds is reckoned as a sign of vigor and soundness, when, in fact, it is quite the reverse—a sign of intellectual weakness and undisciplined emotion. The "good hater," if his faculty is exercised toward his fellow-men, is commonly an egotistical, unreasonable, and prejudiced creature, whose partial judgments are not to be trusted, whatever piquancy they give to his discourse. Charity is a safer guide, even in estimating the motives of men who are promoting evils in the world. And charity is not inconsistent with the sternest rectitudes in all matters of principle and duty, the most powerful advocacy of one's convictions, the most effective condemnation of all that makes for injustice and iniquity. Indeed, the men who are most serviceable in advancing reform are those who love principles and hate no man. They are the winners; only they can win their enemies, which is a more lasting conquest than to defeat them.—*Boston Herald.*

OUR PRESENT STORM CLOUDS.—What are the causes of these clouds? First, the civil war, for war, whether just or unjust, always increases on both sides intemperance and impurity, and lessens the sacredness of both life and property. Therefore we should seek peace and pursue rather than invite more war, and so more vice, by multiplying warships and armies. A second cause of increasing immorality is the beer invasion which came in under cover of the war and filled the land with foreign saloons when we were too busy in another conflict to resist them. Beer is often counted even by Christians, the least harmful of drink, when for that very reason it has become really the most harmful, the bridge over which eighty per cent. of drunkards go to the asylum and the prison. A third cause of the clouds named, is the flood of foreign immigration that has rolled in on us, ever since the Civil War started it, by the need of men to replace a million fallen heroes, and the sudden opening, in the closing days of the war, through the Pacific railroads, of our whole vast domain, which is itself the fourth of the causes leading to the fifth, sixth and seventh; namely, the absorption of our strong men in great commercial enterprises, which made necessary the impersonal and so irresponsible corporations, that, in popular opinion, could neither cheat nor be cheated; these, in time, developing luxury, which has never failed to corrupt its second generation, which has lately proclaimed itself in such Babylonish feasts as the Seelye dinner. There is at least one more leading cause of these clouds, namely, the doubts thrown by the words of some, and silence of more, on the doctrine of future retribution. Whenever men doubt a future hell they make bells on earth. When the op-

pressed cease to believe that God will in the future mete out justice to those who by corrupting government have escaped their deserts here, they seize the bomb and firebrand and themselves make a judgment day. Not only in order to the salvation of individuals, but for social salvation also we must follow Christ in warning men of the judgment to come.—*J. W. Craft.*

FOR "THE FRIEND."

"That was the true light which lighteth every man that cometh into the world" (John 1: 9).

Oh, Jesus, blessed Master,
Thou only art the Light,
Without thy constant teaching,
We cannot go aright.

But Thou art always with us,
To shine upon our way.
Thine our indwelling Presence,
The same from day to day.

We do not walk in darkness
But have the "Light of Life."
Thy voice is ever speaking
Above earth's din and strife.

So we go boldly onward
Without a fear or care,
Thy watchful eye will guide us
And keep from every snare.

We praise thee, faithful Master,
Our glorious "inner Light;"
'Tis joy to know Thy guiding
Amid earth's darkest night.

Teach us in sweet submission
To follow thy dear "Voice,"
In meek and swift obedience;
Lord, this is all our choice.

EDGAR K. SELLEW.

EAST LONGMEADOW, MASS.

ARTIFICIAL SILK has been produced from a variety of sources such as wood pulp, etc., and in the Glasgow Exhibition, near the Moorish Stall, there is shown a complete series of specimens to show how cotton waste can be converted into silk of very fine fibre, which takes on dyestuffs in a most perfect manner. The product is known as Chardonnets silk, and it is claimed for it that as compared with real silk of the highest class, it is exceedingly cheap; that it shows considerable lustre and brilliancy; that it opposes much greater resistance to chemical influences; that it shows greater stiffness than the best China silk and therefore is more suitable for fringes tassels and braids. Experiments with Chardonnets, China and Tussore silks showed that the first was not affected injuriously by concentrated alkaline solutions, by ammoniacal copper and other chemical solutions, while China and Tussore silks were completely destroyed by the same chemicals, and finally it has been proven that Chardonnets silk does not become brittle and rotten in such a short time as natural silk.

In the stress of our own trial we need, perhaps more than anything, the conviction that God is still leading us on to the fulness of Truth through the teachings of the Spirit sent to us in Christ's name. May He give us grace to welcome the lessons with reverence and to embody them in life.—*B. F. Westcott* in "Gifts for Ministry."

Emphatic Christians.

The Lord Jesus Christ put great emphasis on the spiritual character of his followers. They were to be sympathetic, and yet separate, or peculiar, people, zealous of good works. They were in the world and yet not "of the world." Our Master was pre-eminently sympathetic; He touched human life at every point lofty and lowly. He did not draw back his foot when a sinful woman's tears of penitence trickled upon it, nor did he refuse an unpopular publican's invitation to be his guest. "This man receiveth sinners," was the sneer of the bigoted Pharisee. It is a hasty Christianity which snubs honest work in coarse raiment, or refuses shelter to the harlot who is struggling to a better life, or which builds a "colored pew" in a remote corner of a church gallery.

While of his infinite sympathy—which drew not back from the bitter agonies of the cross—there was a sense in which Jesus Christ was "separate from sinners." He possesses a divine holiness, an unworship spirit, and a spotless life; tempted in all points, He was yet without sin. "Ye are not of the world," He says to his followers, "even as I am not of this world." Just here runs the line of separation. It is to be a separation, not of condition or daily contact, but of character. Christ's people are to be a "peculiar people"—peculiar in loving the truth, peculiar in honest dealings, peculiar in works of benevolence, peculiar in hating sin, peculiar in trying to copy Him who was holy and undefiled and separate from sinners. "Be ye holy" means to be sound, healthy-hearted; it also means to be set apart to Christ's service. The separation of a genuine Christian must be a separateness of Christly character. All his power for good depends upon it. The heaven is separate even when it mingles itself through the whole batch of meal. The different particles of salt are distinct from the mass of food which they season—that is, the salt never loses its saltiness.

The more pronounced and emphatic every Christian is in his aloofness from the codes and the fashions and the sinful ways of the world, the more peace and spiritual power will he have. He has his standard of faith and practice given to him—to be lived up to. There is an increasing tendency to sneer at creed. But the all-comprehensive creed which a man must hold to if he be a Christian is, "Believe on the Lord Jesus Christ and thou shalt be saved," and "Faith without works is dead." Strait is the gate that leads to eternal life, and He whose love has opened up that pathway has a right to demand heart-belief in Him and obedience to his commandments. Much of the self-styled "liberal Christianity" is only a thin veneer to cover shallow convictions; it is liberal in giving away priceless truths, and liberal in putting down inclosures which the Bible puts up. It is an indistinct blur rather than a belief, and has no spiritual emphasis.—*T. L. Cuyler.*

CHRIST'S love is the constraining power and spring of action in every good word and work, and we are brought humbly to acknowledge, without his holy help we can do nothing to advance his kingdom on earth.—*Canada to N. Eng. Y. M.*

Love That Does Not Die.

A pathetic story comes to us from Philadelphia. A man and his wife named Pritchard, died in New York of the cholera in 1838. They left two boys, twins, aged twelve, and a little daughter named Ellen. Ellen was taken by an uncle to the then wilderness of the West, and the boys were left to make their own way in the world. One of them died. The other, Richard, struggled along manfully for a livelihood. But he was beset by a terrible longing for the little sister, who was the only living creature of his kin in the world. From the day she left him she had absolutely vanished out of his life.

The first money he saved he spent in sending an advertisement to some Western papers. But there was no result. Richard grew up. He prospered in business married, and became the father of a family, but in all the forty years he never forgot "little Ellen," or discontinued his search for her. Twice a year his advertisements were sent to the West, first to one section and then to another, in spite of the arguments and ridicule of his friends.

In 1858, an old farmer in Ohio happened to see the advertisement on a torn scrap of paper, and thought he recognized the name of the uncle. The kind old man made a journey of forty miles to search into the matter, and finally found Ellen, the mother of grown sons and daughters. The brother and sister, who had parted children, met after forty years, and half the country came to share in their happiness.

A story still more touching, of the endurance of human love is that of a mother in a West Virginia village whose son went out one evening thirty years ago asking her to have supper ready for him when he came back. Whether he was murdered or ran away to sea, nobody knows. He has never returned. His mother, now feeble and white-haired, makes ready for him every night, places his chair by the table and waits. "He will come some day," she says, "and then he will see that I have never forgotten him." One cannot but hope that the loving patience of the poor waiting heart may yet be rewarded.—*N. Y. Witness.*

A FAITHFUL Christian's manner of words, as well as of life, already has the mark of heaven's purity and truth upon it. Speaking the truth in love men trust him. Seeking not his own, men come to speak unselfishly in his presence. Considering others, they in turn become considerate. Cherishing no resentments, he awakens no angry feelings. Such a Christian self-control is not easily attained, but it is worth striving for, and by God's help, it is not out of reach.

Notes from Others.

WEBSTER'S INDEPENDENCE DAY SPEECH OF 1802.—A noteworthy episode of Webster's pedagogic stay in Fryeburg, Me., in 1802, of whose academy he was principal at the age of twenty, was a "Fourth of July" oration delivered by him in the old village church to a deeply impressed audience. For one so young it was a brilliant, a remarkable effort. And what is still further remarkable, the original manuscript of this youthful address, after being lost many years, was discovered by a city junk dealer and rescued from oblivion. It is now in the possession of Alonzo F. Lewis, of Fryeburg. Another curious fact about this oration is that the

peroration is almost the same, word for word, that of his last speech in the United States Senate, delivered Seventh Month 17th, 1850, forty-years after.

We have been accustomed to sneer at Mormonism as a shallow humbug. But people are beginning to call to mind what Josiah Quincy said, "It was not impossible that the time might come to the question, 'What historic American has exercised the most powerful influence on the times of his country, the answer would be, 'Smith.'" Absurd as this may seem at present, Mormonism is no longer to be regarded with contempt. Its propaganda has invaded our metropolitan cities, and with no mean success. Its increase is due to causes that deserve study. It is our modern Mohammedanism, combining church and State, and swinging together with sledge-hammer force of concentration. This is a reaction from the boasted union of church and State, which lies at the base of Anglo-Saxon individualism. In the end which will conquer? It is as a political factor that the Mormon is to be dealt with, not as a sect. Mormonism is not another church or another of Protestantism, but a new religion, and a religion with political hopes and expectations.—*Christian Register.*

RACE PREJUDICE.—The two sections stand level in this matter, and neither is now in position to taunt the other. And so a boasted American civilization is evidently to submit in silence to these repeated revelations of itself as a great mockery.

The plain fact of the matter is that white people of a dark color seems to be increasing in the United States, and contempt for their rights at the moment a growing quantity. How this has been stimulated by a national disregard for the rights of so-called inferiors, we shall not undertake to say; but that something has happened to stir white savagery to unusual depths of ferocity in dealing with the criminal black, and white prejudice to renew its broadened efforts for race oppression, must be evident to all.—*N. Y. Sun.*

We believe that no one can find any Scriptural ground for a regular salary for the minister of the Gospel. We find no single precept in it, and there is certainly no single example there to warrant it. To imagine any of the apostles or any of the elders whom he appointed in various churches, as receiving a stated amount annually, would be to mar a beautiful picture of faith and love and hospitality and mutual bearing.—*W. J. Mosier* in "Word and Work."

Christian reformers should never lose sight of regenerative grace. Improvement in external relations can never eradicate the corrupt elements of human nature. The heart must be changed before it can be held to truth, virtue and right at all times and under all conditions. Toning down wickedness will not do; a radical cure is necessary. Our Lord insisted on a new birth—a renewed nature. We can do no less. Not only the sinner but the pew, must emphasize in all understanding the need for, and the power of, spiritual renovation, not only for salvation, but for well-being and well-doing.—*Presbyterianian.*

Whoever made that Book made me. I know all that is in my heart. It tells me that of all else except God can know about me. You made me, wrote that Book.—*Bishop Doane's* (in the translation of the Bible).

It is said during one of Moody's meetings, a young man approached a young man with the question, "Are you a Christian?" The young man looked

ing good-naturedly, as he replied, "Oh, no, sir, one of the choir."

The *Midland Christian Advocate* says with much interest: "When we are considering ways and means of dealing with anarchism and anarchists, could be well to keep in view the American movement. Almost all the anarchist meetings which have been public are held in more or less close connection with the saloon. The saloon is the heart of the anarchist, whether he is on the street or in the hall. Even the Goldman woman, cultured as she is, as to be met with her clan in a very common way, and just shortly before the great tragedy. The thoughts and evil purposes of these villains made more hateful and more dangerous because of the alcoholic uplift which they find in these doggeries. If there were no saloons, there would be fewer anarchists. If we could banish the saloon as well as the anarchist, what a wholesome change we should be in America."

Items Concerning the Society.

The members of the conference on "The Social Problem in Town Life" turned to their work, it was amusing and interesting to listen to comments of some of them on the host of the conference and on the Quaker training which had produced such results. An impulsive old gentleman from Kent, who had amused the evening conference by irascible remarks upon the folly and red of some Government doings, asked the writer where there was a congregation of Quakers near him. "They are the people," he said, "among whom I should like to worship; they are the only ones (except some of the Roman Catholics) that have a real grasp of the unseen world." Modestly adding a gentle demurrer to this too flattering opinion; and it was a sorrow to have to grant that he would have many weary miles to go to the meeting-place he wished for.—*British*

little tract entitled "The Society of Friends, or, so called Quakers," was reprinted in THE FRIEND of Seventh Month last. A new edition will be issued during the coming month. Friends who have a supply will please order now. They will be raised in large or small quantities at cost two cents apiece. Address William B. Kirkwood, 908 Berkeley Avenue, Trenton, N. J.

THE YEARLY MEETING.—We have had a very comfortable Yearly Meeting. Parting Friends felt generally that we had great cause for thanks to Heavenly Father, for the overshadowing of His Spirit from day to day, and the bond of love and fellowship, as evinced by the valued correspondence, as usual, from all the Yearly Meetings is not abated. Dear Friends from Philadelphia, Ohio, Canada, Iowa and Kansas Yearly Meetings were present, all truly acceptable. Some lines from their meetings, and some were read. The number in attendance was about the same as of latter years.

J. C.

Detailed accounts are given in the *Barnes' Republican*, from which we give the following extracts, after some abridgement: "This day of rapid changes and advancement, less desire for something new, it is refreshing to find a people whose religion, in its purity and simplicity, has remained unchanged, wearing the same garb that was worn by the founders of the Society, in the days when Cromwell's Ironsides trod England's heath their tread, and addressed as did Christ and his disciples when they came on earth. While the meeting that assembled at ten o'clock was as well attended as usual, yet the most encouraging feature was the unusually large attendance of young people, which indicated that the principles for

which the founders of the Society suffered to maintain shall not perish.

"Seventh-day business was begun by calling the representatives, all of whom answered to their names. Minutes were read from the following ministers from other Yearly Meetings, who were in attendance: Anna B. Crawford, Elizabeth Cooper and Thomas Whitson, of Philadelphia, and Joshua Smith, of Kansas. The epistles from all the meetings with which Ohio is in correspondence were next read, and contained much that should strengthen and encourage all to remain steadfast in the purity of the faith. It was proposed that we send a few lines of brotherly love and encouragement to that small body of Friends in New York, to which the meeting agreed. A minute declared that we must all be certain that our foundation is laid on the immutable rock Christ Jesus; then our encouragement and advice will carry force. A committee was then appointed to essay replies to all the epistles that had been received. After reading notice from the meeting of sufferings, announcing the death of two of its members, Samuel Walton and George Mott, and selecting a committee to name their successors, meeting adjourned until Second-day morning.

"On First-day morning the rain kept thousands away that would otherwise have been in attendance, but the meeting was one of power. The afternoon meeting also was believed to be one of the most satisfactory ever held in its outpouring of good through many ministers.

"On Second-day the representatives reported the name of Nathan R. Smith for clerk and James Walton for assistant, which were satisfactory to the meeting. Minutes were read for David Scott, of Philadelphia, and Catharine Stanton, of Indiana. The meeting then entered into the state of Society by the reading of queries and answers, which showed the Society to be in a normal condition, except that two members were reported to have given way to the unnecessary use of spirituous liquors, and the meeting which reported them was encouraged to disavow them, as our records might not be so disgraced again. Much interest and concern was expressed by thoughtful Friends that we might be more faithful in the maintenance of all our precious principles. The school report showed there to be five hundred and twenty-two children of school age in the Ohio Yearly Meeting, the majority of whom had attended Friends schools.

"Third-day was taken up with the reports of committees, and notices were read from the Quarterly Meetings announcing the death of elders, which were as follows: John Hoge, Ann Dean, Anna B. Lee, Stephen Jackson and Nathan Satterthwaite, of Hickory Grove; Rachel Stratton and Penina Shaw, of Salem; Amy John, of Pennsylvania. The Boarding School report showed the school to be in a healthy condition, with bright prospects for the future. The Primary School committee's report was satisfactory, and they asked for two hundred and twenty-five dollars to assist in the work for the ensuing year. The committee having in charge the distribution of the writings of Friends reported progress in the work and asked for an appropriation of one hundred dollars. Elwood Conrad asked permission to attend the women's meeting, which was granted, and he, accompanied by John Fowler and Joshua Smith, delivered a message of love and encouragement. A committee was appointed to have twelve hundred copies of the minutes printed, and also to have five hundred to one thousand copies of the Discipline published. At the conclusion of the business for the day the shutters were raised at the request of Esther Fowler, who spoke very feelingly to all present, reminding them that we should love God because He first loved us, and that we should be so steadfast in purpose that we could feel an increase in our love for God and man, for the day is fast approaching when there will be but one question

of importance and that is our peace with God. Another minister hoped that the young women and mothers would remember that upon their faithfulness to God largely depended the future of the Ohio Yearly Meeting.

"In the meeting held on Fourth-day the stream of gospel ministry seemed to flow copiously and unto much edifying.

"On Fifth-day, after other reports were considered, the committee to essay replies to the epistles received by this meeting, reported that they had prepared replies, which were read and approved by the meeting. The trustees of the Robert Miller legacy reported two hundred and fifteen dollars interest for use the ensuing year. The interest is used to assist the poor children of the society to procure an education. Thomas Whitson pleaded with the young to come unto Christ, and return to the ancient simplicity of the faith, believing that God would from the young people now present raise up standard bearers on the walls of Zion. Jesse Edgerton offered thanks for the overshadowing of the Divine presence. After a few minutes of general silence the meeting then adjourned to meet in one year at the same time and place, if consistent with the will of our great High Priest.

"So concluded a meeting which has been remarkable for the evidences of the outpouring of the Holy Spirit, the large number and deep interest of the young, indicating a coming together and desire to advance the Redeemer's kingdom on the earth."

SUMMARY OF EVENTS

UNITED STATES.—A dispatch from Washington of the 14th says in reference to the ransom of Helen Stone: "Our Government at Washington has not modified the opinion, uttered by President Roosevelt, that there is but one thing to do, and that is to raise the sum demanded for her ransom as quickly as possible. Of this sum \$60,000 has already been subscribed, far the larger part of it in Boston and in the immediate vicinity."

President Roosevelt has lately had the company of Booker T. Washington, who was invited to dine with him in the White House by his special request of the people of Alabama. There were no other guests. There is a feeling of indignation among Southern men generally that the President should take this early opportunity to show such a marked courtesy and distinction to a colored man. The President is said to have no sympathy with the prejudice against colored people, and has said that "the color of a man's skin should not operate to his advantage or disadvantage in an appointment or a removal from office."

Henry E. Cooper, Territorial Secretary and for several months prior to his departure for the United States Acting Governor of Hawaii, has discussed with Secretary of Agriculture William Wilson the conditions in the Territory. He emphasizes the seriousness of the labor problem. The natives are dying off rapidly, the mortality being great in the neighborhood of forty deaths to the thousand, and foreign laborers are getting out of the country much more rapidly than they are coming in. The encouragement of Chinese labor, said he, is regarded as the most promising solution. About 21 per cent of the total population of the United States attend public schools, and 2 per cent of the rest attend private schools, according to the latest report of the Commissioner of Education. The grand total in all schools, elementary, secondary and higher, public and private, for the year ended Seventh Month last, 1900, was 17,020,710 pupils, an increase of 282,348 over the previous year.

In Kansas apples are cheaper, bushel for bushel, than corn or potatoes. The "Apple King" is Judge Fred Wellhouse, who this year gathers a crop from 1240 acres of orchard. He will have more than 100 carloads of the fruit, and his net profit will be from \$30,000 to \$25,000, or larger per acre, according to the *Kansas City Journal*, this will be made on any other crop in the State.

In the convention of American laborers lately held in Milwaukee, the general belief was expressed that this country is now experiencing a season of great and sound prosperity. Secretary Gage added his testimony in his assertion that "every evidence exists of a general well being in industry and trade," which is reflected in a "condition of unparalleled strength in the public treasury."

It is said that there is one life in America, and that in this country that issues policies only to total abstinence,

The Cost of Gold.

are taught that all exchangeable values of men are but the labor of men which have cost. But there is room for doubt over the value of gold and precious metals ere nearly approaches their awful cost of labor and suffering, to say nothing of

Xander Del Mar gives a "History of the precious Metals" as one of blood, slavery and war, and substantially relates the facts in chapters on the "Plunder of Europe by the sea," "Plunder of Africa," "Plunder of India," and "Plunder in the West Indies," ending with the looting by the allied forces commanded by Count von Waldersee. His reports give evidence that "the Trans-himalayas have been worked from first to last by natives who were forced into them at their will; that they were brought from the interior at so much per man, bound, strapped drunk with rotten liquor, and thrust into pits which avarice has dug and which is covered over." We are not prepared to refer the guilt of these iniquities to the present warring nations more than to the past. The sin is, not one of nationality but of man's fallen nature, as charged by Virgil when he exclaims, "Oh cursed lust for gold! dost thou not force mortal hearts to crime?" And where does Paul place "the love of money"? and James the source "whence do all fightings come"? Witness the example of the natives found by the Spaniards in the West Indies, and of many forced to labor in the mines of Mexico and South America. One of these of this country boast a righteousness very superior, when we think what the rapidity has done with our Indians and the natives, if not with slaves in mines.

To resume Del Mar's researches, he concludes that "it is quite evident that without forced labor, without slavery, and without working the mills on the Sabbath, the industry in the Transvaal could not have been made to pay." And what further price has it cost?

In another article in the *Literary Digest* a writer intimates that the story that Lieutenant Peary had discovered gold in the region of the North Pole, needed only to have proved true, to cause the Pole to be discovered very promptly by some of the many gold hunters who would flock thither.

Take the case of the vast interior of Alaska, for example. Had it not been for the pioneer prospectors who made the original discovery of gold in that region, it would have been practically an unknown country to-day. In the entire history of Arctic exploration and adventure, prior to the discovery of gold in the Alaskan peninsula, there are few such trips recorded as can compare in hazard and hardships with hundreds which have been made in recent years, not only by the rugged pioneers of Yukon, but even by women and children. Men by the dozens, by the hundreds almost, can be found who have made during the depths of winter sled trips on the Yukon of hundreds, even of thousands, of miles, and this while the thermometer was recording temperatures as low as any encountered and recorded by the scientific Arctic explorers. Every new mining camp which has been opened in the interior of Alaska has, in its early history, the record of some such daring trip as would have brought fame to the scientific explorer.

Had the heart of man been such that the strenuous exertion inspired by covetousness had been inspired by the higher motives, how would the face of the earth and its history long ago have been changed! The quest of souls in the love of the gospel in strange and barbarous lands, may in some instances match the overcoming of outward difficulties encountered in the quest of gold, but in many more instances will it evince a higher heroism. Of the typical gold hunter, or money-grasper, could it be said, "Though he was rich, yet for our sakes He became poor, that we through his poverty might be made rich?" Or is the mammon-server ever an overcomer of self? "Who is he that overcometh the world, but he that believeth that Jesus is the Christ?" Actuated by that faith should Christians of missionary zeal know of a circumpolar people, it might be one of the wonders of grace but need scarcely be a surprise, if the problem of the

discovery of the Pole were valiantly met and solved, in the quest of a higher interest.

Gold costs souls, Christ saves souls. The love of gold is self-seeking, the spirit of Christ is self-sacrifice. The lust of gold inspires to stupendous endeavors and unscrupulous sins; the love of Christ constrains to noblest heroisms faithful to death. Yet the sin is not in the gold, but in the heart that prefers it to the heart's witness for good. Gold and precious metals are among the creatures of God that are "good, and nothing to be refused, if received with thanksgiving." They have their right place, but not above "durable riches and righteousness." It is only sin that makes gold cost more than it is worth, and there is perhaps not a mentionable sin that it is not made to cost. When it costs conscience, what shall it profit a man, though he gain the whole world? But when gained and used by a good conscience, it is a blessing to the steward and to the world. The money-seeker who always seeks first the kingdom of God will find his right service, and be "rich towards God." The penniless who does the same will not fail of the blessing which "makes truly rich, and adds no sorrow with it."

A Friend in Search of a Society.

Instances occasionally come to our notice of honest hearted friends of Truth coming upon the groundwork and principles of our religious Society by a solitary spiritual leading, and afterwards finding our early Friends had been similarly led, and that a society of such had been gathered, whose successors still subsist in an organization known as "the Society of Friends." Sometimes their fellowship with these is comforting, and sometimes they have found the name misleading.

In a recent letter from New England one says: "I became a member of the Society when living about twenty miles from a Friends' meeting, and knowing no Friends within twelve miles of my home. I had read a small book about the 'Principles of Friends,' and was constrained to request membership against what seemed to be common sense, as I could and did go to a meeting of the body I then belonged to, a mile from my home. Finally I went to [reside in] the vicinity of an old Friends' meeting-house. The meeting held there was a 'union' meeting, the large Friends' meeting having died out. Two people had requested membership with Friends, and the meeting became a Friends' meeting. While

it is not large I think there is only one member who did not come in by request . . .

"I confess I have been much disappointed in Friends. Perhaps I made an ideal of what I thought Friends were by reading; but thou can well imagine how little we can tell about the practices of a people by reading an expression of their principles. Of course I knew nothing of the divisions and have had much to learn about differences in custom. There are good things among all I have met with. Three years ago I went to North Carolina Yearly Meeting and felt drawn to Rich Square Monthly Meeting to visit families. [Later] I had a concern to attend Ohio Yearly Meeting, smaller body . . . This year I felt it right to go to the Western instead of the Portland Meeting . . . I am at a loss to know where to find the right among Friends now . . . Among the confusing, varying, conflicting practices of those calling themselves Friends, I see only one way for me to do,—that is, to be led by the blessed Shepherd himself and go where He shall bid me, looking unto Jesus, the Author, to finish my faith."

We see no better course for our Friend to take. This was the attitude of spirit under which the Society was first gathered in "the unity of the Spirit and bond of peace," and it is the one uniting discipline which has power to succeed in gathering into one, as no outward legislation can gather or bind.

It is not for us to assume to prescribe to a Truth-seeker where his fellowship with Christ should lead him or place him. But may any communion which should say, "Come, and have fellowship with us," be justified in adding, "for our fellowship is with the Father and with his Son, Jesus Christ."

On "The Sacraments."

An eminent preacher at the City Temple recently, says the *London Friend*, made such a clear pronouncement on the subject of the so-called Sacraments, and one so largely in harmony with the views of Friends, that we think readers will be glad to have his actual words as given in the *Christian Commonwealth*.

There is no hint that what we call a Sacrament was being established. Jesus Christ established no sacraments. The Church in one of her aspects has established seven, and most of the Churches accept two; and Jesus established neither. There is nothing of the kind in the great, holy, mystic, spiritual Church of the living Christ. I get rid of sacramentalism by getting rid of the sacraments. My Lord established nothing of this mechanical ceremonial functional kind. . . . All this functional mechanical arrangement and sacrament is so far away from the love-scene, the love-feast of the old, good time. Surely the earliest churches knew this, for, more than seven hundred years, the Christian Church had no Lord's Supper; in a sense it is a modern invention; but the taking of the body and the drinking of the blood is as old as Christ Himself, and He brought it up from eternity. Take the Sacrament—as we now foolishly call

it—take the Lord's Supper morning, noon, and night, and every hour between. Whenever you draw a breath, draw it in remembrance of Christ; whenever you lift an eye to the great heights where the stars tremble and burn do it in the name and for the sake of Christ as a grand covenant-making fact.

Western Yearly Meeting.

The letter printed in our last number as representing "Ohio Yearly Meeting" (so judged because the name "Ohio" seemed to be on the postmark), is now alleged to refer to *Western* Yearly Meeting. We are glad of the opportunity to produce the following testimony from a visiting minister concerning this *Western* Yearly Meeting:—

I have been comforted in witnessing the weight and dignity with which Friends have conducted the affairs of the Church, but truly there is left but a very small remnant. In many places they seem as the few berries on the topmost boughs or the gleanings of grapes after the vintage is over, but may we not be thankful a remnant is preserved, whom the Lord refreshes from time to time as with the dew of heaven.

Mid-Week Meeting.

In other religious bodies the mid-week prayer-meeting stands in a similar relation to that of our mid-week meeting, for worship. Only ours is the greater testimony for the spiritual against secular absorption, by being held during business hours of the day. The *Presbyterian* thus shows a similar concern to that so often heard among us:

We notice that the decay of the mid-week service is a subject of alarm and discussion on the other side of the waters, just as it is on this side. "The prayer-meeting" seems to be losing its hold upon the Church at large, and something must be done to revive it if she is to keep up the vigorous and healthy piety which should characterize her membership. It is a bad symptom when there is no sufficient aspiration God-ward on week-days to draw Christians to the accustomed place of conference and prayer. It shows what hold secular affairs have upon the mind and heart when attendance upon the weekly service is neglected, or when conscience no longer rebukes for the remission.

Fitch's Famous Rules.

1. Never teach what you do not quite understand.
2. Never tell a child what you can make him tell you.
3. Never give a piece of information without asking for it again.
4. Never use a hard word if an easy one will convey your meaning, and never use any word unless you are quite sure of the meaning that it conveys.
5. Never begin a lesson without a clear view of its end.
6. Never give an unnecessary command, nor one which you do not mean to see obeyed.
7. Never permit any child to remain in the class even for a minute without something to do and a motive for doing it.—*J. G. Fitch.*

READING THE SCRIPTURES IN THE FAM—Some years ago, an Irish wanderer, wife, and his sister, asked a night's shelter in the cabin of a pious school-master. The characteristic hospitality of his host, the school-master made them welcome. It was his hour for evening worship, and the strangers were seated, he began by reading slowly and solemnly the second chapter of the Epistle to the Ephesians. The young student astonished. The expressions, "Dear trespassers and sins," "Children of wrath," "Walking after the course of this world were new to him. He sought an explanation. He was told that this is God's account of the state of man by nature. He felt that it was exactly his own state. In this way "I walked from my childhood. In the service of the God of this world we have come to this house."

He was on the way to a fair, where he intended to pass a quantity of counterfeit money. But God's Word had found him out. He produced his store of coin, and begged the host to cast it into the fire; and asked himself if he could not obtain a Bible for himself. His request was complied with, and in the morning, with the new treasure, the pilgrim who had now no errand to the fair, returned to their own home. But I cannot enumerate all the conversions which have occurred at the Church in the House. Many servants have been awakened there. Children have heard there truths, which, when the Spirit brought them to remembrance, in after days—perhaps in days of profligacy, and when from their father's house—have sent the prodigal. It is not only of Zion's solemn assemblies, but of Jacob's humble dwellings—the little fireside sanctuaries—"that the Lord shall count when He writeth up the people, "This man was born there." In a house there have been, perhaps, several of its born into this world. Have there been any born again?—*Hamilton.*

REVELATIONS CONTINUING SINCE THE BEGINNING OF ADAM.—The existence of belief in one God prior to the existence of the Bible shows that revelations were received before the Scriptures were compiled. It also shows that revelations take place independently of the Bible. Being the outcome of a living omnipotent agency, they are occurring all the time. God is always unveiling himself and disclosing his secrets to the minds of devout hearts. Hence there is a sense in which revelation never is a finished product. We sometimes speak of the Christian revelation as final in the sense that it contains all truth essential to salvation; but while no new truth respecting Divine redemption has been revealed since the manifestation of God in Christ, new views of truth have become more adequate, having increased in fulness and completeness from age to age. Man, indeed, is constantly getting a deeper insight into the ways of God, a greater knowledge of his works, a larger acquaintance with his laws, and, as a consequence, a better understanding of his purposes.—*C. C. Workman.*

To return good for good is human; evil for evil, carnal; evil for good, devilish; good for evil, divine.

Luke Cock.

For "THE FRIEND."

ke Cock, spoken of as "That substantial minister of the Gospel" deceased 1740, about 83 years. John Richardson bears testimony to his worth, and says "He a minister about 37 years, and I have him say that he had borne the character of the greatest singer—of vain songs—in all part of the country. He sung then the anion song by the muddy waters there; using drank of the brooks of Shiloh that fifty in the new converted soul, he could sing and rejoice in the Lord Jesus."

following quaint but instructive sermon en preserved:

necessity, Friends, outstrips the law. sity has made many people go by the ng cross. I am afraid there are some who have never gone by the weeping I remember being once traveling and side said to me: 'I'll show thee the ng cross.' 'Nay,' said I, 'thou needest I have borne it a great while.' Now e he showed me was four lanes' end. mber that when I first met my guide, I led me into a lane, a very cross one, I was to speak the truth from my gain. Before this I used to swear and lie

ay then,' said I to my guide, 'I must he here. If thou lead me up this lane I ver follow thee. I see be ruined of the e's trade if I musn't lie for gain.' ere I lost my guide, and then, filled with I went back to the place of the weeping and said, 'If I can but find my good again I'll follow him, lead me whither'.

So here I found him and began to up this lane, telling the truth from my I had nought but beggary and povere- sity this but now I began to thrive in my and got to the end of that lane, though some difficulty. But now my guide be-

lead me up another lane, harder than t, which was to use the plain language, as very hard; yet I said to my guide ny feeble pace. 'I'll follow as fast as I Don't outstretch me, prithee.' So by I got up this lane. But now I was a third lane, and it was harder still;—

—my testimony against tithes. My t being convinced, I said, 'Nay, I doubt'er follow thee up here! but don't leave e my pace, I prithee, for I maun rest o I traveled hard a great while, till I urged 'We see all be ruined; what, art one stark mad to follow these silly s.' Here I staggered and cried and of my guide to stay and take my pace esently my wife was convinced 'Well yshe, 'follow thy guide, let what come, e, the Lord has done abundance for 'I'll trust Him.' 'Nay, now thought o my guide again.' So I said to him, ow thee freely.' So I got to the end lane pretty cheerfully. Now, Friends,

ul to keep up your testimonies in this Tell the truth from the heart. Speak n language and maintain your testimo-free ministry. Though you may have ity to make something to yourselves mber Gehazi." Here Luke repeated e account of Naaman—"Here a on comes up concerning an ox, I

don't remember ever to have heard it before. I doubt you know not what it means, but you have heard of an ox aint you? It is a creature put to the yoke. Sometimes it draws, sometimes it holds. So you must sometimes draw and sometimes hold. But I mun read you a little more out of my journal. Bide my din (talk) a bit pray, youse have it for naught. My guide led me up a lane more difficult than the former, which was to bear testimony to that Hand that had done all this for me. This was a hard one, and I thought I wud ne'er see the end of it. I was eleven years, all but one month, in it. Here I began to go on my hands and knees and creep under hedges. I ne'er forgot since nor I hope ever shall, I would fain think it's almost impossible to fail now,—but let him that think he stands take heed. I thought to have had a watering, but you straggle sear (sore). I cannot get you together. We mun have no more watering to-night. So I mun leave every one to his own guide."

THOMAS CASH, a ministering Friend in England, was staying for a few days at a Friend's house. Sitting in silence with his host he said, "John, wilt thou call thy family together?" When they had assembled, Thomas soon said, "John, are all thy children here?" It was answered, "All but my son Samuel." "Wilt thou send for thy son Samuel?" A lad was told to request Samuel to come in. Now Samuel was a disobedient, undutiful boy who hated Quakers, and his answer to the summons was, "What does the old fool want with me?" and refused to go. The failure was reported, when again it was said, "John wilt thou send for thy son Samuel?" To this summons a similar answer was returned. And a third time the lad entreated his brother to come in. "What does the old fool want with me anyway? he had better attend to his own business." But it being represented to him that courtesy required his attendance, he was induced sullenly to come in. On taking a seat, T. C. soon began, "When I sent for thee the first time didst thou not say, 'What does the old fool want with me?' and on the second summons didst thou not make a like remark; and the third, didst thou not say 'What does the old fool want with me anyway, he had better attend to his own business.' And now I will tell thee what I want with thee. As the prophet was sent to the captain so am I sent with a message to thee." And then he went on to say, in effect—for I cannot recall the exact words—That a renewed visitation was now extended to him, which was the last he would ever receive. If it was not closed in with, he would in a short time see his father die in great sorrow for him, and be himself soon after cut off in hopeless despair. But Samuel would not submit, and all came to pass as T. C. had foretold, and he dying in great agony of mind soon after.

AN ANCIENT WARNING.—"The very thing which is now called the Christian religion existed among the ancients, and was not absent from the beginning of the human race until Christ came in the flesh, whence the true religion, which already existed, began to be called Christian."—Augustine ("Retractions," the author's last work.)

Maxims from "The Inner Life."

For "THE FRIEND."

BY T. C. UPHAM.

Many persons think they are seeking holiness, when they are in fact seeking the "loaves and fishes." To be holy is to be like Christ, who, as the captain of our salvation, was made perfect through suffering. We must be willing to bear the cross if we would wear the crown. In seeking holiness, therefore, let us think little of joy, but much of purity; little of ourselves, but much of God; little of our own will, but much of the Divine will. We will choose the deepest poverty and affliction, with the will of God, than all earthly goods and prosperity, without it. If we have God, He will not fail to take care of us.

Always make it a rule to do everything which it is proper and a duty to do, in the best manner and to the best of your ability. An imperfect execution of a thing, which we might have done better, is not only unprofitable, but it is a vicious execution; or in other words is morally wrong. He who aims at perfection in great things, but is willing to be imperfect in little things, will find himself essentially an imperfect man. Such a person wants the essential principles of universal obedience. Consider well therefore, what God, in his providences would have you perform, and if you feel the spirit of those directions, which require us to do all things as unto God rather than unto men, you will not do them with a false heart or a feeble hand. And thus in small things as well as in great, in those which are seen, as well as in those which are unseen, as well as in those which attract notice, it shall be said of you "Well done, good and faithful servant."

A SIGNIFICANT STATEMENT.—At a recent meeting a woman from Persia remarked that "It was forgotten to be mentioned that natives have the privilege of coming to this grand country of America to be educated, and Americans usually receive them kindly and lend them aid without asking the advice of the missionaries of the countries from which they came. Now, it is the very worst thing in the world for them, for us and the work. They become Americanized and return with exalted ideas of what they ought to do, and can do. Natives who become Christians and want an education are very much more useful if educated in their own land, in their own language, and among their own people."

Another endorsed this remark by an illustration of the Japanese girl who won such high honors at Bryn Mawr College. During an interview with this young lady, she said: "Oh, please don't let any more girls do this! It is a grand thing to come to America and be educated, but for us to be useful in our own country it is better that we do not have quite so much education, if we must come to America for it. How can we ever be satisfied to live our lives in Japan after having been in America," and with tears in her eyes she concluded: "Oh, it is so much harder to be a Christian in America than in our own Seminary in Japan!" How sad it is that such a declaration should be made by one who knows what it is to be a Christian in heathen Japan and in this Christian land. The temptations of our civilization are regarded as being great

er than are those where heathenism prevails. They are of a more subtle character, and are all the more dangerous on that account.

FOR "THE FRIEND."

Military Music and Discord.

[The accompanying article was either written or marked out previous to reading in the current FRIEND (No. 14) the article on "Music as an Antidote to Anarchism." It seems to support what is therein said.—L.]

A correspondent of the Boston Transcript, deprecating the inculcation of warlike sentiments on the minds of the young, gives the following illustration of the capability of martial music arousing feelings of combativeness and deadly wrath. "An old army officer," he says, "sat next to me during a celebrated parade. When the music had passed he said, turning a flushed face on which there was painted the most repulsive expression I had ever seen him wear. 'Look out now, I may hurt you I never hear a military band without being roused to a terrible desire to kill. That is what such music is for.'"

This impulsive avowal of the old army officer we may find confirmatively expressed in that treatise of Clement, of Alexandria (2nd century) called "The Instructor," wherein he says, deprecating the simple belief and practice of the contemned and persecuted Christians,—"Man's voice is truly a pacific instrument, while other instruments, if you will investigate, you will find to be warlike, inflaming to lusts, or kindling up amours, or rousing wrath. In their wars, therefore, the Etruscans use the trumpet, the Arcadians the pipe, the Sicilians the pectides, the Cretans the lyre, the Lacedaemonians the flute, the Thracians the horn, the Egyptians the drum, and the Arabians the cymbals. The one instrument of peace, the woe alone by which we honor God, is what we employ. We no longer employ the ancient psaltery and trumpet, and timbrel and flute, which those expert in war and contemners of the fear of God were wont to make use of also in the choruses at their festive assemblies, that by such strains they might raise their dejected minds."

The military band is an expensive, yet seemingly an essential adjunct of the regimental equipment. Desertions from the ranks would probably be far more frequent than they are, were it not for the agency of the strains of music (when in camp) in warding off homesickness and melancholy. In the actual conflict of the battlefield, the fierce blare of the trumpet, the shrill notes of the fife, and the unintermitted rolling of the drum, stir up the spirit of carnage and at the same time drown the groans and the moans of the wounded and dying. It was in the midst of such a scene that the lamented Hedley Vicers, mortally wounded beneath the tower of the Malakoff, was carried away from the field of blood while he pathetically murmured—"Cover my face! Cover my face!" Alas, that it should have been recounted of that other, Colonel Gardiner, so often referred to as "a soldier of the Cross," that when mortally shot through the mouth on the fatal field of Prestonpans "he was calling to his men" [says Dr. Doddridge, his biographer] "probably in that horrid language which is so peculiar a disgrace to our soldiery." Here,

indeed, was military discord! The detail of the incidents of the recent war with Spain, has coupled this "disgrace" with the name of many a prominent Admiral, general or other officer, and it is not likely that the men in the ranks were behind their superiors in this regard.

An army chaplain, writing to the New York Observer during the war of the rebellion, said, in referring to the many evidences of vice which prevailed in the service—"Such blatant and incessant profanity as I heard in traveling from Louisville, Kentucky, to Winchester, Tennessee—some 750 miles—I never had supposed possible; intemperance prevails and vice shows itself shamelessly." The harmonious strains of the regimental band, not only are of no effect in drowning such discord as this, but rather seem to bring out the evil in more lurid colors. The conclusion of an editorial in THE FRIEND (Fifth Month 7th, 1898) may here be pertinently repeated, as pointing to the only harmony that cannot be unattuned:

"Let the time past suffice wherein any by unpeaceableness have wrought the will of the Gentiles. Let us be driven, though now it may seem at the point of the bayonet, to the Christ of Peace, and to that self-examination for the works of the devil in our spirits, that He may destroy them, 'bringing every thought into captivity to the obedience of Christ.' Let our peace be thoroughly made with God, and it will be thoroughly made with men."

JOSIAH W. LEEDS.

THERMOMETER TUBES.—An interesting account is given in *The Idler* of the wonderful state aided industry at Jena where glass and lenses are made for scientists. The industry has been built up by Professor Abbe and Dr. Schott and has throughout been conducted by scientists whose efforts have made Jena famous among scientific men the world over. One of the most picturesque features of the Jena glassworks is the great corridor where the thermometer tubes are blown and drawn, says a correspondent.

We saw this glass in process of manufacture. A boy workman caught a bit of molten glass from the furnace on the end of a blowpipe. It was hardly larger than a walnut, but by twirling and blowing and moulding it grew to the size of an orange, with the shape of an orange. More glass was then added, and there was more rolling and blowing, and when the proper stage was reached the blowpipe was passed quickly to the brawny master workman.

He, in his turn, added glass, blowing from time to time with cheeks outpuffed until it seemed as though they must burst, and then rolling the great ball of glass on his iron kneading board until it looked like a huge yellow gourd. Faster and faster he worked, keeping the ball always symmetrical and yet white hot. At length he lifted the glowing mass quickly in the air, and a second workman attached the blowpipe at the bottom. Then the two men ran in opposite directions, twirling the pipes and blowing lustily from time to time. From a thick, partly yellow globe the glass thinned out quickly as the men ran apart, until it became a dull red tube not larger than a man's little finger and nearly three hundred feet long. Sometimes in draw-

ing these tubes one of the blowers would only run the length of the corridor, but outside on the hill.

INTERCESSION.

BY J. H. KNOWLES.

"The Spirit helpeth our infirmities: for we know what we should pray for as we ought: but the Spirit maketh intercession for the saints according to the will of God" (Rom. 8, 26, 27).

I cannot pray; my tired heart is weak,
My tongue is languid, heavy, slow to speak;
Spirit divine, my intercessor be,
Pray Thou for me.

I am so full of need, yet cannot tell
My soul's deep want which Thou dost know so well
Spirit divine, Thy speech is strong and free,
Pray Thou for me.

I am not wise, I do not even know
What things to ask for or which way to go;
Spirit divine, Thy sight is clear to see,
Pray Thou for me.

My prayer is human, selfishness and sin
May mar what seems to me sincere and clean;
Spirit divine, thy purifier be,
Pray Thou for me.

For when in me Thou prayest, calm and still
I wait the answer of God's blessed will;
Content, assured, I know He heareth thee;
Pray Thou for me.

—Christian Advocate.

FOR "THE FRIEND."

Some Reminiscences of a Good Man—Ebenezer Worth.

Ebenezer Worth on the 20th of Eighth Month, 1862, writes in his diary:—"My father and tender father was taken from us by death about three weeks' sickness. I felt very anxious while he lay sick that he might have passed away with a sense of preparation for the change before he was taken. To my great satisfaction he expressed in a sober calm that he had not felt any anxiety from the commencement of his sickness, how it might terminate; he seemed resigned to the will of Providence. I think while in health he was concerned to prepare for death. What a comfort to feel an evidence that our departed friends were prepared for the mansions of eternal rest."

There does not appear to be any account of the diary of the funeral of Samuel Worth. From a letter written by a ministering Friend who was in attendance it appears to have been an interesting and encouraging occasion.

Some extracts from that letter follow: A carriage from the West Chester depot on the arrival of the trains seemed to be full or over-gorged, I started on foot, but was overtaken by Joseph Scattergood who had his father's law, David Cope, with him; they invited me to ride with them. David was very interesting in conversation and said amongst other things that Samuel Worth had done a great deal of business, but he never knew a big man to speak against him. A very large company was assembled at the house. Samuel Worth being highly respected in his neighborhood. We proceeded to the burial ground at Marshallton and after some consultation with the elders it was concluded to hold a meeting. The house was filled to overflowing. We sat a long time in solemn silence; it did not seem as if there was much room for words. I thought if there could be such a feeling when my body was laid in ground, it would be all that I could

At length Samuel Cope arose with the age. "It is not of him that willesh, nor that runneth, but of the Lord that hath mercy," or words to that effect. A elder remarked afterward, "There quite a savor with it."

While after he was done David Cope got rather Samuel helped him up, he could and straight but supported himself on his in one hand and the gallery railing in the other. He commenced with saying, "It was a satisfaction to him when he had followed remains of one who had led a godly life in grave, that the company, if they were cate to worship 'God, should quietly gather the house and sit awhile together, even though a word might not be spoken. He then at considerable length and was much ed. About midway in his communication said, "My brethren, I am very feeble, and sit down;" then went on speaking from eat. "Was a tendering time; old men be seen in tears. When David was done I thought the meeting would close had been together a good while. Having little on my mind, I expressed it, desir- that all had witnessed might not be as the ing dew that passeth away. 'Tis upon ground that the husbandman sows seed and when heavenly visitations were ted we knew not that we should be favored more, therefore may we cooperate with measure of grace afforded and thereby be ted out of all error into all truth and be pre- for the awful change which awaits us, ceased speaking, David Cope broke forth in rapturous language, manifesting interest in young people, encouraging and desiring a blessing for them. He "I would ask for myself, a poor, feeble man, just passing from time to eternity, God might be with me through the dark- y of the shadow of death, and may He be you and bless you, my dear young friends, I you and preserve you that you may join angelic host on high, when time shall be owed up in eternity, when all enjoyments must cease and ye can no more be in- tents of this earth."

is may not be exactly as he gave it, but y so. It seemed as if the windows of n had been opened, and a blessing poured

on another occasion several years since sitting by the bedside of an aged friend, uring his long life had been a plain, cal farmer, his end was apparently near, his family gathered around in silence ing his departure. He was propped up, face toward the West and chin down g on the chest. Suddenly he raised his and looking intently upward and outward passed over his features such an expres- of holy surprise and awe as I never be- nor since, saw on a human face. It e but for a very brief space of time, his dropped on his chest and the spirit had its flight. We hope and trust, through itted mercy to dwell amidst some such as had been presented to his view be- side departure.

hip Price, also a plain, practical farmer e Valuable Elder of Birmingham Monthly g of Friends, a few days before his spoke thus to some of his relatives as-

sembled in his chamber: "Within two days I have felt my close to be near, I know not why it is; it is no merit of my own; it is adorable mercy admirable kindness and love that death is not appalling. I hope I am not deceived; but I could not feel this peace, were I not confident in his armor, in whom I have trusted all my life long. The natural eye can have no conception of the splendor of the New Jerusalem. No outward palace or representations can give us any conception of it."

City of the pearl bright portal,
City of the jasper wall,
City of the golden pavement
Seat of endless festival;
City of Jehovah, Salem!
City of eternity.

To thy bridal halls of gladness
From this prison I would flee,
Heir of glory
That shall be for thee and me.

—Bonar.

O, the joys that are there, mortal eye hath not seen!
O, the songs they sing there, with hosannas between!
O, the thrice blessed song of the Lamb of Moses!
O, the brightness on brightness the pearl gate en- closes!

O, white wings of angels! O fields white with roses!

O, white tents of peace where the rapt soul rejoices!
O, the waters so still and the pastures so green;
And the rest, oh, so sweet, more than mortal can dream.

—Nelson.

May all the praise, glory, might, majesty, dominion, and thanksgiving be freely, fully and unreservedly ascribed unto Him to whom alone it belongs for bestowing upon his poor fallen and feeble creature man, the ability to leave behind them such encouraging experi- ences, and such inspiring lines, as the fore- going.

W. P. T.

The Basis of Empire.

This empire of ours, through becoming a very present reality to every man in the street, is searching us all through and through; and under its searching challenge it is strange how godless is our instinctive interpretation of the issues set before us. The affairs that we are dealing with are very big and very distant: the nations concerned, the interests involved, are impressive in their material bulk. And this gross bulk is all that we at a distance can manage to realize. The result is that we take only material, visible, tangible matters into account. We omit, we forget, the living hearts of the people we have to deal with, their aspirations, their traditions, their religions, their loves. And yet these are the motives which actually make history, motives far more real and more powerful than any of those commercial considerations which we chiefly assume to be paramount; and then having left out of our calculations all the main forces engaged, we are surprised to find ourselves at last, when it is too late to with- draw, in face of some maddening Chinese fury or some desperate stubbornness of Dutch resistance. We have gone on interpreting man at his lowest ratio, and the invisible and spiritual powers in him rise up against us and take their revenge. My brethren, an Empire like ours, with its tremendous issues, can be governed only by one rule—by faith in the highest, by faith in spiritual realities, by

faith in a Divine purpose, by faith in God. Our peril at this hour is that just at the mo- ment when every one of us has the making of an empire thrust upon him, whether he will or no, we are habitually accustoming ourselves more and more to omit God from our consid- erations. Such a temper will, without our ever becoming aware of it, build an empire from out of which God will have disappeared, and such an empire so built goes down to ruin in dust and ashes.

Depend upon it that you cannot go wrong by clinging to the right. Lift your eyes from the narrow expediences, and remember that there is a code of conscience which has its home within the will of God.—*Canon Scott Holland in St. Paul's Cathedral, London.*

HURTFUL AND HELPFUL GIVING.—"When I was trying hard to get through the State Uni- versity on very little money," writes Cynthia Westover Alden, the president-general of the International Sunshine Society, in the *Ladies' Home Journal*, "one day an old-time friend looked me over, and taking out a ten-dollar bill, handed it to me, saying: 'You actually look as if you did not get half enough to eat. Take this money and straighten up a bit. Don't forget to pay it back to me when you can. I don't believe in giving money to any- body.' Now I was not an object of charity, though I was sadly in need of Sunshine. I put the bill away and cried as if my heart would break. After waiting some days I sent the same ten dollars back, saying I was glad I could return it to her so soon. To this day I hear of her telling how she helped me financially when I was 'hard up.'

"Another woman, that same week, asked me why I did not take my meals at the restau- rant where most of the students took theirs. I replied that it was a little too expensive for me. The next day I was called in by the prop-rietor of the restaurant, and asked if I could find time to look over the books of the concern and verify the work done by some one else, and if I would take out the pay in meal tickets. I thought it merely a bit of luck that had come my way. But at the close of the term the proprietor told me that my friend had paid for my meal tickets. Did the kindness offend me? I cried just as hard as I had cried over the ten-dollar bill, but it was a different sort of a cry."

"A man of no regrets

He goes his sunny way;
Owing the past no load of debts
The present cannot pay."

O, fear not in a world like this,
And thou shalt know ere long,
Know how sublime a thing it is
To suffer and be strong.

—Henry W. Longfellow.

RAINDROPS are, as a rule, larger in summer than in winter. The size of a raindrop when it reaches the earth depends on the height from which it has fallen. In the summer the lower strata of air are warmer than in winter, and therefore clouds are formed at a greater height where conditions are favorable for rapid condensation. The drops falling from these high summer clouds have more time to grow and therefore become larger than those falling from the lower winter clouds.

The German Watchman's Song.

It was formerly the custom for the watchmen in Germany to sing their national songs at night, as well as those of a more devotional character, of which the following is a specimen:

Hark ye, neighbors, and hear me tell,
Ten now strikes on the belfry bell!
Ten are the holy commandments given
To man below, from God in heaven.

Human watch from harm can't ward us;
God will watch, and God will guard us;
May He through eternal might,
Give us all a blessed night.

Hark ye, neighbors, and hear me tell,
Eleven sounds on the belfry bell:
Eleven apostles, of holy mind,
Taught the gospel to mankind.

Hark ye, neighbors, and hear me tell,
Twelve sounds on the belfry bell!
Twelve disciples to Jesus came,
Who suffered rebuke for their Saviour's name.

Hark ye, neighbors, and hear me tell,
One has pealed on the belfry bell!
One God above, one Lord indeed,
Who bears us up in time of need.

Hark ye, neighbors, and hear me tell,
Two resounds on the belfry bell!
Two paths before mankind are free,
Neighbor, choose the best for thee.

Hark ye, neighbors, and hear me tell,
Three now falls on the belfry bell!
Threefold reigns the heavenly Host,
Father, Son and Holy Ghost.

THE INDIANS AND THE GREAT BOOK.—“At Norway House, on a certain occasion,” says Edgerton Young, missionary of the Canada Methodist Church there, “a number of Indians came into my room, noiselessly, after their fashion, so that the room was filled with them before I knew it. When I became aware of their presence I asked whence they were.

“‘From a journey of fourteen nights,’ they replied; for they reckon distance by the number of nights they are delayed to sleep. “We have got the Kessenavchen—the Great Book—but we don't understand it, although, we can read it.” I thought they were joking, for the Indians cannot read unless some one has taught them; and I knew from their account they must live far away from any missionary; but when I asked them ‘From what missionary did you learn?’

“‘We never saw a missionary nor a teacher.’ I took down from my shelf our Bible, printed in the beautiful syllabic character of the Cree language, and opened to Genesis; they read it with ease and correctness. I turned the pages and they read in many places. I was amazed and asked them again where they lived. They described it to me; it was far away, north of Hudson's Bay, hundreds of miles from any missionary. Their hunting grounds it seems, adjoin those of some Christian Indians—they cover great distances in hunting—and, continued my visitors,

“‘We visited your Indians and found that they had the Kessenavchen. We got them to read it and then to teach it to us; and we were so pleased with it that we all learned to read it during the winter.’

“Every soul in a village of three hundred population has thus actually learned to read the Bible without ever having seen any white teacher; and having providentially come into possession of some copies that happened to be in the hands of the Hudson's Bay Company's agent, these heathen Indians had journeyed through the snows fourteen nights' distance that to them might be given instruction in the Book they had thus learned to love.”

Evidence of Regeneration.

Many persons regard themselves truly regenerated because they are religiously stirred in certain directions. They may be, but it is not safe to rely solely upon such a proof of conversion.

Some persons are naturally sympathetic. They are touched, even to tears, at the sight of occasions. They are responsive to joy and on distresses are lifted into raptures. A stirring presentation of Christ's passion, a tender description of the Garden-agony and a realizing sense of the tragedy of the cross draw tears from their eyes, but this is simply the sensibility which finds expression over almost any tragic event.

As with sorrow, so with joy. Numbers much enjoy certain religious services. They love the minister and take delight in his preaching. But this does not necessarily argue a renewed soul. In one of his striking parables, Jesus described those who “received the Word with joy,” but whose conduct afterward showed that they had neither root nor the fruitage of grace. Herod heard John gladly, but that was all. He made no confession of sin, reformed not his life, and brought not forth fruits meet for repentance, so to-day there are many who rarely miss a Sabbath service, who gladly contribute to the support of the church, and who praise sermons and music, yet never enter into the spirit of devotion and have need to learn the first principles of vital and practical godliness.

Nor does a desire for good always evince the regenerated soul. Longing springs from a sense of want. It is no uncommon thing for unrenowned men to long after the Christian's treasures and to wish they were fit for heaven and were sure of its rewards. Jesus once so graphically and sweetly set forth the blessings of his Kingdom under the emblem of bread that the multitudes cried out, “Lord, evermore give us this bread;” but their longing for it was of short duration, for they soon after basely deserted him as Teacher and Redeemer. To-day hundreds are anxious for spiritual and saving benefits, but not on the terms of the Gospel. They desire immortal life, but will neither seek nor pursue it in the divinely-prescribed way.

Impressibility attends, but is not necessarily, regeneration. Weeping over sin, delight in sermons or longing after heaven are no infallible proofs of a radical change of heart by the Spirit of God. They are good as far as they go, but something more is necessary. Life has its conflicts and trials and this goodness vanishes under the severe testing. Conditions change and it is discovered that sin is loved more than holiness the world preferred to heaven and self prized above Christ. Sentiment is a variable and uncertain quantity. Only as it proves its worth by suitable activi-

ties in the heart and in the conduct does evince a regenerative origin. Regeneration the work of God's Spirit, whereby the whole nature is transformed. Into it enters a principle of life. There is a restoration of the Divine image. Those who enjoy the birth, become members of Christ's family a life, as far as possible, like God. They possess an inner and outer purity. They become sin's existence, and are bent upon its extermination. They follow Christ as Master and Pattern and hold on in the path of righteousness unto the end.—*The Presbyterian.*

A Battle as it Appeared to an Eye-Witness.

I was at Gettysburg July 1-4, 1863, with my brother Gen. O. O. Howard, but not a soldier. It was my first and only battle-field. I received there, not my first impressions, but by far my deepest conviction as to the real and essential character of war. The “pomp and circumstance” were not what we broke camp at Leesburg, Va., and marched to the sound of music and unwavering banners towards Pennsylvania. The report of the first gun following a distant flash and the slow rising of a puff of smoke over the woods excited a thrill of patriotic emotion. Our reinforcements hurrying beyond the town to repel attacks already begun, and others hastening to gain and hold important positions on Cemetery Ridge, won my honest sympathy. But when the first broken line of limping, bleeding “wounded” halted along the Baltimore turnpike, and I contemplated, almost alone, the work of relief felt as never before their cruel sacrifice of blood and limb and life. On the second evening of the battle the moon rose as peacefully as ever and the silent stars looked down unchanged on the upturned ghastly faces of our dead; the otherwise noiseless night resounded with cries of mortal agony from the dying around me. I said to myself “O God the moon and the stars thou hast made, but not this miserable murder and mangled men.” It is not like nature; it is anti-natural; it is of the pit. On the third afternoon I went up, weary with hospital work, for a moment's rest to the cupola of a farm-house. The thin line of blue-coated soldiers seemed to waver along the summit of the ridge, involuntary prayed for their safety, my country and for the right. Just then, above the rattling of musketry and the roar of artillery there came a clap of thunder from a rapidly rising cloud. For a moment no other sound was heard. It was as if God were saying, “an mightier than ye all! Hear my voice! Cease your mad and tumultuous strife!”

Here the question came to me as never before, “Is this the work of God or of Satan? Is there no other way of settling human differences, establishing and confirming human rights? Do union, liberty and law lie all no other road?” Then, as the roar of battle was renewed and volley succeeded volley, seemed to me that each bullet was hungry for a life. Some lives, dear to me personally, or in their noble manliness before me. I spoke imagined farewells to the dying. I seemed look upon dead faces only too familiar, heard in each discharge the possible knell of friend or brother. Oh, wicked extravagance and waste of most precious things! Th

man has, with vast expense of time and trained his bullet-pierced brain for great actual attainments. The other has had gracious spiritual experiences as to be truly marked as an exemplar and teacher of religion. Learning, skill, wisdom, piety, moral power were won by him by years of self-denial and consecration. Ability thus acquired for which the world has a and aching voids. Alas! his body affords an obstacle to the passage of a bullet that of a horse or even a senseless man. Surely here is a wicked waste.

What effect has this had on such as come to him unslain, unwounded? It is not this work seem too like that of beasts or bull-dogs and prize-fighters? Is the military hero himself from his duty deeds; forget for a moment the cause of war in which he fights,—what are the moral motives, impulses, and passions that lead into life and energy by fighting? A Christian soldier once said to me confidentially: "I cannot bear to go into the presence of so angry as I always become in battle." Sherman wrote, "War is cruelty. You refine it." It is that and worse. It is not only kindness and humanity, it lacks righteousness, justice,—it is a moral evil. However justifiable we may think the cause, however beneficent its results, its facts are hideously wicked. In a discredited and ordered universe there is, must be a better way. It is our duty to

FOR "THE FRIEND."
LIFE'S LESSON.

When the heart is crushed with pain,
And aching with its grief,
Every way, it looks in vain
To find a sweet relief;
Even then, as flower crushed,
Still sweetest fragrance give,
Give the joy of sympathy,
With other souls to live.

When pain is given us in vain,
And sweeter we shall grow
When we have learned, through our own grief,
To neighbor's pain to know;
Through the power of our own love
And sweetest sympathy,
Others in their trying times
To brighter side to see.

Let us seek, e'en in our grief,
Our blessings still unseen,
For the lesson we shall find,
That God for us doth mean.
To 'tis selfishness to kill,
To teach us sympathy.
Though, at first, it seemeth hard,
The blessing there must be.

MARTHA SHEPARD LIPPINCOTT.

WESTOWN, N. J.

AN'S COMFORTLESS PALACE.—Few men ever entered within the palace precincts of Sultan of Morocco, for there the woman is supreme. It is known, however, that the beautiful courtyards and rooms, with their walls of mosaics of tiles, with ceilings gorgeously painted and carved wood, and that are marvels of delicate plasterwork. Yet the discomfort must be intolerable. No fireplaces, practically no drainage, and everywhere, and even the attractive

tanks and fountains must look cold and damp in winter. There is an appearance of mystery over all the great palaces, with their tall, windowless walls inclosing acre upon acre of courtyard and garden and palace; walls that are topped here and there by the iridescent green tiles of a roof, by some rich mosque tower, or by the straight tall stem of the cypress. Now and again a European minister and his suit are shown the great, neglected gardens, the paths roofed with broken trellis having vines, wildernesses of oranges and olive and pomegranate trees. The whole is rank with weeds, but everywhere there is water, and in their way there are beautiful gardens, indeed. Scattered about, almost hidden in the dense vegetation, are little buildings, often consisting only of a portico and one room, rich in tiles and painted ceilings, and often marvels of painted art. Here sometimes the Sultan sits to receive the representatives of the Powers, reclining cross legged upon a sofa—a white figure, surrounded with its Oriental setting—while at his side stands his Vizier. The European diplomat, in his uniform of gold lace, attended by his military and civil staff, forms a strange contrast, and on one occasion the writer noticed that his Shereefian Majesty was much more interested in the busby of an officer of the Queen's company of Grenadier Guards than in the conversation.—*New York Sun.*

A CURIOUS OCCUPATION.—In a little house just off Hester street, says the *New York Herald*, dwells an old woman who carries on a most peculiar trade. She is Sarah, or "Old Sal," as she is more familiarly called, and East Side residents know well and most of them patronize her. On the window pane of her little shop is a sign which reads, "Buttons Inside. Any Button Matched. From One Cent to a Nickel." Her stock in trade is stored up in thousands of buttons in little heaps—pearl, glass, bone, jet, shell, brass, cloth, silk, horn and every other variety of button made.

It is said the old woman's business is profitable and that she has managed to save about \$5000 out of her curious occupation.

"You see," she said to me, "it is often the case that a woman buys only enough buttons for a dress, and then, when she loses one, it is difficult to get it matched at a notion store. Those who know me come along here, and I can always do it from my stock."

"I have my regular customers, for most store-keepers around here know me and send their customers to me when they are unable to suit them, and they seldom go away without the very thing they are after."

"Where do I get them from? Many of them come from junk shops, where, on the rags sold, are buttons. All the rag dealers know I pay a fair price for buttons, and they save them until they have a sufficient quantity, and then they come to me."

"Another way I obtain them is by visiting the dressmakers, who often have buttons left over, and their customers seldom ask for them. These I can buy up very cheap. Although my little board outside says that the highest price I charge is five cents, my better class of customers do not hesitate to offer me a quarter, or even fifty cents, in order to make their garments look neat and complete."

THERE are many aspects of the mission of Jesus, but we should not overlook that which He himself emphasized: "To this end was I born, and for this cause came I into the world that I should bear witness to the Truth."

Science and Industry.

An explanation of the fact that our cities show a greater decrease in the death rate than country districts, may be found in the charge made by a writer in a recent number of *Good Housekeeping*, that the stables, chicken houses and other out-buildings on many farms, while kept in an outwardly cleanly condition, in reality reek with disease germs.

USE MADE OF BAD EGGS.—The bad egg is generally supposed to be an utterly useless product, and yet at least one enterprising Philadelphian is doing a lucrative and highly respected business by turning a thoroughly bad egg to account, and enabling it to add its modest share to the sum total of American wealth and prosperity.

During the recent hot spell thousands of bad eggs were rendered what appeared to be worthless. En route to the city from the West the heat destroyed many crates, and many eggs were found useless by the time they reached Philadelphia.

Naturally, you would think these bad eggs would be thrown away. Not so. Nor is the egg dealer compelled to pay for having them hauled away. It is here that the enterprising dealer in bad eggs asserts his ingenuity and usefulness in the community. He visits the commission merchants and offers to haul them away free of charge. Furthermore, when eggs are scarce he pays at the rate of two or three cents a dozen for the decayed products, but now when the heat causes such a large percentage to be rendered spoiled he does not have to pay anything; the dealer is glad enough to have his assistance in hauling the spoiled and useless eggs away.

These he takes to his factory, and they are there converted into a solution used in tanning. The solution loses all offensive odor in its preparation, and is sold to the tanner by the gallon. The latter uses it in the seasoning of the leather, calfskin particularly responding to its application. It is used to whiten the leather, an experienced tanner says, and also to fill in the grain.—*Philadelphia Times.*

A fall of hail to the average depth of one inch over a region four miles wide and eighteen miles long is a fall of 167,340,000 cubic feet of ice weighing nearly 1,000,000 tons. The average elevation from which it fell may be taken as 5,000 feet. All the mass that fell must previously have been raised to that level; that is, 100,000 tons must have been raised 5,000 feet or 5,000,000 foot tons of work must have been done, which corresponds to the work of an engine of a million horse power working for five hours.

—A new industry is promised for North Carolina in the discovery of the matting reed in its river marshes. It has long been said that matting could be made only in China, because the reed suitable for its manufacture was found only in that country. Recently reed has been found growing in the greatest profusion in the waters of the Trent and Neuse rivers, above Newberne, N.C., which experts state is identical with that used in China for making matting.

HORSE CHESTNUTS AS FOOD.—The horse chestnut, says the *International Confectioner*, is richer in albumen than any cultivated plant, richer than even peas and beans. Yet owing to its bitter and resinous taste the horse chestnut has never been used extensively for food. A process of dissolving out

the bitter resin by alcohol has been invented, which leaves a meal containing all the albumen and starch of the chestnut, and "is an excellent food, possessing a pleasant taste."

It appears that ordinary aqua ammonia, or "hartshorn" will extinguish a fire under some circumstances by excluding oxygen. Strong ammonia produces so large a volume of gas when exposed that it is quite capable of "crowding out" all the air if thrown into a room where a fire has begun. *Insurance Engineering* tells of a case where the vapors of a tank containing fifty gallons of gasoline caught fire in the linen room of a laundry. The room was instantly a mass of living flames, but a gallon and a half of ammonia water thrown into it completely and almost immediately extinguished the fire. The ammonia was in a glass demijohn in an apothecary's shop next door to the laundry, and was thrown into the room by the druggist as an experiment. To use his own words in reporting the circumstances, the effect was instantaneous; torrents of black smoke rolled up-wards in place of flames and in a moment every trace of fire was gone. But it would have been death to any one in the room to have thrown a bottle of ammonia in before he could get out.

SUMMARY OF EVENTS.

UNITED STATES.—In the interest of a prompt and satisfactory settlement of China's indemnity, the authorities at Washington are becoming impressed with the advisability of again putting forth the proposition that the claims be referred to The Hague Court of Arbitration for settlement. Secretary Hay and Minister Rockhill are devoting special attention to this feature of the Chinese question, because it contains germs of serious complications.

The partisan legislation enacted by the Legislature of Pennsylvania last winter intended to strengthen the control of the "machine" upon the Government of the State, known as the "Kipper bills" has lately been declared unconstitutional by the Supreme Court of the State. The opinion declares the acts to be unconstitutional on the grounds of special legislation, and grants an injunction restraining the Commonwealth from putting on the ballots the names of candidates for members of the Board of Revision of Taxes.

An effort is being made through the courts to remove the names of fraudulent voters in Philadelphia from the assessors' lists, and in the few divisions already acted upon more than 600 names have been taken off. Further action will be taken by the courts to prevent fraudulent voting by authorizing the appointment of overseers in certain districts to supervise the counting of votes.

The production of gold in the States and Territories producing the largest amounts is estimated by the Director of the Mint as follows: Alaska, \$8,171,000; Arizona, \$1,159,400; California, \$17,816,000; Colorado, \$2,288,000; Idaho, \$1,724,700; Montana, \$1,698,000; Nevada, \$2,006,200; Oregon, \$1,934,700; South Dakota, \$6,177,600; Utah, \$3,972,200.

The commercial value of silver in the States and Territories producing the largest amounts is as follows: Arizona, \$1,857,210; Colorado, \$12,700,018; Idaho, \$3,989,042; Montana, \$8,301,118; Utah, \$5,745,912.

Great excitement has prevailed in Butler County, Pa., a great oil centre many years ago by the recent discovery of petroleum in an oil bearing sand at a depth of 2400 feet. Many abandoned settlements are again the seat of much activity.

A. T. Hay, an assistant to Prof. Hilprecht, lately lectured in Philadelphia upon the results of the explorations by the latter in Nippur in Southern Babylonia and the cuneiform inscriptions translated by the lecturer, stated that the Biblical narrative is corroborated by the writings of the contemporaries of Abraham and Ezekiel in both Babylonia and Egypt, unquestioned evidence existing of the sojourn of the exiles and the conquest of the Israelites. The Assyrian records are of greatest value, because this was the dominant power in the world when the greater portion of the Old Testament was written. "We have many witnesses," he said, "of the truth of the Bible, and it would take almost a month of evenings to tell about the all."

A destructive fire occurred on the 25th ult., on Market Street above Twelfth, in Philadelphia, by which a number of buildings were burned and over twenty persons lost their lives.

The most healthful place in the United States is Marion, Ia., according to the statistics of the Marine

Hospital Service. With a population of 4,100, there were only six deaths in 1901, making the death rate only 1.46 per one thousand inhabitants. The average death rate in all the 1,190 towns and cities from which statistics were obtained was 17.47. Of the populous States, Iowa showed a death rate of 11.17. North Dakota's rate was 6.55.

The United States census reported in 1890 4,600 persons 100 years of age and over. More than half of these were colored. In the record for centenarians the negroes of the United States stand first in number, and Chicago has a larger percentage of centenarians than any other American city.

The Delany system of telegraphy has been adopted by the Pennsylvania Railroad Company. Under present conditions from 1,000 to 1,200 words an hour is considered a maximum for the transmission of railroad messages. Under the Delany system it is claimed that from 100 to 8,000 words a minute can be sent, the rapidity of transmission depending upon the length of the line. It retains the Morse code and key and many of the present instruments, but instead of the operator having to send and receive messages all this work is done mechanically by the means of a chemical receiver and sending and receiving taps. It does not do away with the operator, as he is needed in preparing the message prior to transmitting it and in deciphering it after it has been received.

In the seventeen years covered by the records of the New York State Department of Health the deaths from smallpox have been less than .07 per cent. of the total, or about 11 deaths annually per 1,000,000 of the population; 1138 of the total number of 1275 deaths in that period occurred in New York city, while large areas of the State had not a single death from this cause, which seems to imply that smallpox as a scourge is peculiar to large cities.

The United States continues at the head of the list of the world's exporting nations. The comparative figures prepared each month by the Treasury Bureau of Statistics, exhibiting the imports and exports of each of the principal countries of the world, and the average per month during a given period, show that the domestic exports from the United States are greater than those from any other country, and that the monthly average during the year 1901 has been higher than that of any other country.

There were 358 deaths in this city last week, reported to the Board of Health. This is 43 less than the previous week and 35 less than the corresponding week of 1900. Of the foregoing, 195 were males and 163 females; 47 died of consumption of the lungs; 37 of inflammation of the lungs and surrounding membranes; 7 of diphtheria; 11 of cancer; 16 of apoplexy; 4 of typhoid fever and 10 of smallpox.

COTTON closed on a basis of 88c. per pound for mid-ling uplands.

FLOUR.—Winter, super, \$2.15 to \$2.30; Penna. roller, straight, \$3.15 to \$3.25; Western winter, straight, \$3.20 to \$3.30; spring, straight, \$3.35 to \$3.60.

GRAIN.—No. 2 red wheat, 74 1/2 to 75c.
No. 2 hard, 72 1/2 to 73c.
No. 2 white oats, clipped, 43c.

BEEF CATTLE.—Best, 64 to 65c.; good, 54 to 55c.; medium, 44 to 5c.

SHEEP.—Choice, 34 to 35c.; good, 3 to 3 1/2c.; common, 14 to 24c.

HOGS.—Best Western, 9 to 9 1/2c.

NOTES.—According to reports received 600,000 persons in the Province of An-hui and 300,000 in the Province of Kiang-Si in China are on the verge of starvation, and the famine is spreading. The available funds are insignificant.

Minister Rockhill has brought with him from China a corrected copy of his findings. Steps have been taken for the immediate publication of the report, together with such information in relation to them as will be of value to the commercial interests of the country. One of the important concessions relates to flour, which was placed on the China free list. In view of the present large market in China for American flour, and the enormous prospective trade to develop close relations, this one concession is regarded as of great value.

A despatch from Constantinople of the 27th says: "There has been a voluminous exchange of despatches in cipher between Spencer Eddy, Secretary of the United States Legation, and Consul General Dickinson who is now in Hong Kong, regarding the efforts to rescue Helen Stone, the abducted American missionary, from the brigands of the interior. Nothing has been made public as to the progress of the negotiations."

The *Lucania* and *Campania* recently exchanged messages with each other when at sea, and invisible to each other, at a distance of 170 miles.

A London weekly newspaper states that King Ed is suffering from a nervous affection of the throat, that three operations have been performed.

An active insurance has appeared in Samar, or the Philippine Islands; 2,600 American troops are there. The people of the island of Samar have notified to concentrate in the towns on pain of committing public enemies and outlaws and treating cordially.

The Central Filippine Committee has issued a proclamation confirming Malvar as the successor of Aguinaldo. Copies of the document have been widely circulated. Over 40,000 American troops are now in the Philippines. It is believed that the recent manifestations in island Samar were chiefly due to lack of food. The insurgents finding it necessary to make outlets to the in order to obtain this.

Five more districts in the Province of Samara in Russia have been officially declared famine stricken. Relief has also been extended to seven districts in Siberia. The emigration to Siberia has been lessened in account of small harvests both last year and this.

In addition to finding a circumstance that deterrations and causes the return of many is the exhaustion of available farm land. It is a fact which is not clearly understood abroad that many portions of Siberia are already fully occupied. This is true of nearly all the conveniently accessible agricultural land in West Siberia.

A Prince Edward Island fisherman, Philippe Gault, has saved the lives of no fewer than twenty-seven persons.

A recent despatch from Leipzig says: "The Anti Congress, which opened here yesterday, has appointed a committee to take active measures to foster the spirit of brotherly feeling between the Chinese and the Emperor William would assist the movement."

The second Pan-American Congress has begun its sessions in the City of Mexico. The first Congress, it was held in Washington ten years ago, was prompted by the late James G. Blaine, who sought to establish intimate intercourse between this country and America, and to hold up the good example of reciprocity. The whole subject of international relations was considered in the first Congress, and the delegates adopted an arbitration treaty, which was signed by Ministers of nine South American States, subject to approval of their several Governments. Chile protested, Argentina, to hold up the arbitration, and has declined to adhere to the principle in the present conference if the arbitration is made to cover old disputes questions now pending. A resolution has been adopted in the present Congress urging Colombia and Venezuela to peacefully settle their differences.

RECEIPTS.

Received from James Hobson, agent, Ireland, \$5 being 10s. each for Henry Bell, John F. Duguid, John L. Duguid, John G. Duguid, John G. Duguid, T. M. Houghton, Edward W. Storge, Susan Will, Henry A. Upchurch, William White, and £1 for W. S. Cole.

NOTICES.

Bible Association of Friends in America. The Annual Meeting will be held in the Lecture Room, Friends' Select School, No. 140 N. Sixteenth Street, Fourth-day, Eleventh Month 8th, 1901, at 8 o'clock. The interest of Friends generally in the work of the Association, which has covered a period of nearly seventy years, is desired, and they are specially invited to attend the meeting and take part in the proceedings.

MOUNT HOLLY, N. J.—Charles Darnell informs the time of holding their meetings, both First-day and week, has been changed from ten to ten thirty o'clock.

A YOUNG woman Friend desires a position where she can improve her speed in shorthand and typewriting to teach it. Address "L."

Box 54, Toughkenamon, Pa.

WESTTOWN BOARDING SCHOOL.—For convenience of persons coming to Westtown School, the stage will leave Philadelphia 7.10 and 8.15 A. M., and 4.32 P. M. Other trains are met when requested. Stage fare, fifteen cents; after 7.30 P. M., twenty cents each way. To reach the school by telegraph, West Chester, Phone 114x.

EDWARD G. SMEDLEY, Secy.

WESTTOWN BOARDING SCHOOL.—Applications for admission of pupils to the school, and letters in regard to the same, should be addressed to Wm. F. WICKESHAM, Principal.

Payments on account of board and tuition, and communications in regard to business should be forwarded to EDWARD G. SMEDLEY, Superintendent.

Address, Westtown P. O., Chester Co., Pa.

misrepresentations Kindly Intended, and Otherwise.

ends in representative situations are not frequently brought to grief by liberties taken by publishers with their names, or with their answers to interrogatories which have been sent to them by promoters of this or that cause. Their modes of address to editors of literary papers, when their replies or communications appear in print, have been so tampered with by the publishers as to advertise Friends as deniers of their testimonies. After how a Friend writes to a paper, an answer forthwith makes him seem to say "or" or "Dear Sir," or to have affixed flat titles which a Friend could not conscientiously use. Advertisers of "Charity" Balls, for no other questionable project, send complimentary tickets to a man or woman ministering to us, and though receiving no reply have placed the minister's name in their list of presidents or committees. A reply written by a citizen with special care to conceal knowledge of his engagements in life, is unauthorizedly published with a "Rev." prefixed to his name and a note added as if he were pastor of a Friends' Meeting.

These misrepresentations are made in ignorance of the hurt they are giving to the victims and are doing to impair the confidence of our brethren. We can excuse undiscerning fellow-citizens, when we consider their ignorance, for being unaware of the relation of principle and spirit of truth to the expressions which they put into our mouths or pens; but we are more so when prominent public workers among our religious Society's name are so fully free in conscience to parade before public assemblies all modes of address or communications which have their foundation in lip

honor but not in pure truth. "The reverend Mr. Babcock will lead us in prayer;" "the right reverend So-and-So will now address us;" "his honor will please observe," etc., etc.—these expressions, or the like, we have in public audiences been pained with hearing, as coming through ostensibly Quaker lips, and compromising the position of Friends in the community. What wonder then that non-members thus taught concerning us by members should revise down our words to the popular standard.

Let these reformers bearing our name but otherwise independent, take notice, when they blame steadfast Friends for not entering in with them into associations for desirable ends, that they have themselves to blame for much of Friends' hesitation. When our members seem unable to mix with others in reformatory associations without surrendering, as soon as it is found too singular to be easy, every testimony for truth as held by us so that principles seem steadily to wane along with testimonies, can they wonder that they are making of themselves conspicuous warnings to concerned Friends against joining in such movements? Much more good in public life Friends might do and would be encouraged to do if so many such active reformers were not saying, "Look at my course! You can't enter into public reform work and be a Friend!"

Yet it was in the days when the members of the Society of Friends kept most consistently to their testimonies, that they built up for the Society that large and firm reputation which still survives for righteous benevolence and for being staunch in every good cause,—a reputation which less consistent members are banking on now, and need to thank the living conservatives of the former day for.

Report Concerning Iowa Yearly Meeting.

Iowa Yearly Meeting (conservative) was held at West Branch, Iowa, from the 16th to the 21st of Tenth Month, 1901. The company in attendance was much larger than last year, the increase being mostly from the membership of Hickory Grove Quarterly Meeting, though several Friends from other Yearly Meetings were present. . . .

There was, however, no minister with certificate for service in our midst. Thomas Watson, from West Grove, Penna., liberated for religious service in the neighborhood, very acceptably attended most of the sessions.

Hitherto this Yearly Meeting has been re-

markably favored with the company and labor of devout and gifted servants of the Lord from the other Yearly Meetings with which we correspond, and from Philadelphia Yearly Meeting as well, for which privilege grateful acknowledgment is still offered to the Giver of all our sure mercies. And it is believed and freely expressed that on no previous occasion was the gathered assembly more conscious of the presence of Him whose promise to his Church is "Lo, I am with you always, even unto the end of the world."

On the occasions for Public Worship when the accommodation of the large house was fully taxed the periods of silence were to many baptizing seasons, while the ministry offered, which was considerable, was of the same nature. The testimonies borne had particular reference to the spiritual and practical characteristics which have distinguished the Society of Friends through its whole history. In this way teaching formed no mean part of the service, many persons in the audience having but little previous knowledge of the fundamental truths the body so earnestly contends for and vital to all true religion. This branch of the service seems to be called for quite as much as when early Friends proclaimed the necessity of spiritual independence from all the form and ritualism then holding the masses in ignorance and which it is evident still cling to the systems dominated by clerical authority and teaching.

While considering the state of society it was manifest that our high calling in the Gospel of Christ was endeavored after in much weakness and many shortcomings, while doubtless on the part of some there is living concern to be faithful. And the keynote of the admonition and counsel extended, was, that all might yield obedience to Divine requiring. Walking in the footsteps of Him who in the emphasis and pathos of eternal love declared, "Except a man deny himself and take up his cross daily and follow me he cannot be my disciple."

It was again and again impressed upon the gathered assembly that this self-denial struck at the root of the wide-spread worldliness so manifest in our times, corrupting all branches of general society, and seemingly the great temptation presented to the followers of Christ. That the young should receive their school education in surroundings fraught with influence setting forth the meekness and gentleness of Christ, our boarding schools and other schools are encouraged with results worthy of the effort. But we were forcibly reminded while looking at this branch of the church's service, that the home-training, the education of the family circle, when truly pious is of necessity the foundation effort, and valuable above all others in affording godly impress on the lives of the young, and for which

no equal substitute can be found. And here more than anywhere else, lies the prospect for continuance of our beloved Society. How important is the injunction applicable to parents, "Train up a child in the way he should go, and when he is old he will not depart from it."

The reading of the Epistles from the corresponding Yearly Meeting was eminently a season of heart tendering from the deep sense of unity of experience in the Truth and living concern for its maintenance in the simplicity and devotion of former days. It was clear that no mere formality occasioned their preparation, with the feeling that this branch of Christian fellowship is increasingly useful and far far beyond outward acknowledgment of union.

The proposal introduced last year for holding the Yearly Meeting altogether at West Branch instead of alternating between that place and Earlham, was again considered and resulted in the conclusion that the time had not come for making the change.

Clarkson T. Penrose and Milton Mills were again appointed clerk and assistant clerk.

A. C.

WEST BRANCH, IOWA., Tenth Month 28, 1901.

Signs of the Times.

There are two great masterly causes for the present defection in the spiritual life of the Church and the decrease of conversions:

1. The destructive criticism which impairs and undermines faith, "the mother grace," in clergy and laity.

2. Our splendid, intellectual, materialistic, and secular civilization bewitches the people with a craze of money-making, worldly pleasure, and monumental egotism. Christ is crucified between two thieves, business and pleasure. God shows us the remedy: believe God and come out from the world.

From these two roots crop out some seven offshoots, or manifestations:

1. The neglect of home religion and devotional meetings, to counteract the outside influence of worldliness and secular education.

2. The frenzy of pleasure in worldly amusements and the functions of hypocritical and hollow-hearted society. "Society" is now doing more to injure the spiritual life of our city churches than the saloons.

3. "The amusement heresy and, cooking stove apostasy" in the churches, opening a wide door for fellowship with the world in merchandising, feasting, and fun. The less piety a church has the more oysters, ice cream, and fun it takes to run it, and the faster it runs from God.

4. The general and unprecedented prevalence of novel reading among church members and Sunday-school children, and the rehashing of them even in the pulpit.

5. The multiplication of special days which simply create and nourish the love of novelties outside of the Gospel and which belong to a corrupted or a chromo Christianity.

6. The craze of organization in the church, added to outside lodges, which cumbers and confuses the church with the clatter of unblissed machinery promotes worldly formality and the clamorishness of classes rather than the catholicity of Christianity.

7. Last, but not least, the secular, sen-

sational, and cowardly preaching of the day, which changes the emphasis from eternity to time.

The near future will witness a separation. Christ will soon call his people out.—E. P. Marvin in *Gospel Message*.

How To Make Infidels.

A clergyman of London referring to the death of a noted unbeliever, and to the persecutions which perhaps drove him from honest doubt to infidelity and atheism, remarked:

"The origin of the skepticism of this half century has, I think, few better illustrations than is presented to us in the story of the youth of this skeptic. You all know that he was an earnest and successful Sunday-school teacher; that he wrought well at St. Peter's Church, Hackney; that he was a diligent student of the evidences of Christianity, and was a master of the significance of the thirty-nine articles. At the outset, like most of us, he accepted just as it came to him the faith. Christianity he took as being what it professes to be, and especially he took it as being what its recognized teachers professed it to be. But there came to him as there comes to most of us, a sifting time; a period of examination, when he wanted to know upon what grounds his faith rested, by what he could sustain his convictions in the light of human reason, and in the presence perchance, of those who were prepared to attack them. It is, I think, the most painful and perilous moment of a man's life, when he passes from the position of unhesitating acceptance of the faith to that of one who begins to sift it. Especially is it a period of peril to the young man who hates shuffles, who has an intense abhorrence of anything like cant, and shifts, and devices; and demands frank and fearless treatment of evidence. It is impossible for him to fall into the tricks of middle age, or to be contented with the subterfuges of men who simply want an easy time of it in reference to their Christianity. And, therefore, skill is never so much in demand—the affection, the gentleness, the kindness, and considerateness of the best nurse—all these are wanted when a man has to treat with the soul and its difficulties.

"No moment is so fraught with peril, or so fruitful in opportunity, as that which is offered to the religious teacher in helping a soul to go through this sifting time, and to find for itself a clear grip of the truth, as truth is in itself and in Christ Jesus. Well, it was the misfortune of this man to go to his clergyman—a clergyman richly dowered with bigotry, but unfortunately, very much wanting in good sense; who was, I imagine, in the habit of regarding every moving brain as an indication of a very black heart, and so far as the biographers tell us anything of the matter, he was so treated by this clergyman that the issue was that he went out into the desert a wanderer, penniless, without a home, and without a situation, solely because he had ventured to question the Thirty-nine Articles, and to investigate for himself the principles of the Christian faith. This was pushing off this young man from the very fringes of Christianity into the deserts of skepticism. It was here that his skepticism had its origin. It was at this point, whatever may have been his convictions since that time, and through this

action, that he became an atheist. Is there no instruction for us in this fact? See we light upon our own path from this unquestionable error? Does not half? nay, does not more than half of the skepticism of our day sprout out of the mistaken way in which we deal with doubt and doubters? We stand by and say 'Fling your doubts to the winds, and just believe. Wherefore enquire? Trust. Take as you find it. The Bible is true from first word to the last. Swallow it whole and enter into the blessedness straight away. So has been the habit of men. Consequently upon this treatment, we have had a great brood of skeptics and atheists, who if it had been fortunate enough to receive kindly any Christian treatment—if they had been treated in the way Christ treated Thomas, it would instead of being assailers of Christianity, have come forward as its champions and defenders."

Pulling Teeth with the Fingers.

In spite of China's dislike for innovations, finds it impossible to escape them. At time, says the N. Y. *Evening Post*, the dentist formed an important guild in China, but the past thirty years hundreds of bright young Mongolians have picked up more or less knowledge of the profession from American missionaries abroad, and are now doing business according to modern scientific methods. San Francisco the new school has almost driven the old one to the wall. Nevertheless, the four of the latter pursues the calling in the same manner as their ancestors did for thousands years. At least, one of them visits New York every year, and stays two or three months, until all his customers have had their teeth put "in order."

His work is curiously primitive. For extracting, he relies upon his fingers, and with these he does marvels. With thumb and finger he will pull a bicuspid or a molar which an American operator employs a powerful pair of forceps. The dexterity is the result of years of practice. From boyhood manhood he is trained to pull pegs driven into a wooden board. Three and four times a half-hour at a time, he drives pegs into the holes of his practice board and then pulls them out again. He lifts in similar fashion the weights to which are attached heavy weights. A special training changes the aspect of a hand.

The spare flesh vanishes, and the blood vessels and tendons seem to double in size. The forearm grows in girth and becomes as hard as wood. The apprenticeship period is two years. At the end the student has a finger grip which is a wonder. Its strength is equivalent to a lifting power of three or even four hundred pounds.

ESTEEMING others better than ourselves, let us magnify their virtues and minimize their failings. But, should we see a fault in a sister, and feel drawn to reclaim her, our labor therefore, be invariably in meekness and gentleness of Christ. So let Christ go with us and we ourselves be served from a captious, fault-finding disposition, itself comparable "To the beam in our own eye."—Canada Y. M. W. *Epistle*.

MEMORY OF GEORGE DILWYN.

BY CHARLES WEST THOMPSON.

fully ripe, like the ear for the reaper
He met the pale messenger's ward;
Oh! Sweet is the sleep of the sleeper,
That rests in the name of the Lord.

He slumbers at length with his fathers,
Secure from the tempests of time;
Or the storm that on earth often gathers
Is unknown in the heavenly clime.

They have placed the cold earth on his ashes,
They have given him up to the tomb,
At the light of his virtues still flashes,
The pathway of Truth to illumine.

He is dead, but his memory still liveth;
He is gone; his example is here,
And the lustre and fragrance it giveth
Shall linger for many a year.

FOR "THE FRIEND."

Reminiscences of a Good Man—Ebenezer Worth.*

I, late Eli K. Price, one of Philadelphia's eminent conscientious, and successful lawyers, refer to the writer about the time of the death of Ebenezer Worth, thus depicts his character: "I was made acquainted with his character from his labors in behalf of the Indians and from living within the atmosphere of his life for several summers. He appeared to me like Abraham, as a prince among men, humbly walked with God. He seemed to me one who claimed no deference, yet was so receive the blessing pronounced upon the poor in spirit, the meek, the thirster for righteousness, the merciful, the pure in heart, and the peace-maker. Eli K. Price resided at a farm house a few miles distant from the residence of E. W.

It has been said "The hour of death is an hour," and so it is, or at least should be. In the case of this dear Friend it was truly so. The day previous to his departure was the writer's privilege to sit by his side for some time. On entering the chamber and approaching him, he expressed his affection with my coming and then subsided in silence which was too impressive to be broken by ordinary conversation.

At last thus sitting in silence and gazing at his redeemed countenance the thought distinctly through my mind, "why had I not before observed that Ebenezer Worth was such a handsome man?"—little thinking that his features were already setting their own features, which undoubtedly they were for he quietly passed away soon after. I was already realizing the truth of the words of declaration "that eye has not seen, nor heard nor have entered into the heart the things that God has prepared for them that love Him."

For some time spent under this precious gaze he said, "William, I now believe my life have been my greatest blessings," and more. Such a holy stillness and calmness seemed to pervade the chamber as to the formality of bidding him fare-
well a silent withdrawal seemed most appropriate.

The chamber where the good man meets

present portion of these "Reminiscences" having at the right place last week in the manuscript on page 125, first column, and following the graph.

his fate is privileged beyond the common walk of life," and such it was felt to be on this occasion.

A little time before his departure he said to his brother, John, "When the breath leaves the body I wish the limbs to be straightened out, the mouth closed and thus everything in and about the house and farm kept as near silent as possible for one hour!" This request, I believe, was complied with.

Not long after his decease the following appeared in THE FRIEND, which it is thought might appropriately conclude these "Reminiscences of a Good Man."

FOR "THE FRIEND."

Some Reminiscences of a Few Departed Worth Members of Philadelphia Yearly Meeting.

Joseph Scattergood, Sr., John Carter, and Ebenezer Worth all died in the Sixth Month, 1877—all worthily in the stations of elders. The two former conducted successfully for nearly forty years a considerable business in the manufacture of chemicals, etc. When J. S., who was very ill at the time, was informed of the death of his old partner he briefly remarked "he was a just man."

With Ebenezer Worth he was for a number of years closely associated in the care of the Indians at Tunesassa as well as in the enjoyment of an intimate social friendship which, continued unbroken till the end of life.

Joseph Scattergood, Sr., was in many respects a remarkable man. The following reference to him is made by John S. Stokes in his diary under date of Sixth Month 13th, 1877.

"Attended the funeral of our beloved friend Jos. Scattergood. It was a solemn favored season; several testimonies were borne to his consistent and useful life in his day and generation. He was in the station of an elder and beloved for his integrity and uprightness in the ever blessed Truth as it is in Jesus."

He was a grandson of Thomas Scattergood, the minister who went to England on a religious visit in 1794, and died in 1814. He was one of that band of firm defenders of the Truth whose faithfulness and firmness withstood the efforts that were made to open the way for the spread in Philadelphia Yearly Meeting of doctrines, the tendency of which was to lower the standard which had been raised by our forefathers in the Truth.

He succeeded Joel Evans as clerk of Philadelphia Yearly Meeting in 1865, and was re-appointed to that service year after year, until 1877, when his health had so far failed that he was unable to be present. He filled several important positions in the Church, and was generally esteemed even by those who differed from him in sentiment.

He died at his son William's, in West Chester, and was buried in Friends' burying ground at that place. Our beloved Friend, John Carter of the same Monthly Meeting, was buried just one week before. That Joseph Scattergood was persistent and unflinching in the performance of what he believed to be his duty the following incident will show. He related it to the writer soon after its occurrence and it is now transcribed after several years as nearly as can be recalled by memory.

A bill had been passed by both Houses during the last days of the session of Congress in 1873, which if carried into effect, would probably have resulted in the loss to the Seneca

Indians of fully one-half of their Allegheny Reservation in the State of New York.

A letter from him to his friend Ebenezer Worth may be a suitable introduction to the narrative.

THIRD MONTH 4th, (Third day) 1873.

Dear Friend E. Worth.—I have just returned from Washington whither I went last night at 11 o'clock with T. Wistar, appointed by the Special Meeting of the Indian Committee held yesterday morning. We took with us a short statement of our objections to the bill which had passed both houses, and which the President had referred to the Secretary of the Interior for his opinion. I shall have to leave until I see thee, a particular account of both the bill and statement as well as of our visit. I may say in short that we were treated with marked respect, being ushered into the President's room at the Capitol in the presence of all the heads of the departments, also towards the latter part of the interview of the President himself. The secretary listened attentively to our statement also to some additional matter and told us frankly he could not recommend the President to sign the bill. He wanted us to see * Sessions who it seems has urged him to recommend the President to sign it. He accordingly sent for him. We read to him our objections to it, and commented on other parts very freely. He told us he had tried that day to get one section repealed as he did not like it, but failed. We told him we could not consent to it becoming a law which he wished us to do, promising that next winter the objectionable portions should be repealed. Harrison Halfton and Andrew John † came up with us this afternoon and seemed grateful for the attention we had given to the business and well they might, for the design seemed to me to be on the part of the managers of the bill to pass it without giving notice to any one interested and then quietly send it to the President for his signature. We had the opportunity of impressing on Harrison and Andrew the absolute necessity of their agreeing to divide their land if they do not want it taken away from them. They seemed to be at last convinced that it will be dangerous much longer to delay it.

I have written in great haste supposing from what I wrote on First day thou would like to know the result of our visit. We have cause to be thankful to the Giver of all good inasmuch as He opened the way so fully for us.

Hoping thou wilt soon be able to come to the city. I am thy affectionate friend,

JOSEPH SCATTERGOOD.

J. S. mentioned to the writer that on their arrival in Washington they sought lodgings and in the morning on calling at the residence of the Secretary of the Interior, Columbus Delano, who had the oversight of the Indian Department were informed that he had gone to the Capitol to meet the President and his cabinet.

It was on the morning of the day on which President Grant was for the second time to be inaugurated President of the United States. He had repaired to the Capitol to meet his cabinet and sign such bills as they approved.

*Walter L. Sessions was the member of the House of Representatives from the district in New York State in which the Allegheny Reservation is situated.

†Harrison Halfton and Andrew John two prominent Indians who had come on to Washington to endeavor to defeat the bill.

On arriving at the Capitol the Friends were directed to an upper room where the President and his Cabinet were in session. They applied for admission and were accosted by the door-keeper by the inquiry "are you Mr. Scattergood from Philadelphia." On being replied to in the affirmative the door-keeper said, "I had orders from Mr. Delano to admit you."

On entering the room they found the President and his Cabinet engaged as expected.

Thomas Wistar became apprehensive they were intruding on the privacy of the President and his Cabinet, thought he could not remain and withdrew.

Joseph Scattergood said he had come there to protect the rights of the Indians and felt it proper to remain.

He did so, and on Secretary Delano coming to him to learn definitely Friends' objections to the bill as passed by Congress they were given to him (we may readily believe) as clearly and concisely as the circumstances would admit of. When communicated to President Grant by his Secretary they were sufficient to cause him to withhold his signature.

The bill failed to become a law and the poor Indians were protected in their rights which they continue to enjoy to the present day.

That Joseph Scattergood returned home with the reward of peace in his heart for the faithful performance of apprehended duty we may readily believe.

The timely aid which Friends had thus been able to render to the Seneca Indians was appreciated by them. A resolution of their Council passed soon afterwards expressed their "heartfelt thanks" to the Committee of Friends for their opportune assistance in the matter.

The Humming Bird.

In *St. Nicholas* for Tenth Month, Henry Hales writes of the ruby-throated humming-bird.

The humming-bird builds on the upper side of a branch, a branch generally about the size of the nest. The nest is beautifully felt with fine white vegetable down and studded on the outside with fine lichens and minute specks of bark like the branch itself.

They do not seem to retire to secluded places to build; they are as eccentric in their choice of a nesting-place as in their nature and habits. Some suppose their nests are near the gardens or vines they visit; but that is not often the case. A few magic vibrations of the wings, and they are far away in a few seconds.

The last nest I found was on the outer end of a branch of silver poplar that hung over a public road; every carriage-top that passed under it was within a few feet of the nest—the last place in the world where I should have expected to find such a nest. I should not have seen it except that I was accidentally looking up into the tree, and I saw, protruding over the side of the nest, the long fine bill that happened just then to stir. The nest might have been passed hundreds of times and been taken for a small knot unless thus betrayed.

These birds lay but two eggs—tiny white morsels. The young birds when first hatched are curious little things, and feed by inserting their bills in the mouths and throats of their parents. As the food of the parents is composed of nectar and fine insects, it is easily made ready for the little ones.

A Room of Marvels at the Smithsonian Institution.

"Wonder is the beginning of science," says Secretary Langley, of the Smithsonian Institution, at the National Capital. So he has arranged a children's room, where many exhibits are made, intended to please and instruct the youth who may have the good fortune to go to Washington with their parents or friends.

In trying to interest the children Secretary Langley has assembled as many striking natural curiosities as possible. The stuffed birds are rare curiosities in feathers, gathered from all parts of the world; the insects are either giants in size, brilliant in their color or extraordinary in other ways; and the whole of a large case is devoted to marine shells of strange and beautiful sorts, such as children love.

Another case bears the legend, "How Creatures Hide," and illustrates some of the methods by which birds and other wild animals conceal themselves instinctively from their enemies.

The young and the eggs of the nighthawk are shown on the ground, among a lot of chips and dirt, but resembling their surroundings so closely in color as to be hardly distinguishable by the unaided eye. In the same way the wood pewee sitting over its nest upon a branch is quite concealed, the nest itself closely counterfeiting a knot of the tree. The nest of the calliope humming-bird imitates similarly a pine cone, and is all but invisible.

The young and eggs of the tern look so much like pebbles and sand on which they are laid that they are only detected on close scrutiny. But the gnat-catcher may be said to exhibit more ingenuity in this line than any other bird, inasmuch as it disguises its nest by covering it all over with lichens. Concealed in this painstaking way, the nest, resting upon a lichen-covered tree branch, is liable to escape the eyes even of the most expert collector.

That insects defend themselves against their enemies by similar "protective mimicry" is sufficiently well known. Another glass case in the Children's Room shows a number of such imitators, the most striking of which are the "walking leaves" of Java, which are relatives of the katydids.

The "walking leaves" are wonderfully like green leaves, but are not more remarkable than a kind of tropical butterfly, which counterfeits a leaf when its wings are closed. The very manner of flight of some of the leaf-mimics resembles that of a falling leaf, so as to lend additional deception. But most interesting of all frauds in this line, perhaps, are the "walking-sticks," resembling exactly the twigs of the trees they dwell upon, even the knots and the appearance of the bark being copied.

The largest diamond ever found is shown, and the biggest gold nugget. Of course, the former is merely a reproduction in cut glass, while the latter is a plaster cast gilded.

The diamond is the famous "Great Mogul," which was picked up in the year 1650, at the mines belonging to the Nizam of Hyderabad, known as the Golconda diggings. It weighed about 787 carats, and was somewhat the shape of half an egg. After cutting it weighed 280 carats. The stone passed into the possession of Shah Jehan, then Mogul Emperor of Hindoo-

stan, and is supposed to have been stolen at the sack of Delhi by the Persians, who bore it up into two or more stones to conceal its identity. The Koh-i-noor, now the property of the British crown, is probably one of the fragments.

The nugget exhibited is the "Welcome" found at Ballarat, in Australia. It weighed 2218 ounces, and the original was worth somewhat over \$41,000.

In the mineral case are samples of "mineral wool," "mineral coal" and "mineral clay"—all of them made out of asbestos, which is a kind of fibrous rock related to hornblende. Then there is a big lump of "natural glass," a volcanic product. The Indians, in part of the country where it could be obtained, use it to make knives and other implements out of this glass.

Equally curious in its way is flexible sandstone, which, though it is of solid rock, will bend like a pine board. Finally, there is fall wood from the petrified forest of Arizona—a piece of a tree literally transformed into stone—and a large piece of iron fallen from the sky.

Speaking of asbestos, it is worth mentioning that towels are being made of it now-a-days. They are very economical, for when they get dirty it is only necessary to throw them into the fire, and, on being withdrawn from the flames a few minutes later, they are as new and quite clean. The material is also used for paper stock, for fireproof paint, for stage scenery, and for gloves for handling hot iron.

Among other oddities are various queer sorts of sponges. One of them, from the West Indies, takes the shape of a huge vase, and is called "Neptune's Cup." Another is a beautiful thing from the Philippines, known as the "Flower Basket." From Japan come some very exquisite and rare sponges, one species being so lovely and intricate of design—it is a "sea sponge"—that specimens of it, occasionally seen in Europe, were until recently supposed to be works of art.

A specimen of interest to grown people as well as children is a stuffed "barnacle goose"—a bird that was formerly supposed to grow on trees. The myth regarding it is one of the oddest on record, and has been exploded very recently. Many people in Europe used to eat in Lent the flesh of the barnacle goose on the plea that the animal was not made of a proper sense but fish, being born of the sea. The notion was that certain trees growing to the sea produced fruit in shape like a goose, each containing the embryo of a goose, which when the fruit was ripe fell into the sea and flew away.

How the story started nobody knows together with the goose, some of the fables from which it was supposed to be derived are exhibited.

No less curious is the ancient belief regarding the Scythian Lamb, on which the travelers' tales have been based. Though believed to be an animal it was considered in part of the nature of a plant, sprung from the seed, and was said to feed on the surrounding herbage, turning on its roots as it had eaten every thing within reach, and it perished of starvation.

In reality the so-called "lamb" is the

of a plant. It is covered with soft brown feathers, and counterfeits an animal remarkable for form and general appearance. It is a rare curiosity, and it was only by a lucky accident that the Smithsonian Institution secured one. One of the most attractive exhibits in the children's Room is the so-called "play-room," a pair of hower birds. The little creatures collect all sorts of bright objects, such as butterfly shells, evidently having an eye for decoration. There is a group of the largest smallest birds of prey, from the eagle to the little sparrow hawk, and from the great owl to the tiny elf owl. Among the curious birds are the huge-billed toucan of South America; the bell-bird of tropical America, which does not sing, but utters notes like a bell; the antentry of New Zealand, which has no wings at all; the birds of paradise of New Guinea; the Carolina paroquets, which hang like bats head downward when they go to sleep; and various species of humming-birds, brilliant with metallic hues. The eggs of the hen, the ostrich and the extinct Moa of New Zealand, are placed on the side for the sake of contrast, the egg of the last named fowl being as large as six chicken eggs.

A bird's nest built in a human skull is a rather grim curiosity. There is also a chimney-sweep's nest inside of a chimney, a section of which has been preserved with nest and all; and another interesting nest is that of an elder duck, composed of feathers plucked in the breast of the parent.

Amongst the birds appears the great albatross, to which so much romantic interest attaches. And in the collection of eggs is that of the extinct Great Auk, which is worth more than money. The last three eggs of the Great Auk offered for sale brought respectively \$225, \$1,500, \$1,678.—*Presbyterianian*.

ABOUT THE REVISED BIBLE.—The authorized version of the Bible was "set forth" in the year 1611. The work of the revisers began in 1870. The revised New Testament was published in May, 1881; the Revised Old Testament in May, 1885. The British revisers began work in June, 1870; but the American committee did not get to work till October, 1872. The British New Testament revisers held 407 meetings, while the Old Testament committee held 792 sessions of six hours each. The whole number of revisers was 101; the British company numbered 67; of whom 37 labored on the Old and 30 on the New Testament, and the American company 34, 19 on the Old and 15 on the New Testament.

The revised Bible contains 792,444 words (N. T. 612,530—N. T. 179,914) of which 2,672 words are retained from the version of 1611. The revisers excluded 65,508 words, and introduced 70,772. The number of chapters is 1,189 (O. T. 929—N. T. 260), and of verses 31,058. The Old Testament contains 77 and 3-10 per cent. of the Revised Bible, and the New Testament 22 and 7-10 per cent. The five books of the Old Testament containing the most words are: Psalms, 43,823; Isaiah, 42,960; Ezekiel, 39,603; Genesis, 38,707; and Isaiah, 37,083. The five books of the New Testament having the most words are: Luke, 25,654; Acts, 24,211; Matthew, 23,707; John, 19,007; and Mark, 14,854.

The Upholding Power in Nature.

"And the Spirit of God moved on the face of the waters."—(Gen. 1. 2.)

The doctrine of the all-pervading action of the Spirit of God, and the living Power underlying all the energies of Nature, occupies a wider space in the pages of Divine revelation than it holds in popular Christian theology, or in the hymns, the teaching, and the daily thoughts of modern Christendom. In these the doctrine of the Spirit of God is, if we judge by the Scripture, too much restricted to his work in redemption and salvation, to his wonder-working and inspiring energy in the early church, and to his secret regenerating and sanctifying energy in the renewal of souls for life everlasting. And in this work of redemption he is spoken of by the special appellation of the Holy Ghost, even by the revisers of the early version; although there seems to be not the slightest reason for the retention of that equivocal old English word, full of unfortunate associations, than there would be in so translating the same word as it occurs in our Lord's discourse at the well of Jacob—"God is a Spirit, and those who worship Him must worship Him in spirit and in truth"—where the insertion of this ancient Saxon word for spirit would create a painful shock by its irreverence. All these redeeming and sanctifying operations of the Spirit of God in the soul of man have been treated with great fullness in our own language, in scores of valuable writings. In few of these works, however, appears any representation of the Scripture doctrine of the Spirit of God, as working in nature as the direct agent of the eternal will in the creation and everlasting government of the physical and intellectual universe. And it is this rather frequent omission to which with unequal powers, I am venturing to draw earnest attention.

Our subject is the Biblical doctrine of the perpetual working of the Spirit of God in physical nature, in the inorganic and organic worlds around us, a truth much lost sight of even by Christian philosophers to the serious damage of science itself, of art, and of the Christian enjoyment of the creation; a truth unhappily wholly forgotten or denied by a vast number of physical science men in Europe, who are thereby tossed about in "sunless gulfs of doubt," or tempted to lose themselves in the quagmires of atheism.

The very first verses of the Pentateuch set forth the truth which I desire to bring into prominence, that "the Spirit of God moved upon the face of the waters," and was the immediate agent when Omnipotence set its hand to the last of its many direct acts of specific creation on this ancient globe. The sacred writings from first to last proceed upon the belief that the material universe—so full of blind contending forces, yet so full of the signs of an arithmetical and measuring intelligence in every department, so full of order, of beauty, of utility—cannot be fully explained by self-originating or self-developing powers, or by any agency which is short of one which is spiritual, eternal and divine. The whole series of these sacred records proceeds upon the supposition that nature is endowed undoubtedly with certain limited automatic energies—this is the very word used by Mark (iv: 28) in reporting Christ's parable of the Seed and the Sickle—

"The earth bringeth forth fruit, *automatee* of herself," but the ultimate controlling power is from one end to the other of the sacred Scriptures, asserted to be divine, eternal, and omnipresent. "By his Spirit he hath garnished the heavens; his hand hath formed the crooked serpent"—probably the vast arch of the galaxy. It is God who is declared to govern the evolution of all living things on earth. Matter, in all its interwoven and ethereal forms, is treated of but as the vesture of an eternal will: "Thou coverest Thyself with light as with a garment" in all its organic forms is regarded as but the veil of a mind unseen; and the loftiest created spirits are represented as crying Holy, Holy, Holy, is the Lord of Hosts; the whole earth is full of his glory."

And it is alleged, further, that the "animal man comprehendeth not the things of the Spirit of God," either in nature or in Providence, while "the spiritual man discerneth all things," so that he alone rightly understands the visible, who through the quickening of his own spirit, traces its roots and springs to the all-pervading intelligent agency of Him, who "worketh all in all." "In Him we live, and move and exist," said St. Paul to the Athenian Areopagus; just as earlier the Psalmist of the Captivity has sung, "If I ascend up into heaven thou art there! If I make my bed in sheol, (in the deep dark underworld of shadows) behold thou art there!" No man of mere physical science can understand the deepest realities of nature born from an eternal cause.

Now, throughout the sacred Scriptures the renewal of life in its generations is attributed to this Divine energy informing the forces of nature. "Thou sendest forth thy Spirit, they are created, and thou renewest the face of the earth." So that all that the sweetest poetry or loftiest science has expressed of delight in the material system ought to be translated into the language of adoration for Him "in whom the creation lives and moves." It is thus, also, the Son of God himself, who had a poet's eye, speaks of the world of flowers as "clothed" with more than the glory of Solomon by the Divine Artist. The soft blue sky, the infinite azure, is his; the golden sunrise and the daily miracle of beauty in the sunset of the western sky, are the works of the same Eternal Painter. The dear birds, whom we love the more we know them, all belong to Him, and "not one of them is forgotten" before Him who frames their miraculous powers of flight provides their food, governs their mysterious migrations, and inspires their song.

It is this Eternal Spirit who is beneath all that world of wonders which modern astronomy, geology, physiology, botany, animal mechanics, chemistry and art unfold to us in our own day, until we now at last stand almost breathless with admiration, the more we know, in the midst of such a universe of fearful wonders and of splendor and intellectual delight. One Eternal Spirit pervades the whole creation—the "wheels are full of eyes"; the living creatures are full of eyes also, and those eyes represent the eyes of the all-seeing, all-upholding all-directing intellect and will of God. The whole earth is full of his glory.—*Edward White, Merchant's Lecture.*

"THERE can be no Christian meeting without Christ in the midst."

Colors Characteristic of Each Season.

When the leaves were but half expanded on the old apple trees in the lane, I remember the scarlet tanager that flitted among the branches, then also laden with pale pink blossoms. The combination of color was superb. The effect was a tropical one—the climax of luxury in leaf, flower and plumage. I recall, too, the scarlet lobelia on the creek bank, a torch with ruddy date, that stood out so boldly against the dark-green background. It could always be seen afar off. Later, the rank Virginia creepers entwining the dead trunks of trees glooped as fire, seen at night when the sky was black.

There is never lack of rich red color, do we know where to look for it. We can often scrape the snow from the mossy turf on the hillside, and find the red berries of more than one creeping vine and the holly holds its fruit until long after the holidays. Red represents the intensity of nature's effort, as it does of our emotions. Nature gets red in the face upon occasion. Savage human nature is fascinated by it, and when they could get it, our Indians painted their faces with vermillion, drawn in glades about here. All bright colors found as a magnet attracts iron. An early autumn leaf will be quickly detected. The wide distribution of brilliant tints repays us largely for the loss of the cool shades of summer's greenery, that we, all reluctantly, saw depart. Still, if the sky was one broad rainbow, we should soon tire of it. Bright colors must be occasional or their charm is lost. The eye delights only in the shortlived sunset.

To be thoroughly appreciated, a display of color by nature should be expected by us. We should not be thinking of it. Surprise, like variety, is a spice of life. In Eleventh Month nature generally is in a brown study, and the rambler is apt to be. It is an excellent month for serious thought; a time to get at the real meaning of the sights and sounds of the spring and summer that has so recently passed by; but we must have some relaxation, and none can be more delightful than that of such an afternoon as this, when the setting sun shoots his level rays through the leaves of a scarlet oak.

This oak is the only one of its kind nearby, and stands alone in the middle of a field. Its branches are the trusty place of many a spring bird that tarries in the fields during summer. It is the outlook of many a meadow lark in autumn and the commanding point of view of many a hawk and crow in winter. It is as prominent a feature of the landscape as a tent upon the plain and better than all else, it is an old familiar oak known long to all my neighbors and myself. The leaves hold on well through the winter, no longer green, but now a warm, ruddy brown that relieves the monotony of the widespread ruin wrought by frost.

As the sun was setting, the light penetrated every leaf and brought out its real hue. The sap had not drained away. It was still there richly red—good blood that gave the tree a charmed life. For the time a new season had dawned upon it.

Approaching closely, the leaves were seen to tremble. A light breeze stirred them gently, and their crisp, rattling was not that of dry bones shaken, but responsive flesh rejoicing in its restoration to life. If nature's or our own, had been a brown study until now it was

so no longer. Thought awakened to that larger activity that "May-day" blossoms and the summer's song birds demand of us.

Perhaps it was coincidence, but why court prose when poetry stands by? The birds of the surrounding field were inspired by the glowing oak. They sought its leafy branches and sang their praises. They wandered through its colored labyrinths and rejoiced. The vesper sparrow recalled its summer song; the lark proclaimed that summer returned.

However bright a winter sunset it does not give us the impression of warmth. Its beauty is too distant to rouse us beyond realizing the color effect produced. The imagination will not travel to the earth's edge without a stronger lure. Not so a tree, and an oak at that, which reflects a sunset. I feel the warmth of the birds, surely, as well as see it. The birds, too, are, in the same way, influenced. No brilliant cloud ever tempts a bird to take a long westward flight, but here in the oak they are gathered in force. They well know the delight of basking in the crimsoned sunshine, even if it be the waning light of an autumnal day. This day has been gloomy, but all traces of the desolate outlook usually ascribed to late autumn had vanished.

It is not so long ago we heard, with sorrow, that the bluebirds were passing away; that they soon would be treasured like other friends that death has claimed and many an outing saddened by recalling them. It was a false alarm. As I stood by the old oak there came drifting down from some unseen current of the air a long line of bluebirds. They, too, while passing by were caught by the spirit of the place and joined in the throng all ready gathered. Bluebirds, vesper sparrows and the larks, and all celebrating a trifling incident of an autumn day.

I say "trifling," but is any incident trifling that gives unbounded pleasure and is long remembered? I know that I am living in a worn-out world, thanks to generations of greedy folk, with all too few ideas above three meals a day and a chance to outreach their neighbors. They built up fine estates in their time, it is true, but they also robbed the future of many a charm equitably its due. Many the broad acres now that are so tame; man, in consequence, has sunk below the level that nature had in mind. Few whom we meet who are not as commonplace as a ploughed field; but there is a remnant of saving grace surviving, for we hear of serious efforts at reforesting of worn-out lands instead of continuous stimulation until the point of absolute exhaustion has been reached. It surely were no drawback to the general welfare if a scarlet oak stood in every field. It would not stand alone much of the time. There would be birds for almost every branch, and trees and birds together are admirably fitted to call us away from the tinsel of the town to the staidness and real worth of nature. We do not often value a warbling bluebird as we should. It carries a message that it is wise to heed. It reminds us that the blue sky is still overhead and unmarred by man. We can look upward when we cannot outward and see nothing to disturb the pleasing current of our thoughts. — Charles C. Abbott, *M. D. in the Ledger*.

"THE only way to feed the sheep is to follow the Shepherd."

Two Jubilees.

A Frenchwoman named Bottard, who born in the year that gave birth to Queen Victoria, has lately, says a recent paper, received the cross of the Legion of Honor for sixteen years continuous service at the Salpêtrière in the ward for women who have incurred nervous diseases.

In 1840 she entered the ward at a salary about two dollars and a half a month and was twenty-five years before she was promoted.

In the sixty-two years she has worked the hospital she has been outside only twice and on both these occasions she lost her in Paris.

Her executive ability and her wonderful power over patients, soon transformed her ward from one of the most troublesome in hospital to a place of peace and quiet. It was said of her that she slept with one open, and in every emergency she was first on the spot.

Humanity did not prompt her to seek vice in the Salpêtrière. Her object was to escape the tyranny of an oppressive mistress, but, once in the hospital, her kindest wishes were excited, and she remained to exercise that pity and comforting care we brought peace to so many patients.

Her jubilee may be compared favorably with that of the monarch whose sixty-year rule an empire celebrated.

Victoria, with all her honors, and all consciousness of the affection of her people could not have been happier or prouder than the humble ministering angel of the infirmary when the President of France pinned the ribbon on her breast.

Being now more than eighty years she retires from active service, and will a little room of her own in the hospital—the only home she knows,—with a small adequate pension.

She does not contemplate her retirement with pleasure, and somewhat naively expressed the fear that enforced idleness "will be death of her."

A glorious career—sixty-two years of ministering to suffering humanity. And when record of good achievements is made up, will say that the crudest monarch has a higher place than the lowly nurse of the infirmary?—*Youth's Companion*.

WASTE OF HAPPINESS.—There is not waste more than happiness. Even those who are thrifty and prudent in other directions are prodigal here. They stint and to save a halfpenny, but they are often indifferent about the loss of days of happiness. Do not enjoy our friends with due appreciation until they die, or we lose them in some way. The early spring and summer days without our realizing their beauty. We through a holiday trip and miss half the scenery, because we are in a hurry, or cross anxious about worthless trifles. Nearly old, or even middle-aged man, who looks honestly on his life, will admit that how wretched he may be now, opportunities of peace were given to him. A Frenchman recorded what most of us know from experience to be true when he said that many people could be made happy with the happy

lost in the world. We lose happiness as we often scorn calm, quiet pleasure, seek only those that excite; or, we make mistake of thinking that happiness lies in big, sensational events, instead of in trifling events of daily life; or, we seek in the future, rather than in the present, is like a man looking for his hat it is all the time upon his head.—*The Pall.*

the most extravagant and criminal of all is our shunning the communion of whom "we live, and move, and have being," and failing to acknowledge "In essence is fullness of joy; at thy right are pleasures forevermore."

KEEPING ONE'S TEMPER. "We speak of a having a great temper, as if it were a mess, and then point out one who keeps temper, as a wise man. Why keep that is undesirable?

his sense, keeping means controlling. is all the difference between a controlled and uncontrolled temper as there is in a horse that has been trained to bit idle, and one which is wild.

horses are not all born with the same of spirit. Some are easily broken in, others need the most careful training in to be manageable at all. The same is true with people. Some are naturally there quick and hasty, and still others and obstinate.

we need not be discouraged. Any temper be trained, and often the worst can be trained into the best. The spirited colt makes steepest horse. It is possible, if you begin enough, to change a balky animal into a faithful roadster.

ough temper under good control usually with a strong character. Such a person, full of life and energy. He can do impossible to the slower, milder man, depends on the "keeping." A temper led is one's slave, uncontrolled is one's

Which would you rather be, master

you keep is your own, to be used as a horse. A man keeps a cow that he may get milk; a servant to do his work; a that he may eat the vegetables.

are "keeping" your temper when you benefit yourself—when it brings you and happiness. It can make you high and gay, but when it disturbs other it is like an animal that escapes from the pen, and destroys your neighbor's

your face grows red, and your lips and you say words you would gladly take back after they are spoken, then it is your temper is keeping you, and making you its pleases.

you answer a cross, hateful remark receive a blow without striking back, when it is far easier to frown, then when you are keeping your temper, making you an obedient, helpful servant.

hibition of trained animals is interesting. It shows what wonderful power over brutes. An exhibition of a trained lion is more wonderful, as it shows what a man has over his lower self—*The Philanthropist.*

Self-Discipline.

FOR "THE FRIEND."

The method of maintaining discipline in the State prison at Folsom, California, is declared to be very successful.

There are no dungeons or dark cells and none of the old modes of punishment are recognized in this institution.

When a new prisoner is received he is informed that they have three different bills of fare in the prison and that it is optional with each man as to how well he lives. If he is industrious, orderly, well-behaved and in all things conforms strictly to the rules of the prison, he is served with excellent food, nicely cooked. He can have chops, steaks, eggs, tea, coffee, milk and white bread; if he is only fairly well-behaved, and does not do his allotted task properly, is inclined to growl and grumble at the regulations of the institution, he is given ordinary prison fare, mush and molasses, soup and corn bread; and if he is ugly and insubordinate, he is permitted to feast on unlimited quantities of cold water and a rather small allowance of bread.

There is said to be an intense rivalry among the convicts to enter the first class, and, once there, it is very seldom that one of them has to be sent back to a lower class.

Items Concerning the Society.

A correspondent writes: "I see that Whittier's line, 'and on the meeting-house stick up a spire,' has a fulfillment in England also, as shown by the cut in a recent *London Friend*. Alas!"

The holding of the afternoon meetings for worship in Westtown School at three o'clock in the summer half of the year and at four o'clock in the winter half has been attended with uncertainty and confusion at times on the part of intending visitors. The recent decision now in operation to begin meeting at half-past three on First-day afternoons throughout the school year is likely to obviate the difficulty. The same change to 3.30 has been made some time since for the afternoon meetings held at Orange street meeting-house, Philadelphia.

We are now definitely informed that a united Peace Conference representing all bearing the name of Friends in this country is arranged for, and to be held in Philadelphia, three sessions daily, on the 12th, 13th and 14th of Twelfth Month. For two of the days Witherspoon Hall has been engaged, and on one day the Conference is expected to meet in a Friends' meeting-house.

THE PASTORATE MOVEMENT.—In a recent Monthly Meeting in Philadelphia a member of a Western Yearly Meeting with certificate as minister testified that the operation of the pastorate system among his fellow-members had been disappointing, not having turned out to be as many of them had hoped it would. He regarded as commendable the care which we were exercising pursuant to our rule of discipline, namely, that of seeing that no members were admitted among us by certificate or otherwise who were approvers of paid or stated ministry.

As we are informed by an auditor that John Wilhelm Rowntree of England, in a special gathering of members at Haverford a few days after, reported the results of his examination of the pastorate system in the West as confirmatory of the above statement. It is remembered that J. Bevan Braithwaite, from the same county, while in the West during the early beginnings of the pastorate experiment, expressed his belief that the tendency of the system would be to "*Babylonism*." Besides a creeping on among the meetings of a worship by

proxy, many now have confessed to their habit of leaning on the pastor to do for them those offices of a mutual pastorage which Paul commends in the words, "all the members having the same care one for the other." The speaker could propose to our members here no better testimony against and antidote to the pastorate heresy, than to be exercised ourselves in a more earnest spiritual life.

In a similar company in Baltimore, as appears by the *Interchange*, he laid special stress upon the importance of maintaining the idea of worship and of a free ministry. He believed that the solution lay in no one method of work, but in individual faithfulness and self sacrifice. "The system of arranging to supply congregations with stated ministers, so far from being a solution of the difficulty, resulted in fresh difficulties, and tended to destroy the idea of worship, and change it into the thought that attendance upon meetings is for the purpose of being instructed or entertained." He quoted one known as Dr. Horton, an eminent Congregationalist minister of London, in which he had said how the idea of worship had been almost lost in the churches generally, and appealed to Friends to prove that their position as correct in practice as he admitted it to be in theory, for, said he, this is what the churches need for the development of a strong Christian character.

A few months since we received word from a correspondent residing in England to the effect that he had written at length for the *Philadelphia Friend* in response to Edward Grubb's statement given in his description of the Society in England, (partly quoted in our columns) that there was no hired ministry in the Society there. He thought the matter was left in that pamphlet "in a way not fair to outsiders." By this we are to infer that there are instances of a paid ministry under the name of Friends in England. But our correspondent's manuscript on that subject has not yet reached us.

Notes from Others.

THE ORIGIN OF THE SANDWICH.—How many persons who daily eat sandwiches are aware that it is to an ancestor of the Earl of Sandwich that that popular form of food owes its name? The story runs that the earl in question was very fond of playing cards, and in order to prevent having to stop to eat he used to have a slice of meat put between two slices of bread and eat such as he played. This got to be called a "sandwich."

The Japanese Christians, perplexed with fifteen or twenty different denominational missionary headquarters on the public square in a single city, got together and sent a message to America begging the good people here not to send them any more kinds of religion.

I have not forgotten that Dr. Upham used to say to us at Drew [Theological Seminary] that many of the people in the pews would be looking up at us from week to week with this unspoken question in your hearts, 'Man, have you seen God this week?'—*W. Mac Mullen.*

More than 20,000,000,000 of checks are used annually in the United States, and of this amount something like 18,000 are "raised," the loss falling on the drawer, for the drawer of the check is chargeable with the amount paid on it, provided his signature is genuine, no matter for what amount he has previously filled it in.

The English language is annually increased by the addition of about one hundred new words.

A celebrated actress who is about to come to America on what she declares to be her last tour is thus quoted in a German paper: "I want to be free from the slavery of the theatre, free from all

its associations. The majority of the actors and actresses whose acquaintance I have made are despicable. When I am once free from this life I shall never go back to it. I say this, I, whom the world has called the greatest actress of the century."

The need for such a talk as that of Justice Brewer's Yale College address is imperative. So much emphasis has been lately laid on the material progress of the country and on the importance of knowledge of the most advanced business methods that there has been danger of overlooking the need of spiritual and intellectual development. It is time that educated men were calling attention to the fact that "a man's life consisteth not in the abundance of the things that he possesseth." But it is necessary that some higher standard than that of mere material success should appeal to him.—*Brooklyn Eagle.*

Higher criticism, in its destructive form, has sent its results down among the masses, and is one of the causes of the loss of faith. While no permanent injury will come to the Bible from the most searching criticism, yet many half-informed persons will suffer loss from this source, as they have neither taste nor opportunity to investigate the facts involved. The destructive phase of this system of thought has already been answered to the satisfaction of scholars, but it will take time for these answers to reach and influence the minds which have been misled by skeptical views of the Bible.—*J. S. Mills.*

There is to be a revival this winter of the "lecturer habit," which was at its height fifty years ago. At least, so says the St. Paul *Dispatch*, naming Burton, Zeublin, Van Dyke, Burdette, Riss, Chapman, Elbert Hubbard and Adams among the list of lecturers. But the *Dispatch* thinks that the "habit" of attending lectures nowadays is due, not, as it was when Wendell Phillips, Garrison, Emerson, Lowell and Holmes lectured, to a desire to learn, but largely to gain the inspiration to learn for oneself. "Therein lies the difference between the lecturer of fifty years ago and the one of to-day. The former brought his audience cold facts. The latter brings them warm inspiration. It is a difference of temperament. To-day a lecturer must have as much temperament as an actor. What he says is almost a minor matter. The lecture is not the thing, but the lecturer."

SUMMARY OF EVENTS.

UNITED STATES.—The rural free delivery of mails has proved so satisfactory and self-supporting that thirteen hundred new routes have been established in the past four months.

The cereals (wheat, corn, oats, rye and barley) raised in the United States during the past five years represent a value to the farmer of \$6,250,000,000, or an increase of nearly \$1,000,000,000 over the preceding five years.

On the 29th ult., three Friends bearing an address from the Meeting for Sufferings in Philadelphia to President Roosevelt, had an interview with him at the White House. A dispatch from Washington says: The President was very much moved by the presentation of the address, and read it aloud, while the delegation stood in front of him. After concluding the reading, the President expressed deep appreciation of the kind wishes of the Society, and commended the delegation that he had earnestly desired to direct the office that had come to him as to deserve the commendations of every class of citizens.

The total number of Indians in the United States at the last census was 237,196, compared with 248,253 in 1880. The loss has been general, except in the South and Alaska, where the Croatan and South Carolina coasted as whites in 1880, were classified as Indians in 1900.

A dispatch from Washington, says: Thirty-five thousand effective men will comprise the force which will maintain American sovereignty over the Philippine Islands.

A dispatch from Gloucester, Mass., says: The fishing season of 1900-1901 was not particularly successful. Sixty-two men killed or drowned and nine vessels lost comprise the

casualties. The year's losses are heavier than last year's, which was the smallest in twenty-three years. The sixty-two men left seventeen widows and thirty-five children. The nine vessels lost had a registered tonnage of 617 tons, and a value of \$1,000,000.

A company has been started to manufacture the Electrophotograph, which is a practical machine for transmitting pictures, maps, designs and drawings by telegraph.

A conflict between blacks and whites, near Hallowton, La., has lately occurred, in which thirty persons are said to have been killed. The Governors of Louisiana and Mississippi have sent troops to the scene of the disturbance.

Professor L. E. McGinness, Superintendent of the schools of Steeton, lately addressed the Dauphin County Teachers' Institute on "The Benefits of Good Books and the Baneful Influence of the Other Kind of Literature." He referred to an interview with Henry Rowe and Watson Keiper, convicted of killing Banker Ryan at Halifax. He said they blamed their fate upon the reading of cheap literature, and asked that he instruct the pupils under him to refrain from the use of trashy books.

The Pan-American Exposition at Buffalo, which closed on the 2nd inst., is said to have been a heavy loss to the projectors of it. The deficiency is estimated to be about \$4,000,000.

There have been brought about four thousand one hundred reindeer to Alaska, and the herds are reported to be thriving and increasing. They are valued for food as well as for their ability to draw heavy loads over the snow.

General Miles has stated in an official report to the War Department his conclusion that the abolition of the sale of intoxicating liquors in the army canteen has been beneficial.

Leon Czolgosz, the assassin of President McKinley, was executed by electricity in the prison at Auburn, New York, on the 29th ult. He expressed no regret for his crime.

Petroleum has been discovered in Honesdale, Wayne County, Pa.

The annual report of Commissioner Hermann, of the General Land Office, says that 15,662,796 acres of public land were disposed of during the last fiscal year, an increase of 2,108,308 over the previous year, which was the largest year in public land sales. The net surplus from the entire land and forest administration is \$3,158,442.

A number of Hague bankers and other wealthy men of Holland are making arrangements to establish a colony of Boers and Holland Dutch in Wyoming. A tract of 300,000 acres has been secured for the purpose. The river in the water county, Southern Wyoming. Surveys have been made for a gigantic canal and irrigation system, and construction is to be commenced at once. The prospective settlers are now being brought over to do the work.

The orange and lemon shipments to the East from Southern California last season aggregated 22,500 cars. It is expected the shipments this season will not fall short of 26,000 cars.

There were 415 deaths in this city last week, reported to the Board of Health. This is 57 more than the previous week and 39 more than the corresponding week of 1900. Of the foregoing, 215 were males and 200 females; 53 died of consumption; of the lungs; 52 of inflammation of the lungs and surrounding membranes; 8 of diphtheria; 20 of cancer; 9 of apoplexy; 4 of typhoid fever; 4 of scarlet fever, and 12 of small pox.

COTTON closed on a basis of 8½c. per pound for medium uplands.

FLOUR.—Winter, super, \$2.15 to \$2.30; Penna. roller, straight, \$2.15 to \$2.25; Western, winter, straight, \$2.30 to \$2.50; spring, straight, \$3.35 to \$3.60.

GRAIN.—No. 2 red wheat, 73½ to 74c.

No. 2 mixed corn, 62½ to 63c.

No. 2 white oats, clipped, 44c.

BEEF CATTLE.—Best, 5 to 5½c.; good, 4½ to 4¾c.; medium, 4 to 4½c.

PORK.—Choice, 3½ to 3¾c.; good, 3 to 3¼c.; common, 1½ to 2½c.

LAMBS.—3½ to 5½c.

HOGS.—Western, 8½ to 9c.

FOREIGN.—A naval demonstration has been prepared by France against Turkey to compel the latter to pay certain indemnities to the Sultan. The demonstration consists of a fleet of gunboats at Turkish ports and at the entrance to the Dardanelles, the laying of mines and the mobilization of troops. A strong anti-French feeling prevails at Constantinople.

The brigands who captured Helen Stone in Bulgaria have been communicated with, and Spencer Eldy, the Secretary of the American Legation at Constantinople, has been furnished with authority to pay over to them \$65,000, the moment she is surrendered, but through the mis-

sionaries he is endeavoring to induce them to accept smaller sum.

The wife of the Chinese Minister at Washington, returned a few days ago from a visit to the White House, saying that small feet are no longer the fashion there. She said: "The very first penetrating influence of our civilization on the customs of my country has to be the conditions of women. The emancipation of women in China means first of all the liberation of her feet. This is coming. Indeed, it has already come in a measure, and will continue to come."

A revolution in the method of lighting city chandeliers about to be adopted on the St. Lawrence. It is simple lighting, or, rather marking, by electricity, as if the wall were a wide street. A cable is to be laid in the wall, and an electric current sent through it feeding of different colors on either side. These lights can be as numerous and be placed in such positions as be desired.

The system of wireless telegraphy invented by A. and Armstrong, in England, depends upon currents, varying the earth, instead of currents in the air as the Marconi system. Two short iron rods are placed in ground at any distance apart, up to a distance of twenty miles. The receiving and transmitting instruments are attached to these rods. Then messages are sent. It is claimed that this system can be used for telephones also.

The countries of Continental Europe are becoming seriously alarmed by the encroachments upon their trans-American competition. Discriminating tariffs against American goods are being proposed.

Conflicts between the British and the Boers in Africa continue. In a recent attack upon the town of Bethel, in Eastern Transvaal, several British were killed or wounded, and fifty-four men were and one hundred and sixty wounded. The Boers are to have lost three hundred to four hundred men. British War Office has issued orders to reinforce Kitchener with every available infantry man in England.

The island of New Guinea is now suffering from a visitation of whooping cough. This is the first time this malady has occurred there. It is well known that this disease occurring among a hitherto unattacked people with the greatest virulence, and the native dying by hundreds.

Germany furnishes about seven-eighths of the supply of coal tar dyes, its income from this source over \$25,000,000 a year.

NOTICES.

FRIENDS' RELIGIOUS AND MORAL ALMANAC FOR 1901. CALLED THE "FRIENDS' ALMANAC." PUBLISHED BY THE FRIENDS' BOOK STORE, No. 304 Arch Street. Prices: cents each; by mail, five cents, thirty cents per dozen; by mail, thirty-eight cents. The same with paper five cents each; by mail, six cents, forty cents per dozen; by mail, forty-nine cents. Calendars, five cents, by ten cents.

WESTWON BOARDING SCHOOL.—For convenience of persons coming to Westwton School, the stage will train leaving Philadelphia 7:16 and 8:18 A. M., and 4:32 P. M. Other trains are met when requested by stage. Fare from Philadelphia to Westwton, Pa., by stage, 7:30 P. M., two cents each, with a reach the school by telegraph. West Chester, Phone 114x.

EDWARD G. SMEDLEY, ST.

WESTWON BOARDING SCHOOL.—Applications for admission, prospects to the school, and letters in regard to instruction and discipline should be addressed to Wm. F. WICKESHAM, Principal.

Payments on account of board and tuition, and communications in regard to business should be forwarded to EDWARD G. SMEDLEY, Superintendent.

Address, Westwton P. O., Chester Co., Pa.

DIED, at his summer residence, Media, Pa., on the 14th of Ninth month, 1901, THOMAS E. ELKINGTON, aged 72 years of his age; a member of the M. M. Meeting of Friends of Philadelphia. Early in life, braced, from conviction, the doctrines of the Society in which he had a birthright membership, being endowed with strong mental faculties, by a strong to the sanctifying operations of Divine Grace became a beloved and valuable member of the Society, and since his conversion, good health was not impaired by a slight attack of paralysis. And as passed along, there was apparent a mellowness and peace of spirit, which indicated to those with whom associated a ripening for the Heavenly Kingdom, illness which terminated his life was attended with few days with serene peace and resignation, he borne with true Christian patience and resignation.

Militarism Traceable to Peace, or to Militarism?

The writer in the *Atlantic Monthly* of last month holds the Quakers of Pennsylvania responsible for unrepentant and corrupt government, reputed to their state and chief city, on the ground that they have always refused to resort to bloodshed;—or, to state his case more baldly, because Friends have not been able to benefit of a war spirit through which they are bred in them certain qualities adapted to proceed from carnal warfare. He credits the Quaker with the staunchness of his convictions, and a moral heroism for his belief," as against the more common element in warlike colonies which would have a man for his belief."

Because we have preferred the weapons of carnal war, not carnal,—the out-of-sight weakness which are "spiritual and mighty through the power of the superficial press echoes the charge that we have become too passive to use any more "valiant for the truth upon the earth." A handful under the name of Friends, amounting to near ten thousand men, women and children, are thought to have made a whole state of six million inhabitants with that unresisting spirit that lets the government have its way. We had accredited our religious Society with a pronounced and sweeping influence. The churches of the doughty Dutch of New York have never been hampered by doctrinal non-resistance, yet just there is where the many system, so directly copied here, is an exponent of the "machine" has been used, was long since allowed to arise. The undemocratic system spring up earlier in a state far less touched by Quaker principles? If the influence of

the *Friends* makes such a difference to a state as was ascribed to them, why may it not be assumed that their secret influence has held back the evil day here, which so much sooner overcame a more warlike state? Friends have, indeed, felt themselves much debarred from seeking or holding many public offices by reason of their entanglement with war, but because they have preferred as steadfast voters to be righteous rather than riotous, are they therefore less opponents of wrong usurpations than the classes who could use carnal weapons? We believe that the attitude of our members, and their diligence in correcting abuses through legitimate channels may be just as exactly expressed for to-day, as it was expressed in one of their minutes recorded in the year 1775, and lately quoted in Isaac Sharpless's "History of Quaker Government in Pennsylvania:"

"We have a just sense," said they, "of our religious and civil liberties and have ever been and are desirous of preserving them by all such measures as are not inconsistent with our Christian profession and principles, and though we believe it to be our duty to submit to the powers, which in the course of Divine Providence are set over us, where there hath been or is any oppression or case of suffering, we are engaged with Christian meekness and firmness to petition and remonstrate against it and to endeavor by just reasoning and arguments to assert our rights and privileges in order to obtain relief."

Our critic reproduces a passage which, in its application to Friends, its author later sought to qualify, and we to forget, as from him, namely: "In the long run, a class of non-combatants is as hurtful to the best interests of a community as a class of professional wrong-doers."

But Friends are not non-combatants, only for righteous warfare they use no weapons of murder. So they are said not to observe Christian baptism,—but that is just the kind they wish to observe,—Christ's baptism with the Holy Spirit and with fire. And they are said not to keep the communion,—but it is the keynote of their profession to observe the communion of the Spirit and partake together of the living bread from heaven and the quickening wine of Christ's life. Let us continue to be combatants, baptists, communicants, according to the power of an endless life. Many in this Christian era are involved in both Testaments: let us be so faithful to the new-

ness of the Spirit rather than the oldness of the letter, as to be "able ministers of the New," and "fight the good fight of faith."

Such combatants and soldiers of the cross are not the class that are hurtful to a nation, but they are agents of the righteousness that exalts it, and our author remembers that they know how to "die for their belief." But the "professional wrong-doer" is a reproach to any people, and if Pennsylvania feels that she has more than her share of such reproach, let her return to the principles of Penn's "Holy Experiment," and there find foundations for such peace and prosperity as she enjoyed for the first seventy years. "As long as exact justice prevailed, peace prevailed, and this is the lesson of Pennsylvania."

It is the military system from which the so-called "boss system" is borrowed; for to it centralized organization under a single head is a necessity. Military government is uncongenial to democracy, for it is strict imperialism. Militarism turned Rome's Republic into imperialism, and ours under the same spirit is charged with taking steps on the same road. The general dominates a military machine of men, the boss a political machine of men, the emperor an organization of states and the pope a system of churches. Thus the principle of militarism is educating us for imperialism, as in army, so in city, and state, and church. It is not Peace that drifts us towards bossism in city, state or church, but War. And imperial Rome when divested of statehood continues on through the centuries vested in churchhood. What Quakerism stands for is the only antidote to that militarism which leads to an imperial church, and that bondage under it which the famous vision of a Friend long ago prophesied would creep over our country.

ANOTHER CLAIMANT FOR CENTRALIZED RULE.—Inasmuch as an extract given on page 118 of this paper (10th Month 26) seems to some Friends in one section of the country as "of doubtful tendencies, and rather advocating Mormonism than otherwise," it may here be explained that it was inserted for the sake of having the opposite effect. It was intended to sound a note of alarm against the encroachments of Mormonism as no mean foe, but a very dangerous foe, even "a modern Mohammedanism, combining Church and State, and swinging both together with sledge-ham-

mer force of centralization." In that article Mormonism was magnified only as a danger not as a virtue; as other powerful influences against our country's liberties should be magnified, or reckoned at their true size, as threatening to overwhelm individual freedom of conscience. Militarism works the same way, requiring blind obedience to one head by each man as part of a machine, and accustoms a people to the encroachment of the same principle of a one-man power in a religion, whether creeping on from the East or from the West to absorb the government in a State Church as Joseph Hoag's vision prophesied. Strange that now his own religious Society should be so generally dotted over with communities gathering themselves under the same one-man principle, as in local training for a larger papacy of some sort possibly ahead. May the closer ecclesiastical union now forming, and its central synod, have the grace to be kept from this tendency.

THE REMEDY IS NOT IN COMPLAINT. — A recent letter from a valued Friend remarks: "It is hard in contrasting the state of these Friends with that of many of our members here, not to feel impatient with the latter for coming so far short of the same standard. But this is a specious, but very wrong feeling to give way to. See how patient, and unfault-finding our Master was with all the shortcomings of his disciples,—and they had grievous short-comings!"

"As [one of your members] said to me, 'There is a right way of handling wrong things'; and the right way of handling the wrong attitude of some Friends is, to bear them on our hearts in a prayer that the right plant may grow and increase in them and in ourselves,—and then the wrong things will lessen and pass under. I have seen this remarkably the case in some instances where the wrong thing seemed at one time hopelessly dominant! We cannot win souls by fault-finding, but we may repel them further! I mean, of course, faultfinding in our own will. As we ripen, this tendency to complaining of others lessens in us."

NOTE.—In our last number the verses "In Memory of George Dilwyn" which precede the reminiscences of Ebenezer Worth were intended to come immediately after them as the appropriate conclusion spoken of.

ONE thing I know, and can conceive more beautiful than youth—viz., that rare form of old age which unites the pleasantness of an unruined front with the beauty of purified emotion and the sublimity of grave experience. —J. Stuart Blackie.

WHAT then can we, a people few in number, do to stem this torrent of militarism? Truly nothing is of ourselves. We have no strength, nor power, nor wisdom of our own. yet we may keep the light of truth, which is none other than the light of Christ, brightly burning in us, and let it shine out to others. —Canada Y. M. Epistle.

THE BETTER SONG.

BY MINNIE MCBURNEY.

I thought to write a grand, sweet song
That would thrill the souls of many men—
A symphony both great and strong,
Undying words from living pen—
But all unsung came back to me
The tuneless notes, with empty ring.
They had not reached humanity
Nor soothed one heart's embittered sting.
In pity for a mother's woe,
I wrote a simple heartfelt lay;
A crumb of comfort to bestow,
And light, perchance, dark sorrow's way.
Men loved my song and praised each part,
And to its every fault seemed blind;
It touched the chord of mother heart
And lo! it touched all human kind.

—Forward.

Ministry in Business.

The following portion of a *Ledger* editorial emphasizes the importance of a Christianity that embraces the whole life. We reprint it in THE FRIEND not only because the sentiments have our approval, in the main, but also because we feel that there is a strong undercurrent of progress Christward in our modern civilization. Truly the gospel of Jesus Christ leaves small place for gloomy views, and the anointed eyes hail the progress of his kingdom beyond the borders of the Church as well as within it.

"The merchant is so to carry on his business that his clerks will be better men; the woman is so to carry on her household that the servants will be better women; the statesman is so to administer in politics that every entrance of his shall appeal to the higher sentiment; the journalist is not to forget individual men and women in his journalism, and is to use the newspapers to lift men up, not to drag men down; the mother is to minister, not to a household only, but a home, and make not only means but life."

"Could such a spirit be infused into business, it would go far to settle the disputes between capital and labor that now bring so much suffering and ruin upon both, and to induce that harmonious action which would insure prosperity and happiness on all sides. Could it animate politics, what changes should we see! How quickly corruption and trickery would fade away, and how soon should we find men of integrity and ability filling the high offices of the land! And if all our rulers and statesmen were impressed with the duty of doing good to other nations and races, as well as their own, how soon would wars cease from lack of impetus! It may be objected that all this would involve great personal sacrifice and loss; but that would depend on the strength of the desire. Whatever we greatly wish for we shall probably obtain and will not grudge the price we pay for it. If we honestly desire to benefit others through our work we shall not feel it a painful sacrifice to do so. But the truth is that every such effort, instead of incurring a loss, reacts upon ourselves as a great gain. The interests of the community and those of the individual are eventually identical; what subserves the one must in time subserve the other, and he who so directs his labor as to benefit others, while he may endure some transient loss, will be far more than compensated in the fuller, happier, and nobler life into which he will enter."

Going to and From Seasons of Worship.

An earnest Free Methodist has recorded incident which may be thus summarized. Believe it would be well for the members consider whether the remarks made would apply to Friends generally in this day and themselves in particular.

He says: "I saw a person at a distance seated upon a log of wood, looking attentively toward my house. Noticing after a time he was still in the same position and supposed he might be in some distress, I went to and found that he was a member of the Society of Friends who believed he had a call to me, and was waiting for a further opening. I gladly invited him in. As he sat some time in silence I concluded he had not any special message for me, and so ventured to interrupt the silence by asking how he thought we could best improve an hour to mutual edification. He said 'perhaps thou hast a plan to propose.' I said if we could tell each other with a temper and sufficient freedom what appeared to us the leading defects of Quakerism as Methodism we might learn something useful. He asked me to begin first, which I did some time, declaring my undissembled statement. He heard me through patiently without any reply, and then began as follows: 'I frequently observed that when thy people go to their place of worship they talk of their outward concerns till they arrive at the very threshold; but whenever thou sees a Friend going to meeting he walks in silence with a heart retired as seeking preparation for so solemn a duty. When thy people come out of meeting it is like bees from a shaken hive. They have messages to deliver, or to receive; then comes the inquiry how he liked the preacher, etc. The reply probably is, 'an excellent preacher; what a flow of language! How earnest he is! This is one of the best sermons I ever heard.' Whereas, if but should observe Friends on such occasions, I wouldst remark that each retires in silence seeking to preserve any good that may have been received, and if any remark is made to the service, it will usually be in this wise, 'I think A was much favored to-day,' ascribing praise where it justly belongs.' I exclaim, 'Guilty! guilty! the naked truth. I am a man! and by the grace of God I hope to be by what I have heard.' And he goes to detail at some length his care for a formation, ending somewhat thus: 'Some may have thought me singular in this case to have a conversation in going to and from the season of worship, but they know not what their Quaker has said to me, the effect of his words. I will trust continue with me to my life's end. This man became soon after this time eminently useful in the Society to which he belonged, and may not the concerned Friend's faithfulness to the pointing which drew to the service have been helpful to this end?'

As the administration of the discipline said—in the queries—to be the Lord's will so in going to such meetings due preparation of heart should be sought after. I remark as a youth being sadly impressed in regard to public conveyance—to such a meeting seeing one active in such matters engaged in reading a newspaper. I thought it a poor preparation for such service.

The inexcusable tendency of allowing

es to become too much absorbed in such thing is well illustrated by an incident which be thus told. A benevolent physician at much pains to assist a pious patient in his learning to read in order that he might have the comfort of reading the Scriptures. He had lost track of him for a year or two, on account of a removal.

When he found him in his neighborhood and calling on him, he did not find him at home, but inquiring of his wife if he enjoyed reading he was as much as he used to, the answer was no, he has got out of the Bible and into newspapers long ago."

I believe it would be a good testimony if we claiming to be Friends would be careful to engage in such reading in public. I may say that I have seldom taken a newspaper in my hand on such occasions, without a sense of condemnation and a feeling that if there was anything in it proper or needful for me, I had better await a private opportunity, where example, infinitesimally small might be, could not operate.

AMOUS OLD MEN.—Cato, at fourscore, began his study of Greek, and the same age saw arch beginning, with the enthusiasm of a his first lesson in Latin. "The Character of an," Theophrastus's magnum opus, was written on his ninetieth birthday. Chaucer's " Canterbury Tales " was the work of the poet's ninety years. Ransard, the Father of French poetry, whose sonnets even translation cannot deny, did not develop his poetic faculty until fifty. Benjamin Franklin at this age just taken his first steps of importance in philosophical pursuits. Arnauld, the theologian sage, translated "Josephus" in his eighty year. Winckelmann, one of the most original writers on classic antiquities, was the of a shoemaker, and lived in obscurity and disgrace until the prime of his life. Hobbes, the English philosopher, published his version of the "Odyssey" in his eighty-seventh year, his "Iliad" one year later. Chevreul, the great French scientist, whose untiring labors in the realm of color have so enriched the world, was busy, keen, and active when he called him, some ten years ago, at the age of one hundred and three.—*Saturday Evening Post.*

LOW CITIES BURY THEMSELVES.—A well has lately been driven in the Place de l'Hotel de ville in Paris, for the purpose of ascertaining the nature of the subsoil of the French capital. The revelations throw light on the cities in which great cities, in the course of centuries, bury the relics of their past. First was a layer of rubbish nearly four and half feet thick, dating from the sixteenth century to the nineteenth. A second layer a foot over two-and-a-half feet thick, consists of rubbish recognizable by the character of its elements as belonging to the period from the twelfth to the sixteenth centuries. This was separated from the first layer by a thin deposit of sand, and a second sandy deposit covered the third layer which plainly shows relics of the eleventh and twelfth centuries. At the bottom is a clayey deposit filled with fragments of pottery and lots of oak timber belonging to the Gallic and Gallo-Roman periods. —*London's Companion.*

For "THE FRIEND."

Catherine Booth on the So-Called "Sacraments."

[There was lately quoted in THE FRIEND a strong expression from an eminent London authority, dissenting from the general view regarding the obligatoriness of what are commonly called the sacraments of Baptism and the Lord's Supper. The *American Friend* refers to a recent meeting in Dublin addressed by Sidney Long, a missionary of the London Missionary Society lately in South India, who was led to accept to Friends' views on the ordinances from the fact that converts attached so much importance to these observances as to cause him to study the subject afresh from the Bible. He had not met a Friend or seen any of Friends' writings, but this original investigation convinced him of the truth of their position. It may be of value to add to the testimonies of these witnesses, that of Catherine Booth as set forth in an address upon "A Mock Salvation and a Real Deliverance from Sin." In reading her forceful charge which follows we need to remember that there may be something of the nature of a dependence upon or resting in a "form" even in an unceremonial meeting after our own order, where such is not livingly gathered as in the Lord's presence.—J. W. L.]

What an inveterate tendency there is in the human heart to trust in outward forms, instead of seeking the inward grace! And where this is the case, what a hindrance, rather than help, have these forms proved to the growth, nay, to the very existence of that spiritual life which constitutes the real and only force of Christian experience! . . . We feel persuaded that if Paul were here now, and could see the deadly consequences which have arisen from the idolatrous regard given to what are called the sacraments of the Supper and of Baptism he would say precisely the same with respect to them; for even if Jesus Christ intended them to be permanent institutions (against which there are very strong arguments, as put forth by many most devoted and intelligent Christians ever since the days of the apostles, amongst whom are the "Friends" of our own time), such is the awful abuse to which these ceremonies have been subjected, that we feel sure Paul would say baptism is nothing and the ceremony of the Lord's Supper is nothing, apart from keeping the commandments of God, especially that and all comprehensive commandment, "Thou shalt love the Lord thy God with all thy heart, and mind, and soul, and strength, and thy neighbor as thyself." Christians often say to me, when I put this view before them, "Ah, but you have no authority to remit the Supper, because the Lord said we were to take it in remembrance of Him till He come." I answer that he left the taking of it all perfectly discretionary; and as to its continuance, that entirely depends on which coming He alluded to. "Friends," and many others of the most spiritual and deeply taught Christians of all times, have believed that He then referred, as in so many other places which are generally misunderstood, to his coming at the end of the Jewish dispensation. Anyway, our Lord, who had long before said to the woman of Samaria, "The hour cometh when ye shall neither in this mountain nor yet at Jerusalem [in any special sense] worship the Father. . . . But the hour cometh, and now is, when the true wor-

shippers shall worship the Father in Spirit and in truth," anywhere and everywhere, could not have intended to teach that God could be more acceptably or profitably worshipped through any particular form or ceremony than without such form or ceremony, and especially if there were weighty reasons on the other side for rejecting it. Neither is it creditable to a spiritually enlightened mind that He who said, "If a man love me he will keep my words, and my Father will love him, and we will come unto Him, and make our abode with Him," could have intended to teach that through the earthly medium of bread and wine his people were to remember Him on whom their thoughts were to be constantly concentrated, or to commune with Him in any special sense above that in which they were to commune with Him always and everywhere. The water which Jesus gives and to which alone He attaches any importance, is that which is "in us a well of water springing up into everlasting life;" and the wine which He values and promises to drink with us in his Father's kingdom, is that wine of the kingdom which is righteousness, and peace and joy in the Holy Ghost. Friends, do you partake of these Sacraments? If not, rivers of earthly water, vineyards of wine, will avail you nothing; they will be as "Nehushtan."

If we were to have any binding forms in the new and spiritual kingdom in which all forms were to find fulfilment, it seems to me that there is a great deal more ground for insisting on washing of one another's feet than for either of those already referred to; and in this we can see a great practical lesson on the human side which our Lord actually laid down. How comes it, I wonder, that many of those who regard the former with sanctimonious reverence, can utterly and without scruple, set aside the latter? I fear that human pride and priestly assumption must be held largely responsible.

Further, nothing is more evident to all who have any acquaintance with the history of Christianity, than that the undue value set upon these ceremonies has been one of the greatest hindrances to the extension of Christianity. Again and again have its valiant warriors paused in their triumphal progress and turned aside from the battle with the great forces of evil, to quarrel amongst themselves concerning these mere externals. When I was in Ireland, some of the oldest and most experienced Christians who took part in that great revival some twenty-five years ago, told me that a great proportion of the results of that wonderful work of God were lost in consequence of a controversy about water baptism.

"MAN becomes a slave to his constantly repeated acts. In spite of the protests of his weakened will, the trained nerves continue the repetition even when the doer abhors his deeds. What he at first chooses at last compels. You can as easily snatch a pebble from gravitation's grasp as you can separate the minutest act of life from its inevitable effect upon character and destiny.—*Success.*"

A RELIGION which fails to meet the witness for God in the hearts of the people must be inadequate, or overloaded. There is a universal spirit which knows its own, and owns that which partakes of its nature.—*London Friend.*

THE CHILDREN.

BY CHAS. M. DICKINSON.

When the lessons and tasks are all ended,
And the school for the day is dismissed,
The little ones gather round me
To bid me good night and be kissed.
Oh, the little white arms that encircle
My neck in their tender embrace!
Oh, the smiles that are halos of heaven,
Shedding sunshine of love on my face!

And when they are gone I sit dreaming
Of my childhood too lonely to last;
Of joy that my heart will remember.
When the feet of the pulse of the past,
Ere the world and its wickedness made me
A partner of sorrow and sin,
When the glory of God was about me
And the glory of gladness within.

All my heart grows as weak as a woman's,
And the fountain of feeling will flow,
When I think of the past sweet and stony,
When the feet of the dear ones must go;
Of the mountains of sin hanging o'er them,
Of the tempest of fate blowing wild;
Oh, there's nothing on earth half so holy
As the innocent heart of a child!

They are idols of hearts and of households,
They are angels of God in disguise;
His sunlight still sleeps in their tresses,
His glory still shines in their eyes.
Those trunks from home and from heaven,
They have made me more manly and mild;
And I know now how Jesus could liken
The kingdom of God to a child.

I ask not a life for the dear ones,
All radiant as others have done:
But that life may have just enough shadow
To temper the glare of the sun,
I would pray God to guard them from evil,
But my prayer would bound back to myself;
Ah! a seraph may pray for a sinner,
But a sinner must pray for himself.

The twig is so easily bedded,
I have banished the rule and the rod;
I have taught them the goodness of knowledge,
They have taught me the goodness of God.
My heart is the dungeon of darkness,
Where I shut them for breaking a rule;
My frown is sufficient correction,
My love is the law of the school.

I shall leave the old house in the autumn,
To traverse its threshold no more:
Ah, how I shall sigh for the dear ones
That meet me each morn at the door!
I shall miss the "good nights" and the kisses,
And the gush of their innocent glees,
The group on the green, and the flowers
That are brought every morning for me.

I shall miss them at morn and at even,
Their song in the school and the street;
I shall miss the low hum of their voices
And the tread of their delicate feet,
When the lessons of life are all ended,
And death says, "The school is dismissed!"
May the little ones gather around me
To bid me good night and be kissed!

CERTAIN habits of thought cannot be otherwise than gradually removed. So with certain habits of body consequent on such habits of thought, such as the habit of hurry, the habit of worry, the habit of laying undue stress on things not the most needful for the hour, the habit of trouble-borrowing and many others which permeate and influence every act of life. Their combined effect is exhaustion, and exhaustion is the real mother of most of the ills flesh is heir to.

Is Jesus Impractical?

Hall Caine in a recent letter to the *London Daily News* in reply to an Italian critique of his latest book "The Eternal City," has this striking paragraph: "Is Jesus at fault? Are the laws of life too much for Him. Has the world found out that so far as the government of the nations goes He is impractical and impossible? In saving the individual soul, did Christ leave the collective soul in the lurch? Is it right that, while men in their personal relations should acquit themselves like Christians, they may remain pagans or barbarians in all that pertains to their national life. Or was Jesus a legislator for the nation as well as for the individual? And if so, to what ends do his doctrines of non-resistance, the fatherhood of God, and the brotherhood of man, lead us as nations and races?"

Hall Caine declares that the main purpose of his book was to contend that the teaching of Jesus was equally applicable to public and private life, and that what He taught was taught for all time and for all possible circumstances. We firmly believe that he is right, and that that is the only fair and logical interpretation that can be put upon his teaching. Very pertinently the writer asks to what end Christ's doctrines of non-resistance, of the fatherhood of God, and of the brotherhood of man lead us as nations and races.

Christ's doctrine of non-resistance means the ultimate abolition of war. Hall Caine complains that "the Christian nations uphold standing armies whose object and business it is to do precisely that which He said should not be done." That is true. In so far as the world is not leavened with the principles of Jesus Christ, in so far, that is, as its spiritual evolution is not complete, in so far it is under the sway of principles that are other and lower and, in that sense, hostile to his, and the standing army and the last resort arbitrament of kings are accompaniments of that imperfect, that unfulfilled development. In so far, however, as Christ's principles prevail among men, in so far as there are—and there are—men and women wholly subject to his sway, in just that proportion war is no longer a necessity, it is no longer even a recognized legitimate or even possible contingency. Unhappily the number of such persons is not large as compared with others in whom spiritual evolution is not so far advanced. But they exist. And there are more of them in this year of grace than ever before. Not only so, but the average of Christian life, the national, the racial life, is rising. The evolution of the Christian conscience is going on. It may be a slow way in the estimation of some, but it is God's way, and therefore, undoubtedly, the best way and, probably, the only way for the elevation of the nation and the race, that gradually, bit by bit, year by year, age after age, men in the mass should grow to see eye to eye with God. It was so in the case of slavery. It will be so, doubtless, it will be even more so, in the case of war. Two thousand years of evolution Christward toward slavery was sloughed off. Even at the present rate of progress it can hardly take many hundred more before war shall be left behind.

The same surely holds good of political and social conditions. It is to be admitted that

there is an immense amount of pure paganism in our so-called Christian civilization. The political life. Government theoretically should be of the people, for the people, by the people, to quote Lincoln's famous saying. We are far from that. It is not very long since we heard a prominent politician of the very province declare in cold blood that he could not carry out the teachings of the Sermon on the Mount in the life of to-day. I suppose that politician lives out his creed in his public life. In fact we have good reason to know he does. And there are others. I questionably the coarseness, the greed, the venality, the prejudice, the narrowness and bitterness that characterizes too much of public life are of the very essence of paganism.

Socially, too, we are far from the Christ ideal. Mammonism holds this age in its grip. Jesus Christ, to quote Bryan's strong figure is being crucified to-day on a cross of gold. Jesus Christ, in the persons of the workers of the dependent, of the poor, is being neglected, ignored, in some cases even down-trodden. The maximum of work for the minimum of wage is too often the only desideratum of the employer. The worker is a "hand," a soul, still less a man and a brother. The wage is kept at the lowest and even his day's rest, the law of which is written on his very constitution, is taken from him when it can be done with profit. The combine crushes the small miner or manufacturer, and sorbs all the business interests in monopoly. Wealth centered in the hands of a few enormous disproportion and with tremendous power, buys and bullies all opponents into submission to its will and interests. Individual civic corporations, even national governments are swayed by its immense force. The very thought of the time is corrupted by gross materialism. Success, as taught our children, power to make money, failure is want, power to become rich. Honor, integrity, manly character, these ideals are subordinate to the ideas of material advancement. In state, in social life, in the "church," it is too often, the power of wealth is paramount.

While all this is true, however, it is true that the Christian leaven is working, working strongly and wisely. The purely political and social life is found in Anglo-Saxon communities—is found, that is, where the Bible is most read, and where the Christian religion has become most enfolded in the intellectual and moral life of the people. Go back a century, go back fifty years, and read history candidly and you have to admit that extraordinary changes have taken place and that these changes in the aggregate are on the order of the teachings of Jesus Christ. Go to business life, with all that can justly be said of its oppressions and unfairness, and you find more men than ever who hold themselves to their businesses and their profits in the light of stewardship to Almighty God. The conviction is certainly not practically strong enough to control, but it is getting more power daily in public life—that what is really wrong can never be politically right. Daily, too, the conviction is growing more practical, more universal that from the fatherhood of God follows the brotherhood of man, of all men, and that in social relations

commercial transactions the Golden Rule is only safe, as it is the only permanently able or even possible rule.

Militarism and Mammonism are undoubtedly twin giant forces of evil of our age, and that age has been the first to witness an national Arbitration, and the first to give to a Peabody and Carnegie. The King- of God cometh not with observation, it is not without many an apparent back- and baffling. Satan rages his hour, and 's human myrmidons scoff and struggle it. But it cometh none the less. It is a nature of things that it should come, whosoever shall fall on this stone shall kick, but on whosoever it shall fall, it find him to powder."—*The Wesleyan.*

A Man Who Tried Both Sides.

eph Barker, who died in Omaha in 1875 man of powerful intellect, and a dis- shed orator. He was in early life a mer of the gospel, but being hindered coming somewhat discouraged he fell fidelity and until the last five years of was an active infidel editor and speaker. disgust at the villeness of the men among his lot was cast led him to reconsider his on, and he finally became converted and his closing years preaching the faith once destroyed, laboring with the ut- nergy to counteract the influence for a bad exerted. His excessive efforts down his strong constitution and caused th.

son said of him: "He was constantly ipt of letters from infidels in this and countries, complaining that he had led into infidelity, and now he had forsaken These letters he had always endeavored ver, rising early and sitting up late, to undo the mischief he had done. He at what first opened his eyes and led consider the whole question anew, was ss immorality and licentiousness which on characterizes the lives of infidels. d he had never known an infidel that e Bible who was not an immoral man." ollowing is his own language: "Carried is by a tempest, from my early faith, red for years in the dreary regions of nd unbelief. "I looked for light, and darkness!" I sought rest, and found de. And the farther I went the fared, and the longer I remained in nant shades, the more wretched I be- I found myself at length face to face er darkness and eternal death. God eryl rescued me from that awful state, ight me back to Christ. And here I py in the light of his truth and in the e of his love. I praise the Bible and rist and Christianity more than ever; d and horror of infidelity are greater r. I know it to be the extreme of ad and misery.—the utter degradation of man's soul."—*The Army.*

EVER that any man's life will be filled instant unexpected encouragements if s up his mind to do his level best y of his life—that is, tries to make reach as near as possible the high- ark of pure, unselfish, useful living. T. Washington.

Preaching the Gospel.

It is interesting to observe in the late winter and early spring all the work that goes on in the country. What prodigious efforts are there in operation year by year, as the farmers prepare the ground for the seed sowing.

What a large number of people are engaged in this work, and how heavy the work, is best known to those who live in the country.

The work must be well done if the best results are to be expected and all this is to prepare for the important event to follow, viz., the seed sowing.

If we look away to some large manufacturing town, we may find men engaged there making machines to sow the seed.

Experience has taught us that certain kinds of seed sowing, will be better, and more economically done, by machines specially made for the purpose, than sowing the seed by hand. And so, the wisdom and ingenuity of man, comes into operation, and a great deal of trouble is gone to, to prepare these machines.

Springtime comes and men and horses go over the carefully prepared ground with a carefully made machine, and so the goodly seed is sown!

Is there not a deep lesson in all this for those who are called to preach the Gospel? Those who are the instruments the Lord condescends to use in his service.

The Lord has agencies which are permitted to work in the great world in which we live There is the spiritual plough of sorrow, and the spiritual harrow of disappointment, which are turning up the furrows of the human soul; breaking the ground and making it even, so that later on, in the Lord's own time, He may send his prepared instruments to sow the goodly seed of the kingdom. Ah! yes; instruments that He has long been preparing for the work. And so, one day, the prepared ground and the prepared instrument, with the good message, are to meet, and great will be the rejoicing.

And so, thus there are seasons in the church, when it may be, there is not much outward sign of great religious life; but the Lord is permitting his ploughs to do their effectual work in the human heart, a work as needful there, as the outward work is in the country around.

So through the Lord's creation, we get glimpses of a Divine order in the outward world, and in the spiritual life.

Are there hearts in suffering because sorrow seems added to sorrow, and prayer seems un- answered?

Remember, dear hearts, the eye of the Lord seeth it all, and He sees the necessity of a ground well prepared for his goodly seed. A seed which may come through his instruments or be handed direct by his Spirit. It seems to me the good ground in the parable of the sower, was the ground that was well prepared and ready. And if the Lord in his wisdom is permitting the ploughs of sorrow to do their effectual work, and a rebellious spirit is being broken down, rejoice! and look forward, and upward!

There have been many seeds sown in the country which have come to nothing, and it may be, there have been many visitations of Divine love to the soul in the past, which have come to nothing, earth, and the things of earth, having again stepped in and marred the work.

FOR "THE FRIEND."

But now the Lord in his Divine wisdom is permitting some deep furrows to be cut through the soul; that a heart wearied and sick of the things of earth may eventually close in with the offers of God's love.

In some grounds there is little preparation needed, and in young hearts, which have not yet received the sad impress of earth, these spiritual ploughs are not always used.

How much is going to be saved; how much is going to be gained by an early closing in with the offers of Divine love, is in some measure known to those who have slighted these offers in youth and then have known the things of earth to harden the heart so that the Lord has seen needful to permit the ploughs of sorrow to drive the soul home, as the wayward heart of the Prodigal Son was driven home to the father's house.

How well would it be in the Church of Christ if those who profess to preach the gospel had more often the true eye of spiritual discernment as it ought to be, and that they should stand as watchmen on the walls of Zion, ready to speak the right word in the right season to the right heart.

Surely great is the responsibility that rests on such as are called to be ministers of the gospel; that no earthly thing should be allowed to mar the work, as again and again the Master prepares a heart to give his mes- sage.

A. H. BELL.

WATERFORD, Ireland.

THE FAITH OF HOPE.—I began to think my end was very near. The sense of uncertainty was hard to bear; yet all I could Jo was to look up and hope in the mercy which is new every morning. Hope is a lower measure or degree of faith; but when it is all that is vouchsafed to us, the exercise of it is accepted by our Heavenly Father as sufficient. I remember John Fletcher wrote to some one who complained of the lack of light and comfort, spiritually, that it is best for us to abide with the Master in the state which He has seen fit to allot us, until He is pleased to move us out of it. In such a condition there remains nothing for us but to watch earnestly for the arising of further light,—like the Psalmist who could say, "My soul doth wait more than they that watch for the morning."

The truth is that we walk partly by faith and partly by sight,—and our natural mind, which cannot reach beyond, always craves for more sight, though this means in reality less faith! But as we remain simple,—and "The Lord loveth the simple,"—we are safely led along through these conflicts, gradually gaining strength by what we are exercised in. —*Late Letter.*

"THE awful doctrine of perpetually present Deity and a hastening righteous judgment, should be early impressed upon the minds of all our children."

DAY by day should we strive to conform our lives to a life "hid with Christ in God," for if we are unfaithful in little things, we shall never be made rulers over more; but as we seek to abide in the truth revealed by the spirit of Christ in our own hearts, we will be led to forsake the man of sin and walk in the highway of holiness.—*Kansas to N. England Y. M.*

LINES.

Beyond this life of hopes and fears,

There is a region fair,

It knows no change and no decay,

No night, but one unending day;

O say! Will you be there?

Its glorious gates are closed to sin,
Nought that defiles can enter in,

To mar its beauty rare;

Upon that bright eternal shore

Earth's bitter curse is known no more;

O say! Will you be there?

No drooping form, no tearful eye,

No hoary head, no weary sigh,

No pain, no grief, no care;

But joys which mortals may not know,

Like a calm river ever flow;

O say! Will you be there?

Our Saviour, once a mortal child,

As mortal man by men reviled,

There many crowns doth wear;

While thousand thousands swell the strain

Of "Glory to the Lamb once slain;"

O say! Will you be there?

Who shall be there? The lowly here,

All those who serve the Lord in fear

The world's proud mockery dare;

Who, by the Holy Spirit led,

Rejoice, the narrow path to tread;

These, these shall all be there.

Those who have learned at Jesus' cross

All earthly gains to count as loss,

So that his love they share;

Who, gazing on the Crucified,

By faith can say, "For me He died;"

These, these shall all be there.

Author Unknown.

In a Petrified Forest.

Results of investigations in the wonderful petrified forest in the northern part of Arizona have been reported by Dr. J. N. Pulver and a party of scientists who have been studying the geological formations of that part of the Territory for several months. The remains of the ancient forest are in the heart of the San Francisco Mountains.

"Agate Bridge" is the most notable feature in this land of natural wonders. The portion of the forest where the finest of the gems are found is in Apache county, seventeen miles from Holbrook. The "bridge" is a tree trunk, transformed into the finest agate, which spans a chasm sixty feet wide. This precious gem is one hundred and ten feet long and five feet three inches in diameter at the base, tapering to three feet at the apex, and contains material enough to give labor to all the lapidaries in the world for the next generation. This log is one of thousands. It is impossible to conceive of the marvelous beauty of this region, for the ground is covered with amethyst, red and yellow jasper, topaz, onyx, carnelian and gigantic specimens of agate of every variety—gems as big as flour barrels and steam boilers.

Dr. Pulver reports that there is a fine group of big logs in the foothills about twelve miles east of Winslow, and probably forty-five miles distant from the agate bridge. He was hunting lost horses when he came upon sandstone cliffs notable because of their unusual perpendicularity. These cliffs have been worn away, leaving exposed huge trees, which may be observed from a distance of a mile or more from

the valley, standing out in bold relief, like the pillars of some ancient temple. A closer view shows these trees to be from four to six feet in diameter, and often twenty to thirty feet high with their great roots running off into the solid rock. A great niche in the face of the wall marks the place from which one of these trunks has fallen. Some of the remaining ones appear just ready to fall, while others project but little beyond the face, indicating that the mountain is filled with the remains of these trees.

Several miles westward, along the slope of the mountains, a small but remarkable petrified forest was found. The largest tree, which must have been the very king of its race, stands on the summit of a sun-baked, desolate foothill. It is twenty-six and one-half feet in circumference and fourteen feet in height, with roots imbedded in the solid rock. Almost all of these trees are perfectly preserved, even to the bark, which in some cases is five inches thick.

With the exception of a single cottonwood trunk the trees are of an extinct coniferous species. They lie prone upon the ground. The section or ends of the logs show brilliant reds and yellows and dull blues. The bark is not brilliant, but dull, and wonderfully well preserved. Some trees show even the knots to perfection. Some of the petrified logs are four feet in thickness and from ten to twelve feet long. They have no branches, but the hundreds of pieces varying from a couple of inches to one foot in diameter are probably the remains of branches.

Here and there are heaps of chips from the petrified trees, and their beauty of coloring is bewildering. There are literally thousands of bushels of chips that are red moss agate and may be beautifully polished. There are many more times chips of amethyst, gray topaz and various-hued agates, showing the grain of the trees, as they grew millions of years ago. One may obtain cross sections of fallen trees, showing in complete detail the annual ring marks and the separation of the bark from the trees. The stone is of the hardest and takes and keeps an incomparable polish.

In the rocks all about the trees there are impressions of branches, leaves and even cones and fruits, that must have belonged to them. The trees with the thick bark were conifers, like the sequoias, or "big trees" of California, and quite likely were their direct ancestors. Others were like our common trees—that is, such as oaks, chestnuts, beeches, elms, maples, magnolias and lindens. The only living trees found in the vicinity of the fossil forests are pines and spruces and two kinds of cottonwood.

The scientific theory concerning the petrification is to the effect that after the forest of pines and cedars was established the basin or valley became a lake. This valley has an area, approximately, of one hundred by eighty miles, and is surrounded by extinct volcanoes. These volcanoes emptied themselves into the lake, and the trees became soaked with the siliceous water. Silicia took the place of every fibre and atom of wood. The colors of red, brown, yellow and purple came from the iron and manganese solution in the water. All this took place before the existence of the Grand

canyon of the Colorado. When nature for that big ditch the lake was drained, and water, in its rush to the northwest, left the stone trees, breaking them off as smooth as if they had been sawed. This sustains the theory that the trees were petrified where they grew.

The fact that nearly all the fallen trunks lie in one direction and to the northwest sustains the theory that the lake emptied to the northwest and into the Grand canyon.—*Chicago Record.*

Science and Industry.

EGYPTIAN tourists can now ride direct trolley from Cairo to the pyramids, and declared that before long a line equipped with American cars will be running from the old front at Piræus to the Parthenon.

It is said that Europe and Asia will soon be connected with a bridge over the Bosphorus. This is made necessary by the demands of commerce, the bridge forming a link for transatlantic traveling between Hamburg and Constantinople. German engineers have its construction in charge, and it is regarded as a marvel of engineering. The crossing, it is stated, will be at a point where the King of Persia carried his army over in B. C. 513. Modern science is wonderful. The necessities of trade are rendering it utilitarian and practical wherever possible.

THE STORY OF THE KORINTHIAN CAPITAL. Dr. Quinn, the well-known antiquarian, in *Harper's* a charming legend of the origin of the design of the capital which characterizes the Corinthian pillar:

"In the winter a young girl had died at Corinth," he says. "Some time after her maid gathered together various trinkets and playthings which the girl had loved, and brought them to the girl's grave. There she placed them in a basket near the monument and placed a large square tile upon the basket to prevent the wind from overturning it. It happened that under the basket was the seed of an acanthus plant. When spring came the acanthus sprouted, but its shoots were unable to pierce the basket, and accordingly they grew around it, having the basket for a pedestal. Such of the long leaves as grew against the four protruding corners of the basket on the top of the basket curled around these corners and formed pretty volutes. Kallimachos, the sculptor, walking that one day, saw this, and immediately conceived the notion that the form of the basket, the plaque on top of it, and surrounded by leaves and stalks of acanthus, would be a capital heading for columns in architecture. He found this idea formed the beautiful Corinthian capital of capital. Such at least is the story as Architect Vitruvius told it 1900 years ago."

GUM ARABIC PRODUCED BY ANTS.—Gum arabic is an exudation from certain species of acacia. In order to obtain the gum, the stem must be cut or perforated so that the juice may exude, and we are told by W. B. Busse, who has just been investigating the production of German East Africa, that in a majority of cases this necessary perforation is accomplished by ants, without whose labor, therefore, the world could not get its supply of gum arabic.

arabic—at least with the present ease. V. Busse, as reported in *Le Journal d'Afrique Tropicale* (Paris): "Part from the rare wounds inflicted by man, animals, storms, etc., all on of gum in this country is provoked by the ants perforating the bark of the tree to gain admittance into the wood, where they deposit their eggs in the excavation, which sometimes of considerable extent. The wood with soft wood generally show few of this kind; the hard-wood acacias, filled with them, each perforation being filled with a globule of gum. The ant that produces the gum makes no use of it; it is an obstruction to her work, since it clogs the galleries that she hollows out. For species of ant, however, sometimes the exuded gum before it has become entirely hardened, and gives it the peculiar appearance well known to collectors."—*The New York Digest*.

RAILWAY EMPLOYERS AND EMPLOYEES.—Relations of Railway Employers to their employees was the subject of an address recently before the School of Commerce, Statistics and Finance of the New York University by Samuel McCune Lindsay, Professor of Sociology in the University of Pennsylvania, and President of the American Academy of Political and Social Science. Professor Lindsay's address is of special interest by reason of the fact that he has now in press a report on the subject of railway labor, which will appear in the next issue of the United States Industrial Commission report. After being introduced by John H. Hoskins, Professor Lindsay said that there are over 1,000,000 men employed in railway service in the United States, and nearly 5,000,000 persons dependent on the earnings of railway employment. The engineers, firemen, conductors alone constitute a professional army of 116,000 men, including trainmen, station agents, switchmen, telegraph operators and dispatchers. One of the million employees are engaged in the operating of trains. Over a quarter of a million of men are needed to keep the locomotives in repair, while another quarter are required in shops and elsewhere in the plant. All of the mechanism is valued at less than 10,000 officers, with the 30,000 clerks. "Railway business," said he, "is quasi-public in character; the responsibility of the employer for the acts of his employees is greater; the risks run by both employer and employee, largely financial in character, and dangerous to life and limb in the case of the employee, are vastly more important than in any other general occupation. A more efficient method of recruiting railway employees, examining their previous record, testing their qualifications, educating them for promotion, and punishing them for violation of rules has developed in railroad business than in any other industry. No one can study the problems and life of railway men without realizing that he is dealing with a peculiar and inferior class of industrial labor. Railway business," added Professor Lindsay, "has no precedents. There is some complaint of the blacklisting or combined effort on the part of railway officials to drive men out of the occupation because of activity in labor

organizations in participation in strikes. Such complaints come from a few individual cases which may be well founded, but more often from mere hearsay who are being weeded out for inefficiency. There are a very few indications of any present tendency in the direction of blacklisting, and many more proofs that practices of this sort are things of the past. The majority of the men approve of stricter disciplinary measures intended to improve the service. The railway corporations are doing much to cement the ties that bind them to their employees by providing easy methods for their men to secure sick and accident insurances through relief departments established by the companies, to provide for their families through death benefits, and finally, to provide for old age and incapacity through pensions, largely paid out of the funds of the companies as a reward for long and efficient service and not as a charity."—*Ledger*.

Winifred Saxe as the Queen of a Kingdom.

Tradition has much to say about Winifred Saxe, writes Rebecca Harding Davis in *Success*. There are stories of the singular influence she had over her husband and sons. Every man who came near her—even old Khasuke and the few remaining Indians of his tribe who lingered in the hills—served her gladly, and took orders or scoldings from her in silence. She had not unusual beauty. There is a silhouette of her in existence which shows a delicately cut face, full of tenderness and fun. But certain women in all ages have had an unaccountable charm, a magnetism which did not come from a beautiful person or face. Winifred Saxe probably was one of these. In an old letter her brother says, "Winifred has the voice of a cooing dove, but on occasion she shows the temper of a lioness."

Her own family and the Saxes were the leaders, the dominant minority, in a large territory, with its population of white settlers and Indians. The girl, as much as Victoria, was born to the belief that she belonged to a ruling class. She was a little gentle woman, but she always bore herself with a certain quiet consciousness of power, a native dignity befitting a queen.

She had, assuredly, a wider authority than falls to the lot of the modern woman. To begin with she had eleven children of her own and two or three orphans who never knew that they were not her own. The house was large, and the hearts of John and Winifred Saxe were big and warm. An army of farm hands was fed in the kitchen. The house servants were slaves, both black and white, for Pennsylvania then had slaves. The white ones were immigrants who were brought to America free of cost, and sold by ship captains in Philadelphia for sums representing their passage money. They were bound out to their new owners until they had worked out this money. John Saxe crossed the mountains once every two years, and usually brought home some of these "redemptionists." Winifred Saxe always had two, three or four "bond-girls," the daughters of poor white settlers. She took them when children and kept them until they were of age, instructing them in weaving, sewing, cooking, teaching them to read, write and cipher and to fear God and keep his commandments. They

served her, and she ruled them as a faithful mistress. It was a pure, patriarchal relation. What education had she?

None, according to our ideas. Her only books were the Bible and "Pilgrim's Progress," but she knew them by heart. Her language in her talk or letters was modeled on their wonderful English. All of her thoughts were based on their thoughts. She knew nothing of philosophy and law. She never read a novel or a play or a scientific book; but she talked apart every day with Isaiah and with David; she went through life and met death with John and Jesus Christ. Her company, surely, was not ignoble.

As for her knowledge, she knew men and women. It never occurred to her to paint a picture or to make a political speech or to dabble in science. Her errand into the world, she well knew, was to lift up human lives

Life Power Rather than Methods.

Ministers and churches are now, and have been for years, talking a great deal about methods of work. Fault is found with old ways of doing things, and various substitutions are discussed and projected. The modern worker must have something up to date. Time is wasted in pulling down and in trying to build up. Discussion waxes warm about this and that way of accomplishing desired results. Some persons fall out of service because the old is set aside, and others because the new is not tried. Every denomination is more or less agitated over questions of altering or improving existing agencies.

Those who are always talking up or proposing new methods, imagine that they are the forerunners of reformatory movements and that those who cannot see with their eyes are obstructive. They claim to be the sole progressives and remand those whom they are pleased to call conservatives to the rear. Division of interest ensues and often contending parties arise. There is a weakening of the forces of a congregation or of a denomination. There is much loss of spiritual and aggressive power.

This wrangling or disputing over methods is no good sign. It does not really indicate true progress, or abiding zeal, or vital energy. Method is not everything. It varies. It is relative. One method may be good in one place and bad in another. Due regard must be had to time, place and circumstance. Any method will accomplish beneficent results if it is properly worked. The great thing in each and every case is not the method used, but the life-power back of it and through it. The best of plans, either old or new, often fails because of the lifeless and unconsecrated spirit and force behind them. He who aims at success for Christ and puts his whole soul into his cause soon adapts himself to the situation and makes it turn to the advantage of his Lord's Kingdom. What we need to-day is not so much a change of methods in the Church movements, as more consecrated lives, a more personal enthusiasm, a more praying spirit and a more persistent activity. If all Christians, young and old, would take hold of the various instrumentalities at hand and work along the lines already laid down, there would be less friction and more practical results.—*Presbyterian*.

The Outspread of Influence.

at we do,—what we have been doing,—now not now; it may be that we shall hereafter. What Westtown does, what FRIEND does, comes up into view later on in a little—here a little, there a little. Now comes from Arizona to our table a copy of the Los Angeles Daily Times, a “minuteman,”—full, pressed down, and well-running over with information of well-known resources of that candidate for statehood. On a sheet portraying “leading spirits of Arizona’s great progress,” appears a portrait above which is pencilled the words, “Westtown Old Scholar.” and at its side the words, “Now getting THE FRIEND.” Looking at the picture we find printed the name of a character for whom both institutions seem somewhat to answer, according to their fitness in the Truth, namely, “Judge R. Street, Chief Justice of Arizona.” It is part Westtown has had in the making of this character, or the FRIEND in the imbuing of the spirit of a chief justice, remains revealed. All we know about it is, in our sense of responsibility has sprung into life through the message of that. We can only hope that both these men, of our Quakerism, the school and the law, by reflecting principles of the Law of the spirit of the life in Christ Jesus, “by the princes decree justice,” have helped to the administration of Law better than had not existed. We hope that they have conferred more than one lawyer to the aid of right law and authority, whereof we are Hooker, in his grave and noble declared: “Of Law, no less can be said, that her seat is the bosom of God, her voice the harmony of the world; all things in

heaven and earth do her homage, the very least as feeling her care, the greatest as not to be exempted from her power. Both angels and men, and creatures of what condition soever, though each in different sort and manner, yet all with uniform consent, admiring her as the mother of their peace and joy.”

Still farther also, even from extreme borders on the Pacific slope, come occasional reminders to us of a far-reaching responsibility. The sight and sense of this draws forth the acknowledgment, that, welcome as our subscribers’ contributions of patronage are, THE FRIEND more highly needs their right contributions of prayer.

It has been cheering to see, as one of the outcomes of the Old Scholars’ Association of Westtown, such revivals of tender respect for the underlying principles of that Institution, as to make some Old Scholars, though no longer members of our religious Society, welcome the coming of some continued representative of those principles to talk with them from week to week. Thus the Old Scholars’ movement has added to the subscription list of THE FRIEND. Perhaps more such will be thankful to be thus reminded of what they want.

And as Westtown contemplates her benign motherhood, not only of chief justices, but of incumbents of many a high station and many a vocation over the earth, she is doubtless braced up in a quickened zeal to walk worthy of the vocation unto which she is called.

Of these Old Scholars, what judicial decision has not been tempered more with Christ, what surgical operation has not been guided more with holy help, what essayist has not referred his brilliant thought more closely to the Witness for Truth, what housekeeper not been more turned to be a home-maker, what salesman not more concerned to give “quaker measure,” what talker not more scrupulous of the checks and openings of truth and good, than if Westtown had not worked, and the FRIEND for these seventy-five years not followed, in the upbuilding of our youth and manhood as subjects of the inspeaking Word? Not much are we disposed to claim for the united service, but surely a difference has been made.

There is but one right disposition for every centre of influence whether editorial, judicial,

or executive,—whether parent, teacher, fellow-pupil, doctor, elder or overseer—and that disposition is the concern of heart which is ever saying: “For their sakes I sanctify myself.”

KNOWING THE SCRIPTURES AND THE POWER.

—In view of the awakening interest in Bible study manifest throughout the country, the (Baptist) Watchman, while in sympathy with much of what is urged about the necessity of inculcating a better knowledge of the Scriptures, commends a spiritual, rather than a scholarly knowledge as desirable. It says:

And this kind of knowledge of the Scripture, the most fruitful and rewarding of any, does not come by any mere thumbing of grammars, dictionaries, or commentaries; it comes by meditation upon the words and that spiritual communion with God which anoints the eyes. It sometimes seems as if a season of meditation and prayer gave one a knowledge of the Scriptures, akin to that which one gets of a book when he has the privilege of an unrestrained and familiar conversation with its author.

The best knowledge of the Scriptures is not to be gained by a so-called “scientific study” of them, and least of all by the curious investigations of dates and origins. Something of this is useful, but after it has been done, only the foundation has been laid.

A CORRESPONDENT has pointed out, in the article entitled “In a Petrified Forest” in our last number, an assumption concerning the trees described, that they grew “millions of years ago.” He makes known his distress at seeing it, “fearing it might prove a seed of infidelity to many young minds . . . I know,” he says, “by sad past experience when about nineteen years old, the effects of such a seed on my own mind, which I was mercifully delivered from.”

The editor certainly intended to erase those obnoxious words from the article before it was printed, and is surprised to see that they were overlooked. Aware of the effect of such reckless guesses at time on those who devoutly believe they are taught otherwise in the Holy Scriptures, we are reminded of the solemn responsibility of “causing one of these little ones to stumble.”

Can a Woman Speak in Meeting?

The editor of the *Sunday School Times* gives the following answer to a puzzled woman who asks the above question:

"What Paul stated to the Corinthians, as his practice among them, or as his views for them, is one thing. They are to be accepted and approved accordingly. But, of course, they are not to be recognized as binding on all and for all ways, where they are at variance with God's approved course with his children in other times and places. We know that in the very beginning of the life of the Israelites as a people Miriam was a woman who led and taught the people in worship. Does that woman critic of women teachers think that God made a mistake in inspiring a woman to teach? Deborah was a leader and judge in Israel. What has our woman critic to say of such a way of God in this case? But these facts are of the old dispensation. How is it under the new? Philip, who was inspired, as was Paul, and whom Paul prized, had four daughters who prophesied (taught) under the influence of the Holy Spirit who inspired Paul. Priscilla was a competent Christian teacher, capable of instructing the eloquent Apollos. Paul approved Priscilla's not keeping silence (see Acts 18: 18; 18: 26; Rom. 16: 3; 1 Cor. 16: 19; 2 Tim. 4: 19). Of one thing we may be sure,—Paul approved of women whom God had inspired doing God's work in God's way. If any man or woman doubts this, it is well for that poor, ignorant man or woman to learn the truth. It is possible that such a misguided person may yet be saved. Why do not such persons study the Bible?"

The Doukhobors.

The Montreal Witness says:—
"Our correspondent, Mr. Booth, says it is generally believed in his vicinity that the immigration department has discriminated in favor of the Doukhobors and that if the opportunities given them had been offered to intending emigrants in the Old Country the places of these foreigners would have been filled by Britishers, who, it will not be disputed, are a more desirable class of settlers. We have reason to believe that this is a common view in Manitoba as we have heard the same remark made by very intelligent people from there. Yet it seems on the very face of it to imply too much. Can anyone conceive of any reason why our immigration department should prefer Russians, however excellent, to Britishers? There could be no race or religious reason for it and certainly there is no political reason. The French, if we may judge from their press, do not welcome the Russians, so it cannot have been they who inspired the alleged policy. It was certain that all the other provinces, and particularly Manitoba itself, would immensely prefer British settlers. It might therefore, one would think, be assumed that whatever has been done for these would have been a thousand-fold more gladly done to get English, Irish and Scotch settlers. Of course, there is no comparison between the Doukhobor migration of a whole people and any possible British emigration. There has not been, so far as we have heard, any general movement away from Britain during the past few years. Mr. Booth has not particularized the differences to which he refers. It is often necessary to deal wholesale on different terms from what one deals retail. But we do not know that any temptations have been withheld that could rightly

have been offered to tempt British immigrants to Canada. The question seems to have been, Doukhobors and Galicians or, for the most part, nobody. The question, so far as there was a question at all for the department, was whether the great west should be tilled by these brawny peasants or not tilled at all. Moreover, the country is equally open to all, and especially to those who need it most. We can hardly believe that our correspondent would really advocate the refusal of a refuge to these persecuted people, who had had to flee their own country and who were dying like sheep in Cyprus. We believe that our country is already much the richer for their coming. If, like Quakers, they will not fight on the other hand they will not get drunk, and that is practically a vastly more important item the life of a Canadian community. Nor are they ever idle, but always making the country richer. In this way they in a substantial manner atone for their unreadiness to fight. The Quakers, if they have fought no other battles, have certainly fought out the battle of liberty on the non-combatant question long ago. Mr. Ford's proposal to force them into the army would be the substitution of Russian servitude for British liberty. May the time never come when we shall have to require military service at the hands of those who hold it sinful."

TRIFLES.

BY GERTRUDE MORTON CANNON.

"To-day," said pretty Dolly, as
She opened her bright eyes,
"I'm going to give my dear mamma
A beautiful surprise.
I hardly know yet what 'twill be,
But I'll soon find a way
To do some unexpected thing
- To please mamma to-day."
"I'm tired of doing little things,
Why, any one can sweep
And dust, or wipe the dishes,
Or sing Evelyn to sleep.
'Tis some big thing I want to do.
If I could write a book,
Or save the house from burning, now,
How pleased mamma would look!"
So after breakfast Dolly went
And sat beside the fire,
While mother cleared the table off,
And mended baby's tier;
She wiped the dishes, made the beds,
And braided Bessy's hair,
While Dolly sat and pondered long
Within her easy chair.
And so Miss Dolly dreamed and planned
The busy morning through;
She could not think of anything
Quite large enough to do!
And as she went to bed that night
She really wondered why,
When mother kissed her lovingly,
The kiss was half a sigh!

—*Youth's Companion.*

Sport.

"I speak with the matured experience of one who has seen and taken part in sport in many and varied kinds in many and varied parts of the world. I can handle rifle and gun as well and efficiently as most 'sporting folk,' and few women and not many men have indulged in a tithe of the shooting and hunting in which I have been engaged both at home and during travels and expeditions in far-away

lands. It is not, therefore, as a novice that I take up my pen to record why I, whom so have called a 'female Nimrod,' have come regard with absolute loathing and detestation any sort or kind or form of sport, which in any way is produced by the suffering of a mals.

"Many a keen sportsman searching I heart, will acknowledge that at times a feeling of self-reproach has shot through him he has stood by the dying victim of his sport. I know that it has confronted me many many a time. I have bent over my fair game, the result of, alas! too good a shot. I have seen the beautiful eye of deer, and different kind, glaze and grow dim as the bright life my shot had arrested in its happy course sped onward into the unknown; I have ended with the sharp yet merciful knife the dy sufferings of poor beasts who have not harmed me, yet whom I laid low under veil of sport.

"I have seen the terror-stricken orb of red deer, dark, full of tears, glaring at with mute reproach, as it sobbed its life away and that same look have I seen in the glorio orbéd guanaco of Patagonia, the timid gaze the graceful and beautiful koodoo, springbok etc., of South Africa, seemingly, as it were reproaching me for thus lightly taking the I could never bring back. So, too, I have witnessed the angry, defiant glare of the v beasts' fading sight, as death, fast coming, deprived him of the power to wreak his vengeance on the human aggressor before he died.
"And I say this: The memory of those scenes bring no pleasure to my mind. On the contrary, it haunts me with a huge reproach, I wish I had never done those deeds of violence and cruelty."—*Florence Dixie in Westminster Review.*

THE NEW TESTAMENT CHURCH.—Some of the churches are losing their grip on society. It may be true, and it is certain that the present is an era of intense secularism. But there never has been an era when in some form antagonism of the world to the gospel of Christ has not been fully as potent and universal as it is to-day. The form is not the same for the environment has changed. But the source, man's alienation from God, and hostility to Divine grace is unchanged. The real question therefore is: Have not the churches lost their hold on the gospel? Have they not secularized both in spirit and method? Would they not in any preceding age have been as powerless as they now are, if their spirit and methods were the same? The Apostolic churches were creations of the Holy Spirit; they were exponential of the Church invisible. Their constituencies were filled with the Spirit; they wrought with joy in consecration in the confident of the coming of their Lord, and the final consummation of his kingdom. This was the hiding of their power.

We put the matter in this way, because the New Testament Church is a Divine institution and can fulfil its provisional and temporal mission as it intensifies this idea. The great need of the world in the prosecution of the cause of Christ, is to magnify the local church. First, let it be a creation of the Holy Spirit, then his organism. W. H. H. MARSH

MY LORD AND I.

of the Hugenots when they were hiding in rocks and caves in France during the persecution.

I have a Friend so precious,
So very dear to me;
He loves me with such tenderness,
He loves so faithfully,
I could not live apart from Him,
I love to feel Him nigh,
And so we dwell together,
My Lord and I.

Sometimes I'm faint and weary,
He knows that I am weak,
And so He bids me lean on Him;
His help I gladly seek.
He leads me in the paths of light,
Beneath a sunny sky,
And so we walk together,
My Lord and I.

He knows how much I love Him,
He knows I love Him well,
But with what love He loveth me,
My tongue can never tell.
It is an everlasting love,
An ever rich supply,
And so we love each other,
My Lord and I.

I tell Him all my sorrows
I tell Him all my joys,
I tell Him all that pleases me,
I tell Him what annoys,
He tells me what I ought to do,
He tells me what to try,
And so we talk together,
My Lord and I.

He knows how I am longing
Some precious soul to win,
And so He bids me go and speak
A loving word for Him.
He bids me tell this wondrous love
And how He came to die,
And so we work together,
My Lord and I.

I have his yoke upon me
And easy 'tis to bear,
In the burden that He carried,
I gladly take a share,
For then it is my happiness,
To have Him always nigh,
We bear the yoke together
My Lord and I.

HAMMON'S PROVERB.

JAMES BUCKHAM.

Hammon, well beloved, was wont to say,
"I ought went wrong, or any labor failed:
I know, friends, will be another day!"
In that faith he slept, and so prevail'd.

Give this proverb! While the world shall roll
Till fresh shall raise from out the night,
To baptize the indomitable soul
In courage for its never-ending fight.

And I say, is conquer'd till he yields;
He need not while, like mist from glass,
Does the strain of life's old battle-fields
Every morning that He brings to pass.

And, new hope, new courage! Let this be,
Thy cheerful creed. What's yesterday,
And its shards and wreck and grief to thee?
Let it, then—here lies the victor's way.

As the salt savors the whole, so should
The hands and power of the Lord, be
Of the earth, that truth and peace
Reveal and Christ's kingdom be estab-
lished among men.—Canada Epistle.

For "THE FRIEND."

In a Business Hour.

Having concluded an agreement with a mechanic that he should do for me a certain repair upon a property, his attention was called to the small copper insignia representing an Indian head, less than an inch in size, attached to the label of his vest, which betokened his connection with the secret order known as that of the "Red Men." Being asked how he, who on a previous occasion had hinted at his connection with Friends, should have allied himself with a secret order such as our religious society has a testimony against, the response came that for two hundred years his family had been Friends, but he had years ago married a Methodist, and, in the matter of uniting with the lodge, he had found that the outward token he displayed on his breast was "good for his business."

The reply was made that, conceding this to be so, did he think that the time and money given to lodge attendance, banquets and the like was well bestowed? Did he not think that the connection militated against that "business" which it was of the first concern that we should attend to? Referring to his uniting with the Methodists, he was told that an elderly member and trustee of that denomination, sitting in the chair which he was occupying, had said to me that although he was one of the originators of one of the most prominent secret orders, he had seen the waste of time, money and right effort which the affiliation involved, and he had advised his own son not to have anything to do with any of the orders. In the way of "business," the circumstance was recalled (it is stated by that worthy Methodist, the late Charles G. Finney, in his forcible, printed testimony against Freemasonry) of a man in a western State who had come a long distance with a wagon load of pork to the railway station; that the delivery was much obstructed by others who had arrived in advance of him, but that the freight agent, finding him to be a fellow Mason, had conveniently accommodated him much in advance of his turn. Was this method of self-advantage a commendable kind of dealing? My Red Man admitted that it showed pretty sharp practice in looking after one's interest, yet it was not apparent that he was prepared to condemn it; for, confessing that he was a negligent attender of his order's meetings, he yet insisted that he only cared for the connection so far as he "found it good for his business." Unfaithful, alas, even in the unrighteous mammon!

It is understood that a procedure attendant upon initiation into the secret order just referred to, includes a mock assault with tomahawks and other offensive weapons by the "tribe" upon the new applicants for membership. How entirely inconceivable that any of the Scattergoods, Worths, Elkintons and others, who, for generations, have interested themselves in the true welfare of the Indians, should be found entangled in such puerilities! May any Friend who may have gone into such secret lodge alliance come away from it, and giving what time and service he may to the best "business" of the religious denomination in which his lot has been providentially placed, so "strengthen the things that remain." The following excerpt from a late number of a

lodge organ sufficiently evidences that the fellowship referred to is at enmity with that which has been taught by the Scriptures of Truth, wherein it is searchingly asked—"What fellowship hath righteousness with unrighteousness and what communion hath light with darkness?" The frank admission of the secret order editor is this:

"It should be remembered that a candidate is powerless to defend himself, and that if he attempt to do so there is added danger that he may break an arm, or a leg, or injure himself seriously in some other way. Moreover, some men have weak hearts that are apt to fail them under a great nervous strain, and it is not improbable that a death might occur during an initiation ceremony that is not conducted according to the ritual. [Fatal endings of initiations, whether according to ritual or outside of it, have been many times published.]

"Who has not seen candidates dripping with perspiration and trembling from head to foot when no liberties whatever were taken with them? Suppose these men were roughly handled, what would be the result? Complete nervous prostration, undoubtedly, from which they might never entirely recover. Degrees are intended to convey lessons, and the makers of rituals have taken particular pains to exclude from them anything that might savor of the performance of the circus ring, yet the clown is often in evidence during an initiation ceremony. Let us by all means respect the feelings of candidates and have a decent regard for our obligation to take part in no ceremony that is not sanctioned by the ritual."

JOSIAH W. LEEDS.

The Deliverer.

The effect of the grace and coming of Jesus, is indeed to save people from their sins; and to them who will be his, and believe that He has all power committed to Him in heaven and earth, and had the victory over the world, the flesh, and the devil, He can, and doth give power. Stronger is He that is in us, to wit, Christ, by his Spirit, than he that is in the world; and more powerful is Jesus to save, than the devil is to compel men to sin; for he can but tempt. Yielding to his temptation brought misery upon our first parents; and yielding is the cause of misery still.

The second Adam, the Lord from heaven, the Restorer of mankind, did not say that we should not be tempted, or have no onset in the field, where the usurper goes and hath his food—the earth and the dust thereof. He that was so bold as to approach and tempt the Lord of Glory, will no doubt assault his followers; and the Lord, who well knew what we should meet with, advised and counseled to watch and pray, that we enter not into temptation; which was as much as if He had said, "If anything that is evil trouble you, touch it not, but pray to me, and I will assist you." So that it is the Lord who worketh this deliverance. God must have the praise, who is worthy, for his own works praise Him, because they are wonderfully made manifest in this age of the world, after so long and dark a night of apostacy.

Blessed be God, who is the spirit of light and of purity, and has now eminently broken forth by his Son to enlighten the children of

men in the heart. His spirit and great power hath been stronger than the power of darkness, pulling down and spoiling the works of the old adversary, yea and binding and casting him out; fitting the creature for his heavenly building, to be as a stone or a pillar in this his latter house, which God is building of living stones, disallowed indeed by the worldly wise of this day, but approved of God who is the Chief Corner Stone and Lord of all.—*Alice Hayes (1657—1720).*

HEROES AND HEROES.

We give unstinted praise to the man
Who is brave enough to die;
But the man who struggles unflinchingly
Against the currents of destiny
And bears the storm of adversity
We pass unnoticed by.

We've plaudits and tears for him who falls,
Borne down in the shock of strife;
But a word of cheer we neglect to say
To him who plods on his dreary way
And fights in silence from day to day
The unseen battles of life.

There's courage, I grant, required to face
Grim death on the gory field.
There's also courage required to meet
Life's burden and sorrow; to brave defeat;
To strive with evil and not retreat;
To suffer and not to yield.

Some moments are there in every life
When the spirit longs for rest;
When the heart is filled with a bleak despair;
When the weight of trouble, remorse and care
Seems really greater than we can bear,
And death were a welcome guest.

But we crush it down and we go our way
To the duties that lie in wait,
From day to day we renew the fight,
To resist the wrong and to seek the right,
To climb at last to the sun-crowned height—
And to climb o'er time and fate.

And thus—for my heart goes out to them—
My meed of praise I would give
To those who struggle life's path along,
The host of toil, who are patient, strong,
The unwearied, unnumbered throng,
Who are brave enough to live.

—*Rocky Mountain News.*

Sacrificing Convictions.

There are multitudes of people who in one way or another are led to yield their consciences, sacrifice their convictions, and conform to this world's usages, maxims and principle. They yield a little here and a little there; they assent to something which they do not believe, and do something which they do not think quite right; and they think they can do so much more good, have so much greater influence, and live a much easier life by conforming to the wills and wishes of others. They think a little compliance of this sort will make but little difference. But when a man has yielded his convictions, he has lost his power, he has taken off the keen edge of his conscience, and from that time he becomes a crippled, helpless, powerless man.

How many persons there are who once were strong, but now are weak, who, while they may have gained opportunity, have lost power, who no longer are sustained by the deep, settled conviction of conscience, and the consciousness of right-doing, but who have yielded to be governed by expediency, ruled by circum-

stance, and carried hither and thither by the currents and counter-currents that are surging to and fro through the world.

Young man, beware how you stifle your convictions or sell out your conscience. No matter how fragrant the mess of pottage may be which is offered you in exchange, if you sell your birthright the time will come when you will be glad to recall the past, when you would be glad to accept poverty and suffering with a clear conscience, and when you will hate and spurn the price for which you have sold your convictions, your manhood, your uprightness of heart. Wait till God shall give you light. Do not make haste to yield those principles which you believe to be true. Be strong in God, and He shall open you a way of deliverance, or give you strength to bear your burdens, and bring you off more than conqueror through Him that hath loved us.—*The Armory.*

Cruel Laxity.

The article entitled "Self-Discipline" on page 135 of the current volume of THE FRIEND is calculated with the unthinking to produce such an erroneous impression, that a short comment upon it appears to be not out of place.

On what ground it is possible to justify a general prison diet composed of chops, steaks, eggs, and other delicacies it is very difficult to see. If there were one criticism to which our modern prisons are open as a class it would be that their systems of discipline are not sufficiently rigorous. So far has this reactionary movement gone that a writer in one American review remarks that the "whole system of our criminal policy, viewed as a means of suppression, may be said to have degenerated into a farce," and the late Charles Dudley Warner, himself by no means inclined to err on the side of severity, in an article in *The New Princeton Review*, after commenting on prison attractions, similar to those now under discussion, says, "Do these reformed prisons reform?" and adds "All this better lodging and better feeding of convicts is nonsense, because it does not diminish the volume of crime."

Of course the loss of liberty is a serious—a very serious—punishment to most men; and yet what is the moral effect upon a community where convicts are better housed, better clothed and better fed than the average laboring man and his family? The race has properly revolted from the horrid atrocities practised on the inmates of prisons for generations. That is no excuse, however, for the rushing to the other extreme as is now the tendency, and through a maudlin sentimentality making a hero of every convict, and supplying him with luxuries which honest men are not able to supply themselves with by their ennobling toil.

A prison system, if successful, should strike terror to the heart of every offender. Cruel laxity in punishment is a high crime against society; a social crime, appealing to the tendency of the day but one which is sowing a wretched harvest for both the immediate and the distant future to reap. When men commit crime, as we see frequently reported in the newspapers, with the object of being sent to prison for a season, something is surely awry. An enlightened sentiment will demand that all prisons be managed upon humane principles

in every particular. But that sentiment never lose sight of the fact that reformat of the individual should be the primary object to be striven for. The results prove that efforts in this line are most discouraging measured by percentage. Yet that is no reason for ceasing to strive to obtain better results.

It is a fact that cannot be refuted that most modern prisons, where great numbers of criminals are herded together, are veritable beds of crime, to use a rather threadbare expression. Questions of prison reform and prison discipline are now receiving more attention at the hands of thinking people. Unfortunately too little consideration is usually given to the elevation of the spirit side of the individual, where alone true reform can be hoped for. There is no substitute for Divine Grace. All other means are auxiliaries, which may assist, or may retard in the upward or downward career.

The words of Scripture are that "the way of sin is death." Chops, steaks or eggs for breakfast are not such a diet as is calculated to make any convict think so. Probably a side of jail many of them lived from hand to mouth, not frequently sitting down to "excellent food, nicely cooked." For such men this sort of prison discipline have so deterrent an influence as to assist them to fight the next temptation? I fear not.

Our English Friend, William Tallack, sums up this question in a chapter entitled "The Social Crime of Cruel Laxity" in his excellent book "Penological and Preventive Principles."

"The Law and Penal System should be effectual 'terror to evil-doers' And system of utterly inadequate sentences, pleasantly associated imprisonment, which deals in a lax and essentially ineffectual manner with the perpetrators of such outrages in itself, a serious and cruel crime against the best elements of the community, however plausibly it may be advocated under the guise of a false 'humanitarianism' or of special 'modern reform.'"

"It is not in accord with the precepts of inspired wisdom, or with the example and precept of the Divine government."

GEORGE VAUX, JR.

PHILADELPHIA, Eleventh Month 11, 1907.

THE CHRISTIAN PRINCIPLE OF DRESS.—He who takes in speaking of Friends' principles regulating their dress, expresses himself thus—"Our principle is, to let decency, utility and simplicity be our principal guides; and to conform to the changeable fashions of a vain and fluctuating world; though we occasionally adopt alterations, which are convenient or useful. This is a principle, the propriety of which, I apprehend no one will deny; and it is easy to suppose, that such a rule must make those who adopt it, generally singular in their appearance. It is not, however, for the sake of singularity, that we prefer different from others; yet we have reason to believe, that even this singularity is without its use. It is, in some respects, like a hedge about us; which, though it does not make the ground it encloses, rich and fruitful, frequently prevents those intrusions, by which the labor of the husbandman is injured or destroyed."

Science and Industry.

ATS.—There are two curious things about that are not generally known. Yellow s, however, few in number, always indicate female; no male ever had the slightest of yellow. That is one curiosity, and the r is that a blue-eyed cat is always deaf. e sure, blue-eyed cats are scarce, and it is possible that some deaf cats may not be -eyed; but whenever you find a blue-eyed cat feline is absolutely incapable of hear-hunder. —*Late Paper.*

SPOOL-PEST IN FORESTS.—The white- rests of Maine are threatened with obn by the ordinary little spool on which ound. White birch is the only wood ed for making them and so great is umption that the trees have a hard supply the demand. The spool mites thirty-five or forty million feet of ber every year, turning out 800,000, pls. Somebody has figured out that

enough thread could be wound on these spools to reach around the earth at the equator 3600 times. Beside the immense quantity of the timber used here, fifteen or twenty million feet of it is shipped to Scotland every year in the form of spool bars.

LOCKJAW, or tetanus, has caused many deaths recently and the malady is being closely studied by leading medical scientists. The subject recalls an incident in connection with the death of a young woman in New York from lockjaw, which reveals some curious facts in connection with the development and propagation of the lockjaw germ. The patient, while walking near her home, on West Twenty-sixth Street, had the thin sole of her shoe pierced by a wooden splinter on the sidewalk, penetrating her foot, but causing only a slight wound. She was taken to the New York hospital, on West Fifteenth Street, but as the anti-toxin remedy was not then in use her death followed from blood-poisoning. The doctor who had charge of the case, in explaining it expressed his firm belief that the tetanus germ had been carried into the wound from the splinter. "The probability is," he said, "that the splinter fell from a stick of wood brought to the city, from Long Island probably, and after it entered the blood the poisoning quickly followed." He referred the writer to a celebrated physician on Madison Avenue for details as to the germs found on Long Island, and the doctor told, what appeared to me to be, a remarkable story.

"The hospital physician was right," said the doctor, "when he said the splinter carried the germ with it probably from Long Island. In and around the villages on the Long Island seacoast, the soil swarms with the germs of tetanus. There are millions upon millions of them just below the surface. The discovery was made by noticing that many of the bare-footed fishermen died of lockjaw while working along the shore, and an investigation followed. In all my knowledge I find no parallel to this condition of affairs. The accuracy of the statement was questioned for a long time, and so interesting was the subject that a commission of British scientists came from England and made a thorough investigation. They found the reports true, and published the results in a medical work (which the doctor produced), showing that myriads of the germs infest the soil to an extent unknown anywhere else in the world. They made the test by plunging an iron rod in the soil. Clinging to the earth, on a single rod, were hundreds of the germs, which were subsequently developed in a broth culture and photographed." [They were reproduced in the medical work referred to in little groups, in size and shape of a small pistol cartridge.] "No one knows what cause the enormous germ deposits in that particular part of Long Island," remarked the doctor, "and probably never will; but the fact is a curious one, and not generally known even to the medical profession."

SLEEPLESS TREES.—The *London Telegraph* reports that some of the trees on the Embankment cannot thrive because they are deprived of rest at night. Powerful electric lights take up the work when the sun sets, and the

trees, it is said, languish from arboreal insomnia. It is the light, not the kind of it, that does the mischief, for electricity stimulates growth. The victims cannot, like the tired night-worker, draw down a dark blind and make an artificial night, nor imitate the lyric maiden who "closed her eyes when she went to sleep." The tree is nearly all eye—its leaf is eye, lungs and skin. A pretty experiment which Professor Dewar showed the other day illustrates all this. The end of a plant covered with leaves is immersed in a small tub containing water, and a picture is thrown on the screen. Instantly the water can be seen flowing into the plant. Then the leaves are stripped off, and at once the transportation of fluid ceases. If too long continued light be the true cause of the trees languishing, then it would seem that they also need rest for reparation.

THE ELECTRIC TYPEWRITER COMING.—Electricity is fast coming to the aid of the over-worked typewriter. Typewriting has become such an important matter in all large commercial houses, in almost every country in the world, except Turkey,—where the machines were excluded by the Sultan, because they were manufactured in the United States,—that the application of motive power, for the purpose of increasing efficiency, will be welcomed. In the new electrical device, the physical force is supplied by an electric current, acting through a magnet. The operator works with more rapidity, for the keys fall to one-third the depth, with one-tenth the pressure required on the modern machine. It is claimed that the electricity will secure uniformity of the writing, and that the light action will make it possible for the manipulator to use all his fingers. An increased current will print a dozen manifold copies with equal ease.—*October Success.*

Some Words and Their Uses.

In *Correct English* we find the following definitions:

Anarchism, in one of its meanings, is a social theory which regards the union of order with the absence of all direct government of man by man as the political ideal; absolute individual liberty. The most noted expounder of this theory was Pierre Joseph Proudhon (1809—1865), whose views have been adopted, with various modifications, by many agitators. Its present most noted exponent is Prince Kropotkin, of Russia.

As generally understood anarchism means a state of society in which there is no capable supreme power, and in which the several functions of the state are performed badly or not at all; social and political confusion. Anarchism is the wisdom of the man who burned down his home because his chimney smoked. It would destroy by violence, if necessary, all existing government and social order, leaving the future to determine what, if anything, should be raised upon their ruins.

Socialism is a theory of civil polity that aims to secure the reconstruction of society, and a more equal distribution of the products of land and capital (as distinguished from property) and the public collective management of all industries. Its aim is extended

industrial cooperation. Many socialists call themselves collectivists and their system collectivism.

Communism in its full sense means the abolition of inheritance, the abolition of the family, the abolition of nationalities, the abolition of religion, the abolition of property.

Setting the Country's Clocks.

[Although one of our columns last Sixth Month 8th contained a portion of the following article, yet we accede to desires forwarded from different quarters, to print this enlargement of it.—Ed.]

There are seventy thousand clocks set by the Government every day when the noon hour strikes in Washington. In every large city throughout the United States time balls at the same minute indicate the time to hundreds of watches are regulated to correspond with the signal. This time service comes from the Naval Observatory in Washington, and its original design was to furnish mariners at seaboard cities with the means of regulating their chronometers. Like a great many other Government institutions, it has strayed from its original purposes, and now it serves another of more general usefulness.

This time service is ostensibly free; actually it is not free, but costs the owner of each clock \$15 a year. The Government furnishes the signal free, but the Government does not deliver it. If you want to string a wire to the Naval Observatory from your office in New York or Chicago, or San Francisco, the Navy Department will furnish you the signal every day without money and without price. But the stringing of wires is costly and attended with great difficulties. So you necessarily turn to the telegraph company, with its three hundred and fifty thousand miles of wire; and this company puts a wire into your office and connects it with its great system which has a wire running into the Observatory. No one knows what the company receives from its time service, but reckoned on a basis of \$15 a clock each year, and seventy thousand clocks, the amount should be more than a million dollars. This sum it receives for suspending all business on its wires from 11.57 to 12 o'clock, Washington time, each day, giving the operator at the Naval Observatory full control of them. Actually the operator there does not send the signal—it is sent automatically by a remarkable clock—and so far as the time balls are concerned, the preliminary work is done by a man in charge of each, who hoists it to position and throws its machinery into the circuit just before the final signal goes out.

The Naval Observatory contains a great many fine instruments. It holds what was for a time the largest telescope in the United States—the twenty-six inch Clark equatorial—which cost \$46,000, and was erected in 1873. With the Clark telescope Professor Hall discovered the satellite of Mars, and there are other discoveries to its credit in astronomical history.

The big telescope has nothing to do with the time signal. The telescope used in the business of measuring time is the transit instrument, which is much smaller. Here, on each clear night, an observer watches the

movement of the stars, and by their aid corrects the big Frodsham clock which stands in the signal room. In the making of the observations the web of the spider plays an important part. Threads of cobweb are not only fine, but wonderfully strong for the fineness. They also possess a remarkable stability, not being affected by moisture and neither expanding or contracting with the changes in the temperature. These threads are used to make cross lines extending at right angles across the field of view, so as to divide it into mathematical spaces. For this purpose it is found that spiders' webs gathered near Washington are more efficacious than those which can be obtained elsewhere. Some years ago the directors of the observatory sent to China for webs, thinking that the large spiders of that country would produce an especially desirable web. But it was found that in their peculiar field the American spiders were superior to the foreign—another triumph for home industries. The Washington spider webs are obtained by expeditions sent out in June of each year. They collect from barns and fences the cocoons of big "turtle back" spiders. Each cocoon is bound with a single filament, and this is reeled off and used to divide the telescope's field of view. By their aid the observer measures the movements of the stars and determines exactly the time. The big clock is regulated to the minutest measurable fraction of a second and left to feel its measured way through the hours till morning. It is not affected by any of the movements that jar tall buildings and shake smaller ones, for it is secure in a deep sunk pedestal of granite.

All through the signal room, as the day observer enters, there is a buzz as of grasshoppers in the field on a warm summer day. This is the voice of the chronometers, which fill long wooden cases. All the navy's chronometers are sent here to be regulated.

Opposite the Frodsham clock are two less costly timepieces, which contain the mechanism for sending out the time signal. These timepieces cost between \$700 and \$800 a piece.

The Frodsham clock is set for sidereal time. Between this and standard Eastern time there is a difference of eight minutes 12.09 seconds. The other clocks, when they are regulated by the Frodsham, must be made to vary just eight minutes 12.09 seconds from it. This is accomplished by an ingenious recording device. A cylinder standing on an adjacent table is made to revolve at a fixed rate of speed. A stationary pen loaded with red ink makes a straight mark on the paper, which is fastened round this cylinder. In each of the two clocks is a cogged wheel just behind the dial which turns with the second hand. Each of the cogs in turn touches a brass spring, which closes the circuit of the battery. An electric impulse from this battery passes through the pen and by a mechanical arrangement causes it to make a horizontal mark on the cylinder. Thus every second is permanently recorded. The Frodsham clock is also in circuit with this pen. A cup of mercury rests in this clock. It is connected with one pole of the battery. The pendulum is connected with the other. As the pendulum swings it touches the mercury in the cup, closing the circuit and sending an electric impulse through the pen. This im-

pulse also causes the pen to be deflected to leave a mark on the cylinder.

It is easy enough to set either of the clocks within a second of the Frodsham set the minute hand at the eight minute variation and the second hand twelve seconds more. But the fraction of the remaining second is to be measured with great nicety. This is done by measuring the space between the marks on the cylinder with a prepared graduated scale which shows the difference between two beats to hundredths of a second. The operator doing this accelerates or retards the clock to be regulated by touching the pendulum with his finger till the space measured shows that the fractional difference is nine-hundredths of a second. Then the clock is ready for the day's work.

All this takes place not too long before noon hour, so as to give the clock little to lose or gain. There is a sounder on the side of the clock which steadily ticks off the second loud enough to be heard in the adjoint room. At three and a quarter minutes before noon approximately the big clock is switched into the telegraph circuit.

This signal clock has a toothed wheel directly behind the wheel which marks the seconds. The wheel is divided into sixty spaces but the tooth representing the twenty-second is missing, and so are those representing the thirty-fifth, fifty-sixth, fifty-seventh, fifty-eighth and fifty-ninth seconds. As the wheel revolves, the teeth come in contact with a spring which is in connection with the current, closing the circuit and causing a sounder to respond. The twenty-ninth drops out, and that intermission indicates an approach of the half minute. In the same way an intermission of five beats indicates an approach of the end of the minute. This arbitrary arrangement is designed to warn operators all over the country when they cut in at what point they have come on the circuit. Before the final signal there will be a lapse of twenty seconds. This is brought about by action of the operator at the observatory, is not automatic like the other intermissions. It is produced by the operator moving a switch key, which throws out of the circuit the wheel marking the seconds and throws into circuit the wheel that marks the minutes. If an operator comes in on the circuit and first intermission he notes is a single second he knows that he has come in on the half minute. If the intermission is five seconds he knows he has come in just before the minute but not the final minute. If he counts more than five seconds, he knows that it is the intermission before the noon hour, and he is accordingly.

What this operator and what all operators have to do in regulating the time ball is to switch between the sounding of the first second and the signal which marks the minute. As soon as the operator has counted more than five seconds in the intermission, he knows that the next signal will make the act hour of noon. The time ball has been hoisted to its position at the top of the pole.

These poles are in conspicuous places in every large city in the United States, usually on top of the Western Union Telegraph building. The ball is of canvass over a globular frame. There is a mechanical device by which a signal

se sent over the wire when the time ball circuit pulls the trigger and releases the fact that it falls to the bottom of the pole. Intermission which he knows precedes the signal, the operator throws the lever, and in this way all the time balls in the country are brought into the circuit with the Naval Observatory.

The last one hundredth of the last second of the fifty-ninth minute of the eleventh hour strikes the tooth of the big minute hand, and touches the spring which closes the circuit and simultaneously the time balls all over the country drop. When I say simultaneous—course I make no allowance for the fraction of a second during which the electric impulses are going out from Washington. Such an error has been sent from Washington to the clock in one-fifth of a second.

The dropping of the time ball sets the clock on Governor's Island, one of the military posts at New York, through the intermediary of a bugle call. Just before noon of each day two enlisted men are stationed at a post commanding a view of the tower of the Central Union building. One of these is a colored man, with a powerful field glass. The other is the most bugler. The signalman motions the bugler at the moment of the time drop, and the bugler sounds the call for the time.

All over the island watches and clocks are adjusted, and though they do not achieve perfect time to that fraction of a second marked by the electrically controlled clock, they become accurate enough for all military purposes.

The clock regulating is done by another mechanism. The same signal which drops the time balls throws a lever in the mechanism of clocks all over the country. The lever strikes a cam, which governs the movement of the minute and hour hands, and with one motion the lever throws these hands to the correct position, making the clock mark the exact time, minute and second of noon.—*Washington Star.*

FOR "THE FRIEND."

He Shall Teach His People Himself."

Dr. Drummend in one of his addresses to the congregation stated the following:

"One of you have heard of Helen Keller, a deaf girl, who is deaf dumb and blind. She was seven years old her mind was as blank" (so far as outward knowledge was given her). "Nothing could get into her mind, because all the avenues of the world were closed. Then by that great teacher, which Boston has discovered, by the blind see, the deaf hear, and the dumb speak, that girl's soul (mind) was opened. Then they began to build up a mind—to give her a certain amount of information and knowledge. But no one liked to tell her the truth. They reserved that for Phillips."

After some years had passed they took her to the city and he began to talk to her, through the young lady who had been the means of her senses, and was able to communicate with her by the delicate process of touch. Then Phillips began to tell her about God, and what He had done, how He loved her, and what He was to do. The child listened very intently. Then she looked up and

said: "Mr. Brooks, I knew all that before, but I didn't know his name." There was some mysterious presence, some compelling power, some guide, some elevating impulse, within her soul. "It is God," said Phillips Brooks, "which worketh in you. God is with us and in us."

Another instance of the impression made upon very young minds, by the Divine Spirit, occurred near the residence of the writer.

A little girl some five years old, had been corrected by her mother for some misbehavior during the day. On retiring to rest at night she kneeled down by her bedside, and after asking a blessing upon her father and brothers added, in the hearing of her mother, who was sitting in a corner of the room, "Not mamma. There's no use; she's too bad!" Then she got into bed; but was not able to go to sleep until she had got out the second or third time. Then going through the same formula as before added, "and bless mamma, too." Then she got into bed and went to sleep.

Cultivated Living.

Professor Charles Eliot Norton addressed the Radcliffe college graduates this year. The address was listened to with the closest attention by the seventy-four graduates and was greeted by great applause. Among other things he said: "The best service which you can render in the world is to make yourselves living representatives of ideals of beauty in character and in conduct. This is the justification of your education. From lowest to highest act of daily commonplace experience there is none in which an ideal loveliness may not display itself.

"The world will do its best to hinder you by exposing you to the influence of the low motives and the vulgar ambitions of its votaries. But be faithful to yourselves and to your own ideals, so that you may exhibit in the world the fair ideal of true womanhood.

"There was never greater need of the incomparable service which you can render by so doing than there is to-day in our vulgar semi-civilized America. The advance of our civilization depends on the joint efforts of the little band of women and of men whose education has given them understanding of the true aims of life.

"The final aim and effort of civilization is to make life pleasanter, and this is the object of what we can call good manners. With the rapid rise in the social orders of the great masses of men and women who, till very lately, have had little share of civility, there is risk of the lowering of the standard of manners by the mere force of moral gravitation.

"The vulgarity of the multitude affects even those to whom vulgarity is abhorrent. The mind becomes more or less injured to it. By degrees, in its less odious forms, it may even cease to shock. And it is for you, the gentle and well-bred, to conform in nothing to the vulgar standard, and, in the crowd, to set the example of refinement, elegance and propriety.

"There is one form of vulgarity to which young women are in these days specially susceptible and exposed. It is the exaltation of brute force and skill in the exaggeration of esteem for athletic prowess. You are tempted to rival your brothers in sports fit for men

alone, and you are still more tempted to admire as the height of manly achievement what at its best is merely evidence of qualities of body and mind in which civilization counts for little, and in which the barbarian may equally excel.

"Physical strength, athletic ability [are good for little unless they are the basis and support of higher moral and intellectual performance. We forget the names of the winners of the Olympic games. It was not they who won the fight at Marathon. Alcibiades might be among them, but not Æschylus or Pericles.

"In a democracy like ours it is the women who are the makers of manners and who, in a great part, are the makers of morals as well. It is not through the extension of political privileges, nor through possession of the franchise, or the holding of office that you women can exert your strongest influence in the improvement of politics. The greater questions of public concern are ultimately always questions of morals, and your power, in itself mainly a moral power, can be exercised to most effect by requiring of men in public life as strict adherence to the principles of morality, of manners, and of honor as is demanded of them in their private conduct.

"The laxity of women in their condemnation of public crime, their unconcern as to the breaking of national faith, their encouragement of the jingo spirit, their indifference to the sin and horror of war, is one of the plainest evidences of the low stage of our boasted and beautiful civilization."

Items Concerning the Society.

Philadelphia Quarterly Meeting having approved of the appointment of one or more evening meetings for Divine worship, under care of a committee, one such meeting has been appointed to be held on Saturday evening the 22nd instant, at 7.30, in the meeting house on Twelfth Street below Market street. All members and attenders of [Friends'] meetings are invited to attend.

The Managers of the Shelter for Colored Orphans, at Forty-fourth and Haverford Sts., Phila., have added a well equipped infirmary of modern design to their valuable home school. This addition, and in fact the whole institution, was opened for inspection on the afternoon of the 15th. A large company of Friends attested the steady interest of the Society in the colored people and in intelligent work for them. It is to be hoped that speedy contributions will soon wipe out the debt incurred in this addition, so that the Board of Managers will be untrammelled in their efforts for progress. One notes with pleasure that a number of young women Friends are members of the Board, and they doubtless find an ample field for usefulness in caring for the present inmates of the home, and in following those who have gone from it with a sympathetic interest. Strangers to this good work will rejoice to know that in addition to the elements of an English education, cooking, sewing, house-cleaning and washing are regularly taught.

Notes from Others.

Whenever opposite views are held with warmth by religious minded men, we may take for granted that there is some higher truth which embraces both. All high truth is the union of two contradictions, and is not found in a middle path between the two.

The *Religious Telescope* recently published an article on "ministerial whines." A copy of the paper fell into the hands of a lawyer of some twenty years' practice, who has also served some years as judge, and who is now one of the commissioners of the Supreme Court of his State. He is said to be a Christian man and a church-goer. He writes as follows:

"I am just through reading your observations on the Chautauque. That portion relating to the ministerial whine is so thoroughly in line with my own views that I must thank you for it. That whine is the fly in the ointment nine times out of ten. Why preachers cultivate it, is one of the mysteries. Most of them have sensible wives or other relatives, and why such relatives don't interfere, is another mystery."

"HAZING" THAT IS CHRISTIAN.—"Hazing" at Wellesley College has taken on a happy form from the very beginning of the institution. According to the *Silver Cross*, the upper class girls vie with another in making newcomers feel at home, escorting them to their rooms, showing them over buildings and grounds, and relieving the sense of homesickness and loneliness in a crowd that is inevitable under such circumstances. Last year the freshmen were welcomed even before they reached the "College Beautiful" for each girl received during the summer a note from some upper class girl, proffering assistance on her arrival. The plan was started and carried out by members of the Christian Association of the College. It is capable of adaptation and use in many other places. We recommend it to the boys and girls who have just taken up anew their school work.

YALE'S DEBT TO CHRISTIANITY.—In its consideration of the late bicentennial of Yale University, the *New York Observer* thus gives credit to the Christian ideals of that seat of learning:

"The highest learning is to know God, and those Christian ministers who have been at Yale, and [they] who repaired its buildings and presided over its destinies, laid firm foundations, and builded a noble edifice for broad and thorough education, because they began with the knowledge of God, and made all other knowledge subordinate to and co-ordinate with this knowledge. Two hundred years of Christian education sums up the record of Yale. Its philosophy and ethics have been drawn from the Bible. Its scientific teachers, like Silliman and Dana, have been reverent and Christian investigators. Its Oriental scholars have found their most interesting researches in the sacred oracles of religion, and its jurists and publicists, from Chancellor Kent [down], have established the basis of their jurisprudence and statesmanship upon the law of God, and those ethical principles which are matters of revelation rather than of intuition."

SUMMARY OF EVENTS.

UNITED STATES.—The stream of meteors expected to appear this year and believed to be of the same group seen in 1835 and 1867, was visible in some places on the night of the 14th. A dispatch of the 15th from Northfield, Minn., says: Professors and students of Carleton College recorded and charted more than 1000 meteors last night. The shower began about 11:30 o'clock and continued until sunrise. All the meteors of any importance were charted upon specially prepared charts. The climax was reached at 5:18.02, when a brilliant meteor was seen to enter the constellation of Hydra. By accurate determination the trail persisted for twenty-two minutes. Several thousand large meteors were seen at Goodhue's night, the shower began at Los Angeles, Cal., of the 17th, says: The fall of meteors was quite marked in this city just before daylight yesterday. The display was at one time brilliant, but there was a steady fall of the brilliants after 1 o'clock. One watcher counted 385 between 4 and 5 o'clock, while the total number seen in this city is estimated at a thousand. Some of the meteors were very beautiful, leaving brilliant trails of green and red. One hundred meteors were counted between 4.04 and 4.20 o'clock.

Carroll D. Wright, the United States Commissioner of Statistics, computes that for the twenty years ending Twelfth month, 1900, there was a total of 14,000 deaths by strikes and lockouts of not less than \$468,968.581.

An ordinance has been enacted in Reading, Penna., imposing a fine of from \$5 to \$50 for spitting on the sidewalks.

A teacher in the Girls' High School, in Philadelphia, who was lately suspended because she refused to vaccinate, has brought the matter into the court, and a decision has lately been announced in which Judge Arnold dismisses the case, and says: "As School Directors may, in the exercise of a sound discretion, exclude from the public schools pupils who have not been vaccinated, as was decided by the Supreme Court in the case of Duffield vs. Williamsport School District, so they may exclude teachers and other employees for any reason. The protection which vaccination is believed to afford must be reciprocal; teachers and pupils are alike entitled to protection against contagious diseases."

A company with a capital of \$400,000,000 has lately been organized under the title of The Northern Securities Co. for the purpose of consolidating the great Northern Railroad and the Northern Pacific by the ownership of the stock of these two companies, and controlling other competing roads. A community of interests has thus been established among the railroads of the Northwest. This combination is said to be the largest in the world relating to railroad interests.

According to Captain Broadbent, just returned from Alaska, from the northern shores of Kotzebue Sound to the Arctic Ocean, a distance of 300 miles, is one immense bed of bituminous coal, and he says there is enough coal in sight to supply the world for many years.

The preliminary estimate of the average yield per acre of corn, as published in the monthly report of the Statistics of the Department of Agriculture is 16.4 bushels, as compared with an average yield of 25.3 bushels per acre in 1900 and 1899, and a ten-year average of 24.4 bushels. The present indicated yield per acre is the lowest general average ever recorded for this crop, being 2.2 bushels per acre below the yield in 1881, which has stood for twenty years as the lowest or record. The preliminary estimate of the average yield per acre of potatoes is 59.9 bushels, against an average yield per acre of 80.8 bushels in 1900, 88.6 bushels in 1899, and a ten-year average of 78.7 bushels. The preliminary estimate of the average yield per acre of hay is 1.32 tons, against an average yield of 1.28 tons in 1900, 1.35 tons in 1899, and a ten-year average of 1.28 tons.

A recent earthquake in Sevier County, Utah, has caused damages estimated at \$100,000. In many parts of the country landslides have occurred, blocking railroads, changing the course of streams and causing general disorder.

The annual report of Commissioner General Powderly, of the Immigration Bureau, shows the total storage arrivals in the United States during the year to have been 487,918, an increase over the preceding year of 39,346. During the year 365 were returned to their respective countries, having become public charges within one year after landing. The number refused landing was 3516, as against 4246 for last year.

So great is the demand for freight cars that the Pennsylvania Railroad is shortly to let contracts for 4000 more, bringing its total ordered for next year up to 19,000 cars. From all sections of the country the shortage in motive power is reported to be more serious than the scarcity of cars.

A bed of asphalt has been discovered in Northern Michigan, near the Wisconsin line, which has been pronounced by experts to be of as good quality as that found on the island of Trinidad. A company has been formed with the view of developing the extent of the bed.

The use of the X-rays for the treatment of cancer is said by Dr. Gilman, of the Hahnemann Medical College, in Chicago, to have been successful in fifty cases which he had treated in the last eighteen months.

There were 371 deaths in this city last week, reported to the Board of Health. This is 6 more than the previous week and 68 less than the corresponding week of 1900. Of the foregoing, 164 were males and 207 females; 52 died of consumption of the lungs; 54 of inflammation of the lungs and surrounding membranes; 10 of diphtheria; 10 of scarlet fever; 1 of typhoid fever; 1 of typhoid fever; 1 of scarlet fever, and 2 of small pox.

COTTON closed on a basis of 8c. per pound for middling uplands.

WHEAT.—Winter, spring, \$2.50 to \$2.70; Pennsylvania roller, straight, \$3.25 to \$3.40; Western winter, straight, \$3.40 to \$3.55; spring, straight, \$3.50 to \$3.65.

GRAIN.—No. 2 red wheat, 75c to 77c.
No. 2 mixed corn, 65c to 67c.
No. 2 white oats, clipped, 50c.

BEEF CATTLE.—Best, 5c to 6c; good, 5 to 5 1/2c; medium, 4 to 4 1/2c.

SHEEP.—Choice, 3c to 3 1/2c; good, 3 to 3 1/2c; common, 1 1/2 to 2c.

LAMBS.—3 1/2 to 5c.

HOGS.—Best Western, 7c to 8c.

FOREIGN.—The manufacture of arms and ammunition is said to be proceeding on a great scale at all the principal Chinese arsenals. Large contracts for the supply of rifles are being negotiated by the representative of European firms.

Consul General Dickinson, at Sofia, has notified a Bulgarian Government that it will be held responsible if the United States should be the hands who have Ellen Stone in custody become exasperated by the pursuit and slay the prisoner. The ransom negotiations are being conducted by the British.

Terrific storms have lately swept over the British Isles and have resulted in many shipwrecks, involving the loss of upwards of one hundred lives, and great damage has been wrought in inland sections.

The gales have been succeeded by frost and snow, and unprecedented severity for so early in the season, which is now seriously impeding railroad traffic and is causing the rivers to overflow. The lakes in the London parks are covered with ice.

The British War Secretary Brodick has said that Britain had 42,000 Boers in custody in the concentration camps and on various islands and that 11,000 more had been killed or wounded since the country on paper was said to be believed the number of Boers now in the field was about 10,000.

The Hague Government has reiterated its desire to maintain its policy of neutrality in connection with the South African question, and said: "But, while we do so, we scrupulously observe the obligations of international law, as no one would suggest that the ties of consanguinity existing between the Dutch and the South African States should be forgotten. The Government, therefore, will always remain on the alert to seize an opportunity for the restoration of peace."

During 1881 and 1882 the European immigration to the United States reached its maximum, and amounted to 730,000 persons. The number in 1885 was 832,000; in 1891, 565,000; in 1897-98, 220,000; in 1898-99, 312,000.

From all parts of the Western United States people are being sent to Mexico in amounts never before equaled. It is estimated by buyers and railroad men that the total of Twelfth Month more than 1500 cars will have been delivered into that country.

NOTICES.

A WOMAN Friend desires a position as matron, wash house-keeper, or companion. Address "H."

4224 Viola St., W. Ph.

WANTED, a Friend and wife or daughter to take care of the meeting-house and grounds at Lansdowne. Compensation—use of live-roofed house on meeting-house grounds and five dollars in spring and fall, when he is in Lansdowne is on the Media R. R., about twenty miles from Philadelphia. Address J. R. ELPHRETT, Lansdowne, Pa.

FRIENDS' RELIGIOUS AND MORAL ALMANAC AND PRIMER CARD CALENDAR for 1901, for sale at F. Book Store, No. 304 Arch Street. Price almanacs 6c; cards, 10c, by mail five cents; thirty cents per dozen; fifty cents each, by mail six cents; forty cents per dozen, by mail forty-nine cents. Calendars—five cents, by mail ten cents.

WESTWOWN BOARDING SCHOOL.—For convenience persons coming to Westtown School, the stage will make trains leaving Philadelphia 7.16 and 8.18 A. M., and 4.32 P. M. Other trains are met when required at Stage fare, fifteen cents; after 7.30 P. M. per person each way. To reach the school by telephone call West Chester, Phone 111.

EDWARD G. SNEYDELL, S.V.

WESTWOWN BOARDING SCHOOL.—Applications for admission of pupils to the school, and letters in regard to instruction and discipline should be addressed to W. F. WICKERSHAM, Principal.

Payments on account of board and tuition, and communications in regard to business should be forwarded to EDWARD G. SNEYDELL, Superintendent.

Address, Westtown P. O., Chester Co., Pa.

WILLIAM H. PYLE'S SONS, PRINTERS

To introvert is to convert, to divert is to convert.

TAKE care of Truth, and it will take care of your reputation,—and thine also.

HE who loses the supreme Giver in his gifts, sees himself also.

THE fear of the Lord is the beginning of wisdom and the perfect love which casteth out fear is the end of it. R.

THERE is that which makes the hovel a home, and there is that which makes the mansion a hovel; and that is, the prevailing spirit the occupants.

ALL success in life which fails to advance the true success of the inner life, is all failure.

THE PROLOGUE, PRESCRIPT AND POSTSCRIPT. The Word of God spoke to men's condition centuries before the Bible was penned, and to that in men without which it could not have been written, and it "liveth and abideth forever" since the Bible was penned. The prologue from the foundation of the world, which spake also unto holy men of old the sacred Inscript, continues to-day to be its Livingscript; and the latest note of the more abundant life which He is come to be,—having doubtless yet many things to say unto us, we cannot bear them now.

'LET GOD BE TRUE THO' EVERY MAN A LIAR.'—Scientize and historicise the Scriptures, whether down or up, as the event may prove; yet at its worst the whole laboratory of historicism cannot if it would erase the indelible, obliterate that Word of God which spake

in the beginning, who midway between his old and new Testaments was made flesh and a dweller among men, and in these last days as Spirit of Truth is poured out on all flesh to be the inspeaking Word and Witness for Truth to every man's heart. Whatever may be done with the Bible, the Divine Word will not pass away, nor let the Bible pass. It would be unlike his past workings among men, if these apparent unsettlements were not made to fall out rather to the furtherance of the Gospel. By many investigators they are so intended. But the transition period is one of hazard and jeopardy. Yet the onward march of the Divine reign among men is not in word but in power. In a dangerous place indeed are they who "know not the Scriptures, neither the power of God." But they only who know the power of God can rightly know the Scriptures. That inward witness for truth which has made men hitherto claim the Scriptures as sacred to their soul's deepest needs, will still reclaim them as undying echoes of the spiritual life.

PROGRESSIVE BECAUSE CONSERVATIVE.—The wise conservative is the wise progressive. True progress is based upon past experience,—upon known, tried and assured truths. It takes its next step upon a truth surely founded upon that which is already known as sound. To know and conserve the truth behind us in its consistency with views presented as truths before us, is no easy mental process. It is profoundly educating, and requires a stronger, stabler and more discerning mind than that which cannot weigh what has been won, but breaks easily with the past in the glamour of the new. This jumping from the ship upon any promising raft that the tide may be shooting past us, is indeed progressive till the tide turns. If the raft holds together. But there is a hundred-fold more motion in the coal-bunks of the old ship that with its storage of force steadily advances her course against changeable winds and tides, withersoever the governor listeth. To take sailing directions from his proved authority only, will get our ship and its passengers to the desired haven soonest.

EGYPT'S APPEAL TO ISRAEL.—Those who have confidence that our Friend John S.

Fowler's concern for Egypt, as detailed in his article in our present number, is of the Lord (and we could not fail, on hearing him relate it, to be so impressed), will doubtless be moved to return unto the Lord some of his own money, for his work of relief under this concern.

The just gauge of giving unto the Lord's work is, not the proportion which one's contribution bears to another's or to the whole amount, but rather how much one has left.

Jesus himself was sheltered in Egypt as a child, and wants shelter there to-day in the children. "Ye have done it unto me," is a plaudit from the Saviour which imparts a satisfaction that money laid out on earth cannot buy. Peradventure our own house may be relieved of spiritual famine by thus, according to our means, sending down into Egypt to buy corn of the Kingdom for ourselves.

THE TEACHER AMONG THE DUKHOBORS.—Michael Sherbinin, the Russian who with his family, has recently gone out to Canada, as a teacher of the Dukhobors, writes to the London *Friend* from Petrovka, near Kosherny, Saskatchewan, an account of the difficulties they have had to face in making a home for themselves. Owing to the five weeks' delay of the steamer which was bringing the lumber for building, the work was set back, and the family endured privation, at the beginning of the cold season in a little single-roomed hut ten feet by seventeen feet. The making of a roof was another difficulty, as the Dukhobors cannot make the shingle roof, which is best. For plastering the house inside and outside with clay there were no women to be had. Those of Petrovka were not to be got at any price, and the Dukhobor women of Terpenie could not come owing to harvest operations.

M. Sherbinin says: "My family were so suddenly met by the cold which set in that we were short of several necessities; but God mercifully protected us. Only it pleased the Lord to take from us our beloved little baby Salome, who was like sunshine in our home. Her cold frame lies now beside me in the hut where an old man and woman gave my wife a shelter from the cold after we had in vain sought all through the village for a warmer shelter.

"I have not yet taken a whole homestead [i. e., obtained a grant of land under the Homestead Act] but Commissioner Smith writes me that my receiving the ten acres with my building upon it from Mr. Adamson does not interfere with my obtaining a homestead as well."

A PRAYER.

FREDERICK WILLIAM FABER.

O Lord! when I look o'er the wide-spreading world,
How lowly and yet how unhappy it seems;
How full of realities, pure and divine,
Yet how bent, alas! on unworshipful dreams!

There was darkness in Egypt while Israel had sun,
And the songs in the corn fields of Gessen were gay,
And the chosen that dwelt 'mid the heathen moved on,
Each threading the gloom with his own private day.

Ah, so it is now with the Church of Thy choice;
Her lands lie in light which to worldlings seems dim;
And each child of that Church, who must walk in the dark realms,
Has a sun o'er his head which is only for him.

Yet it grieves me sore, Lord, that so many should
Under
Should see naught before them but desolate night;
That men should be walled in with darkness around them,
When within and without there is nothing but light.

But still more I grieve for Thy glory, O Lord!
That the world should be only an Egypt for Thee,
That the bondsmen of error should boast of their chains,
And scoff at the love that would fain set them free.

Oh, we who have light, we must make our light brighter,
And thus show our love to Thee, Lord, for Thy gift;
The faith Thou hast sent us our love can make greater,
And almost to sight our believing can lift.

FOR "THE FRIEND."

Co-Education.

It is 1901 by the calendar, but the *Public Ledger* in Philadelphia and G. Stanley Hall, in Worcester, are writing against co-education! The case of the *Public Ledger* is not hard to explain. Its educational policy is a reflection of Philadelphia experience where conditions are admittedly sub-normal or morbid. Taking the case at its best in Philadelphia, and giving principals and teachers credit for adequate preparation and devotion to the profession, the number of pupils per teacher and the absence of play-ground and street supervision, are reasons wholly sufficient for the failure of co-education. Indeed an enlightened educational policy is insisting upon proper care during these periods of relaxation, as more important, if possible, than the in-school instruction. But the case at its best is not used as the telling evidence for the separation of the sexes in school. In arguments on the subject, some special situation is made to do service in a broad generalization covering the whole subject. Thus circumstances as follows furnish the evidence against co-education in the most recent case on record. An advanced grade of a Grammar School under an able woman teacher is taken out of her hands and put in charge of a young man, an aspirant for the teaching profession. He has had courses in pedagogy and some college training, and men are sorely needed in the educational system of the city! The fifty or more pupils

under his care represent widely divergent environments, but the neglected tenth is there and they bring with them the evil of unhappy homes and of an apprenticeship in street brigandage that only waits the opportunity to spread throughout the school. Only the highest type of teacher has the sensitiveness to the real life of children that can arrest such tendencies and turn them to good account. The average young man is insensible to such tendencies and so the evidence against co-education accumulates.

The case of Stanley Hall, however, is totally different. He is an educational expert of the highest order. No one could impugn his motives, and to question his authority would surely seem like arrogance. The only available means of dealing with the case would seem to be to adopt the Clark University estimate of his limitations, and to see if this could be applied to his position on co-education. Nowhere is Stanley Hall more esteemed than in his own University, but the atmosphere is one of calm judgment, and any undue fervor of enthusiasm is fairly discounted. So it comes to pass that one learns there that Stanley Hall has been somewhat "carried away" with the rapid developments of the new science of physiological psychology. He makes no mistakes, probably, in handling the facts of his science, but his active mind is stimulated into speculative views by the facts, and his conclusions are not yet demonstrated. There can be no question that there are great differences between boys and girls from the ages of twelve to sixteen. The whole organization of education in the past has recognized this difference, and constructed different systems for boys and girls. It surprises us, therefore, to hear at this late date a plea for different systems for boys and girls, because the past has apparently failed. Until there can be some physiological and psychological demonstration that it is difference that is needed for success, why not argue the other way, and plead for a uniform system? This has been so ably done by Lady Henry Somerset that we gladly invite attention to the following from her pen:

"Closely related to the movements that occupy our thought is one which in the United States has been worked out to an assured success—and that is co-education. It is my deliberate conviction, that for the hysteria into which so many men and women novelists have fallen, and for the keyed-up public mind that is willing to exploit their product, there is no remedy so sane and sound as the education of our young people together, from the kindergarten until they complete their course in the technical or professional schools.

"If anybody dared to speak the truth about the boys' public schools in England, there would be a social convulsion, compared with which not even that of 1886 (?) or the lamentable disclosures of the past winter are to be mentioned. It is hard for human nature to kick against the pricks, as hard as it was for Saul, when the pang of conscience got hold upon him, on the highway to Damascus. We cannot circumvent our heavenly Father's plan; He has set the earth in families, and when we try to segregate girls and women into the school or harem, boys and men into the school or government, we have frustrated his

grace and we must pay the penalty. It is unlikely that the more subtle revelations of natural law, which science is continually making, will prove to us on the natural plane that what God joins man may not part asunder.

"There is a certain stable equilibrium the results from the commingling of the sexes, the common interchanges of daily life, that tends toward soundness and safety for every member of the common family, both within and beyond the walls of home. And it seems likely that the stored-up electricity that should be added to the sum total, and so generally diffused as to become beneficent rather than dangerous, whose most vivid illustration is a thunderstorm on the one hand, and a quiet fall of ripening rain upon the other, is analogies that we might well ponder in the relations of the two interdependent halves that make up the human family. It seems inevitable that when this natural relation is interfered with, the unnaturally pent-up power should wreak themselves in ways that may forever mar the life of those who are the victims, and who, in their youth and inexperience, are more sinned against than sinning by the unwise parents and unphilosophical educators, who make a virtue of this mode of massing our sons together in the crudest period of their development. Who doubts but that this method will yet be pointed at as a downright barbarism that still more heavily handicapped our young people in the time of their earlier temptation?"

The Friendly attitude from the start favored these apparently reasonable views, and the Friendly experience as handed forth in fine type of man and woman amongst us, and of right relations between them, seems to give satisfactory force to the argument.

J. H. B.

PHILA., Tenth Mo., 1901.

GEORGE BOWEN of Bombay, used words that are just as forcible to the needs of today as to the need of yesterday:—"He that abideth in God cannot lose ought by consecrating it to God. More difficult to some than the renunciation of their property is the renunciation of their wisdom. Generally I find that they who are most proud of the mental stores have really little that is fit above." The intellect is a noble servus when consecrated to God, but independence Him cripples its power and warps its decisions. "The meek will He guide in judgment, not the self-assertive. "Them that honor I will I honor, and they that despise me shall be lightly esteemed."—*The Friend* (London).

SPLENDOR from within! It is the one thing which makes the real and lasting gladness without. Trust that inevitable law of self-expression. Be, not seem! Be beautiful, and you will by and by seem so. Carry the face from within, not dress it from without. Within lies the robing room, the sculptor's workshop. For whosoever would be fairer, illumination must begin in the soul. The face catches the glow only from that side. It is the spirit's beauty that makes the face, even for the evening's company; a spirit beauty is the only beauty that outlasts the work and wear and pain of life.—*Christian Register*.

Science and Industry.

THE farm products of the United States this year are worth about \$400,000,000 more than last year's output.

THE passer-by who desires to see the bones of his hand or wrist, may now drop his five-cent piece into a slot-machine and place his hand in proper position, when the machine, adapted to pass x-rays through, will do the rest. —*Literary Digest*.

THE boiler tubes of a liner, if placed in a straight line, would reach nearly ten miles and the condenser tubes more than twenty-five miles. The total number of separate pieces of steel in the main structure of the ship is not far from forty thousand.

CONTINUALLY GETTING PAINTED.—Ever since the Forth bridge was opened—eleven years ago—its painting has gone on continuously, says the *Mechanical Engineer*. "Beginning at the south end, the workmen take three years to cover the entire length of the bridge, and three years represents approximately the length of the paint, no sooner have they finished on the men have to begin again. In this way square inch of steel comes under observation at least once in three years. The staff of men employed varies in number from the minimum of thirty-five."

PINE TREES BECOME PEN TREES.—All woodsmen know that pine needles grow in pairs in same sheath, and that when placed side by side the sharp pointed ends are exactly opposite. If you then these two needles together by a thread tie near the pointed end, and you will have a pen with two sharp nibs, ready to write whatever you please. As a pen-holder, insert the pen into a hollow twig, letting the points stick out about half an inch. Drop the pen into an inkstand, letting it remain for a short time in the ink. The ink will rise by capillarity in the tube formed by the junction of the two needles, and will form a reserve of liquid sufficient for the writing of twenty lines. The pen is fine, simple, and anti-rusting. —*Literary Digest*.

JOSEPH READ'S INVENTION; WAS IT WORTH WHILE?—The inventor of the cooking range of the other day, says a writer in the *New York Mail and Express*. He was ninety-two years old, and he lived at Everett, Mass., a suburb of Boston. His name was Josiah M. Read. The old man was unknown to fame, though his invention affected a more profound and momentous change in American domestic life, perhaps, than Morse's electric telegraph or Whitney's cotton gin, or even Howe's sewing machine. There had been stoves before. Franklin made a stove, which still goes by his name: it is simply an open grate on legs with a pipe; the feet can be warmed at it and the room can be filled with smoke. There were no cooking contrivances before Read made ranges, away back in the thirties; but they were crude affairs. Men who are now not old remember when women baked in a Dutch oven—a movable tin box, which was shoved up and out of a hot open fire. The cooking range

made possible an elaborate and careful arrangement of the humblest cuisine. It was economical in the sense that it gave a great deal more heat from the same amount of fuel. It saved heat and time. It enlarged the American bill of fare. It increased the complexity of the domestic organization and abolished old-fashioned rustic simplicity.

For it is a fact that in proportion as the cook stove saved fuel, it made heat, and put an end to the old time cozy social kitchen life. It made the dining-room necessary, even to the poor. By making the menu vastly more complicated, it actually increased the housewife's labors, while apparently economizing effort. By driving the husband out of the kitchen with its heat, its hard, black face, its rattle and its odors, it tended to separate the housewife from the life of the family and convert her into a mechanical drudge. Where once she sat before the fire, stirring the simple broth in the pot, her husband at her side, the children curled up on the hearth looking at their picture book by the firelight, she now toiled with bent back over a half dozen complicated dishes on the stove, acquiring headaches and grievances, while her husband kept away from the blistering proximity if he could, her boy ran on the street and her girl played the melodeon in the parlor. For together with the cooking machine in the kitchen other sorts of domestic machinery came in. The attractive old cozy fireplace, the domestic altar, was gone; the "fireside" became a place to fly, not to seek. But the housewife could not fly it; she became its slave. Or else she undertook to graduate from the kitchen altogether, and employed, possibly when her husband could not afford it, a servant to be her cook. This further tended to hasten the end of the old simplicity, the old domesticity. —*Philadelphia Ledger*.

AN EXPENSIVE TIDBIT.—China, possessing the oldest aristocracy, may naturally be expected to furnish the most expensive luxuries. And she certainly does in so far as costly food is concerned.

Compared with the peanut butter paste of China, such dishes as nightingale's tongues or strawberries at Christmas are merely inexpensive trifles.

This paste, a combination of peanut buds and ginger jelly, is brownish in color, and is to be obtained in small jars. The price is \$10 an ounce, more than half its weight in gold—an almost sufficient guarantee that it is eaten very sparingly.

Peanut butter paste is said to have a flavor for Oriental palates ten times more exquisite than that of birds'-nest soup. At the base of the kernel of a peanut is a small cone shaped formation, usually surmounted by two microscopic leaves. The nuts are first roasted, then these minute growths are carefully extracted. They are so small that many thousands of them are necessary to fill a small teacup, but when a sufficient number are collected they are put into a mortar and ground into a fine flour, which is afterward mixed with ginger jelly and rubbed down to a smooth paste. —*New York Journal*.

THE workmen die, but the work goes forward. And they die, thank God! into the everlasting life, into the perfect work, which is perfect rest, into the vision of the Father and the glory of the just.

Dunkers at Meeting.

The following is quoted from *Scribner's Magazine*:

"So the valley is awake to its Sabbath duties. From its every quarter, along its every road, the rockaways are crawling. They meet at the covered bridge; they move solemnly up the long hill; and our church parade is on. How different it is from that famous one that swings along Fifth Avenue every Sunday, when the human pea fowl of every class strut and spread their plumage. Here simplicity is the effect to be obtained, for the keynote of the teaching of these somber folk is humility. There, for instance, is the Dunker bishop of the district. He drives a fat horse with a monstrous curly mane, and the good animal ambles along as though he is really anxious to make time, but fears to be seen running on Sunday. The brother sits well back in his vehicle, and is almost hidden from view by the dust-covered side curtains, but still we can see his great black hat, with its high, cylindrical crown and broad, flat brim. It looks hot these summer days, but it is well in keeping with his heavy brown coat, which has a straight, clerical collar, close buttoned at the front, and sweeps into broad tails behind. The bishop's hair is long and is trimmed off straight just below the ears, which causes it to stick out in most inartistic fashion. His beard is long, too, and his upper lip is clean shaven, for among his people a mustache is a badge of worldliness. Beside him is his wife. They have fine faces, the women of these simple sects and the austere scoop bonnet and kerchief at the neck almost seem a fitting frame for the placid countenance of the bishop's helpmate. Her dress, too, is plain in color and cut, and is unornamented by frills or furbelows.

"As it is with the bishop and his companion, so it is with every man and woman in the long line of vehicles bound over the ridges. You have seen them, and, unless you know their faces, you have seen all the brethren and sisters in the solemn procession. Yet there are differences. To the stranger in our valley these differences are so small as to pass unnoticed, but to them so big as to divide them at the Dunker meeting-house, to halt some there, to send some on to the farm with the blue gates, some to the gathering in the grove and others to the barn service."

HOUSE-WORK FIGURES.—A Vermont man, with a fondness for figures, has produced the following: "We have often heard of women dish-washing their lives away but did anyone ever think of the number of times, reduced to actual figures, the table has been spread, cleared off, dishes washed and put away during thirty years? A black-walnut dining-table has been in use in my family for thirty years. In that period this table has been spread 32,850 times, and as many times cleared and the dishes washed. My family averaged five during that time, making 164,250 meals eaten from that table. At the low price of fifteen cents per meal these would amount to \$24,637.50. These figures are small when compared with sixty years of continued service, which sometimes happens, but they show how women cheerfully do their duties from the cradle to the grave."

SOUTHPORT FRIENDS' MEETING.

JOSEPH J. SPRAGGON.

In our meeting-house

I saw a stranger with a care-worn face,
A face which told of pain and inward grief,
Or memories of lost or absent friends.
He took a seat and bowed his head in prayer,
Then looked around and seemed to wonder that
No voice was raised, but all sat silently
in meditation deep.

The hush grew deeper and more solemn still—
An opportunity for quiet thought
We cannot prize too much.

Ere long we heard a woman's soft, low tones
in supplication and in grateful praise.

She spoke to God in humble, reverent words,
And bore unto the throne of heavenly grace
The wants and woes of erring, suffering men,
And sought, through Christ, the needed help,
To none denied who come in his great name.
She ceased. Again a hush o'erspread us all.

The stranger, with his tear-dimmed eyes,
Saw visions of deliverance;
And as he sat, he thought of Him who said,
"Come unto me, thou weary one, and rest."

And now, a faithful loving minister

Gave forth the words, which in the silence
Had been brought to him, with living soul,

"Why art thou now disquieted, my soul,
Why art thou still cast down?"

Hope thou in God, for thou shalt speak his praise,
And all thy mourning shall be turned to joy."

The fitly spoken words, not long drawn out
Nor amplified unduly, brought a message,
Clear, direct and unmistakable,

To burdened hearts not far from dire despair.
Then others testified that God was good,
And that in hours of darkness He had shed
His light on the untrodden path and proved
A very present help in time of need.

Again answered prayer and heartfelt thanks;
And after a brief pause our meeting closed
Without a formal priestly benediction.

Was this the end? Nay, rather, the beginning
Of radiant hope, dispelling gloomy clouds
From one discouraged soul. The sunshine now,
From Christ's own face, turns darkness into light,
And makes the way of life, before so drear,
A way of pleasantness, a path of peace,
An entrance to the presence of the King.

LIVERPOOL ROAD, SOUTHPORT, England.

WORSHIP becomes spiritual and uplifting in
proportion as the services have more of God
than of man in them. The question in their
arrangement should ever be, not how attractive
they can be made to the public, but how
acceptable they may be made to God. He
calls for an intelligent, simple, hearty and be-
coming response to his mind and will.—*Ex-
change.*

ALAS for those who have not been true to
the truth given them, and another soul has
been given the truth they were afraid to utter,
and that other has taken their crown.

OLIVER CROMWELL's secretary despatched
on important business to the continent was
detained over night at a seaport town, and
tossed upon his bed unable to rest. At last
he awoke his servant and said "I am so afraid
something will go wrong with the embassy."

"Master," said the valet, "did God rule
the world before we were born?" "Most assur-
edly." "Will He rule it after we are dead?"

"Certainly." "Then why not let Him rule
the present too?" The secretary put the govern-
ment on God's shoulders and in a few moments
was sleeping soundly.

FOR "THE FRIEND."

Some Reminiscences of Departed Worthies,
Members of Philadelphia Yearly Meeting.

(Continued from page 132)

In connection with the reminiscences of
Joseph Scattergood, Sr., it may not be im-
proper to state they are prepared and sent by
a Friend who is no way connected with his fam-
ily, with the hope that their perusal will afford
the same instruction and encouragement to
others as they have done to the compiler.

He was born in Philadelphia in 1808. His
parents were Joseph and Ann (Rogers) Scatter-
good, who were the parents of several chil-
dren.

The gift of writing an intelligent, interest-
ing and yet strictly truthful letter is not
possessed by all, not even by those who are
esteemed as well educated.

To some it is a task; to others, ideas and words
to express them flow as freely as ink from the
pen. That the former class can with patience
and persevering effort attain to much profi-
ciency in this line cannot be denied. To the lat-
ter class it would seem as though our Friend,
Joseph Scattergood, Sr., might belong; he
was what might be properly considered a
good letter writer. This was apparent from
his letters to Ebenezer Worth and others, but
more especially from the frequent intercourse
of this kind with Joseph Snowdon whilst the
latter was Superintendent at Westtown Board-
ing School.

The following appears in a letter to his
brother William, dated 12th Month 5, 1839.—
"Uncle Jonathan Evans,* has been for the
last few days alarmingly ill. On Fourth-day
he was taken with a chill, on Fifth-day morn-
ing he came down stairs and attempted to eat
breakfast; had to return to his bed, where he
has been since. The family agree in saying
they have never known him so ill. Charles
(his son and a physician) asked him if he should
call in Dr. Hartshorne. He said no, he had
confidence in Charles, and added, that human
aid would be of little avail, that he believed
the time would be short; or something to
this effect, indicating that it was his own con-
viction the time would not be long before he
would be released.

"While we must bow with submission to the
event if it should please the Great Master to
take from works to rewards this dedicated
servant, yet we can not help wishing that it
might be right for the church militant to have
his valuable service a little longer. . . . Our
Quarterly Meeting was numerously attended,
Daniel Wheeler, who is, I think, a truly dedi-
cated old-fashioned Friend, appeared in a
very instructive and solemnizing discourse; and
was followed by Elizabeth Evans in prayer.

"In the meeting for business, after Daniel
Wheeler's certificate was read, he alluded to
his certificates, saying he had for a long time a
concern to pay this visit, by remarking that
when he left England to go to the South
seas, he had no prospect of it, but soon after
he left he was impressed with a belief that he
should have to go to America; which conviction
was an evidence to him that he should be
favored to return to England; which conviction
never forsook him in times of peril, when

* A highly approved elder of the Monthly Meeting of
Friends, of Philadelphia, for the Southern District.

there seemed to be no hope of rescue. He
concluded by an exhortation for us to trust in
the same never-failing arm."

Third Month 5th, 1850. "Hannah Rhoads
has the liberty of her Quarterly Meeting to
pay a religious visit to Great Britain; a truly
arduous undertaking at any time, but more es-
pecially at the present. Her brother William
Evans is now visiting the meetings in New
Jersey. Samuel Nicholson, of Haddonfield
N. J., accompanies him." In his partner, John
Carter, Joseph Scattergood found not only a
eminently wise and safe counsellor in business
affairs, but a congenial friend with whom he
had true religious fellowship. In a letter ad-
dressed to him while on a journey to Boston
Ninth Month 5th, 1839, John Carter adds the
following: "At a meeting yesterday our
faithful and exercised friend, Wm. Evans, was
engaged in a close awakening, unflattering
testimony, the force of which was felt by
more beside myself. The great need then
was for some of us who had long been de-
claring ourselves as concerned for the great
cause, to come with full purpose of heart into
Christ's school, and, laying aside every hin-
dering thing, everything that is calculated to
distract or divide our attention from the awful
important work, and be taught and instructed
in humility by his spirit, and bear the exercise
which he would then introduce us into,—was
strongly enforced with an authority which car-
ried its own evidence. May we both, my
dear friend, be more wise, more devoted, more
faithful and more diligent to labor in the vine-
yard of our own hearts and being thereby
conformed to the Divine Will, prepared to fill
the places which may be allotted to us in
Church." W. P. T.

EXAMPLE OF CONTENT.—"The little wayside
sermons we get should be taken into account
in life's valuable discipline," remarked a
thoughtful society matron, "and these are
more numerous than would be believed by peo-
ple who overlook them. I was walking on
the street the other day a trifle perturbed in
mind about some personal matter—perhaps
a new frock which didn't fit, or a formal din-
ner that had not been without a flaw—when a
little ten-year-old black boy ran past me at a
rapid gait. It was a cold morning and he
was barefooted and thinly clad, but his face
was in a broad grin of happiness, his eyes and
teeth shining like precious stones.

"What made him so happy?" Well, he was
flying a kite and that kite was, in my opinion,
a marvelous invention. It was a good-sized
paper bag, with the bottom cut out, a rag tail
attached and a string fastened to one edge of
the end. The way that simple box kite moun-
ted into the air was astonishing, and the joy in
the little colored boy's face was merely the
result of his heartfelt pleasure in his achieve-
ment. "I had a chance to ask him where he
got his idea for the kite, and he answered me,
cheerfully:

"'Done made it up myself, lady.'
"Really, it made me thoroughly ashamed of
my recent complaining mood to witness that
half-clad, doubtless half-fed little black boy
extracting so much genuine pleasure from
such meagre material as an old paper bag and
a bit of string."—*Detroit Free Press.*

Egypt.

FOR "THE FRIEND."

BY J. S. FOWLER.

The writer has thought something more extensive might be of interest to some of the readers of THE FRIEND relative to "a concern of Egypt," as expressed in the tenth number of the present volume; feeling, however, how short any account can convey in its entirety a view of the suffering condition of the poor people in that ancient land, which well alluded to in the account above referred to as "appalling beyond description," a motive that has led me to particularize some of my feelings and impressions, has been such that I had not done what I could, in writing the matter before my friends.

When in the city of Cairo, and after my return (on account of whose concern for the people of that land we had gone there), told she felt ready to leave and proceed to Alexandria, and we were making preparations to do so, suddenly, and greatly to my surprise, a feeling of love for the people of that land so near my heart as I never before had had any conception of. The only thought that I could give was the expression of the Apostle, "The love of Christ passeth knowledge."

The all-absorbing feeling was that any action on my part to enlighten their darkness and alleviate their suffering would be an inextinguishable privilege. I reflected that I was an alien, unacquainted with their language and customs, so turned from it and we proceeded on our way.

After performing what way opened for in Alexandria, we embarked from thence for Marseilles in France. Soon after getting out of the harbor, the reflection passed through my mind that "now we were leaving Egypt forever," when the language arose, "Wouldst thou be willing to return again?" When the vessel came to anchor, "Yes, if I had one hundred thousand dollars, or two hundred thousand dollars to rescue those poor people with," I immediately, the destitute, orphaned and neglected children came up before me, and then I thought of those whom we had seen so many, especially in the city of Cairo. Landing at Marseilles, awhile was spent in the south of France, and then we went to England, spending weeks there; and afterward crossing into Ireland. While in the last place, it came into my mind I might have to ask for money for the succor and relief of the poor in Egypt, referred to, which was much trial to me.

The night after sailing from Queenstown, I again came before me, when the subject presented, as embodied in the title of agreement under the title of "A Plan for Egypt," as published in the tenth number of THE FRIEND, vol. 75. And while reflecting that the work has been long deferred, I felt it was not so much for want of a willingness to do what was believed to be the Lord's will, as from a fear of making some mistake, in so great an undertaking.

A few statistics and observations as they came before my mind when reflecting on the subject, might be of interest, viz: There were in Egypt nine million, seven hundred thirty-five thousand of a population, one-twelfth of whom are supposed to be Mohammedans: the other twelfth, adherents

to, or in sympathy with The Greek Church, except about twenty-five thousand Protestants, or under their care. From a feeling while in that ancient land, that it was a day of precious Divine visitation to the inhabitants there, I thought a little extract from a small work entitled, "Egypt in History and Prophecy," by H. L. Hastings, might be of interest, viz: "If any one inquires the reason why God should select Egypt, the house of bondage of his people, for special favor in the latter days, we might answer, that God is sovereign, and declares, 'I will have mercy on whom I will have mercy.' And yet there are certain rules of procedure in God's dealings with nations, as well as persons. He says to apostate Israel, 'I remember the kindness of thy youth, when thou wentest after me in the wilderness. Israel was holiness unto the Lord.' So, also, Egypt, before she became 'the house of bondage,' was the house of refuge for the church from famine, and Abraham, Isaac and Jacob, and their households, were fed by its fertile soil, and drank the waters of the Nile. And as God is not forgetful of Egypt's work of faith, and labor of love bestowed on his people in preserving Joseph and the patriarchs from famine, so neither does He forget that One greater than Joseph, greater than Pharaoh, when pursued by Herod's murderers, found safety there, till God brought him back to the land of Israel, and fulfilled the oracle, 'Out of Egypt have I called my Son.' He who repays even the cup of cold water given to one of his disciples, will doubtless well repay such substantial aid to himself in his hour of need."

"And now the monuments of Egypt come forward again to testify to the deliverance of Egypt from famine by Joseph, to Joseph's exaltation as vizier to Pharaoh, and, inferentially, to the truth of the Bible history in Genesis. Osburn in his great work, 'The Monumental History of Egypt,' vol. ii, p. 90 describes Joseph's tomb recently discovered at Sakkarah with his name and blazon and titles which he thus translates from the hieroglyphics, 'The name of Joseph is thus written, *et-tushp*, he came to save.' It is paronomastic and alludes intelligibly to the good work he accomplished for Egypt during the seven years of the famine besides embodying the sounds of his name."

"The title under which Joseph was first inaugurated, *abreeth* (which our translators render 'bow the knee,' Gen. xli, 43), appears also in his tomb, and at the head of his blazon. It will, we believe, not be found among the distinctions of any other prince of Egypt. It is written *hh-resu*—royal priest and prince."

"The office to which Joseph was appointed by Pharaoh is in like manner fully comprehended in the titles which appear on his tomb. He was extensively empowered in regard of the tame cattle of the king. He was the director of the granaries of the chiefs of both Egypts. The 'full and the empty channels of irrigation,' were in his charge, and the adjustment of the supply of water to them; so that 'Joseph was over all the land of Egypt' in special respect of the provisioning of the land; which comports exactly with the inspired narrative. It is, therefore, historically true that Joseph was sold into Egypt as a slave, and that he was afterwards prime minister to Pharaoh—

Aphosis. The men named in the Bible are real men, and the events recorded actual occurrences. Whatever be the value of these facts to the history of Israel, they are far more important to that of Egypt, where so little that is precise and tangible has hitherto been found."

"We add to this undeniable conclusion of the learned Egyptologist, that this discovery of Joseph's tomb, is of profound interest to the whole Christian world. By it, he being dead yet speaketh. It is a rare and beautiful coincidence that the patriarch who, dying in the faith, gave commandment concerning his bones, should from his tomb, after the lapse of sixty generations, speak to the world with a voice of blessing, confirming the word of the God whom he served."

And now this work, which I have felt myself called to, which abstractly speaking is a common charity, simply feeding, clothing and educating orphaned and destitute children, so that they may be fitted to exert an influence on the side of right; as also the treatment and education of the blind; the destitution and suffering of both classes, any effort to portray in this way is vain to attempt.

Having returned to Philadelphia in order to give further attention to the concern, I wish to say it is an arduous undertaking, and it would much lighten the burden and facilitate the work, if such as feel like aiding in it would send in their contributions to The Provident Life and Trust Company, 409 Chestnut Street, Philadelphia, with their names and Postoffice addresses.

PHILADELPHIA, 23rd of Eleventh Month, 1901.

ONE day a woman said: "For more than two years I have been worrying over troubles that I was afraid would come upon me. They have not come yet, they may never come; during this time I have been comfortable in the main, and fairly provided for, nevertheless I have worried and probably I shall continue to worry, but thus far, at least, there was no need of worrying." To her as to multitudes of other people, it might well be said, "Sit still, my daughter, until thou know how the matter will fall" (Ruth iii: 18)—Sit still—Wait. There is a luxury in waiting, when you wait upon God. "They that wait upon Jehovah shall renew their strength."

MANY a good man who trembled at his own weaknesses, and feared to be exposed to temptations, has found, in the critical moment, that he was stronger than he knew. His very diffidence and self-distrust have put him on his guard and enabled him to gain a victory where he dreaded the possibility of defeat. Is it irrational to add that in such emergencies, God also intervenes by the direct agency of his Holy Spirit to give help and strength? Is not that, in fact, the very thing that we should expect Him to do? If He suffers his servants to be afflicted with such trials, He will surely not forget them while the trials are in progress.—*Christian Advocate*.

THE VALUE OF CRITICISM.—"What a tame world this would be if we had not perpetually the shock of adverse judgment and opinion. Storms root the oak, fire tempers steel, great epochs make history and adversity well borne makes character."—*Francis E. Willard*.

This earth is but a sparkle in the glow
Of the great universe—a planet small,
Around one sun revolving, that is all;
We reck not whence we come, nor whither go.
And of the other worlds few things we know,
Yet laws omniscient hold them in enthral,
As in processional they rise and fall,
Now to our vision brought, now sunk below.
But when we think that on this lesser sphere,
Man in his Maker's Image hath a place,
And ponder on the hope, the joy, the fear,
The destiny of all the human race,
And that Chief Sacrifice once offered here,
Fain would we prostrate fall, and veil the face.

—Living Age.

For "THE FRIEND."

An Opening in the Light.

The West Lake Quarterly Meeting was last held at Athens, Ontario, on the 5th of Tenth Month 1901. Evidences of Divine goodness and favor were manifested during the first meeting for worship. In the course of the following meeting for discipline, Matilda Branscombe, a minister of the gospel among Friends, one in good unity and held in good esteem among them, felt, as she said, at liberty to relate the following, since which time she has expressed her willingness to let it become more generally known to Friends through the columns of THE FRIEND that it may comfort them as it did her, and be an evidence to all that we are not forgotten of our gracious, long-suffering Lord.

"Whilst engaged in my daily employ in my workshop, a holy solemnity overspread my soul. I perceived the drawing nigh of my Lord. I dropped the knife I was using, and burying my face in my hands, I felt constrained to cry, 'Lord, what is it? Why, Lord, this weight over me?' To which my Lord replied, 'All societies have sought their own glory, and of building up their own name in the earth, and they have neglected my glory; and Friends have been too fearful that their own name would perish with this generation. But the change which shall be brought about will not be by thy help, nor of any other man or woman, but by myself.'

"Oh! the light and the glory, the joy and the gladness of that day, so overspread my spirit, that it was quite a length of time before I could resume my work. And since that time in meditating upon the vision, I have been led to believe that when this, the Lord's work comes to pass, that Scripture will be fulfilled, which says, 'Then shall ye return, and discern between the righteous and the wicked, between him that serveth God and him that serveth Him not.' Mal. (iii : 18.). And the light will be such that we shall see and know each other in the Lord, and our several positions which He has assigned to each of us in the body, in such a manner as never yet has been in any former generation."

Taken *viva voce et verbatim*, 24th day of Tenth Month, 1901.

Nor is the above recorded, that it may cause any rightly qualified, diligent servant of the Lord to slacken his hand in the work, neither he who may deem himself to have but the one talent to bury it, for the Lord of the harvest may send plowmen and sowers into his fields to prepare the work, yet the increase and the glory are his and his alone. So shall the Lord and his faithful servants rejoice together in the end.

BENJAMIN W. WOOD.

For "THE FRIEND."

Waiting on the Lord in Meetings for Discipline.

The following extract from the life of Henry Hull conveys admonition much needed among us at the present time. There are things frequently brought before our meetings for business, so secular in their character, that it is not best to attach any special solemnity to their disposal. But most of what concerns such meetings—answering queries, cases affecting the religious rights and welfare of our members, etc., is strictly "the Lord's work."

In instances that have passed under my notice I have feared that the business generally is put through as if it were a perfunctory or mere worldly matter.

It has been a comfort that in the sittings of our Yearly Meeting the goodly order required by Truth is so well observed. They have generally been kept free from the spirit of debate and the clerks have proceeded as though manifestly under the restraint and guidance of the Holy Spirit.

It is about ninety years since these observations by H. Hull were made.

The business-like spirit he then noticed in meetings in England has spread its influence in those in this land also. If it should become common in our meetings for business as these are a reflex of our meetings for worship, we may have sorrowfully to lament 'the glory is departed from Israel.'

COLORA, MD.

"Having the opportunity of sitting with Friends of London in the Monthly Meetings of Devonshire-house and Grace-church Street, I had to reflect upon the disposition there is in men to adhere to old customs, as well from the preference I had for the method of managing the concerns of society in my native land as from the attachment I discovered in Friends here to their own mode; and also the easy way in which they did business, in some cases without waiting to feel their minds impressed with religious concerns, manifesting little more seriousness than if met to consider any interesting matter pertaining to the affairs of this life. Yet I found they were no strangers to the baptizing power of Truth, which, in considering the proposal to recommend as a minister a precious sweet-spirited woman, seemed to prevail among them, and she was acknowledged as such. I thought I saw that my recommending them to weightiness of spirit was considered by some as 'stamping things too high'; they seemed not to understand me, and I was grieved at the want of a right understanding among the knowing, who certainly had correct views of the letter of the discipline—but where this alone is relied upon, it renders insensible to the Divine life, so that a resurrection through the power of Christ Jesus, the blessed head of the Church, is necessary in order to do his work. I am fully of the belief that it would be better for our Society, if there was more generally a dependence upon the "Spirit that quickeneth"—the humble and sincere laborers would be more comforted by seeing an advancement in the work of reformation, and our meetings would be more to edification than they now are."—*Friends' Library*, Vol. 4, page 284.

The Snow Hill Institute.

The following account is given in the *Canaan Register*:

"Several years ago a ragged, dirty n boy walked into Booker T. Washington's school at Tuskegee Institute, and announced that he had come to school. His name was Wil J. Edwards, he said, and for lack of money had walked all of the way from his home at Snow Hill, one hundred and fifty miles. He remained at Tuskegee until he graduated working on the farm and in the shops to his way. He developed so much ability by the time he graduated he had received several flattering offers to work or to teach, he declined them all.

"I am going back to Snow Hill, my home," he said, "to work for my people there. And he went.

"The young man went to Mr. Simpson, planter who owns more than four thousand acres of rich Southern land and obtained mission to begin a school for colored children in an old log barn on the place. The community of colored people was one of the most discouraging. Many lived in filthy one-log cabins which they did not care to make any better. They had 'two Sundays a week.' That is, they spent Saturday loafing about the village stores. Their religion a thing to be remembered only once in weeks, on the one Sunday in a month when a preacher held service for them. Few cared whether their children went to school or not.

"The young teacher labored faithfully, taught his pupils to work—as he had been taught at Tuskegee—quite as much as he taught them books; and, when school was out, followed them to their homes to try and interest the fathers and mothers. In time his work began to tell. An interest in the school sprang up, and grew until it began to change the lives of the colored people in the community so much that Mr. Simpson noticed. Convinced that here was a movement which deserved encouragement, he gave forty acres of land for a site, and the school was located permanently. A Board of Trustees of men of both races were chosen. Mr. Simpson is President of the Board, and one of his sons is the Treasurer. Not only have they given land and money, but they have manifested consistent, intelligent sympathy, which has enlisted the interest of the other white residents of the community.

"At the last census there were in Wilcox county, in which Snow Hill is situated, twenty-four thousand blacks and six thousand whites. There are few places in the South where the relations between the two races are so satisfactory as they are here. Both whites and blacks speak in the most friendly terms of each other, and both declare that the influence of the school is largely responsible for the present conditions. I believe that a land-owner like Mr. Simpson and a teacher like Principal Edwards would cooperate with each community in the South the vexatious race problem would solve itself.

"From a log barn built of pine poles in 1893, the school has increased until now it has, in addition to its land, seven wooden buildings, some farming tools, and a few head of live stock. Last year there were four hundred

ills, and there would have been more had been room. The school has al-regular income, and it could not have if it had not been for the almost con- of Mr. Simpson. The parents of s give produce and what little money, and the principal has been untiring orts to secure money enough to pay hers. There has been no year when of gone without any pay himself for ore months of the school year. Other e graduates as they have been need- on to their books the students are lsmithing, carpentry, wheelwright- ing, farming, brickmaking and laying, work, cooking, sewing and general rk. The students have built all the dings. The last of these is a four- dom structure named Washington er Booker T. Washington."

Notes from Others.

at words of President McKinley, "It is y; his will, not ours, be done," an impres- of faith and trust imparted by a dying a great people, and the solemnity with y were received, adds special interest to it," "Last Words of Distinguished Men." The arrangement is alphabetical and cient as well as modern history. There ment, simply a description of the circum- ounding each death-bed. The idea of was possibly given by the following word- igne, quoted on the fly-leaf: "If I were a books, I would compile a register, with of the various deaths of men; if he who ach men to die, would at the same time o live." (F. H. Revell Co).

Christian Intelligencer thus refers to a orthy of public attention: "The repeated e venerable missionary to the New John G. Paton, to this country have had object, in part, the securing from our ent, co-operation with England and other ountries in prohibiting the sending of arms and firearms to those islands. A bill this for the New Hebrides and other ands nearly succeeded in passing the last t. It will be introduced again this winter, t not fail of passing. It is vital to the on of the native races, and would remove ndrance to their Christianization. This f passed, would be preparatory to a gen- ally like that protecting the native races o which seventeen nations have given ncluding the United States. England ay such a law relating to the Pacific Is- it is believed that France and Germany o follow us in enacting a similar one."

Items Concerning the Society.

anted meeting was held at Oxford, Pa., iberian meeting-house last First-day, Allen, being accompanied in his service e Elkinton.

terly Meeting's appointed meeting for ounced last week was held in Twelfth ington-house, Philadelphia, on Sixth-day e 22nd instant. A good attendance in d in interest appeared, and living con- earnest laying hold on eternal life was ov the meeting.

meetings, if arranged for by the com- e be duly announced.

ES OF OTHER YEARLY MEETINGS TRAVEL- E CONTINENT, &c.—At the Conference

on Liberation of Ministers, which met, according to the appointment of London Yearly Meeting, at Devonshire House, the 31st ult., the following minutes were passed:

"The Conference recommends that certificates should not in future be granted to ministers of other Yearly Meetings for service abroad, believing that the responsibility of liberation can only rightly be exercised by the Yearly Meeting that has full knowledge of the ministers applying for such certificates. One of the results of this arrangement would be that this Yearly Meeting would not be responsible for expenses incurred in such visits.

"The Conference is not prepared to recommend any alteration in the arrangements as to the expenses of Friends with certificates from other Yearly Meetings whilst in this country.

"CHARLES C. MORLAND, Clerk."

THE FRITCHLEY FRIENDS, AT THEIR GENERAL MEETING.—The following letter to a British paper may interest some of our readers:

"If any one wants to have a peep into the religious life of England a hundred years ago, let him go to Fritchley for the General Meeting of the Fritchley Friends. And if he asks how he is to get to Fritchley, he had better take the train to Ambergate, the station that mounts guard at the entrance of the lovely Matlock valley, and then walk a couple of miles up into the heart of the hills. There he will find one of the quaintest villages in the British Isles, a tiny hamlet, and yet its name is known throughout the length and breadth of this land and of the United States.

"General Meeting was held this year on Thursday, October 10th, and large numbers of Fritchley Friends met together in the newly-opened meeting-house. The Fritchley Friends are a secession from the general body of Quakers—or rather, as they put it, they are the original body from which the Quakers have withdrawn. The leader of the secession was one John Sargent, who owned a mill at Fritchley, and who, in the middle of last century, was a prominent member of the Society of Friends. About the year 1860 he became very distressed about the condition of the Society; it seemed to him that Quakers generally were becoming more and more tinged with the spirit of the world, and were abandoning many of their distinctive features. He therefore organized a series of conferences up and down the country for the purpose of discussing this question. These, however, only served to deepen his conviction that he was right, and consequently in 1869 he, along with several others, separated themselves from the London Yearly Meeting, and formed a distinct body.

"The followers of John Sargent may be regarded as the Conservative section of the Quakers; [wherein they seem to be liberals or ceremonialists, it is for the maintenance of spirituality.] They rigidly maintain the old dress and style of conversation, and use the old Book of Discipline. Their aim is to draw the hard-and-fast line between themselves and the world that was drawn by the early Friends. As to any amalgamation with the parent Society, they are very pronounced in their opinion that it cannot take place until the other Friends come round to [the earlier] views. So strongly do they feel that many of them do not care to attend the ordinary Friends' meeting if there is not one of their own at hand.

"It was very sweet to get right away up in the hills with these simple-minded people, and join them in their quiet meeting for worship. There were Friends from Norway and Ireland, Scotland and Wales, London and Yorkshire, all drawn together for the day at the little Mecca where John Sargent lived. Strong, sturdy men in stiff collarless coats and white neckerchiefs filled one side of the meeting-house, while on the other side were row after row of the old 'poke' bonnets, with many a lovely and demure face just visible within

the shade. There is no bonnet so becoming to a pretty face: let fashionable ladies take note. So we sat in quiet worship for nearly two hours, with a few brief prayers and addresses to direct our thoughts. It was all so restful and simple, and one could quite understand what one Friend meant when he said, 'I cannot tell you how good it is to get away from the great metropolis and spend a few quiet hours here.' There are joys in life that London knows not of!

"After meeting, all life and animation.

"How dost thou do, John Naylor? I am glad to see thee. Where art thou for dinner?"

"Thank thee, friend, I am going with Peter and Deborah Thompson."

"To me, a stranger, they are kindness itself, and carry me off to dine with the descendants of John Sargent, who still live in the village.

"At the business meeting one gets an insight into how things are going. Unfortunately, their numbers are not growing; no 'convincements' have been recorded since last General Meeting. Letters are read from the Fritchley Friends in Pennsylvania and New York Monthly Meetings, and a deputation of men and women Friends is appointed to visit the American societies. Many of the older Friends are exercised by the fondness of the young Friends for cricket, football and the like; but one Friend puts an end to the discussion by a beautifully expressed thought—that if the younger members will cultivate a life of close communion with their Saviour they will not go wrong in the matter of sports; 'they will be preserved,' as he put it.

"They are so tolerant, so open-minded, are Quakers, whether Fritchley or otherwise. There is often difference of opinion, but each speaker is heard in respectful silence, and there is no display of feeling whatsoever. Can the same be said of any other Christian body, I wonder? When all have had their say, there is no voting, but the clerk sums up what he takes to be the predominant feeling of the meeting and frames it as a minute. Very rarely does the clerk make a mistake, or have his 'minute' questioned.

"I am sorry thee has to go, friend," said my hostess as I took my departure, and so was I. One does get tired sometimes of conventionalities even in religion, and is glad to climb the hills of the spiritual life with people who meet God face to face, and need no mortal being to stand between them and their Maker." G. K. HIBBERT.

SUMMARY OF EVENTS.

UNITED STATES.—A convention has lately been in session in Washington of manufacturers, representatives of various trade organizations, &c., to consider the subject of extending the business of the country by means of reciprocity treaties with other countries. The convention adopted resolutions favoring reciprocity, provided no harm is done to any home industry; and urging the creation of a Department of Commerce and Industry.

President Roosevelt has shown great independence in the appointments he has made to various offices, and he has apparently been uninfluenced by political considerations. An order has been issued by his direction by which 1600 persons have been restored to the classified civil service appointments.

A number of cases of lock-jaw have occurred in Camden, N. J., following vaccination. Investigation is believed to show that it has resulted from germs of tetanus, which had lodged upon the abraded surface of dust in the air.

Dr. Benjamin Lee, of the State Board of Health of Pennsylvania, is emphatic in his declaration that vaccination should not be either avoided or postponed on that account, and gives the following reasons to support his advice:

"First, the Camden epidemic of tetanus is purely local.

"Secondly, cases of tetanus have recently developed there in persons who have not been recently vaccinated.

"Thirdly, during the same period half a million or more persons have been vaccinated in the city of Philadelphia and its suburbs, and among these not a single case of tetanus has resulted.

"Fourthly, the germ of tetanus does not exist in vaccine virus.

"Fifthly, if tetanus occurs in a recently vaccinated person, not presenting any other wound or abrasion of the surface, it is because proper precautions have not been observed for ensuring cleanliness both in the act of operating and in the subsequent care of the wound.

"Sixthly, smallpox is still increasing in the neighborhood of this city. To suspend vaccination at the present time would be most injurious, as it would undoubtedly favor the spread of that disease."

The census returns show that there were 119,050 Chinese in the United States, 25,767 of whom were in Hawaii, and 67,729 in the Western States and Territories. There were 86,000 Japanese, of whom 61,111 were in Hawaii. The statement shows a general increase of Japanese for the past ten years and a decrease of Chinese for the same time.

A new treaty has been concluded with England respecting the construction of the Nicaragua Canal. Secretary Hay has said that he felt highly gratified at the result, which had been reached without the usual difficulty and with an abiding desire on both sides to reconcile differences and establish a permanent understanding as to the questions involved. In the view of the Secretary this question has gained all that it has asked, and there can be no question of the acceptability of the treaty in the Senate.

A remarkable find of lead ore has been made near Friendsville, Tennessee. It is said a vein twenty-two feet in thickness has been uncovered. The vein has been traced along the side of a mountain for half a mile.

It is computed that the Gatling gun has killed 250,000 men since 1862. The cost of living to-day is a third higher than it was in 1897, yet, according to the Springfield *Republican*, "present conditions are plainly more satisfactory to the masses of the people than were those of the low-price period. There is more work and steadier employment for large numbers of wage-earners, and while the great majority of the employee class find regular employment in hard times as well as good, and hence the masses of all classes rise in price, they find some compensation in the greater assurance of continuous work, which business under rising prices gives.

C. F. Benjamin, professor of applied Science, after conducting a fifteen months' crusade against the smoke nuisance in Cleveland, and practically clearing out the atmosphere, claims the secret of his success was all in installing of mechanical smokers. These smokers range in cost from four hundred to a thousand dollars per furnace, and are said to pay for themselves in a short time in the fuel and wages saved.

The Chicago *Record-Herald* says: "Beyond any question the most marvelous development of the century in the field of applied science may be seen in the electric lighting industry. There is nothing comparable to it in the whole history of civilization. The electric light was exhibited for the first time in 1876, but the history of its commercial use dates from the introduction of the Edison incandescent lamp in 1882. In nineteen years this industry has grown to become the dominant in electric lighting plants in the United States alone now reaches the enormous sum of \$700,000,000."

A dispatch from Erie, Pa., says that by a consolidation of trolley lines now proposed, in the course of a few months it will be possible to make a journey to Martinsville, Ind., 562 miles from Erie.

New York has more than twice as much greater than the entire population of Philadelphia lives in tenements; that is to say, in houses occupied by more than three families maintaining separate households. Philadelphia is likely to retain indefinitely her distinction as a city of homes. No other large city contains so many separate dwellings occupied by one family. These are the homes which imply the largest measure of privacy, comfort, independence and happiness for family life.

Smallpox is raging among the Sac and Fox Indians on their reservation, in Tama County, Iowa; thirty-five deaths have occurred.

A well of almost pure lubricating oil has been opened inardin County, Iowa, it flows 150 barrels a day. It is about thirty miles northwest of Beaumont.

The Rocky Mountain Industrial Sanitarium, organized by Denver professional and business men last spring, is now in successful operation. On a ten acre tract five miles from Denver fifteen or twenty patients in the early stages of consumption are under the plans of the proprietors, who virtually have no other patients. The rules of the institution compel a continuous outdoor life to be maintained summer and winter. Each patient is provided with a roomy tent, plenty of warm clothing and blankets, and a small stove, to be used only in extremely cold weather. Experience has proved that with proper food and clothing and a life in the open air and sunshine,

artificial heat is unnecessary, and becomes absolutely unbearable to the patients, who, without exception, are gaining rapidly.

Allotments of land in severity, embracing in the aggregate 7,862,475.11 acres, have been made since the passage of the act of Second Month 5, 1887 to approximately 64,000 Indians.

Of 21,329,819 males of voting age in the United States 2,826,295 are illiterate. Nearly one-half of all the illiterates in the country, it is said, are negroes.

There were 412 deaths in this city last week, reported to the Board of Health. This is 71 more than the previous week and 16 more than the corresponding week of 1900. Of the foregoing, 219 were males and 223 females; 46 died of consumption of the lungs; 66 of inflammation of the lungs and surrounding membranes; 13 of diphtheria; 11 of cancer; 23 of apoplexy; 2 of typhoid fever; 3 of scarlet fever, and 7 of small pox.

COTTON closed on a basis of 8c. per pound for middling upland.

WHEAT—Winter, super, \$2.50 to \$2.70; Pennsylvania roller, straight, \$3.25 to \$3.40; Western winter, straight, \$3.40 to \$3.55; spring, straight, \$3.40 to \$3.65.

GRAIN—No. 2 red wheat, 76¢ to 77¢.
No. 2 mixed corn, 67¢ to 68¢.

BEFF CATTLE—Best, 6 to 6½c; good, 5½ to 5½c; medium, 4½ to 5c.

SHEEP—Choice, 3½ to 3½c; good, 3 to 3½c; common, 1½ to 2½c.

LAMBS—3½ to 5½c.

FOUR—Best Western, 7½ to 8½c.

FOUR—Another letter, has been received from Ellen M. Stone. Her health has been somewhat affected by her continual imprisonment and hard fare, but she expresses herself as confident of ultimate release. The brigades are still claiming a high ransom.

Violent opposition has been made in Athens to the translation of a part of the Holy scriptures into the language of the common people. A dispatch of the 21st says: "The agitation against the proposal to translate the Gospels into modern Greek was continued to-day. Twenty thousand persons assembled around the ruins of the Temple of Jupiter Olympus, and took part in a demonstration organized by the students. A resolution was passed, calling on the Holy Synod to excommunicate any persons who translated the Gospels into the Greek as now spoken." Seven persons were killed in a riot which took place, and the Ministry has resigned. The question involved is said to be the most vital in the life of modern Greece. It is the question of keeping unbroken the Greek tradition against the Slavonic, and the Priests are said to have declared against the translation. A Mecklenburg steel manufacturer, named Griebeler, has, according to his statement, discovered a process of hardening steel to such an extent that its resisting power is far in advance of the Harvey and the Krupp hardening process. Wedges made of the new steel will split ordinary steel as though made of wood.

A dispatch from El Paso, of the 24th, says: that a mining prospector, Henry Bierman, has lately discovered a cave near Victoria about 200 miles north of the city of Mexico, which appears to have been at one time a temple of the ancient inhabitants of Mexico in which were strewn many ancient implements of warfare and cookery, and which was decorated with inscriptions in the Aztec and Mayan alphabets. The walls of the early inhabitants of Mexico and with many carvings of men and animals. He found round after room in this great underground temple or palace, and stores of prehistoric relics. Here and there were large drawings of men apparently in ancient armor, and of others evidently dressed as priests. In some rooms were altars with carved idols of stone standing back of them.

Representative Shafruth, of Colorado, has lately returned from a visit to China and the Philippines, and says in relation to the latter "For years we can expect nothing from those islands but loss." "They will be absolutely of no service to us in controlling the trade with China. At the least calculation, to hold the islands an army of 30,000 soldiers in the islands for many years. That means an expense of \$45,000,000 a year. Such a sum is all the Filipinos can pay by taxation, let alone the cost of civil government, which is more expensive over there than a similar government would be on this hemisphere. There are almost no improvements, such as civilized countries make. I have seen that we ought to let the islands go, just as we are letting go of Cuba. Allow them to have their independence." Five Americans and three Filipinos form the Commission charged with the government of the islands.

There has been an alarming spread of the plague in South Russia, according to the despatches from Lemberg,

hundreds of fatal cases are reported in Moscow, O. Kieff, Kherson and other towns.

A dispatch from St. Petersburg, says: It is being apparent that the famine is worse than the Government seems to have anticipated, or at least the means now available for relief will suffice for a few days. From the local government boards of many provinces and special districts there are being sent in daily reports of deep and increasing distress and an appalling scarcity of grain and provender.

Temperance hotels have recently been established several Swedish towns. Meals are offered at cost. The plan originated in a town called Vexio, and is the Vexio system.

The alarming increase of drunkenness among in large centers in England is creating disgust in quarters.

Strong lights, with basins of petroleum below are now used in France to destroy nightflying insects that injure vineyards. As many as 4500 insects have been caught in a basin in one night.

NOTICES.

Received from James Hobson, agent, Ireland, 1 Edward Bell.

The following subscriptions have been received to establishing an Orphanage and Blind Asylum in Cairo, Egypt, viz: E. R. \$1,000; G. R. \$500; C. W. \$250; C. W. \$200; L. R. T. \$100; L. T. & N. \$100; R. P. \$50; J. B. & A. C. R. \$45; C. W. & B. \$25; S. L. \$25; B. P. L. \$20; J. W. L. \$20; J. \$20; R. G. R. \$15; M. T. L. \$15; Cash, \$10; \$10; S. C. \$10; H. P. C. \$10; P. M. ANKS FOR THE UNSPEAKABLE.—There is a pervading and baptizing all rightly gathered assemblies in Divine worship,—an endowment which cannot be put into words, for it is in the light which no language can approach unto, and in the life which is itself the Word to man. It transcends all speech and under its own inspiration, and is best described, felt, and lived in when all out-sounds are hushed and all flesh is silent unutterable presence. Unspeakable is it, unspeakable are the thanks which it owes to bow themselves before the Giver.

HE UNDERSTANDS ME."—He who speaks in man's condition, whether it be his Saviour's, who ministers, must have a sense of state, a sympathetic insight and recognition that is permitted only to the love which puts one in the offender's place. Any sentiment of hate or alienation frustrates our efforts in reaching a brother's condition, because it places us outside of him merely to condemn him, rather than within to labor with him, as one that he can feel under. Hence the futility of censure, the utility of sympathy, if we wish to gain him. "First be reconciled to thy brother, then offer thy gift." There are indeed "revelations" of instruction which are the way of where they win their way in love. But do not get inside of one's heart to minister to conversion, or stand aloof and scold to harden his heart. Our Saviour's method of joining our humanity, what is in man, coming into touch with the feeling of our infirmities, and now bringing to our condition within us and not distance.

A Deputation of Friends to the President.

Soon after the recent elevation of Theodore Roosevelt to the chief magistracy of this country, a deputation from the Meeting for Sufferings of Philadelphia Yearly Meeting proceeded to Washington as bearers of an address to the President which had been prepared by that body. We have not as yet felt at liberty to publish the language of the memorial, since it was offered to him as a personal letter. Having, however, obtained from members of the deputation a sketch of their visit, we are able here to produce it, mostly in the language of one of them.

In this address was expressed its Christian interest and sympathy with President Roosevelt upon being called so suddenly, and under circumstances so sad and unlooked for, to exercise the functions of the highest office in our national government.

The address dwelt upon the great importance of the President maintaining throughout his administration a course actuated primarily by the spirit and precepts of the gospel. The practicability and efficiency of conducting the affairs of civil government upon a Christian basis, was illustrated by the experience of William Penn in connection with the State which he founded, the peaceful prosperity that marked the first seventy years of its history, and the dealings of William Penn with the untutored Indians. As a like spirit and practice should now enter into the management of the internal affairs of the nation, and no less control its growing international relations, the belief was expressed that rich blessings would thereby result to our beloved country and the whole world; and that as the powerful influence of the executive is exerted in this direction, he will not only merit the lasting gratitude of his fellow countrymen, but receive the approval of the Most High in that day when all nations shall stand before Him, and every man shall be rewarded according to his works.

The deputation was received by President Roosevelt with his characteristic frankness and courtesy. As they and others stood about him, he read aloud the address, commenting occasionally with appreciative emphasis upon passages that especially impressed him; making the remark (another informant says) at the use of the singular pronoun in allusion to him, that he liked those expressions, having some relatives in Philadelphia whom he had heard

speak in that way. He then thanked the deputation for their visit, and wished them to express to the Friends who sent "the message," as he termed it, his warm appreciation of the thoughts and wishes regarding himself and his administration, that had prompted its preparation.

The interview, though brief, left the impression upon the visitors, of a man of much native force and energy, who realizing the heavy responsibilities now resting upon him, is actuated by an honest and strong purpose that these shall be bravely met, and faithfully discharged.

By What Governments are Friends' Conscientious Scruples Against Carnal Warfare Respected?

In a petition from the Religious Society of Friends addressed to the Parliament of the Commonwealth of Australia, we find the attitude of several governments towards Friends in relation to their conscience against war thus summed up:—

In England their conscientious objections to military service is provided for by the existing law.

In Canada the "Militia Act" contains a conscience clause which absolves all members of the Society of Friends, and some others, from personal military service.

In Tasmania the "Defence Act" (which the present Bill would supersede), contains a similar clause.

In Victoria there never was compulsory service, and consequently no exemptions.

In Europe even, conscientious objections are respected.

In Norway, alternate service to the State, not at all connected with war, is accepted.

In France, Louis XIV. exempted Mennonites (a religious sect holding Friends' views as to war), from military requirements. The Government of 1793 did the same, and so did Napoleon.

In Denmark, they are exempted from obligations either to take judicial oaths or to serve as soldiers, In Prussia, Frederick the Great granted them full liberty of conscience and exemption from soldiery.

Even the ultra-military German Empire in practice allows military service to be commuted (in cases of conscientious objection), for hospital and other pacific work.

"It requires but little talent or thought to murmur, censure or complain. The devil certainly helps all such to cultivate the disposition: for by no other means can he so certainly gain his victories. They lay the flattering unction that they are doing God's service, when really they are sowing the seeds of discord, envy and strife."

THE DOUKHOBORS.—From accounts given by our Friend John Ashworth, of Manchester, who has recently visited the Doukhobors in Canada, the progress they are making is very encouraging to those who have given them help. Their thorough honesty and hard-working habits are already putting many of them in a position in which they are self-supporting. Some of them show no little mechanical skill; they have constructed a bridge over the Swan River, and in one house J. Ashworth saw a home-constructed lathe, and in another a loom. In some places they are giving up their communistic system, and are taking land individually; but most adhere, as at present, to the former method.—*Australian Friend.*

PRINTING BIBLES.—Notwithstanding its enviable reputation for producing learned books, the printing of the Bible is the great glory of the Oxford University Press. Here the Bible has been printed for over three hundred years; and it can be printed in one hundred and fifty languages and dialects; and over six hundred tons of paper are used up annually for this purpose alone. Orders for one hundred thousand Bibles are common; and the stock of printed and folded sheets is generally so large that an order for five hundred thousand copies could speedily be executed. The average production is from thirty to forty Bibles per minute; and this could easily be increased. There are no fewer than one hundred and ten editions of Oxford Bibles in English, from the stately folio for the Church Lectern down to the Brilliant Bible, which is the "smallest Bible in the world"; and of these fourteen are of the "Revised" edition.

The total average annual output is considerably over one million copies, which, piled on top of each other, would make a pillar eighteen miles high. Upwards of one million copies of the Revised New Testament were ordered in advance of publication in [Fifth Month,] 1881; and the honor of the Oxford Press workpeople was proof against offers of from two thousand pounds to five thousand pounds by American agents for a copy in advance of the day of issue. In Bible production, the Press holds its own triumphantly in the new world against the severe competition of American printers and publishers.—*Carlton Press.*

INDECISION.—Indecision is many a man's ruin. This is true spiritually as well as temporarily. The soul's safety demands prompt action. Favorable opportunities for salvation must be seized at once. Gracious calls are to be heeded without delay. When the Spirit is working in a human heart it is a risky and fearful thing to say, "Go thy way for this time; at a more convenient season I will call for thee." The wise will immediately fall in line with his motions and accept the Saviour whom he tenders, and live as He directs. "Now is the accepted time; now is the day of salvation." Close in with the overtures of mercy. Run no risks. Time presses. Eternity is near. The Judgment is at hand. It may be now or never with you.—*The Presbyterian.*

"A MODEL house-keeper may be made by training; but a home-maker is made by Christ's Spirit."

Science and Industry.

SUBMARINE GOLD MINING.—An account of the placer mining that is now being carried on through the ice off-shore at Nome, Alaska, as given by the *San Francisco Mining and Scientific Press*, is as follows:

The beach at Nome is flat and beneath the sea slopes away so gently that at the quarter-mile distance where the boring—or, more exactly, shaft digging—in the ice is going on, the sea is still so shallow that it is solid ice to the bottom. Diving suits are not necessary. There is no water at the sea bottom to contend with.

Geologically, there is no reason why such explorations of the sea bottom at Nome—but not the sea bottom at any or every other place—should not develop payable placers. The stream whose old beds and channels have proven so rich in gold in the high lands back of Nome once had a comparatively direct line of flow from the high lands, though the tundra as it now is and through a gently sloping valley, occupying an area now covered by the waters of Behring sea. One of the regional earth movements, such as is now going on on the coast of the Baltic sea in Europe, has lowered the level of the old plain till the sea now flows over it. The channel beds of the old streams are now beneath the sea surface—part of that old plain—and contain beneath the sea the gold brought into them when they were part of the land. It is this gold which will be found and mined as the result of the novel exploration now being carried on at Nome. The sea-covered locus of the payable deposit should not be particularly difficult to locate by prospecting. It will be the seaward extension of the richest portions of the beach and tundra. Unlike the beach the sea bottom will be mined through the lighter deposits containing the fine gold, and beneath them will exploit the old channel bed rock with its possible deposits of coarse gold and certainly much larger accumulation of fine gold.

The sea-bottom mining, while novel, is not entirely original. The Russian miners in Siberia have been doing much the same thing there. The difference is simply in the place of the mining. In Siberia it is the stream beds that have been mined. The Russian miner's practice is to cut out from the ice the area he designs to make his shaft. This exposes a water surface. Poles are then forced vertically down on the sides of the shaft to the bottom of the stream. The water again freezes on the exposed surface and also freezes behind the poles. The freshly frozen ice is cut out and the ice formed behind the poles makes a wall, preventing the further influx of water. The miner then thaws the bottom of the stream bed with fire and removes to the stream bank what he wishes of it within the limits of his shaft. Later in summer he washes up his dump and recovers the gold.

STORKS IN CONSTANTINOPLE.—One of the most interesting sights in Constantinople is to watch the storks rearing their young. Every year the old birds return to their former nests, which are generally placed on the flat tops of the Turkish chimneys. They are supposed to bring good luck, and rather than frighten them away a Turk will not use his

kitchen chimney while they are in possession. The parents' bill of fare for their little ones is varied. A snake or a frog is evidently great delicacy, but the former gives its cat a very bad time. The writer has often seen a stork coming home holding in its beak a long live snake, which all the time is trying to get hold of the birds' feet, which a tucked away as far as possible out of danger. When at last he arrives with his tid-bit, the little storks stand up, and, throwing their heads back till their beaks rest on the backs, begin clapping their bills, just as they were applauding with their hands. Some times the old bird is so pleased with this family tribute that, forgetting the snake, he indulges in a similar display, and the snake promptly wriggles off down the chimney. It is difficult to describe the disappointed air the hungry group as they see their dinner disappear. One of the disadvantages of stork-nests is the quantity of snakes and frogs which are constantly finding their way in this manner into the "lucky" house below.

Here is a tragic story of stork justice fully misapplied. It is said to have been actually observed recently by a student of law. Some unkind person put a strange egg in one of these homes on the house tops. When a Stork came home he became very indignant and had long and stormy arguments with his wife. As she evidently could not explain the matter satisfactorily, he went off and collected a large number of his fellows, who after fully examining the strange egg, every one agreed equal to his own. They then within a short distance and held an animated conference, after which they all returned and upon poor Mother Stork and killed her—*L. J. ger.*

OLD BANK NOTES.—A Bank of England note is old when it finds its way back to bank. The note may have been in circulation for a few days only, but if it gets back to bank its life is ended. It is burnt. The Bank of England never reissues a note, and will change for a check is desired new notes issued. The Bank of France, more economical, does not reissue a note, but turns the old one to some use. These are reduced to a pulp means of acids and the pulp is afterward used, but it cannot be remade into notes. The Bank of Italy is not so old until it has been examined carefully by experts, in order that every one of the old notes may be thoroughly destroyed.—*Late Paper.*

DEPTH OF THE ATMOSPHERE.—The British Royal Meteorological Observatory has published the estimates made by various mathematicians and physicians regarding the depth of the atmosphere surrounding the earth. The calculations of the various savants on this subject are widely divergent. Biot estimated that the depth was only about 40 miles; Bravais, seventy miles; Mann, eighty miles; Callandran, one hundred miles; Schiaparelli, one hundred and twenty miles; Marie Davy, one hundred and eighty miles; while Ritter stated that it reached a height of two hundred and sixteen miles. In Great Britain, during the early part of last century, the depth of the atmosphere was generally accepted as being forty-seven miles.

the fact that meteors became incandescent at a much greater altitude incontrovertibly proved that this calculation was fallacious. Robert Ball states that meteors have been observed at a celsitude of more than two hundred miles, and since they only become incandescent when they come into contact with the air the calculation of Ritter appears to be most correct.—*Public Opinion.*

GROWTH OF THE NORTHWEST.—A correspondent of the Philadelphia Press writes as follows. After giving some account of the growth of the railroad systems of the Northwest he says:

"I have had some idea of that development from the reports that have come to us of commerce that passed down the Detroit River in the season that is just closed. It is estimated. Not far from seventy millions representing the products of the Northwest were floated down the Detroit River the past year. Not many years ago the steam barge James F. Joy was built, capable of carrying 1100 tons of ore or grain, was deemed a remarkable exploit, and the citizens of Detroit who were so disposed, who had summer places along the St. Lawrence River, used to sit on their piazzas of a summer evening and watch the James F. Joy barges not quite so large, as they floated down the stream to Lake Erie and extend congratulations that so great a thing was possible for that river.

"Now, there are barges capable of carrying a thousand tons and in a year or two ten thousand ton steamers will be steaming there, and there is no slackening in the development of the Northwest they will go through the laden to their capacity. The railways of the Northwest feed these great freighters, and some of the railways centering at Buffalo or Cleveland take their products, and this is only an item. It is that part of the development of the Northwest which the commerce represents.

OLDEST NEWSPAPER.—It was supposed recently, says the *Golden Penny*, that the *Lat Pau*, a Chinese journal published in Peking, had one thousand years, was the oldest paper in the world. In a very able work recently published, however, Imbault Huard, Consul at Canton, shows that this belongs to the *Tsing-Pao*, or *Pekin News*, which has been published continuously since 1710, and is even said to have been published some two hundred years before that, or early in the sixteenth century—eight hundred years before a newspaper was known in

the parts of Peru—for example, in the shape of Jaaja—hens' eggs are circulated as coin, forty or fifty being counted for the market places and in the shops the make most of their purchases with this sort of money. One will give two eggs for brandy, another for indigo and for cigars. These eggs are packed in the shopskeepers and sent to Lima. Jaaja alone several thousand loads of are annually forwarded to the capital.

"cements unity."—*Dr. Jenkins.*

A Long Life.

The following is found in the London Times, of Eleventh Month 1st, 1901:

"Elizabeth Hanbury, of Richmond, Surrey, a member of the Society of Friends, died yesterday, aged one hundred and eighty years and one hundred and forty-four days. We are indebted to a relative for some particulars of her life. She was the youngest child of John Sanderson, who was born at Arnthorpe, Yorkshire, in 1749, o.s. Elizabeth Hanbury was born in Castle-street, in the parish of All Hallows, London-wall, on [Sixth Month] 9th, 1793. Her mother died on [First Month] 31st, 1795. Her father's warehouse was in St. Mary's Axe and he resided in Leadenhall-street, the house having a garden at the back in which were trees and a summer-house vividly remembered by Elizabeth Hanbury among her earliest associations, for here her father liked to walk enjoying the flowers they were able to grow there. She remembered the opening of the East India-house in Leadenhall-street, long since pulled down, being on the occasion carried on the shoulder of a man-servant to see the illuminations. She also used to speak of being taken to a window in their house early one morning to see George III., who rode past on a large white horse with a few attendants. About 1800 the family removed to a roomy house in Old Jewry, and E. Hanbury often spoke of her nurse frequently taking her for a walk in Moorfields, where Finsbury-circus now is, to see the cows milked and to look at the poor patients at the windows of Bethlem Hospital (Bedlam), which then occupied the side of the "Fields" adjoining London-wall. A few houses only were built in what is now Finsbury-square. She inherited from her father a strong taste for poetry, and throughout life even at the age of one hundred and six or one hundred and seven she would frequently quote considerable passages. About 1816 she accompanied a sick brother to the Isle of Wight. At that time communication with the island was kept up by a sailing packet between Southampton and Cowes, twice or three times a week. When Elizabeth Fry began to visit the prisoners at Newgate Elizabeth Hanbury joined in the work, and thus began many years of untiring labor among prisoners. At this time the convict ships, especially those for women, were sent out with a disgraceful and scandalous disregard of proper and even decent arrangements for those whom they carried. No matron was provided on board and no employment for the convicts, during the months of the long voyage. They were under the sole direction of the men of the ship. Drink was plentifully supplied and the demoralizing influences were often ruinous to young offenders who hitherto had been strangers to the evil influences of those long hardened in vice. Elizabeth Hanbury threw herself energetically into the effort made to reform this state of things. The convicts proved willing to second the changes introduced and to obey a matron, to do useful needlework, and to be taught as in a school. An immense amount of good work was thus achieved, but it continued to need care for many years. Every convict ship for women was visited before its departure, and everything possible was put in order so as to ensure to the utmost to the welfare of the many women

it was to convey. The valuable aid given in this important work by Elizabeth Hanbury led to requests to join other societies of a philanthropic and benevolent character. Of these the Anti-slavery Society held the most prominent place. E. Hanbury worked vigorously among ladies to gain their influence and support for the anti-slavery movement, and, in association with the Gurney and Buxton families and William Allen and Thomas Clarkson, she continued for years an unbroken work for the cause. For many years she was treasurer of a small but very useful society for assisting servants of the poorer classes when out of situations, and also took an active part in an invalid asylum, a refuge, a district visiting-society, and various means of affording sympathy and assistance of less permanent character. In 1826 she married Cornelius Hanbury, and afterward chiefly resided at Stoke Newington. Her Christian and philanthropic work, though begun much earlier, was largely carried on after this date. The Society of Friends admit the ministry of women in their meetings for worship, and Elizabeth Hanbury felt it her duty to speak from time to time. In due course she was recorded as an "acknowledged minister." Her addresses were generally brief, thoroughly evangelical in doctrine, and always correctly and admirably expressed. She took a deep interest in the various religious and benevolent objects which engaged the time and attention of her granddaughters, two of whom became missionaries, one in connection with the China Island Mission, and the other with the Church of England Zenana Missionary Society. Her sight enabled her to read and write, though with some difficulty, till she was over one hundred, and she daily dressed and went into her sitting-room till about the middle of her one hundred and seventh year. During the next twelve months of her life, she remained free from any malady, took her meals regularly and slept well, but her weakness slowly increased, and she became less disposed to converse, though her interests and the bent of her mind remained the same. Elizabeth Hanbury leaves a son, Cornelius, and numerous grandchildren and great-grandchildren.

READY access to the library tempts to quick and hasty reading. A taste is formed for devouring indiscriminately what comes to hand. The habit grows, and one reads, without due digestion, whatever lures his eye, or he hears commended, or talked about. He becomes the miscellaneous and omnivorous reader. A good thing thus degenerates into a vice or mania. He is the best reader of books who masters them, and makes their contents his own by careful reflection and comparison. It is not so much the quantity, as the quality, of our reading that benefits us intellectually and morally.—*Ex.*

"We cannot all be in the most desirable places or in the most favored positions, but we can all make the best of our surroundings. By mastering our conditions, we develop the strongest, noblest and worthiest powers of character, grace, intellect, heart and life which we possess, and so come to a fulness and ripeness of manhood and saintship, otherwise unattainable."

AN OLD FASHIONED WOMAN.

No clever, brilliant thinker she,
With college record and degree,
She has not known the paths of fame,
The world has never heard her name,
She walks in old, long trodden ways,
The valleys of the yesterdays.

Home is her kingdom, love her dower—
She seeks no other wand of power
To make home sweet, bring heaven near,
To win a smile and wipe a tear,
And do her duty day by day
In her own quiet place and way.

Around her childish hearts are twined,
As round some reverend saint enshrined,
And following hers the childish feet
Are led to ideals true and sweet,
And find all purity and good
In her divinest motherhood.

She keeps her faith unshadowed still—
God rules her life in good and ill;
Men in her creed are brave and true,
And women pure as pearls of dew,
And life for her is high and grand,
By work and glad endeavor spanned.

This sad old earth's a brighter place
All for the sunshine of her face;
Her very smile a blessing throws,
And hearts are happier where she goes,
A gentle, clear eyed messenger,
To whisper love—thank God for her!

—L. M. Montgomery, in the *Congregationalist*.

Be Observant.

A child may know more than a philosopher about some things. A little girl entered the study of Mezerall, the celebrated historian, and asked him for a coal of fire.

"But you haven't brought a shovel," he said.

"I don't need any," was the reply.

And then, very much to his astonishment, she filled her hand with ashes and put the live coal on top. No doubt the learned man knew that ashes were a bad conductor of heat, but he had never seen the fact verified in such a practical manner.

Two boys of my acquaintance one morning took a walk with a naturalist.

"Do you notice anything peculiar in the movement of those wasps?" he asked, as he pointed to a puddle in the middle of the road.

"Nothing, except they seem to come and go," replied one of the boys.

The other was less prompt in his reply, but he had observed to some purpose.

"I notice they fly away in pairs," he said.

"One has a little pellet of mud the other nothing. Are there drones among the wasps, as among bees?"

"Both were alike busy, and each went away with a burden," replied the naturalist. "The one you thought a 'do nothing' had a mouthful of water. They reach their nests together; the one deposits his pellet of mud, the other ejects the water upon it, which makes it of the consistency of mortar. Then they paddle it upon the nest, and fly away for more materials."

You see, one boy observed a little, and the other a good deal more, while the naturalist had something to tell them that surprised them very much.

Boys, be observant. Cultivate the faculty. Hear sharply. Look keenly. Glance at a show window as you pass it, and then try how many things you can recall that you noticed in it.—*Ec.*

FOR "THE FRIEND."

The "Away from Rome" Movement in Germany.

With a Bohemian Retrospect.

There was an account given in the *New York Independent*, several months ago, concerning a quite remarkable spread of anti-Catholic sentiment in some parts of Germany and Austria. It has come to be spoken of as the *Los von Rom*, or "Away from Rome" movement. It is reported that fully thirteen thousand persons (another account says ten thousand) have left the Roman Catholic denomination and joined the Protestants, while seven thousand have affiliated with the partially reformed element, the Old Catholics. There has also been a spread of the movement over the border into Saxony. Although it began rather as a national and political agitation, being violently felt in the Austrian parliament, it is gratifying to be assured that it has lately taken on an increasing spiritual and non-political character. The affirmation of a purer faith, by Dr. Eisenkolb, perhaps the most prominent of the newly convinced ones, before "Emperor and Empire," has been given wide publicity. "We will not permit anybody, not even if he be a minister, to step between us and our God, the Saviour, as a Mediator," sounds the note of a definite parting with clericalism.

In the *Converted Catholic*, (New York), the following remark is made by a writer concerning a sympathetic movement, away from Rome, in Germany's recently acquired provinces of Alsace and Lorraine: "These two provinces, with a thriving agricultural and industrial population, have been for centuries under the dominion of Rome. Alsace especially was counted as loyal to Rome and Romanism as Dublin and Innsbruck. In a manner not to be explained by any human reasoning, Protestantism has made unprecedented gains in Alsace. The severe military system forced upon the Alsatians—and forced upon them with all the harsh intolerance characteristic of Prussia—would seem to be an impediment to the spreading of Evangelical doctrines among the liberty-loving peasants of Alsace. In spite of these handicaps, Protestantism has already advanced, and entire congregations have turned away from Romanism and have become sincere and aggressive Protestants."

During the summer just past, the editor of the *Converted Catholic*, James A. O'Connor, was in Europe expecting to visit the scene of the "Los von Rom" movement. Prevented from so doing, he has given in his monthly journal some further information thereabout, which had just been furnished to the *London Christian* by the wife of its editor who herself is one who had come away from Romanism. It appears from this statement that the cradle of the movement was in Bohemia where, at Teplitz (a town noted for its saline baths), the first Romanists, for a long period of years, have severed their church connection and declared themselves Protestants. There are said to be now nineteen such congregations in Bohemia alone. It is remarkable that Prague, the capital, with thirty thousand German Catholics (about one-seventh the city's population), has not one German priest, the reason

wherefore being, that the Roman curia found the Slavs to be both more docile teachers and subjects.

While the Austrian law ostensibly leaves subject free to choose his own religion at his fourteenth year, this freedom in reality does not exist, except it be under very considerable hardships, officials who have been Protestant being summarily turned out of office, and pupils dismissed for the same reason. The Government, acquiescent in priests' demands that it should combat "treasonable movement," prohibits assemblies where religious addresses are to take place; confiscates pamphlets which formerly could easily be distributed; seizes newspapers favoring the movement, and even opens letters suspected of containing Protestant matter. Meanwhile, petty persecutions, set on by the priests, are prevalent, as might rather be expected. It is surely cheering to know of this revived Reformation in that historic province watered by the Moldau and the upper Elbe, where the seeds of a better manifestation of the Christian faith than then generally prevailed, were sown by faithful one century or more before the appearance of Luther. Among these gospel seed-sowers was Conrad Waldhauser, who, after leaving Vienna, where for fifteen years he had been an influential preacher, and visiting Rome where his eyes were opened to the excessive corruption of religion and the priesthood, passed through all Austria, preaching reformation, and finally coming to Prague, in Bohemia. A contemporary, Matthias of Jaxa refers to him as a powerful preacher of repentance, who "spoke forth to the people sharp warnings to flee from the wrath to come. No prevalent vice escaped his rebuke. Pride of dress, usury, lightness, and youthful vanities, were rebuked, and a powerful reformation was made. The usurer gave up his ill-gotten gains. The thoughtless and proud became serious. Quite a number of converts were drawn to listen to his sermons. A great change was effected in the hearts of a large number of his hearers, while the piety of his own life exhibited an example of what he commended to them."

A native of Prague was Matthias of Jaxa just quoted. He was the author of notable works against Anti-Christ, the Abominations of Carnal Priests and Monks, and other writings pertinent to those decadent times, such as might have entitled him to be called the Wilfrid of Bohemia. A graduate of the University of Paris, afterward a parish priest in Prague, and also confessor to Emperor Charles the Fourth, of Germany, the result of his spiritual conflict is very touching and instructive. After telling of his earnest prayers "to God and the Father of my Jesus Christ," that he might be directed in the right way, and not be allured by worldly reverence, he continues:

"Whether I should seek out and chase the benefices, and thirstily grasp after honors, which to some extent I did, or rather go without the camp, bearing the poverty and reproach of Christ; whether, with the material should live in quest of an easy and quiet life for the moment or rather cling to the faithful and holy truth of the gospel; whether to commend what almost all commend, lay my

many do, dispense with and gloss over the pictures as many of the great and learned famous of this day do, or whether many inculcate and accuse their unfruitful works of darkness, and so hold to the simple truth of the Divine words, which plainly condemn the lives and morals of men of this age, to prove them false brethren; whether I will follow the Spirit of Wisdom with its suggestions, which I believe to be the Divine gift of Jesus, or follow the sentiment of the multitude, which, in their self-indulgence, without show of mercy or charity, are lovers of this world and full of carnalities, they claim to be safe,—I confess that between these two courses I hung wavering in doubt; and unless our Lord Jesus be our power, none will escape the honeyed face and the tricks of the harlot—the tricks of Satan and snares of Antichrist."

Another brave heart of the same time was Milicz, born in Moravia, student in the University of Prague, later, preacher and deacon (for the limited time his conscience did allow him to be), in the latter city, living thenceforward a lowly place, his sincere efforts for the moral and spiritual regeneration of the capital, then noted for its revelry, gained him in a degree the hearts of the populace. "Having been," says Matsch of Janow, "a simple priest, and secretary of the prince's court, before his experience of the visitation of the Spirit of Christ, he grew rich in wisdom and all utterance of doctrine, that it was a light matter to him to preach five times a day—once in Latin, once in German, and then again in the Bohemian tongue—and this publicly, with a mighty voice and a powerful voice; and he constantly brought forth from his treasure things new and old." A visit to Rome, where he was imprisoned, writing there a valuable work against Anti-christ, his liberation, and return to Prague and establishing a large school of copyists for the transcription, in order of circulation, of religious and other improvements; his arrest by order of the pope for sedition; his appeal from the jurisdiction of the archbishop of Prague to the pope himself, with his journey to Avignon, where the pope then was; and his death while his cause was pending,—these are but briefly the usefully dedicated life of the reformer, John Milicz.

Matthew of Cracow, another opposer of superstition and reprobator of the priestly corruption of the age, was for a while lecturer of theology at Prague as well as at the University of Cracow; later by invitation of the Emperor he was the occupant of a post at the newly instituted University of Heidelberg; and through the same high influence, he was made bishop of Worms. His treatise on the Pollution of the Romish Court, containing which his repeated missions to Rome on affairs of high importance enabled him to come with authority, showed at the same time that he was free to deliver his testimony without fear or favor. The very usual custom of buying and selling of ecclesiastical offices was severely and at much length condemned. Replying to the objection that the priests ought not to judge their rulers, he said, "that the principle is true in all things that are either good or indifferent;

but where there is manifest mischief, the case is altered. The head ought to govern the members but not to mislead or destroy them. When he does that, he does not govern them, and then neither are they bound to obey him [in matters of conscience], because he thereby ceases to fulfill the duties of the head." Matthew of Cracow died in the cathedral city of Worms, and was buried there, in 1410.

In this same year, 1410, was born at Ober Wesel, on the Rhine, the learned and eloquent John Ruchrath, who, half a century later, and during the space of some seventeen years, was found in the above city of Worms preaching with the utmost plainness upon the need of a reformation by priest and people. This one passage I quote, as showing his right apprehension of a testimony which Friends claim to be founded in the truth:

"The zeal with which the Saviour sought to extinguish ambition may be inferred from the fact, that he does not leave his followers at liberty to take a name designative of pre-eminence, but expressly forbids them to assume the proud titles of Master and Lord. For this reason I am often surprised that these names have found their way to the spiritual heads of the Church, and that theologians and philosophers assume them as their peculiar privilege; although there is but one who is our Lord and Master, and in whom are hidden all the treasures of wisdom and knowledge; not to speak of the blasphemous and fulsome titles of Most Wise, Most Venerable, Most Blessed, Vicar of Christ, hero, demigod, and even Most Godly, with which his flatterers fawn upon the pope, and which, considering the self-love of man, can scarcely fail to make him vain of his ornaments, and lead him to exult and fancy himself beautiful."

A simple reference need only be made to the name of John Huss, and to that of Jerome of Prague, his true yoke-fellow in the defense of the gospel, and fellow-sufferer in tribulation and at the martyr's stake. Their faithfulness to God and His grace, with that of those other worthies already alluded to, will, I have not a doubt, be renewed and livingly felt in the spiritual enlightenment and resurrection of Bohemia, and of all Germany. The subject may now be left, in glancing at Alsace, into which, as stated, the new protest against Rome has extended, by recalling the name of John Tauler, of Strasburg, the chief of the province mentioned. His principal work, "The Imitation of the Humble Life of Christ," as it illuminated the way in the fourteenth century of many seekers of the Kingdom, on both sides of the Rhine, may still have a service for honest wayfarers at this late day.

JOSIAH W. LEEDS.

WHAT are the abuses of reading? These (1) Hurried reading without concentration. (2) Reading for mere entertainment without reflection. (3) Reading when we ought to be doing some other thing.—*Ladies' Home Journal*

The stream which is to heal and vitalize humanity must rise on a height above humanity. Moral and social reforms which rise from lower levels will be like rivers in the desert, which trickle feebly for a few miles and then are lost in the sand.—*Alexander MacLaren.*

Indians at the Burial of Bishop Whipple.

The Indians present in Fairbault at the burial of Bishop Whipple bore testimony to the noble missionary work he had done among them. About forty Sioux Indians were present from Birch Coulee and twenty-five Chippewas from White Earth Reservation. Among the eight active pall-bearers, clergymen representing the different phases of the Bishop's work, were two full-blooded Indians, one of whom, a son of an Indian clergyman, is now serving as a deacon among his own people.

The aged Emmegabowh voiced the thought of all the Indians present when he spoke of the grievous loss they felt in the departure of such a friend, "The Great Warrior," as he called him. This reverend minister, whom Bishop Whipple had ordained, said:

"I write the language of my sorrowful heart. I cannot say much at this time—my heart is too heavy. When I heard that our Bishop had died, I said, 'No, this cannot be.' I did not think our Bishop could die. But in another hour a second messenger entered my house to assure me that the loving Bishop had died truly. I and my wife went alone in our lonely room, and then for hours spoke not to one another.

"The Indians began to come from all directions and to ask with startled faces what it meant. I said: 'My friends, the best friend our people ever had in this world—the great warrior, the great Bishop, the great loving man—has fallen.' The grief was terrible to see. They could not believe it. Some went away with bitter weeping; others stole to their homes stunned to silence.

"I went to Fairbault for the last time with my sorrowing people. I said to them: 'This time we go to Fairbault with feelings unlike any that we have ever had. Before we have gone with bounding step and happy hearts. We have known that we were to look on the face of our loving Bishop, the friend of our lives. It was our joy to see the face of the man who loved and sympathized with my people. Before we have been going to get inspiration, courage, counsel. We have gone away full of hope and courage, blessing our Bishop and with our hearts ready to go on as he had bidden us.

"Our Bishop was all love. He preached always, from the beginning, love! love! 'My children, love the Great Spirit; love one another; love all other tribes.' His one great aim has been to unite us by close connection in Christian fellowship.

"He is no more here to give us these lessons. His loving face is hidden from us. His voice is silenced. Silenced, did I say? Yes, and no. His voice shall sound, and be forever ringing in our ears. Yes, and it shall be ringing as long as his red children live, throughout the Indian country.

"More than forty years ago, when I went with him through the forests, he carried his blanket, his robe case and other things, and many times the Indians said, 'We must not let him do this. He will kill himself. He cannot work in this way and live.' But he would smile—oh, how we loved that smile!—at every step he took and say, 'Oh, this is nothing! This does not tire me!' And his voice filled us with hope and courage.

"Our beloved Bishop has stood for over forty

years and defended the defenceless. He has spoken and written for the rights of his red children, and that, when no man gave much thought to the forlorn outcast of the world. He alone the first Bishop who entered into the Chippewa heathen land. To-day throughout the Chippewa country tears are blinding the eyes, hearts are heavy loaded with sorrow, and are looking upward, crying, "My father! My father!" like Elisha of old when his friend was taken away from him. In a loud voice he cried, "My father! My father!" The double portion of Elijah's spirit was given him. May the double portion of our departed Bishop's love be given us! His has been a long battle for us. His Indian work has been blessed in the conversion of many. He has built churches and has ordained many Indian deacons who are doing their work faithfully. How truly can he say in the language of St. Paul, "I have fought a good fight, I have kept the faith."

"But we, what are we to do? What courage can we take away? We are lost children. Our hearts are lead. I bid you farewell."—*Spirit of Missions.*

HOME LIFE.—There is probably no other subject in the world about which there has been so much sentiment as home. The sweetest poets have sung its delights; the finest oratory has laid the fairest garlands upon its altars. There is no fancy so dull it does not picture a place where the weary heart may find peace and rest, and where love binds up the wounds the world has dealt.

It is the ideal home of which every man dreams, and in which every true woman hopes to reign some day as queen. So far as the outward signs go, many achieve their desire. But if "stone walls do not a prison make, or iron bars, a cage," still less does the mere possession of a house make a real home. It may be beautiful within and without, rich in art treasure and costly bric-a-brac; yet, if consideration and forbearance and love and patience do not furnish it, it is as lacking in the essential attributes of a true home as the bare stones in the street.

"Shall I not take mine ease in mine inn?" asks bluff Sir John. "Shall I not take mine ease in mine own house?" we ask. "Shall I not there be free from prying eyes, and at liberty to do even as it pleases me."

Only too many of us roughly translate this to mean that we feel at perfect liberty to make our homes a dumping ground for all our bad temper and irritability, and the boorishness that we would not dare to inflict on the outside world.

It is a strange and very pathetic fact that we give our best to strangers and chance acquaintances, and keep for our nearest and dearest only what is left of our brightness and amiability.—*Phila. Ledger.*

We often talk of men who succeed, and the measure of success differs largely. I don't mean by success the tumble bugs that roll their treasure home, pigs that succeed in finding acorns, bankers who pile up dollars, trust organizers who rob, or gamblers who successfully swindle. When I mention successful men I mean those whose lives have added something to the dignity and decency of the human race.

Why We Live Longer.

The Government bulletin showing that the length of life in the United States is materially increasing, will be taken as a matter of course by all observing persons. It would be astonishing if it were otherwise. The great gain is in the lower death-rate among infants, among children under five. The death rate among this class is very much lower than it was before, and by before, I mean twenty-five years ago. The improvement within that period has been nothing short of marvelous. Children under the age of five are peculiarly susceptible to bad sanitary conditions and it is along the lines of sanitation that we have made the greatest improvement in the period I speak of.

Adults live longer now than they used to, because the conditions all about are constantly improving. The surroundings in every dwelling place are better than they were, and, what is quite as important, the opportunities for getting good food are very much better. There is more money in circulation, people are more prosperous and they are putting into their stomachs a higher grade of food than was the case twenty-five years ago. The question of diet has received very close attention and on all sides new and nourishing foods have been put on the market at a very low price.

We have learned many other lessons in the past few years that help us to prolong life by avoiding fatal diseases. We know that contagion is carried by insects. We have learned the danger of promiscuous spitting and everywhere the health boards authorities are having laws passed against it. We have learned the value of cleanliness. Among the masses ten people hate regularly now where one did a dozen years ago. We have learned the value of cleanliness in our food. We realize the danger of keeping our supplies in dirty ice boxes, where food is readily decomposed. We have learned to guard carefully against impure ice.

A feature that has materially decreased the death rate is the more rational system of amusement that has come in within the last fifteen or twenty years. People have learned the danger of overworking and underpaying. They take vacations during some parts of the hot months; they live out of doors as much as possible. Golfing, bicycling and other out of door sports have come in, to the great advantage both of our minds and bodies.

Cities, large and small, have learned to keep their streets clean, and clean streets have a direct bearing on the death rate. In New York I have seen the death rate go up and down, according to whether the streets were well or poorly cleaned. Towns of any considerable size have adopted fairly rational methods of sewage disposal.—*Dr. Cyrus Edson.*

Service Lost for Gain.

The ideals of our business world come very near being proper ideals. The ideal for instance of exerting wide influence, of wielding power, is a noble ideal where the power is one of character and service and not one of mere brute force. Our business in the world is to express ourselves, to make ourselves felt, to leave our mark on human affairs as far as we can. Insofar as a captain of industry is doing

that he is doing well. The ideal of supplying the people with any of the necessities of life such as oil, sugar or corn is also a high ideal. It is one of the best forms of usefulness a man who does it has a right to claim place beside the poet and the teacher; and indeed in some respects, his function is more fundamental and important than theirs. The field of usefulness in material things is one which the highest qualities of humanity can well show themselves—in which we may lay for the devotion of saints and heroes and self-sacrifice of martyrs. Why do we not find these traits in the business world?

It is because the ideal of the business man is not service, but gain. The soldier, the clergyman, the professor or the editor think little of his salary. It is a mere incident. The business man thinks of little else and the higher he gets into the world of finance the more his success is measured by the money makes. There is no reason in nature why man's success in furnishing kerosene to the world should be measured in money any more than another's success in providing it with poetry or sermons. Milton got £5 for "Paradise Lost," and yet we think none the less of him. We measure his value by what he did and not by what he got for it. It ought to be a proud thing for a man, of things being equal, to supply millions with sugar, but it is a matter of comparative little importance how much he gets for it.

The business world has become so one-sided in its preoccupation with mere questions of gain that its highest ideal to-day is to get something for nothing. The man who can "make" a million or two "on the street" a day, without rendering any service to mankind is considered pre-eminently a "success man." As no man can get something without earning it, unless someone else earns it without getting it, the result is that the main occupation of the business world now is to get away other people's earnings from the. This is done in a thousand ways—by watered stock so that dividends are paid on nothing, speculations of all kinds (which is, of course, gambling, and nothing else), by municipal franchises, by land monopoly in the growing cities and other similar things. Upon such privileges all the trusts and combines are built. They effect enormous savings in advertising, in plants, and in the number of employees, and then go on charging the price fixed under the old expensive competitive conditions, or else actually raise them. The ideal of service is thus completely lost. The ideal of annexing the earnings of others, a thing that which might be a noble, unselfish dedication to the interests of the human race, comes an inordinate desire to squeeze all that can be got out of it.—*E. H. Crosby in Success.*

If only for an hour man gets at least a glimpse of the larger, nobler life, the ground is taken away from life, and visions of greater stir the energies of hope.—*Berry.*

JESUS took no man out of society who was founding his Church; He left him as he stood. He changed the man, and through man the society. He withdrew no father from his family, no daughter from her mother; he changed them there, but, changing the men, changed all.—*A. M. Fairbairn.*

THE CRIPPLE.

T. WILKINS.

meet a cripple when I'm out upon the street wonder: Were I crippled would this life be as sweet as sweet?

He answers and its echo make me tremble on my feet, the truth is so apparent that the echo must repeat.

Such a touching sermon that no language can utter, no tongue can ever handle and no pen can e'er display the sweetness of the living of a whole man day by day, passing by the cripples in the throngs upon the way.

He knows till he has tried it, what it is to lose leg,

to be obliged to travel all through life upon pegs;

He knows the crushed ambition of a cripple who must beg;

He senses others' troubles till he tastes their bitter drag.

He can subdue much sorrow and allay the deeper pain

of cripples, by assisting with a portion of our sin.

He knows not what the morrow will be bringing in its train,

His life with all its changes is uncertain in the main.

A London Gentleman.

A London gentleman, who had a beautiful provided him with a collar on which his name and address were engraved. He asked whether this had ever served the dog back to him, he told a re- of the Boston Herald the following in- ing incident:

One occasion I lost Scotti in Piccadilly. Now how much I rush about in hansom and Scotti always goes with me—we many miles in a week together in this but on this occasion I was walking and him. Search was in vain. The crowd eat, traffic drowned the sound of my feet; and, after waiting awhile and look- where, I returned to my suburban home to my companion, and sorrowful, yet that he might find his way back.

About two hours after my arrival a cab drove up to the door, and out Scotti. The cabman rang for his fare asking he had somehow captured the dog. I inquired where and how he found it. Oh, sir," said cabby, "I didn't hail him. He hailed me. I was a-standing close James' church, a-looking out for a fare, and I jumps the dog. "Like his impu- says I. So I shouts through the win- let he wouldn't stir. So I gets down to pull him out and shows him my out he sits still and barks, as much as "Go on, old man." As I seizes him, the collar I reads the name and address. Right, my fine gentleman," says I. "I see you where you're wanted, I dare you. So I shuts to the door, and my gentle- leases himself with his head just looking out. I drives on till I stoos at this here when out jumps my passenger, a-clear- door, and walks in as calmly as

though he'd been a regular fare.' I gave my friend the cabman a liberal fare, and congratulated Scotti on his intelligence—he is instinct, or reason, or whatever it may be—that told him that hansom cabs had often taken him safely home, and therefore a hansom cab would probably do so again, now that he could not find his way and had lost his master.'

Dignified Schoolboys.

The model schoolboy is to be looked for in China. Eleven hundred college boys, all bound for Queen's College, Hong-Kong, and not one of them indulging in boisterous laughter or even letting off his superfluous spirit by a run or a leap, is a sight to be witnessed any day in that Eastern city.

A correspondent of *The Captain* stood in one of the streets crowded by these Chinese school-boys, and watched them as they passed. They did not hurry, but walked sedately along with their books under their arms. The utmost exhibition of youthful feeling was a reserved smile which lighted up the face of a boy here and there, as he listened to the conversation of his companions.

Boisterous behavior would have been considered by these Chinese lads as undignified and quite contrary to all ideas of schoolboy good form. The more sedate a Chinese boy is in his behavior, the more he conducts him- self like a little old man, the more aristocratic he is considered by his school-fellows, and the more praise he receives from his schoolmasters and his parents.

In America and England parents and sons do not invariably agree as to what virtues are to be admired in a schoolboy. In China they always do. Strange as it may seem, Chinese youths go to school with the sole idea of ac- quiring knowledge. Hence the stolid, deter- mined faces of those eleven hundred boys as they entered Queen's College.

There was little variety in the color and cut of their dress. They wore no hats. Some had brushed all their hair straight back into the long queues; others had a fringe of stiff bristles dividing the shaven from the unshaven territory of their heads. All carried fans.

In age the boys varied from nine to twenty-three, and many of them had family cares in the shape of a wife and children at home. Every year, however, sees a decrease in the proportion of married schoolboys and the average age becomes less each year. In the early history of the school, boys of all ages were to be found in it, and it was not an un- heard of thing for father and son to be running a close race for the first prize.—*S. S. Visitor.*

Correspondence.

Seeing in your last issue the statement from "late paper," that no yellow hairs are ever seen on male cats, I want to say that must be a mistake. I had a pet cat when a child, yellow and white, named Josey, and he was a large, fine fellow, too. Besides being handsome, he was smart. When I would chant geography, as we were taught to give the States and capitals, he would jump up in my lap and place a paw on each of my shoulders and look me in the face as though enchanted. I could tell more of him, but this will suffice. *Tri- colored* cats, white, black and yellow, I think it is safe to say, are always females.

ANGIE H. WHITE.

FOUNTAIN CITY, Ind., Eleventh Month 27th.

Of late THE FRIEND has not contained reports concerning the doings of the Doukhobors. I trust they are increasingly prospering, and soon will not be obliged to labor far from home, in contact with the motley crowds of men employed on new rail- ways, rather rougher than the average of workers. I can sympathize with those dissenters because an- cestors of mine had to yield and migrate, harassed by bitter papists.

R. HECKER.

PHILA., Eleventh Month 29th.

This (Wenatchee, Washington Territory), is one of the finest fruit growing sections in the Union. Wenatchee fruit took the premium at the Pan-American Exhibition and also at Spokane. It is really wonderful to see the fine fruit of almost all kinds growing in such abundance and to such perfection.

We are here in the Squil Chuck Valley, about seven miles from town, near one of the clearest mountain streams that ever flowed, among the evergreens. This is a very healthy place and land is cheap. We are one mile from school. Some of our neighbors have lately taken homesteads not far away. I think it is the best place for a man to get a start that I ever found; many have done well here, and many more can. Now is a good time to get a home. Our climate is mild, with some snow and very little wind. We have one of the best markets on the Great Northern Railway. I am in no way connected with the sale of land here, but am glad we have found so good a place for a poor man who is willing to work. Good lumber is nine dollars per thousand at the saw mill only a few miles from here. A man can get plenty of work at good wages. [A meeting of Friends held in our house].

Those wanting more information can enclose a two cent stamp to my address, and I will endeavor to do the best I can to answer questions.

LOUIS P. HAMPTON.

WENATCHEE, Chelan Co., Washington Territory, Eleventh Month 15th.

Items Concerning the Society.

A public meeting is appointed to be held at West Grove, Pa., to-morrow, the 8th instant, at 3 P. M., under religious concern of William C. Allen.

T. Wistar Brown has presented to Haverford College nearly one thousand clay tablets, many of which are believed to have been in existence three thousand years before the birth of Christ. This means that Haverford is in possession of a collection at least five thousand years old. The tablets, or Babylonian books, as they are commonly called, were recently purchased in New York by George Barton, professor of the Assyrian language at Bryn Mawr College. When the existence of the collection in this country first became known among the foremost historians in America, representatives of a half dozen colleges endeavored to secure it.

Newgate Prison, in London, which will shortly be removed, was first built in the twelfth century, but was destroyed in the great fire of 1666 and again in the Gordon riots of 1780. This prison was the scene of much suffering among early Friends, confined for conscience sake. Thomas Ellwood gives a graphic account of a coroner's inquest held there on the body of an inmate who died of prison fever.

Little Egg Harbor Monthly Meeting, comprising Barnegat and Tuckerton meetings, was laid down by Burlington Quarterly Meeting at its recent session, and the members were joined to Burlington Monthly Meeting.

A second evening meeting for worship to include all members and attenders generally, was appointed by a committee of Philadelphia Quarterly Meeting,

to be held last Fourth-day, at 7.30 P. M., in Friends' Meeting-house on Twelfth below Market Street.

We observe an announcement of a book entitled "Early Settlers of Nantucket," compiled by Lydia S. Hinchman, a second and enlarged edition. It gives a brief history of the settlement of the island, and prominent events in the lives of the following settlers or their associates: Thomas Macy, Edward Starbuck, Tristram Coffin and his children, Christopher Hussey, Stephen Bachelor, John Wing, Stephen Greenleaf, Peter Folger, Thomas Barnard, Robert Barnard, Thomas Prence, William Collier, Thomas Gardner, Richard Gardner, John Collier, Samuel Shattuck, Peter Hobart, Thomas Mayhew, Sr., Thomas Mayhew, Jr., Richard Swain, John Swain. Also some genealogical detail of the following Nantucket families and their descendants: Mitchell, Russell, Swain, Barker, Swift, Rotch, Bunker, Coggeshall, Wing, Hathaway, Newhall, Colcord, Wadley, Waterman, Stanton; and of the families of Lucretia Mott, John G. Whitaker, Thos. Earle, John Milton Earle, Josiah Macy, Aaron C. Macy. (Ferris & Leach, publishers, 29 N. Seventh St., Phila.)

SUMMARY OF EVENTS

UNITED STATES.—In a paper read before the Philadelphia County Medical Society, Dr. William M. Welch, physician-in-charge of the Municipal Hospital, stated that since the beginning of the present year about 300 cases of smallpox have been treated in that institution, and of this number not a single patient had been recently vaccinated successfully. The shortest period elapsing between a successful vaccination and the contraction of the disease was five years. It was the case of a boy, who had the disease in a very mild form.

Two passenger trains on the Wabash Railroad met in collision about 7 o'clock on the evening of the 27th ult., at Seneca, Michigan. A number of emigrant cars were crushed and burned, and many lives were lost; the number of dead and injured is estimated at from 60 to 150.

The 57th Congress convened in Washington on the 2nd inst. David B. Henderson, of Iowa, was re-elected Speaker of the House.

The Supreme Court of the United States has rendered a decision in a case known as "The Fourteen Diamond Rings Case," in which it affirms that the Philippine Islands are not foreign territory, but domestic territory of the United States. An important feature of the decision is its affirmation that all the acts of the government in reference to these islands are valid. The issue is cleared for Congress to say what sort of government and customs tariff shall be accorded to the Philippines, Negroes, Mindanagos and others of the Philippine Archipelago.

The fifth annual report of Secretary of Agriculture Wilson, announces an important extension of the forecasts of the Weather Bureau, which now includes reports from certain points on the British Isles and the western coast of Europe, from the Azores, Nassau, Bermuda and Turk's Island. The Atlantic forecasts based upon these reports now form part of the regular night forecasts issued in Washington. Three new forecast districts have been established—in Boston, New Orleans and Denmark. An extension of the forecast to farmers through the rural free delivery is contemplated. A considerable success is reported in experiments in plant breeding to secure samples of cotton resistant to wilt and other diseases.

A cross of hardy Japanese with the Florida sweet oranges has resulted in the hardest evergreen orange known, and there is promise of ultimately securing a fruit free from hardiness and from the diseases which have hitherto been its bane.

The development of the rice industry in Louisiana and Texas since the introduction by the Department of the Japanese rice, during the past three years, has been remarkable. At the same time the imports of this product have decreased from 154,000,000 to 73,000,000 pounds.

90 per cent. of the date palms introduced in recent years from Africa are now growing vigorously in Arizona and Southern California. This year a collection of the choicest varieties in Egypt have been obtained. Progress is reported in the introduction of Egyptian cotton.

The annual report of the General Superintendent of the life saving service for the year 1901, shows the smallest loss of life from documented vessels suffering disaster since the general extension of the service, and

also with respect to vessels of all classes, including the undocumented, with the exception of the years 1880, 1882, 1888 and 1889. The average number of lives lost annually during the entire period (twenty-five years), was 37, one life having been lost in every 13 casualties, while the number lost during the past year was 17, or one in every 43 casualties. The life saving crews assisted in saving vessels and their cargoes valued together at over nine millions of dollars. The cost of the maintenance of the service was \$1,640,013.

The estimates for appropriations for the War Department, as presented by Secretary Root, for the year beginning Sixth Mo. 1, 1902, aggregate \$157,409,836, which includes about \$29,000,000 for the improvement of rivers and harbors.

The Superintendent of Indian Schools, Estelle Reed, in her report, takes up the subject of agriculture, embracing dairying and other branches of farm study, as well as domestic science for the girls. Speaking of agriculture, the Superintendent says "No occupation will so soon dispossess the Indian of his nomadic instincts, and fix upon him permanency of habitation as agriculture. Tilling of the soil will necessarily oblige him to remain in one spot, and the performing of certain duties at proper times of the year will instill into him the necessity for systematic work, and for giving attention to details. To make any real progress the Indian must have a home wherein will centre all his interests, hopes and ambitions, and a home on a farm will best fill these requirements. As there is no one to whom he can so rapidly contribute to his own support, he should not only be encouraged, but urged to cease leasing his allotment, to cultivate more acres, raise better crops, and live the thrifty, independent life that falls to the lot of tillers of the soil." Attention is called to the fact that the first Government appropriation in 1819 was but \$10,000, while during the past year the sum of \$3,244,250 was expended for Indian schools, and that the total number of pupils enrolled was nearly 25,000. A gratifying feature of Indian education, as indicated by the report, is the rapid growth of industrial training methods in the Indian schools.

There are 2800 acres of celery this year in the past-latest Westminister, Cal., which, it is estimated, will produce 1600 carloads. There were 410 deaths in this city last week, reported to the Board of Health. This is 32 less than the previous week and 36 less than the corresponding week of 1900. Of the foregoing, 209 were males and 210 females; 48 died of consumption of the lungs; 66 of influenza; 10 of lung disease; 10 of pneumonia; 10 of diphtheria; 11 of cancer; 11 of apoplexy; 4 of typhoid fever; 3 of scarlet fever, and 14 of small pox.

COTTON closed on a basis of 8c. per pound for mid-ling uplands. FLOUR.—Winter, super, \$2.50 to \$2.70; Pennsylvania roller, straight, \$8.75 to \$9.40; Western winter, straight, \$3.35 to \$3.50; spring, straight, \$3.40 to \$3.65. GRAIN.—No. 2 red wheat, 77¢ to 78¢. No. 2 mixed corn, 66¢ to 66½¢. No. 2 white oats, clipped, 51¢.

BEEF CATTLE.—Best, 5½ to 6c; good, 5¼ to 5½c; medium, 4½ to 5c.

SHEEP.—Choice, 3¼ to 3½c; good, 3 to 3¼c; common, 1½ to 2c.

LAMBS.—¾ to 5½c. HOGS.—Best Western, 7½ to 8½c.

FOREIGN.—In a late edict the Dowager Empress of China has authorized the instruction of foreign sciences in Chinese schools.

Diplomatic relations between Colombia and Venezuela have been severed by the act of the former Government.

A battle has recently taken place on the isthmus of Panama between the Government troops of Colombia and insurgents, in which several hundred men were engaged. The United States, under treaty obligations with Colombia, is authorized to preserve freedom of transit across the isthmus, and has sent a force of 100 men for that purpose. Colon, which had been taken by the insurgents, has been surrendered to the Colombian authorities.

The Peruvian Minister and the Bolivian Minister of Foreign Affairs have signed a protocol submitting to arbitration the pending questions between their respective countries.

Negotiations for the liberation of Ellen M. Stone, the captive missionary, have received a decided set-back as a result of the refusal of the brigands holding her to accept a ransom of \$65,000.

The brigands have acquainted the American authorities with their purpose to hold the woman until the sum of \$100,000 is paid, and then to send her to Bulgaria. The Bulgarian government repudiates the responsibility of Bulgaria, and alleges that the officials had given every assistance possible in the matter.

In answer to a cable message of inquiry sent by *Christian Herald* to President Washburne, of Bo Christian, Connecticut, concerning Ellen M. Stone, following reply was received: "Stone negotiations pending. No immediate prospect of release. Satisfactory evidence she has been well treated."

Stewart Culin of the Free Museum of the University of Pennsylvania, after a visit to Cuba in search of remnants of its aboriginal inhabitants, says "My general conclusion is that there is a considerable number of Indians, of Indians, who intermarry among themselves and are descended from half a dozen different families, still sun in the province of Santiago. They have lost their guage and most of their customs, and can only be identified physically from the other inhabitants of part of the island. They live in no sense wild, but are secreted in the hills. In his annual report reviews in detail the actions of the Taft Commission in the installing the various branches of government to 70 per cent. the estimated population of the Philippine islands habiting 58 per cent. of their estimated area, the maining area and population continuing under military administration.

Secretary Root reports that three religious orders were established under Spanish rule, had at the time American occupation a holding of about 403,000 acres agricultural lands. The native tenantry is hostile to friars. He recommends that the religious orders should convert this property into money, for the protection of their own interests; that the lands should be purchased by the State, and that title upon proper terms should be offered to the tenants, or to the other people of the islands. For this purpose, says the secretary, it will be necessary that money shall be obtained from other sources than the ordinary revenues of the Philippine Government, and any bonds issued can be paid for by receipts in admission of the land to tenants.

The latest report of the Suez Canal Company called attention to modern improvements, to meet the requirement of navigation, which will be inaugurated in the future. The deepening of the channel to 31 feet has been begun, and it is contemplated to light the canal with electricity, so as to let the traffic proceed at night.

NOTICES.

WANTED.—For two weeks, beginning Twelfth Mo. 20th, a young woman as mother's helper in a family in Germantown. Apply promptly to S. T. E., Office of The Friend.

HADDONFIELD QUARTERLY MEETING is to be held at Moorestown, Twelfth Month 12th, at 10 o'clock. For coming from Philadelphia and Camden may take a last boat leaving Market Street, Philadelphia, at 10 o'clock, and arrive at Moorestown at 10 o'clock, leaving Philadelphia at 8.52, and Market Street, Cal. at 9.03, reaching the Meeting-house gate about 10 o'clock.

RACEL G. HALL, plain milliner, 1953 N. Camden, between Twelfth and Thirteenth Streets, will receive orders after Twelfth Month 5th, 1901.

WESTTOWN BOARDING SCHOOL.—Applications for admission of pupils to the school, and letters in regard to instruction and discipline should be addressed to Wm. F. Wickes, Westtown, Pa.

Payments on account of board and tuition, and communications in regard to business should be forwarded to EDWARD G. SMEDLEY, Superintendent.

Address, Westtown P. O., Chester Co., Pa.

WESTTOWN BOARDING SCHOOL.—For convenience of persons coming to Westtown School, the stage will leave Philadelphia 7.16 and 8.18 A. M., and 4.32 P. M. Other trains are met when requested. Stage fare, fifteen cents; after 7.30 P. M., twenty cents each way. To reach the school by telegraph, West Chester, Phone 114x.

EDWARD G. SMEDLEY, Superintendent.

WESTTOWN OLD SCHOLARS' ASSOCIATION.—A group of scholars of Westtown Boarding School, with members of their families and all others interested in the School, cordially invited to attend the Fifth Annual Meeting of the Philadelphia Friends' Association, to be held at the Meeting-house, Fourth and Arch Streets, Philadelphia, on Sixth-day evening, Twelfth Month 6th, 1901, from 7.10 P. M. After hearing from representatives of various interests cared for by the Association, there will be a list of addresses as follows:

For the Westtown Faculty, by . . . Wm. F. Wickes, President.
For the Undergraduates, by . . . Walter S. Thomas, Jr.
For the Friends of the School, by . . . Agnes L. Tinsley.
For the Old Scholars, by . . . John B. G. Smith.

Concealed Weapons.

"Ingrateful," says Cicero, "and unrighteous is the citizen who, while himself exempt from the danger of arms, nevertheless retains concealed spirit."

Most of us would repel the charge of carrying concealed weapons, yet we may be carrying just that are so concealed even from our sight, that we are slow to recognize them. Our victims discover them, they find hidden shaft of sarcasm has hurt them, know what dispositions have wounded in the house of their friends; they smart at the covert taunt, they learn what an arsenal of irritability we carry, with what a store of explosives we are inwardly stocked, poisoned arrows our spirits can throw by word or gesture, or glance of the eye.

What the laws call concealed weapons, pistols or daggers, are but the outcome of more hidden springs of warfare,—the animosities, dislikes or ill-governed passions which war or slumber in our inward parts. Moreover, all national armaments for destruction proceed from the same source, the heart of man;—"come they not even from the lusts that war in your members."

Accordingly we would call upon the members of the religious Society for a "general disarmament." Thus will the sincerity of our peace professions and conferences be put beyond all doubt. Concealed weapons in any of us are revealed by the spirit of life in Christ Jesus. There is only one war which is Peace, and that is the war of Love, which worketh no ill to fellow-being. There is but one Peace that is war, and that is the war of the Spirit against all the secret springs of war. Christ

is our Peace, Christ is our Overcomer in the battle-field of the heart;—the olive branch of the nations, because its seed and root in the individual.

Our sole remedy for concealed weapons is Regeneration. Congress may fulminate laws to make assassins more cautious, but it cannot regenerate anarchism into the spirit of peace, and will not, we fear, lay a hand on those outward incubators of anarchy which are named saloons. Still, legislatures are needed to legislate in the outward against crime, till regeneration in the inward removes the need. Through the regeneration of citizens must be lifted those higher standards of righteousness, which will call for laws of the land to re-echo the spirit of Christ.

The Society of Friends having given out word to the world of its special acknowledgment of the Holy Spirit as the rule of life, cannot afford to have any concealed weapons lurking in the hearts of its members, contrary to the Prince of Peace. And as the source of wars and fightings is abolished from heart after heart by the washing of regeneration and the renewing of the Holy Spirit, Friends will best become able ministers of the new testament to advance the day when war shall be no more. But first, last, and always, the Gospel individually applied must be the power by which this great change is wrought.

Reminiscences.

For "THE FRIEND."

(Continued from page 156.)

The following is from a letter addressed by Joseph Scattergood to Susanna Bigg, formerly Horne, a minister in England, who had in 1812 and 1813 paid a religious visit to this country. It was written about 1837, probably upon learning of the death of her father, Thomas Horne: "The bereavement which thou hast met with, since my last was written, was heard of, soon after it occurred, and although not qualified to enter fully into sympathy with thee on such an event, yet I have felt for thee, and believed that thou who had so often been qualified to administer comfort and consolation to others, under similar affecting dispensations, could not under like circumstances, be without his holy help, by which alone afflictions are sanctified and rendered blessings, and under the influence of which those that sincerely trust and confide in Him, can truly say, 'Not my will but thine be done.'"

"It was this holy confidence and reliance which enabled my grandfather, when at your house, when informed of the death of a much

loved daughter, to exclaim, 'The Lord gave and the Lord hath taken away, blessed be the name of the Lord.'

"I have often instructively reverted to the holy resignation and submission to the Divine Will which he manifested on that and other occasions of a trying and proving character, and I think I may truly say, a desire has been raised to experience a like degree of it, whatever may be allotted to befall me, by Him who doeth all things well. Thy allusions to trials which he passed through while under thy father's roof, as well as in other parts of your country, brought very forcibly before me the descriptions of them which are preserved in his journal, in the reading of which I have so often been instructed. The long continuance of and peculiar character of them, together with the manner in which they are described, although very instructive to those who can understand such baptisms, has induced some to whom they have been read, to doubt the propriety of their publication, at least in the form in which he left them. I finished making the extracts I thought proper, some time since, and previously to submitting them to the Committee appointed by the Meeting for Sufferings to examine them, they were handed to my brother William, to examine.

"It is very probable that it may be got ready for the inspection of the Meeting for Sufferings, so as to be put in the first number of the next volume of the Friends' Library. As soon as published I will endeavor to send thee a copy."

Under date of Twelfth Month 7th, 1837, Susanna Bigg thus replied to this letter:

"My Dear Friend:—I duly received thy letter of Seventh Month 12th, which I can truly say, gave me much pleasure, both as it conveyed the information of thy intention of compiling something relating to thy valued and much-loved grandfather, also to find that one of his descendants appeared well disposed and qualified for the service; believing that the revival of the exercises and experiences of faithful servants are of use to those who are endeavoring to follow in the same path which is trodden by the Company of the Suffering Redeemer. I am sorry that I have been almost necessarily hindered from making any inquiry of the very few who are at all likely to be possessed of any material to add to what thou already has in possession. Only six out of the long list thou sent me, I believe, now continue in mutability. I hope thou hast already sufficient to form an interesting Memoir. Thy dear grandfather used to keep a kind of Journal from which I was sometimes favored to hear a part, by which, as also by his exemplary conduct, I was instructed.

"The extracts from his letters to myself are all I have now to contribute, of which any can be made use of that are thought best for pub-

lication. Although many years have passed away since we witnessed the deep exercises and conflicts he had to wade through while detained as an ambassador in bonds among us; his patient abiding under them is not forgotten, probably by others as well as myself.

"I see you have some of the publications of those in this country who continue to be defenders of that faith which, if still maintained, will defend from all the fiery darts of the wicked.

"Our valued friend John Barclay, has been well engaged in making selections from some of the works of our first Friends, and to the fifth volume just printed, has written a preface worthy of all acceptance in the present day of trial."

It is known to many readers of THE FRIEND that while in England, Thomas Scattergood was long exercised under the belief that it was his duty to seek a religious opportunity with King George III. When this duty had been performed he was able to leave that country in the year 1800 with peaceful feelings. His absence from home in this visit extended to more than six years. The following account of this interview is taken from his Memoirs:

"It will be proper to observe, that in the interview which his companions had with one of the king's advisers to whom they had applied for permission to visit him, they were informed that it was not likely he would consent; alleging as a reason, his unwillingness to see any strangers, in consequence of attempts which had recently been made upon his life. He, however, suggested that as he regularly walked upon the esplanade at a certain time of the day, they might have an opportunity then, if they thought that would answer. When they met, Thomas Scattergood was introduced to the king as a much loved minister of the gospel from America, who had been engaged in a religious visit to the Society of Friends in England. Thomas then took off his hat and said, 'I have a message from the Lord to thee, O king.' The king instantly uncovered his head, also his attendants, and made a full stop at this salutation, and listened with respectful attention to what Thomas said. When he concluded, the king said to him, 'I thank you,'—and instead of pursuing his walk, returned at once to his apartment."

The following incident in reference to Susanna Horne is taken from an account of George Dillwyn, published in a former volume of this Journal.

"In the year 1812 she came to this country on a religious visit, and George had near unity with her in her ministerial labors amongst us. A few weeks after Susanna had sailed from this land, George Dillwyn rose at the close of a meeting for worship in Burlington, and in much brokenness and humility said, 'As many Friends are interested in Susanna Horne, I may tell them she has arrived safely in England.' This announcement was startling to all,—and the weak in faith were no doubt full of fears, lest the slowly revolving weeks should not bring its confirmation. But time proved that George had been enabled to follow her in spirit even to her port, and was made sensible, although at three thousand miles distance, of her landing."

W. P. T.

THE ULTIMATE APPEAL.

Hold not thy peace, God of all worthy praise!
Exalt thine own above our mortal ways;
Rebuke the erring thought
By which the sense bound world would fain exclude
Each entering germ of Thine infinitude!
Reveal, however unsought,
Thyself to every age increasingly,
Such large intent in all Thy works we see—
Prescribed, or life in-wrought.
Excite in us, beyond each faith effort,
New aspiration for Thy lore complete,
Counting our lore as naught
Except as we behind each partial scheme
Read Thy one method in no fitful gleam!

Imprinted on the Face.

The influence of beauty is universal, an influence to which every one will confess himself susceptible, whether it be the beautiful in nature or in art. But the beauty of the human face is perhaps the most impressive, and yet there are few who think that it depends at all on cultivation. The commonly received idea is that one is born good or ill-looking, and cannot help himself, which is a very injurious notion.

There may be cultivated upon every face an enchanting beauty and expression which will kindle admiration in everyone who looks upon it, which will attract attention and win love far more than any mere physical combination, any perfection of form or coloring.

The psychologist insists that the character is indelibly stamped upon the face—that what one uniformly thinks and feels, traces itself in unmistakable lines on brow and cheek.

It may seem a foolish motive to present to a child the desire to be beautiful, and it might very easily be misconstrued and misapplied.

To attempt to cultivate the expression without the qualities of heart on which it alone depends, would be very likely to stamp upon the face a meaningless simper, a hypocritical smile which would be anything but pleasing. Our first impressions of a person are derived from the expression of the face and manner.

We hear every day the expression, "There is a good face, I like that countenance," or "What pleasing manners," and these are generally true indications of character. And a face from which we involuntarily shrink, will be almost sure to belong to a character from which we should shrink.

A young girl often met a certain old Quaker lady in the street cars. One day, acting on a sudden impulse, the girl turned and said, "Won't you let me kiss you?" "Yes, dear, certainly." As the acquaintance ripened, the young lady asked, "Weren't you surprised that time in the cars, when I asked you to let me kiss you?" "O, no, dear," was the answer, "they often ask me that."

Some one asks, "Have you never met the beautiful surprises of the street—met a man or woman 'who had the Ten Commandments written on the face?'"—*Health*.

"For if thou went to plough a hundred years, thou couldst not bring one stalk out of the earth. But God, without work of thine, whilst thou art asleep, creates out of the little grain a stalk, and on the stalk many ears, as many as He wills."—*Luther*.

What Ruth Had.

"Oh, there's that Ruth Knolls and brother again! Do you know, teacher Mer she is just awfully dull in school, and we laugh at her so much. She hasn't a particle of brilliancy."

Viva chatted this speech out as she was along the street beside her teacher.

"She has something far better than lianzy," said teacher Merton.

"What?" said Viva, her cheeks flushed uncomfortably; for she felt that she made a mistake, and she was very anxious to stand well in teacher Merton's opinion.

"She has a courteous manner. That grace that is very great, but far too I know Ruth quite well, and her kindness, courtesy are unfailing in company or at home. She is going to grow into a lovely womanhood."

"I am sorry I spoke so," said Viva, really didn't know anything about her except that she stumbles so dreadfully in her lessons.

"No doubt she is very sorry about it, is a fine gift to be quick and bright in understanding things; but you know, my dear, it is far more important to be kinder and gentler. When you go out in the world one will ever ask or know whether you have done in algebra and Latin. It has made your best, it is wrought into whether your best is very good or only mediocre. But be sure of this: Everyone meets you will know, without putting through an examination, whether you are a tiewoman or not. It isn't practical to be Greek or discuss psychology or read Shakespeare with every one you meet; but you always speak kindly and listen courteously and quietly look out for the opportunity the little deeds of kindness that make lives so much more worth living."—*Union Signal*.

PREPARATIONS FOR WORK.—Work is a curse. To the first man, before his sin, task was given to till and to tend; the punishment for his offense was that his work should be unproductive, that despite his efforts, labor should give forth thorns and thistles, penalty still inflicted for ill directed and proper undertakings. Then it is of essential importance that the young man or woman should be fitted for the work in which are to be engaged. The dignity and rewards of profession or business should cast no glamour around or obscure the real point which attention must be directed. Parents sometimes destine their children from a certain occupation. If they consist trained their offspring for this particular work, their authority might not be so misused, as it is when without any such careful thoughtful provision, but by a mere arbitrary direction at a certain period in their offspring, they declare that he shall be physician, lawyer, engineer, electrician or what human beings are not clay in other men's hands, to be moulded at will for desired purpose; they have faculties, dispositions, predilections and facilities which be taken into account in determining to make them most useful, and, therefore, prosperous and happy in the world.—*Exponent*.

FOR "THE FRIEND."

ledge of Romanism in France, and its Apparent Weakening.

ough the moral enormity of the sale of souls in the Roman Catholic church had now prevail as it did in the time of Julius, when the soul's merchandizing of Mountebank monk Tetzel hastened the advent of the Lutheran Reformation, yet the guilt of the sale of prayers—of masses said—for the release of souls from purgatory," is continuous, as it is also a sanctioned and highly approved ceremonial denomination referred to. Man's spiritual enlightenment, during the nearly four centuries that have elapsed, would appear not to have kept pace with his wonderfully enhanced material knowledge. One stands at the recital of the blasphemy of the Roman trafficker, who with his red cross, was claimed to have "as much efficacy as the cross of Jesus Christ," and his big, money chest, made bold to sound the bell,—"Draw near, and I will give you your souls sealed, by which even the sins of the hereafter desire to commit shall be forgiven you." Nevertheless, there are in the present day a great multitude of people who pay money for purgatory and not a few mercenary priests ready of Peter's reproof to Simon,—"Thou perish with this, because thou hast said that the gift of God may be purchased with money."

able revival of this method of making money out of religious credulity, is at present operating in France, the facts here being obtained from an article furnished by Beaumont, of Paris, to the *Converted*

secluded valley of the department of the Meuse, perhaps a hundred miles southwest of Paris, on an affluent of the river Sarthe, the city of Montligeon, a place which, until twenty years ago, numbered scarcely three hundred inhabitants. The bishop placed a priest here, a certain Abbe Buguet, the poor vegetable woman of the district. His parishioners all very indigent, the view of relieving the hardship of life as well as his own, Buguet went up and secured contracts of work for the people in the way of cutting and mending clothes for the great shops of the

For a while the new industry seemed to them more money than their former occupation as small husbandmen, but, the introduction of labor-saving machinery in the tailoring craft, the abbe's parish came poorer than before, and grumbled deal at Buguet as the cause of their misery. Pondering on possible ways of relief, the priest, one day, speaking from the pulpit, broached the idea of engaging for getting poor souls out of purgatory, seeing that there were millions thus circumstanced, it was evident, he said, many prayers and many masses had to be said. His flock rather surprised the proposal, Buguet purchased an and, with the help of his sacristan set to printing a little sheet of paper containing to be a cry of distress from the purgatory, and addressed to the whole of the Catholic believers. Working day

and night for weeks and months, the abbe and his helper prepared and sent out a great quantity of these papers on which it was stated that by means of one sou every Catholic faithful could for one year participate in a mass daily said by the Montligeon priest for the souls in purgatory. This appeal came as a great temptation to poor, weak-minded peasants, who felt that they were kept in a sorry case as compared with the well-to-do, who could so readily leave large money to the church for masses for the repose of their souls.

Now, the poor French peasants, delighted that for one sou per year they could participate not only in the alleged redeeming prayers of the mass for their relatives but also for themselves after death, eagerly caught at the device. Soon hundreds, then thousands, finally millions of sous began to pour into Montligeon, so that the abbe, unable to keep up with the prayers, had to hire ten other priests to help him. The town therewith began to prosper, for, with the superfluous sous, Buguet built himself a magnificent church building, superior to many a cathedral; next, an immense workshop as large and as ornamental as a university, and has since added one large building after another to accommodate all his employees, of whom he has nearly five hundred. The regular office force, who arrive every morning at fixed hours, to engage in this factory, soul-redemption employ, comprises eight chaplains, fifteen interpreters, twenty secretaries and a crowd of accountants and bookkeepers.

At first, the bishop had opposed the work of the abbe, but, with the coming of great success, he had not only consented to bless the church building, but had raised the resourceful priest to the dignity of a canon. And now, every year, on the second day of Eleventh Month, Montligeon has a general festival, when the whole population turns out in a body, and with mournful banners flying wends its way to the cemetery, there (outwardly) to pray for the poor souls of the whole world. Meanwhile their successfully enterprising priest becomes the recipient of many plaudits, for the town's people feel, says the account, that their "prosperity has increased a hundredfold since the good abbe had the idea of making wings for the souls in purgatory instead of slaving at making garments for ordinary mortals." At its recent rate of growth it would seem as though Montligeon were in due time take its place as a favored settlement of the Romish church, along with their famous shrine of Lourdes in the department of Hautes-Pyrenees in the south of France. The latter place has a strong castle, with ruins of fortifications of the time of Julius Cæsar; but its fame of late years is altogether founded upon an alleged appearance (in 1858) of the Virgin Mary to a peasant girl, Bernadette Soubirous, to whom was disclosed the miraculous healing properties, so claimed, of the grotto-spring, which is now visited by multitudes of pilgrims.

It is to be hoped that the French people will awaken to the degrading effects of these superstitions and idolatries. Many, indeed, are being aroused. The recently enacted Religious Associations bill, in recognizing the so great mischief done by the Jesuit order, pro-

vides that all their wealth shall be confiscated, to be used for the benefit of the people. The monasteries and convents generally, heretofore closed to any supervision or regulation of their affairs, must now submit to such inquiry. It is said that the number of religious establishments engaged in traffic, reached the surprising number of twenty-five hundred. An outcry was made against these, because, as the inmates had taken the vows of poverty, and no wages were paid, they could, and did, easily undersell regular tradesmen. While commodities in great variety were manufactured, the most flagrant "industry" was the traffic in strong drink. The French statesman, Clemenceau, who has published statistics of these houses and the various branches of trade carried on by them, says of their drink traffic: "We know that the 'charity' of our monks embraces speculations in alcoholism, that is to say, in the worst vices of humanity—and all to enrich the coffers of the church. Five religious communities sell wine wholesale; six sell liquors wholesale; two, alcohol exclusively; four sell liquors retail; seven convents are patented as distilleries; and nine as inns, with billiard playing allowed."

While a good deal of the opposition to the Romish religious orders may have a political and rationalistic animus, there is no doubt, on the other hand, that many seeking souls, humiliated at sight of the superstitious, spiritual darkness and clerical bigotry so prevalent over the land, are sincerely solicitous that the true Light and the knowledge that enlightens should be more widely disseminated. The land of Irenæus, Bernard, Fenelon, Pascal, Grellet and Oberlin, of the Waldenses, Huguenots and Camisards, needs spiritual rehabilitation on better lines. Lately, two large meetings have been held in Protestant places of worship in the city of Havre, attended by many converted Catholics and Roman Catholics, whereat several former priests spoke of that new liberty of the gospel into which they had entered, and the struggles and difficulties met with in their path to freedom. Their testimony, it was said, made a profound impression on the people of Havre.

In his review of the religious state of Europe prior to the Reformation, D'Aubigné remarks, that "few countries seemed likely to be better disposed than France for the reception of the evangelical doctrines. Almost all the intellectual and spiritual life of the Middle Ages was concentrated in her. It might have been said that the paths were everywhere trodden for a grand manifestation of the truth." Then follows the following discriminating reflection in explaining how, when a happy attainment in the truth seemed so near, the political course of the kingdom suddenly turned at the moment of the Reformation, and the religious life took a contrary direction. He says:

"France, after having been almost reformed, found herself, in the result, Roman Catholic. The sword of her princes, cast into the sea, caused it to incline in favor of Rome. Alas! another sword, that of the Reformers themselves, insured the failure of the effort for the Reformation. The hands that had become accustomed to warlike weapons, ceased to be lifted up in prayer. It is by the

blood of its confessors, not by that of its adversaries, that the gospel triumphs. Blood shed by its defenders extinguishes and smothered it. Francis, the First, in the very beginning of his reign, eagerly sacrificed the Pragmatic Sanction [limiting the Roman prerogative] to the Papacy, substituting a *concordat* detrimental to France, and advantageous to the crown and to the pope. Maintaining by the sword the rights of the German Protestants at war with his rival, this 'father of the sciences' plunged it up to the hilt in the hearts of his own reformed subjects. His successors did, from motives of fanaticism, or weakness, or to silence the clamors of a guilty conscience, what he had done for ambition. They met indeed with a powerful resistance, but it was not always such as the martyrs of the first ages had opposed to their Pagan persecutors. The strength of the Protestants was the source of their weakness; their success drew after it their ruin."

The text of D'Aubigné thus illustrates how the fighting Protestant princes of France and their following, reversed the testimony of the Apostle Paul, where he said, in extolling God's grace and strength as superior to all earthly advantages: "Therefore I take pleasure in infirmities, in reproaches, in necessities, in persecutions, in distresses for Christ's sake; for when I am weak, then am I strong." It also sorrowfully illuminates the caution of David: "Put not your trust in princes, nor in the son of man, in whom there is no help."

JOSIAH W. LEEDS.

BLESSED are the men and women who do not see all clearly yet, but who feed their soul on God and wait to know Him better!

"GREATNESS evinces itself more in the constructive than in the destructive. It is easier to pull down than to build up. It requires a genius to construct a watch, or to devise the electrical instrument, but a child can destroy either. It is the man of construction, not of destruction, whom the world most needs. It is the builder in the material, mental and religious domain who leaves behind him an abiding and beneficent impress."

THE POWER OF RELIGION.—"It is religion which, penetrating to the depth of each one's conscience, makes him feel the force of duty and urges him to fulfill it. It is religion which gives to rulers feelings of justice and love towards their subjects; which makes subjects faithful and sincerely devoted to their rulers; which makes upright and good legislators, just and incorruptible magistrates, brave and heroic soldiers, conscientious and diligent administrators. It is religion which produces concord and affection between husband and wife, love and reverence between parents and their children; which makes the poor respect the property of others, and causes the rich to make a right use of their wealth. From this fidelity to duty and this respect for the rights of others come the order, tranquility and the peace which form so large a part of the prosperity of a people and of a State. Take away religion, and with it all these immensely precious benefits would disappear from society.—*Encyclical Letter of Pope Leo XIII.*

Our Inheritance.

Some years ago I paused to speak to a young man whose face attracted me.

"Yes," he replied in answer to one of my inquiries, "I have had a hard life. I am poor and wretched, a stranger in a strange land. And yet," he added, "I have heard there is money waiting for me in the old country if I could get back to claim it."

"If that is the case," I asked, "why do you not go back?"

"Well," he answered, "you see it may not be true, after all, and, besides, I would not know just what steps to take. No; I will try to make my way here."

After a little talk with him about the better inheritance that could surely be had for the claiming, I left him and passed on.

Nearly a dozen years later, I sat listening to the sermon of a minister from England. During the course of it he spoke of a Refuge for Boys in which he was much interested; and told of a lad who had run away from this home, unwilling to perform the duties assigned him there. "Shortly afterwards," he said, "we heard that a fortune had been left to him, and every effort was used to trace him, but in vain." "Somewhere, to-day, perhaps," he added, "that young man is wandering poor and homeless whilst an ample provision is held in trust for him, and all he has to do is to come and claim it."

When the sermon was over, I sought a private interview with the minister, and told him of the boy who had so interested me. The date of his coming to America, his appearance and his story, all seemed to point to him as the fugitive sought so long and vainly.

Again, through the newspapers, the effort was made to inform him that an inheritance was his for the claiming; but again it was unsuccessful.

Often, since then, my mind has dwelt on the wonderful teaching in this little life parable. How many there are who like this poor lad, are contenting themselves with a life of poverty and hardship whilst "the glorious inheritance of the saints" may be theirs for the seeking.

Without merit or effort of their own this inheritance has been provided, and He, by whom it has been provided, is sending forth his messengers day by day to search for his wandering sons that they may be lifted from the depths of their degradation into the joy and abundance of the Father's house.

We might suppose that the poor hungry, thirsty, homeless souls, who vaguely grasp the thought of the "all things" that are promised them, would seek with joy for a fuller knowledge; but no, like the poor boy they say, "It may not be true after all, and I know not what steps to take; I shall try to be content as I am."

Ever it is the same old story—blessings offered and rejected. "Ye will not come unto Me that ye might have life," said our blessed master and through the centuries the cry still rings, and we see the wonderful spectacle, one of the lost seeking a Saviour, but the Saviour seeking the lost, and offering to sinful souls the possibility of becoming "Heirs of God, and joint heirs with Christ."—*Altit.*

"GOODNESS may win gold, but gold will never win goodness."

The Soul's Atmosphere.

In these later ages the world has developed new sense, that of climate. We have been mightily fastidious in breathing. There are medical cures which stake everything on air. In the late autumn increasing hosts of well-to-do people preen their wings and follow the migrator birds. They are in search of a pure atmosphere. Colonists settle for the winter the keen heights of Davos, or pursue the southwards to San Remo or Algiers. We pay any price for an atmosphere. In the sunlight it flashes on the retina, in the fragrances which it intoxicates, in the secret vigors it conveys, we find some of life's choicest gifts.

And atmosphere, now so centrally important to the health and pleasure seeker, has become in other ways, a new thing to our generation. It has been transformed by science. We only know its chemical constituents, but, obtaining glimpses of the tremendous forces that incessantly play through it. We are investigating the mystery of that luminiferous ether of which it has been strikingly said, "a shock in any part of it causes a tremor which is felt on the surface of countenances." The scientist is trying to measure those "shivers of undulation" in which it presses themselves successively as heat, or light, or magnetism or electricity. We stand in awe of the stupendous energy which is represented in the conveyance to us of the light of a star. We try to grasp what is meant by the statement that one faint star far away on our retina represents a wave movement which has travelled on through long years at a rate of six hundredths millions of millions per second.

But when we speak of atmosphere, in the language either of the pleasure-seeker or the physicist, we are far from having exhausted the term's significance. The universe consists of something more than of solid planetary systems, and of the swift telegraph of luminiferous ether between the interstellar spaces. Behind that universe lies another and a bigger. It is the world of consciousness, the invisible realm of souls. That we bring to both is to us all self evident, though the one is related to the other remains unpenetrated and seemingly impenetrable mystery. And it is this chasm between matter and mind which makes it so difficult for us to think accurately from one to the other. As we discuss the problems of our spiritual nature our terms, borrowed from the material outside, are the very rudest of implements. At best they permit us to speak only in metaphors. And yet we speak "not as uncertainty." For while the mind holds secrets of itself which can never be interpreted by the physical, an instinct within, which is the unconscious ground of all our reasoning, assumes of an underlying unity binding these two together; a unity which makes everywhere the truth of the outer to be a projection of the plain hint of the truth of the inner.

It is under this persuasion that we speak here of the Soul's Atmosphere. Our story of a climate not mentioned in Baedeker, but yet as real as the sunshine of Nice or the sunset of Arachon. For as certainly as our physical organism, so certainly does our spiritual self, live by the air it breathes. But the analysis of the one atmosphere is

ly so easy as that of the other. When we of oxygen and hydrogen, carbon and nitrogen, of the atomic theory and of the law of combining proportions, we are in the sphere of weights and measures, of the accurately measurable. It is a more dimly-lighted region when we reach this other side, and our measuring instruments are all to seek. We stumbling up against dim perceptions, admissions of truths which, while they increase with their grandeur, leave us only a vague sense of their outline and content. The more of the highest in man will never be reached, because it loses itself in the Infinite. And yet we can make some affirmations. Our planet is immersed in a deep, dense sea of air, that plays incessantly through our organism and carries in itself mysterious powers which we are just beginning to discern. Our thought-world-to-day surrounded by ether, not less pervasive and potent. We cannot tell its whole content, or the whole modus of its operation. Some of this is ad in books, is preserved for us as what we know. A Galileo, a Newton, has in sense been the light of our seeing. But exact knowledge which our race has inherited forms only a small part of its thought-sphere. The whole past life of humanity, soul's immeasurable movement, is in it, in us we cannot guess. But we should be in a wretchedly inadequate account of the soul's atmosphere if we spoke of it as merely such stored up world-thought. We might well speak of our planet's atmosphere as only an affair of a few gases. Neither the nor the other is quite so parochial. The our body breathes gets most of its vitality beyond its own sphere. It quivers with such that stream through it from the farthest stars. It is lighted and warmed from out. It would become poisonous to us if it were not for a central sun which, by the force of its shining, turns a deadly gas into air for the plant-world and into vitalizing oxygen for our human lungs. And it is something, assuredly, more than analogy, an assurance "deep seated in our mystic frame," which points to our physical sphere as in all a pattern of the word within. What is in silence forms the smallest half of mystic forces that surround and incessantly upon our soul's life. If the farthest send on quivers which register themselves on our earth's surface, who can say influences from innumerable [thoughts] of an Intelligence permeate our spiritual envelope, and work in ways unnoted upon our consciousness? And this inner atmosphere, visible from all worlds, has also its sun. Soul's system has its centre as surely as a planetary. The history of religion is the story of the soul's gravitation to the centre, aspiration for its birthplace. The saints pour out this aspiration into every language. Behmen's words on the new birth stand as a type of the whole human movement here. The account of the soul as a light originating in Father's essence, *lumen delumene*, immersed in darkness, feeling "a fire of anarchy" until its longing for the light is satisfied by God's witness in it, when there arises "a sweetness of rest and peace," is the same story from Plato and St. John to Fox and to William Law. A Catholic

medieval mystic recounts the experience in words which one of Wesley's evangelists might have used in an experience meeting: "And then do we all come unto our Lord, our self clearly knowing and God fully having . . . Him verily seeing and fully feeling; Him spiritually hearing and Him delightably in-breathing, and of Him sweetly drinking." To have moved into this climate is to have lighted on life's best. Michelet, in his fascinating book "La Montagne," speaks of a certain hill-elevation where the human organism breathes freest and reaches its height of exhilaration. The soul knows that height better than the body. The luxury of climate is missed often by the deep pursed traveller who roams from China to Peru, while engaged to the full by some humble artificer or patient woman whose physical boundary is a workshop or a cottage. The question of the soul's atmosphere has, however, another side. So far we have discussed it as a something which works upon us and from which we incessantly draw. But we do not merely draw from it. We also contribute to it, and it is here perhaps that the chief significance of our life exhibits itself. If we knew it, a bigger thing than our arts and manufactures is the making of atmospheres in which souls can thrive. When from the centre of us leaps out thought, desire, or volition towards friend or foe we cannot measure what we are effecting here in the eternal world of souls. We are pouring out powers that create or destroy. If waves of force, flowing from physical centres, flash, as we know they do, through atmospheres, and penetrate every form of matter, who shall estimate the effect of the forces emanating from our spirit centres, that beat upon our brother's thought and will? It is from this point of view that we best study the significance of prayer. When a mother wrestles in spirit for her child or a friend for his friend, we have at work the highest and the purest force the world knows. And the results? We may not see them. But unless all the discoveries both of the physical and spiritual universe are in a conspiracy to deceive us, nothing is more certain than the certainty of these results. The forces here unlocked may have a circuit as wide as that of a comet, but they will not waste themselves nor fail of their goal. From this standpoint, too, we could best discuss the whole life of the Church. Its business is to create an atmosphere. More than its assertion of dogma, more than the perfection of its ritual, is its function of filling the area of its influence with an air which the poor, poisoned soul of humanity as it inhales the oxygen and warms to the sunshine, shall realize as the Divine it has panted for, the very breath of God. —British Paper.

CHRISTIANITY is not merely a collection of propositions, whether ethical or religious, but rather the revelation of a Saviour in Jesus of Nazareth. Its power and value reside in Him, in what he was and is, and in what he did and said, and in what he is still doing. We can detach the platonic philosophy from Plato without harming it; but we cannot detach Christianity from Christ, since He himself is the substance and essence of the whole system. —The Independent.

A CONFESSION.

"You ask me how I gave my heart to Christ?
I do not know.
There came a yearning for him in my soul
So long ago.
I found earth's flowers would fade and die—
I wept for something that could satisfy;
And then—and then—somehow I seemed to dare
To lift my broken heart to Him in prayer.
I do not know—
I cannot tell you how;
I only know
He is my Saviour now.

"You ask me when I gave my heart to Christ?
I cannot tell.
The day, or just the hour, I do not now
Remember well.
It must have been when I was all alone
The light of his forgiving spirit shone
Into my heart, so clouded o'er with sin;
I think—I think—was then I let Him in.
I do not know—
I cannot tell you when;
I only know
He is so dear since then.

"You ask me where I gave my heart to Christ?
I cannot say.
That sacred place has faded from my sight,
As yesterday.
Perhaps He thought it better I should not
Remember where. How I should love that spot!
I think I could not tear myself away,
For I should want forever there to stay.
I do not know—
I cannot tell you where;
I only know
He came and blessed me there.

"You ask me why I gave my heart to Christ?
I can reply;
It is a wondrous story; listen, while
I tell you why.
My heart was drawn at length, to seek his face;
I was alone, I had no resting-place;
I heard how He loved me, and with a love
Of depth so great—of height so far above
All human ken
I longed such love to share;
And sought it then,
Upon my knees in prayer.

"You ask me why I thought this loving Christ
Would heed my prayer?
I knew He died upon the Cross for me—
I nailed Him there!
I heard his dying cry, 'Father, forgive!'
I saw Him drink Death's cup that I might live;
My head was bowed upon my breast in shame!
He called me—and in penitence I came.
He heard my prayer!
I cannot tell you how,
Nor when, nor where;
Only I love Him now."

It is wisely ordered, that neither nations nor individuals can deteriorate each other, without injuring themselves; nor promote the welfare of others, without partaking of the benefit conferred. —Dilwyn's Reflections.

We are all the time in life wanting to do some good and wondering that we fail. We fail because we are not first full of the spirit of what we want to do or give. We undertake to do where we have nothing to do from. We are dry springs, empty reservoirs. We have no fountain head. We have never established a source of supply. Before we can be the best and do the best and it is all important that we be ourselves filled with "sweetness and light" have the fountain of them in us. —J. F. Ware.

There remains one principle on which the various classes of professing Friends are united, and that is the cause of Peace. Representatives of all that have convened in this city and are holding a conference during these last three days of the week for the presentation of this great cause before people in many addresses, papers and discussions. Whether the people are in a mood to hear a breath against militarism at this juncture remains to be seen, but it has been judged that the time might be opportune. Or whether the presentation of the peace question would have arrested more attention in another than "the Quaker City."

en a query. Few if any known as paid pastors per on the program— that departure which must, while it lasts, frustrate much living co-operation. Friends in such demonstrations on behalf of objects. Accordingly the apprehension which has been felt in prospect of a visitation of such an order to our meetings for worship is considerably altered—to that extent making peace. But whatever the composition of the Conference, there can hardly be but one desire—that its effect may be good, and the cause of Peace on earth be advanced through its labors.

In Western Quarterly Meeting, Guilford County, C., last month, a minute granted by his Monthly meeting to a member for service in New England. Western Yearly Meetings, was, after a lengthy discussion, not endorsed. The trouble was that, by the issuing of the minute he had administered the rite of communion. "The ceremony occurred on a canvas tent on a hollow camping ground, not in a Friends' meeting-house." If the place alleged as a palliation, it is difficult to see how alters the principle.

At the meeting appointed by William C. on at West Grove, particularly for young Friends, First-day afternoon, another is appointed for tomorrow, the 15th instant at Coatesville. We now learn that in pursuance of the concern expressed in his minute, he was in attendance at No. 9th in the Monthly Meeting held at Shalton, at East Caln on the 13th, at West on the 27th, and in the afternoon at an aped meeting, which proved to be large, in the C. A. building at Coatesville; at the Monthly meeting at Parkville; the Eleventh Mo. 5th, at West Eleventh Mo. 6th, at London Grove Eleventh 7th, at Kennett Eleventh Mo. 10th and aped meeting at Little Britain in the afternoon, at Shalton Eleventh Mo. 17th, in Oxford at an aped meeting in the Presbyterian place of worship Eleventh Mo. 24th, and on the evening of the day in the Methodist place of worship in New on.

Notes from Others.

Methodism's growth has been most noteworthy. According to the compiled statistics it now has 1 ministers, and 7,833,456 members.

THE NEW DIPLOMACY, STRAIGHTFORWARDNESS.—A considerable interest has been aroused in our own country by the speech recently made in New York City by John Hay, Secretary of State, and other things he said, were the following

My experience of diplomatic life, which now more years than I like to look back upon, I have the greater record of American diplomacy. I have read and studied, I can say without hesitation that we have generally told squarely what we wanted, announced in every negotiation we were willing to give, and allowed the other side to accept or reject our terms. During the time in which I have been prominently connected in our foreign relations, I can also say that we have been met by the representatives of other nations in the same spirit of frankness and sincerity. Men of large affairs, will bear me out in there is nothing like straightforwardness to us like."

LITTLE LAMB'S MARY.—Mary Tyler, the heroine of the familiar poem, "Mary Had a Lamb," resided at Somerville, Mass., until, which occurred not long ago. The infant of the pet lamb following her to school occurred in her childhood, just as is told in the poem, and was afterwards put into verse by her mother, who was then one of the school children. As a woman, Mary Tyler was always proud to

show bits of the famous "fleece as white as snow" in various stages of evolution, from the raw wool into a soft dress fabric.

The average person is scrupulously honest. This may be denied by the skeptics who question the existence of any good traits in humanity, but it is nevertheless a statement founded not upon mere sentimentality, but upon exact knowledge. Here is proof of it in the experience of people who have to do with the "lost and found" columns of the newspapers and the bureaus established by the railway companies, the traction companies, the theatres, the hotels and the great stores for the reception and restitution of lost articles. Not everything that is lost finds its way back to the owner, but in these bureaus there is constantly more property awaiting owners than there are claimants for it. Because now and then somebody loses something which is never found the impression is created, perhaps, in that person's mind that the average human being is dishonest, but the fact remains that only an insignificant fraction of the money or articles lost in public conveniences and public places is unrecovered by the losers.—*Chicago Inter-Ocean.*

A MODERN MOABITESS.—"And Ruth said; 'Entreat me not to leave thee or to return from following after thee, for whither thou goest I will go; whither thou lodgest I will lodge; thy people shall be my people and thy God my God.'"

An example of a wife's devotion that almost passes understanding has recently come to light. It did not occur in the society circles of one of our larger cities, but in the city of Honolulu, and the woman who was determined to follow her husband "even unto death" was a native woman belonging to a race that is only removed from barbarism by two generations. Lulia, the wife of a leper who had been deported to the island of Molokai, stained her body with iodine and presented herself for examination, claiming that she had leprosy. When her nurse was discovered the woman broke down and confessed that she did not have the dread disease, and, as an excuse for her action, stated that in her marriage vow she had promised to remain with her husband "in sickness and in health." She wished to go to the leper island to nurse him and resorted to subterfuge in trying to gain the end of her desire.

The action of this woman should furnish a lesson to those who regard marriage as a social or business arrangement. While it could not be advised that her extreme example should be copied, her act of devotion is one that should call forth the highest admiration.—*Kansas City World.*

In the course of an address delivered last week by Bishop Potter in New York City, he said: "Over and against the herd of men there stands the Man, with the secret of divine strength. The whole point of view changes. Step by step there comes into the consciousness the sense of an indwelling strength hid with Christ in God. Here in the last analysis lies the secret of all social and moral problems. We are harassing ourselves here in this city with what we call the drink problem, as affecting the sober observance of Sunday; but we must realize that the true solution of that and of all social and moral problems is in some force touching the inner springs of conscience and of life. It is that that will make men sober, not drunken, because they will not be drunk with wine, but filled with the Spirit of God."

The zeal of the foes of righteousness and purity is a continual lesson to the friends of uprightness.

A brief note in the *Public Ledger* announces that "Evelyn Abbott, the Greek historian and fellow of Balliol College, Oxford, died recently at the age of fifty-eight years. Soon after graduating the lower

half of his body was completely paralyzed, and he was obliged to deliver his lectures and to do his work all his life lying flat on his back." Few things can effectually handicap a man who is in earnest. Evelyn Abbott, the cripple; Helen Keller, the girl unable to hear or see; and last, but by no means least, Booker Washington, the slave, have shown what can be done when there is the willingness to pay the price of hard work and self-sacrificing, persevering effort. Each had to surmount a seemingly insurmountable obstacle, and each succeeded grandly, so grandly that we are apt to shame when we permit ourselves to be overcome by the petty difficulties which so often cause us to lose heart in the struggles of life."

THE CRAZE FOR AMUSEMENT.—It does not need a long experience to show us that those who surrender themselves to a desire for amusements miss their realization. The every day duties, the close at hand service, the longing to be worthy of the gifts of life, while driving from the mind the unworthy aim towards getting a good time out of the world, will instead supply that peculiar, broad, varied interest, which furnishes happiness, including that lower order of satisfaction named amusement.—*Mary B. Baldwin, in the Interior.*

THE CHRISTIAN MAN IN POLITICS.—The pastor of President Roosevelt's church in Washington, John M. Schlick, lately said: "The Christian man is in politics for his country's good, and not for personal profit. That is characteristic, and when once he feels the responsibility, you are bound to see his marks in results at the polls and his party's councils."

"Do I think he is in party politics? Why, yes. He thinks and has convictions, and he is always right, even when he belongs on the other side. He has sense enough to see that a man may be loyal to his country and yet vote against him. He has both room and honor in politics. You have seen him preside at conventions, in senates, at the helm of the ship of State, and he always honors his place. Unbelief may try to get him out, but it cannot."

The cost of living, says *Dun's Review*, has materially risen in the last two or three years. Necessary supplies for family use that would have cost \$72.45 in the summer of 1897, and \$91.29 a year ago, would now cost \$97.74.

Lord Roberts is credited by the *London Daily News* with corroborating the view that the war was responsible for Queen Victoria's death. In a speech at Manchester, he is reported to have said: "I cannot help thinking that, but for the intense anxiety caused by the war in South Africa, and by the deep sorrow which [she] felt for the loss of so many of her devoted sailors and soldiers, and of her own grandson, she might still have been with us."

SUMMARY OF EVENTS.

UNITED STATES.—In his message to Congress President Roosevelt enforces the need of enacting laws against anarchists; recommends the regulation of industrial combinations, especially the publication of their financial conditions; the creation of a Cabinet officer to be known as Secretary of Commerce and Industries; the re-enactment of the law excluding Chinese; the betterment of social conditions; the passage of a better immigration law; reciprocity; the building up of a merchant marine; the need of strict economy in expenditures; the amendment of the interstate Commerce Act; the preservation of forests, particularly in the West; the construction of reservoirs for storing water, and the reclamation and irrigation of arid regions; additional legislation for the Philippines; the construction of a Pacific cable line to Hawaii and the Philippines; and of a canal across the Isthmus of Panama. In connection with the Monroe doctrine, he says: "We do not wish to see any Old World military power grow up on this continent or to become a military power ourselves." He also recommends an increase in

efficiency of the navy and army; the extension of the Civil Service Law; the allotment of lands to and the education of the Indians, the breaking up of their tribal relations, etc.

Many measures have already been introduced in Congress dealing with the question of anarchists and assaults upon the President.

The Postmaster-General has just issued his report for the past fiscal year. It shows that the total receipts of the Department were \$111,681,199.33. The total expenditures were \$105,654,672.47, leaving the expenditures exceeded the receipts by \$5,926,527.48. The expenditures for the year were nearly \$8,000,000 greater than in the preceding year; nevertheless the deficit was nearly \$15,000,000 less.

The average cost of carrying the mails is about six cents a pound. Last year there were about 430,000,000 cents a pound. Second-class matter which gets at pound rates. With all allowances, the carrying of second-class matter costs the Government about five cents a pound, so that the total cost for this class last year was about \$21,500,000, while the same class paid in postage about \$4,250,000, leaving a net loss on transportation alone of about \$17,000,000. An effort is being made to lessen the cost of the small matter of this class by the Post Office authorities.

During the foot ball season of 1901, there have been nine deaths, and seventy-three cases of serious injury resulting from this game, besides probably hundreds of temporary bruises and sprains. Influential voices are being raised against this brutal game, being made to issue by professional teams; and the effect upon thousands of spectators thus familiarized with the shedding of blood and the suffering of others; and also the demoralization resulting from the betting and frequent intoxication accompanying it.

It has been determined by the Board of Health to enforce more rigidly the act of Assembly requiring all principals or others in charge of public, private, parochial, First-day or other schools to refuse admittance to any child who cannot show a physician's certificate of successful vaccination, or that he or she previously had smallpox.

A corps of forty-five physicians have been engaged to make a systematic canvass of Philadelphia and offer free vaccination to every person.

Dr. A. Leteue, of the C. L. Magee Pathological Department of Mercy Hospital, in Pittsburgh, has discovered what appears to be a successful serum treatment for tetanus or lockjaw. Dr. Leteue does not claim the treatment will cure every case, but believes the problem of treating tetanus successfully has been solved.

On the 6th inst. very cold weather prevailed in this section, the thermometer in some parts of Pennsylvania registering 5 to 10° below zero. In the Catskill Mountain region a temperature of 33° was recorded at Hobart.

The report of the Isthmian Canal Commission favors the Nicaragua route, and makes an estimate of \$189,351,062 as the total cost of construction of the canal through Nicaragua. With adequate force and plant the Commission estimates that the Nicaragua Canal can be completed in six years, exclusive of two years for preparation. The total length of the Nicaragua route is 183.66 miles, and the Panama route 49.09 miles.

It is proposed to establish as a fog signal off Egg Rock, Long Island, to be heard 50 miles under water. The theory upon which the plan is to be worked out is that the bell, being under water, its sound may be heard by persons on shipboard at a much greater distance than if the bell was suspended above water in the open air, while for the same reason its noise cannot be objectionable to residents along a nearby shore.

In carrying into effect the Compulsory Education Act in Philadelphia, the chief officer and his fifteen subordinates made during last month 6588 visits to homes and schools and took in one month 438 children from the streets and put them in the way of receiving an education, and, we trust, of becoming useful and respected citizens.

The larger car of the Pennsylvania Railroad has been brilliantly lighted by acetylene gas. No generator is carried on the train, the gas being stored in a tank of about eight cubic feet capacity under the car without the need of any attention from the train crew.

The number of milk cows in the United States in 1868 was 8,691,658, valued at \$319,681,153. The number in 1900 was 16,292,000, valued at \$51,432,100.

Judge Sanborn, of the Federal Court at South McAlester, Indian Territory, has decided that after Indians become citizens they are still wards of the Government, and that after Indian Territory shall be allotted and the Indians are voters it still will be a crime to sell them whisky.

Estimates have been made which show that beginning Twelfth Month 1st, 1901 is \$101.37, while the same on Seventh Month 1st, 1897 would have been \$72.45, and on First

Month 1st, 1860, \$121.75. These records are compiled by multiplying the quotations of all the necessities of life by the per capita consumption. Prices are now at the highest point in many years.

An organization has been formed in this country for the benefit of the native races in this and other nations. The object of the organization is to continue the agitation for treaties and laws to stop the sale of opium and intoxicants to natives throughout the world.

Columbia, S. C., has been selected as the example of several California cities, by sprinkling certain of its streets with oil. It has been found by actual practice that it costs about \$36 per block, and that it not only settles the dust, but makes a better road.

The decision of the United States Supreme Court that the Philippines are American territory was affirmed 5 of the judges, 4 others dissenting. In conformity with this decision, it is said that \$7,000,000 collected in Manila as customs duties must be returned by the United States authorities to merchants and others.

The Pennsylvania Peace Society, lately meeting in Philadelphia, expressed its conviction that governments should have a Peace Department in lieu of a War Department, and the Constitution should be so amended, and made obligatory, that all national difficulties tending towards war should be referred to the Peace Department, the decision of which should be final.

In his annual report Professor Moore points to the complete failure of the Weather Bureau for the accurate complete collection and dissemination of crop information, having a large number of paid employees and volunteer observers and 14,000 persons reporting weekly to central points on the effect of weather on crops in their respective localities.

There were 140 deaths in this city last week, reported to the Board of Health. This is 30 more than the previous week and 64 more than the corresponding week of 1900. Of the foregoing, 211 were males and 229 females: 42 died of consumption of the lungs; 81 of inflammation of the lungs and surrounding membranes; 13 of diphtheria; 18 of cancer; 16 of poeplexy; 4 of typhoid fever; 7 of scarlet fever; 8 of small pox.

Cowboys closed on a basis of 8¢. per pound for miding uplands.

FLOUR.—Winter, super, \$2.50 to \$2.70; Pennsylvania roller, straight, \$3.30 to \$3.50; Western winter, straight, \$3.40 to \$3.60; spring, straight, \$3.60 to \$3.85.

GRAIN.—No. 2 red wheat, 80 to 80½c.

No. 2 mixed corn, 67½ to 68c.

No. 2 white corn, 65 to 65½c.

BEEF CATTLE.—Best, 6 to 6½c; good, 5½ to 5½c; medium, 5½ to 5c.

SHEEP.—Choice, 3½ to 3½c; good, 3 to 3½c; common, 1½ to 2½c.

LAMBS.—3½ to 5½c.

HOGS.—Western, 7½ to 8½c.

FOREIGN.—Reports received from Constantinople at Washington state that Ellen M. Stone has been heard from as late as the 1st instant.

The statistics of smallpox in London, England, of 420 cases, show that the rate of mortality among the vaccinated was 20 per cent; among the unvaccinated 60 per cent.

Over 2,000,000 quarters of wheat consumed annually in the British Isles, no fewer than 24,000,000 quarters come from abroad, for which nearly 240,000,000 is paid. Official investigations made by the Municipal Council as to the number of unemployed in the various industries of Germany, show that the unemployed in the larger towns amount to from 7 to 10 per cent of the population, and that the aggregate of unemployed in Germany reaches 500,000 men, or 4 per cent of the total number of artisans in the country.

There are schools in Germany for farmers, gardeners, florists, fruit growers, foresters, blacksmiths, carpenters, machinists, cabinet makers, bookkeepers, tailors, shoemakers, druggists; there are cooking schools, institutes for training servant girls, barbers and chiropodists. These are usually supported by the Government and free to all comers, or perhaps only a nominal tuition is charged.

It seems that girls, as well as boys, of Reykjavik, Iceland, have contracted the habit of smoking cigarettes, and the law allows any adult man or woman, who finds a boy or girl smoking to inform on the young offender corporal punishment and to seize and destroy any cigarette found in his or her possession.

The local press of Vienna announces the formation of an Anti-Dwelling League. The league includes members of the Reichsrath, a number of high officials and other notable personages. They propose to urge legislation for the establishment of courts of honor to arbitrate in questions of honor.

It is said that Nebuchadnezzar's throne room, 60 by 170 feet, has been discovered in Babylon.

NOTICES.

FUND FOR ORPHANAGE AND BLIND ASYLUM IN OR S. CAIRO, EGYPT.—Subscriptions and contributions, with names and addresses, may be sent to the President and Trust Co., 409 Chestnut St., Phila.

JOHN S. FOWLER.

WANTED.—For two weeks, beginning Twelfth Mo. 20th, a young woman as mother's helper in a family in Germantown. Apply promptly to S. E. O'NEILL, Office of The Friend.

RACHEL G. HALL, plain milliner, 1953 N. Camac, between Twelfth and Thirteenth Streets, will receive orders after Twelfth Month 9th, 1901.

WESTTOWN BOARDING SCHOOL.—Applications for admission of pupils to the school, and letters in regard to instruction and discipline should be addressed to WILLIAM F. WICKERSHAM, Principal.

Payments on account of board and tuition, and communications in regard to dismissals should be forwarded to ELLIOTT A. SAGEY, Superintendent.

Address, Westtown P. O., Chester Co., Pa.

WESTTOWN BOARDING SCHOOL.—For convenience of those coming to Westtown School, the stage will leave trains leaving Philadelphia 7.16 and 8.18 A. M., and 4.32 P. M. Other trains are met when required. Stage fare, fifteen cents; after 7.30 P. M., twenty cents each way. To reach the school by telegraph, West Chester, Phone 114x.

EDWARD G. SMEDLEY, Sup.

Friends' Library, 142 N. 16th St., Phila. Open on week-days from 11.30 A. M. to 2 P. M., and 3 P. M. to 6 P. M., also on evenings in which Friends' Institute Lecture is held, from 7 to 7.45 P. M. Resolutions to the Library include the following:

BACON, Las.—Our Home Base on the 31st.

BURGESS, J. W.—Civil War and the Constitution (2 vols.).

COURT, Cecile de, Baroness.—Memoirs.

GLESTONE, J. P.—George Whitefield, Field-preacher.

GREEN, W. D.—William Pitt, Earl of Chatham.

REFLECTOR, Agnes.—Fireside Sphinx.

RAY, C. A.—Making of an American.

TIMMONS, C. M., Jr.—Tearing Alaska and the Yosemite.

WELCH, A. C.—Anselm and his Work.

WHITE, E. A.—Art of Teaching.

DIED, at his residence, Marlton, N. J., on the twelfth of Seventh Month, 1901, SAMUEL WOODMAN, a member and ex-officer of Crosswell Presbyterian and Lehigh Monthly Meetings, aged seventy-seven years. He had handed a cup of cold water in the name of the disciple shall receive a disciple's reward."

—, on the twenty-second of Twelfth Month, 1901, at the home of her niece at Moorestown, N. J., REBECCA T. TROTH, widow of Joseph E. Troth, aged ninety years and six months. She was a member and ex-officer of Upper Springfield Monthly Meeting, N. Y. Her illness and resignation with which she viewed the approach of death, together with many peaceful expressions, were to her relatives and friends the consoling evidence that she has been gathered into that Heavenly City where sufferings are unknown.

—, at his home, near West Grove, Pa., Twelfth Mo. 24th, 1901, THOMSON FRAME, in the sixty-first year of his age; a member and elder of New Garden Monthly Meeting, West Grove, Pa. During the last week of his life, his bodily suffering was frequently intense which he bore with Christian patience, saying he did not have any of it taken away until all for which he intended had been accomplished. In the early part of his sickness he seemed much exercised for himself and for his family, but he was comforted by the presence of the beloved Society of which he was a member. He was full of a deep concern, desiring none should be deceived by any feeling of security, nor born of the Spirit. The nature of the disease was such, that for some time before his death, he was almost entirely deprived of the power of intelligible speech, but he seemed frequently to be in supplication, and we have evidence to believe that his petitions were understood by His Heavenly Father. The many mansions prepared for the people of God.

Appeals to Heaven and to Men.

On the same day that witnessed the closing of the Peace Conference provided for all bearing the name of Friends on this side of the ocean, might mention to us of meetings appointed for the London Meeting for Sufferings for unity prayer "for the removal from the hearts of men" of all that hinders the conclusion of Peace. The meetings on this side of the Atlantic were for persuading men, and on that day for persuading the Throne of Grace. While man has not authority to "command of the days of the Son of Man," or foretell a day of prayer, and while no religious society can appoint prayer by appointing meetings for it, yet we must respect the principle acknowledged by the holding of such meetings, namely, that the cause of Peace on earth is of those invisible spiritual processes which can best labor in by the true exercise of prayer. Philadelphia Yearly Meeting, in the opening of our Spanish war appointed meeting for united waiting on the Lord in a common sense of impending events, but leaving the Head over all things to his Church." The special form of religious exercise which such a meeting should come under. Yet the movement to assemble thus was an acknowledgment of the turning of the hearts of men "as a man waters the water-courses in his field." is within the power of the Father of Spirits and within the scope of men's labor together with Him in prayer. Even science shows increasingly that the Father has left in store mighty unexplored forces invisible for ages awaiting man's discovery and manipulation by the proper application. Just as rational it is to believe that there is in reserve an heavenly host of spiritual powers available for our right spiritual touch

and travail, through the one Mediator of all power in heaven and in earth. "Eye hath not seen, ear hath not heard, neither have entered into the heart of man the things which God hath prepared for them that love Him;" but He reveals them by his Spirit as we are able to bear them, and often in response to the prayer of faith, if we have it as a grain of mustard seed. He moves the prayers that shall move his love and power, that men may know that holy help is placed within the reach of their holy appeal.

A concern was uttered at the beginning of the present volume, that Friends should be availing themselves of this mighty engineering in heavenly places to overcome the spirit of war that was stalking over the earth. For it was high time that we should see that all this atrocity must be overcome from above. Vain is the help of man against the sin of man, except through God. The Spirit of the Prince of Peace, we believed, yearns for the co-operation of the living members of the Society of Friends in living prayer, that the remainder of wrath may be restrained.

This praying always with all supplication in the Spirit we ought indeed to do, and not to leave the other undone, namely, all its forthgoing testimony and appeal to the hearts and reason of men. Apprehending that they should now move to persuade men, individuals delegated by no official bodies under the name of Friends, came together last week in Philadelphia as a voluntary Conference, to repeat our views and desires in regard to Peace on earth, and to urge them upon public attention. Some of the papers read were remarkably impressive. For a company presumably of so diverse persuasions as regards our other principles, its unity in facing the problems set before the nine sessions seemed unbroken. No section under the name of Friends seemed to think its business was to represent itself, but simply and solely the cause of Peace. In this single eye to Peace lay the safety of the Conference towards itself and generally towards legacies possible to be left behind on other grounds, which had been feared. Of the sayings of which we are informed, we cannot say we would not have had some things stated differently, or not at all. But as they who came hither for Peace departed in peace, in that we would abide, and hope for the best.

The statement of principles adopted, and given forth to the public press, is as follows:

This Conference of members of different bodies of Friends in America is convinced that lapse of time has not made necessary any change in the position which the Friends have always taken on the subject of war. Rather have reasons accumulated, with the passing generations, for believing that war in all its forms is not only irreconcilable with the precepts, example and spirit of the Founder of Christianity, but that it is likewise out of harmony with the common principles of reason and morality, whose foundations are laid in the essential constitution of humanity. War, in its spirit, its deeds, the persistent animosities which it generates, and individual and social degeneration produced by it, is the antithesis of Christianity and the negative for the time being of the moral order of the world.

We believe that love, good will, self-sacrificing service, the faithful and courageous inculcation by teaching and example of truth and righteousness, are the divinely ordained means for the promotion of justice and right, for the eradication of error and iniquity, for the creation and maintenance of social and political order, and that the efficiency of these is not promoted but impaired by the instruments and methods of war.

We recognize with profound gratitude the progress toward the peace of the world that has been made in recent generations, in the elimination of certain forms of war, of the establishment of peace over wide areas of territory within the nations themselves, in the supplanting of brute violence by law, and in the progressive substitution of arbitration for war in the settlement of international controversies.

The establishment by the civilized Powers of the permanent International Court of Arbitration we gratefully recognize to be one of the greatest events in the history of human society. The setting up of this institution is the practical adoption by the nations of the principles and methods of settling controversies which have always been agitated by the Friends. The existence of this court makes it practicable and therefore, morally obligatory hereafter to adjust in a pacific international way controversies that may arise, and, therefore, takes away every ground that has been urged for considering war a necessity. . . . We believe that the time has fully come when the voice of enlightened humanity should make itself heard, calling for an adjustment of the matters at issue by the Christian methods which have in numerous instances of successful operation proved themselves as practicable as they are reasonable and humane.

In the spirit of our Master, the Prince of Peace, we call upon Christians of whatever name prayerfully to consider whether they are

faithfully holding and advocating as fully and earnestly as their profession demands, the great principles of love, brotherhood and peace which lie at the very heart of our common Christianity, and the faithful maintenance and propagation of which by all who call themselves Christians would, we firmly believe, speedily make all war impossible, and bring in the reign of permanent and universal peace.

As to our omission of a few words in the above, it seems a rule of wisdom not to prejudice a good cause by directing the hearers' attention unnecessarily to a side issue, or special case, on which strong and perhaps partisan feeling is apt to foreclose their seeing the larger truth on its own merits. We join in the deploring of the present wars, as all others; but not in their intrusion here as blunders to the pure principles held up to view.

Strength in Unity for our Schools.

The well founded concern of our Friend Dillwyn Stratton, in regard to unity of purpose in the elementary educational mark of Ohio Friends, is gladly admitted to our columns. We learn also with interest of the intention of the superintendent of the Educational Committee of Philadelphia Yearly Meeting to meet the teachers of the small schools in three centres in Ohio during the last two weeks of the present month, to further this excellent idea of a common course of study, and of uniform text books and methods of teaching.

This work of unification has been carried to a good degree of perfection in the limits of Philadelphia Yearly Meeting. The Superintendent is fortunately connected with the large and flourishing Monthly Meeting school in the city. Naturally, the standard in this school is high, and methods and means must be of the best to meet the competition of numberless educational institutions claiming patronage. With such a centre of radiation of the best, the work of unification has been simplified. Thus the teachers in the larger school, being in good part specialists, have gladly given the teachers of the smaller schools instruction in their specialties. In this way work in drawing, in gymnastics and even in reading and English has been quickened into new life all along the line. That our Ohio teachers are to feel this quickening and, we trust, through a similar supervision, is cause for hopefulness, not for education only, but also for a larger fellowship of faith in a rich and common inheritance.

WELL knows he who uses to consider that our faith and knowledge thrive by exercise, as well as our limbs and complexion. Truth is compared in Scripture to a streaming fountain; if her waters flow not in a perpetual progression they sicken into a muddy pool of conformity and tradition.—John Milton.

Jukes—Edwards.

A. E. Winship, the enterprising editor of *The Journal of Education*, has published a striking study under this caption.

It traces the descendants of Jonathan Edwards to the number of fourteen hundred and contrasts their record for usefulness in the world with the record of the twelve hundred descendants of a criminal character under the name of Jukes. The Jukes family was investigated by R. A. Dugdale, of New York State, and his paper published in 1877 was something of a sensation in the study of heredity. Of the twelve hundred Jukeses three hundred and ten were professional paviors, three hundred died in infancy from lack of good care and good conditions, fifty of the women lived lives of notorious debauchery, there were seven murderers, sixty were habitual thieves and there were one hundred and thirty who were convicted more or less often of crime. The cost to the state of this family in pauperism and crime was over one million two hundred and fifty thousand dollars.

In the Edwards family, on the contrary, out of fourteen hundred there were only four for whom an apology must be made, while the record of college presidents and professors, of judges and influential merchants and missionaries is quite bewildering. The conclusion of the whole study are summed up in the opening sentences of the monograph, and with some abbreviation they are as follows:—

"Education is something more than going to school for a few weeks each year, it is more than knowing how to read and write. It has to do with character, with industry and with patriotism. Education tends to do away with vulgarity, pauperism and crime, tends to prevent disease and disgrace, and helps to manliness, success and loyalty.

"A boy that leaves school and shifts for himself by blacking boots, selling papers, and 'swiping' fruit, often appears much smarter than a boy of the same age who is going to school all the time and does not see so much of the world. A boy of twelve who has lived by his wits is often keener than a boy of the same age who has been well brought up at home and at school, but such a boy knows about as much and is about as much of a man at twelve as he will ever be, while the boy that gets an education becomes more and more of a man as long as he lives."

"Jukes—Edwards" is inscribed to Wm. R. George and a fitting tribute is paid by the author to all those workers who are attempting to solve the problems of crime by practical systems of education. In the face of the statistics in this study with their overwhelming force on the side of heredity, it is refreshing to find such faith in the educational process and in the power of Divine Grace.

J. H. B.

The Atlantic City School House.

Some weeks since a notice of the proposed school house in Atlantic City, to be built as a second story to the meeting house, was printed in *THE FRIEND*. Since that time the improvement has been made and the school has had the use of the new rooms for three weeks past. The meeting room remains substantially as it was, with the exception of several steam ra-

diators that now supply the heat and seem tirely cool to any cold weather emergency.

The three school rooms are amply large have an abundance of light and by means hospital transoms can be comfortably ventilated. So far as appears they are admirably suited to accommodate the school. Ab fifty Friends have made contributions to the cost of this improvement, in sums vary from five dollars to one thousand dollars. There remains about one thousand dollars to be subscribed. It is hoped that Friends will up this amount by the end of the year. stated in the first notice, there is no Preceptive or Monthly Meeting to carry this undertaking. Its position is not unlike that of other educational institutions in our midst, the appeal is to Friends generally and for cause of elementary education under the foster care of the Yearly Meeting. The Treasurer is David Roberts, Moorestown, N. J.

FOR "THE FRIEND"

Co-Education Again.

The educational public in Philadelphia been somewhat surprised during the past week to have the Superintendent of the Department make a public declaration in favor of co-education. This is more notable in view of several adverse reports on the subject that have emanated from the local boards.

following abstract of the report of Superintendent Brooks is taken from the *Public Ledger*. In recommending the establishment of "ritorial high schools," the Superintendent gives in favor of co-education therein in part of separate schools for boys and for girls. recommends three distinct courses of study for each school—a general course for boys, a commercial course for girls, an manual course for boys, while any boys desiring to take the commercial course could enter the regular class in that subject. This arrangement in providing additional high school facilities, he argues, will be undoubtedly most economical, and in his judgment nearest to the most advanced ideals of age. "I realize," he continues, "that I touching upon a mooted question when I advocate co-education in our new high schools, yet, from the experience of many years in management of a large institution, where young men and young women were educated together, reciting daily in the same class, do not hesitate to recommend that these high schools should be open to both boys and girls."

THE OLDEST BIBLE IN THIS COUNTRY.—It is said to be the oldest Bible in the United States belongs to John Herr, of Lima, Ill., whose family it has remained for twelve generations. There are but three copies in existence, though originally fifty were printed. The original binding is of Beechwood covered with stamped leather, and is in a good state of preservation. It is a fine example of the printing of the Middle Ages, it having been printed in 1553, at Zurich, by two apostolic Carthusian monks, who, we are told, were burned at the stake, three years later, for printing in German when Latin only was permitted to be used in religious books. It contains a picture of the last judgment, wood engravings with hand painting.—*Protestant Banner*.

FOR "THE FRIEND."

inst Countenancing the Spirit of Speculation. temperance paper refers to the financial er of an apparently very successful owner temperance restaurants, seventeen in num- in several large cities of the Union. e of these establishments were located in e situations for good business, in Phila- ia. No liquor was ever served in any of e. Bible texts were hung upon the walls, food was excellent and prices moderate, e the business generally was "conducted in onorable way in keeping with the profes- of the proprietor." The latter, the writer s to have been a generous-hearted man and many laborers in the Lord's vineyard had aken of his bounty. How did this lamenta- eversal come about? The account in the e paper says, "It is not surprising that a failure came, through speculation in s." A woeful sequence (there have been any such) to a weak giving way to the sible invitation to "invest the surplus" in mes which may realize very large divi- s. Some of these adventures are ad- ed to the capitalist, some to those of erate means, others again to those who closely to count the pennies. Here, for nce, is one in the last issues of my daily r, and it is believed to be the best daily city of a million and a quarter of inhabi- t. It is an invitation to help choose a r for "a first-class monthly publication," ng that "you can win any amount from hundred and fifty dollars up to thirty-five red dollars," although the representation e the large figures of the grand prize is eed by the explanation that one hundred s of the publication concern at twenty-five rs a share, make up the larger part of the h." The scheme may not, technically, be nted an illegal lottery, yet it is a strong pon the so-prevalent passion for specula- the same passion which breaks out in those mmon, morally perilous pastimes of soci- progressive euchre, whist and other games ance. A favorite line of speculative adver- ents of late has been to proclaim the un- ed chance of winning a fortune by invest- in suburban lots of certain very progres- ities. Very many of these alluring pros- es find entrance into papers of the philo- pic and religious press. Indeed, there one such in the excellent paper, not d, alluded to in the first sentence of this nication, wherein there was a plausible e of a China dinner set for (seemingly) a yet the very trashy paper which it was rpose of this advertisement to "boom," tained many advertisements which e cover any right-minded person with e to respond to. Many Friends, in their ctive places keep clear of an infringe- of that portion of the Sixth query of our line which counsels "against encourag- eries of any kind." For the guarding membership against encouraging the spec- e or the gambling spirit, is surely ad on the Truth. J. W. L.

E cannot be too much in earnest when g with the rising generation. We can- e too careful to use the right seal in g with tender wax if we want the right sion."

BEAUTIFUL HANDS.

The beautiful hands are the useful hands,
That are ready for any work;
That improve the moments that others waste,
And the duties of life never shirk.

The beautiful hands are the helpful hands,
That lighten a mother's toil;
That cheer up her heart, weighed down with care,
And bring to her lips a smile.

The beautiful hands are the loving hands,
That smooth a father's brow,
When it aches with the worries and cares of life,
Or smarts 'neath affliction's blow.

The beautiful hands are the willing hands,
That gladden many a home,
With their tireless devotion and ready aid,
When hours of affliction come.

The beautiful hands are the kindly hands,
Dispensing good to all;
Soothing the pathway for others' feet,
And raising those who fall.

The beautiful hands are the clever hands,
Which make home attractive and bright,
With their skill and cunning in many odd ways,
To charm and gladden the sight.

The beautiful hands are the reverent hands,
Which clasped in earnest prayer,
Bring blessings down from heaven to earth,
For weary hearts to share.

BEAUTIFUL THINGS.

Beautiful faces are those that wear—
It matters little if dark or fair—
Whole-souled honesty printed there.

Beautiful eyes are those that show
Like crystal panes where heart's fires glow,
Beautiful thoughts that burn below.

Beautiful lips are those whose words
Leap from the heart like songs of birds,
Yet whose utterances prudence guards.

Beautiful hands are those that do
Work that is earnest and brave and true,
Moment by moment the long day through.

Beautiful feet are those that go
On kindly ministries to and fro—
Down lowliest ways, if God wills it so.

Beautiful shoulders are those that bear
Ceaseless burdens of homely care
With patience, grace and daily prayer.

Beautiful lives are those that bless—
Silent rivers of happiness,
Whose hidden fountains but few may guess.

Beautiful twilight at set of sun,
Beautiful gale, with race well run,
Beautiful rest, with work well done.

Beautiful graves, where grasses creep,
Where brown leaves fall, where drifts lie deep
Over worn-out hands—oh, beautiful sleep!

UNTIL TO-MORROW.

Oh heart! be patient yet awhile
Until to-morrow,
Push back the curtains of the night
That hide from thy desponding sight
The stars which look with friendly light
From out the blackness of thy grief—
Until to-morrow.

O soul! be patient yet awhile—
Until to-morrow.
Lift silent lips and trusting eyes
And hands of faith to darkened skies;
Somewhere—sometime—the sun will rise;
Be patient till the morning breaks—
Until to-morrow.

—New Orleans Times-Democrat.

FOR "THE FRIEND."

Primary Schools in Ohio Yearly Meeting.

Of the few expressions that concerned Friends make to the world through their Institutions, perhaps none, aside from their meeting stand out so prominently to it as their schools. Those who are drawn to us by our Christian doctrines, held as they are almost as free from form, ceremonials and priestly trappings, as were those of the Primitive Church, have good reason to expect a correspondent simplicity of living in our homes, of education in our schools, and moderation in our business.

The home life and business standing of Friends are not so directly governed by the organized body as the school, it being subject to an appointed committee and conducted by a teacher who is a member. Education has always had encouragement from Friends, but long established schools may come to be accepted as permanent institutions and not have the same lively concern that their condition demands of the body they represent. As a consequence, a fear has arisen lest they should lack in efficiency.

This year's minutes of Ohio Yearly Meeting report that two hundred and eighty-three of the five hundred and twenty-two children of school age in that body have attended schools under its care, and that twenty-two terms of primary school have been taught the past year. It appears that the schools in different neighborhoods lack a uniform course of study and that students entering the Boarding School at Barnesville differ not only in having studied different text books, but that there is lack of uniformity in the branches taught in different primaries. This has received some attention from the teachers, but a more general interest is desired from the committees and employers, that all may work together to establish such a uniform course of study as will give system in our educational work. The methods employed in the instruction in different schools might be drawn nearer together, producing more harmonious results. May we not also hope that a consideration of these apparent defects will lead to a fuller realization of the religiously guarded education for which our schools are maintained.

DILLWYN STRATTON.

WHAT SHALL BE DONE TO SUPPLY THE MISSING ELEMENT IN MEETINGS?—In the sense of the pure love of God, which flows in my heart towards you, do I warn and exhort you to walk in the cross of our Lord Jesus Christ, which crucifieth us to the world and the world to us. And watch in patience, and meekness, and calmness of spirit against everything that would draw out the mind, in any measure, from the true meeting-place, either in or out of meeting. For truly, my Friends, he or she that doth not watch diligently out of meeting, but let their minds go a gadding to the ends of the earth, and take no heed to have them gathered in before they come to meeting—truly, it is no wonder to see such disappointed. And therefore, my dear Friends, be careful, every one in particular, to have your minds stayed upon the Lord, and the Lord will not be wanting to you; for great is his condescending to us in the day, and wonderful is his work to those who truly watch and wait upon Him!—Letter of George Gray to Friends in 1676.

A World-Wide Authority for Measurements.

A recently published book of travel, "Seen in Germany," by Ray Stannard Baker, gives an account of the Imperial Physical and Technical Institute at Charlottenburg, adjoining Berlin, extracts from which may be of interest to readers of THE FRIEND.

"Here," says the writer, "are set up the most perfect instruments in the world for measuring heat and cold, for finding the pressure of the atmosphere, for determining the strength of electric currents, for measuring light, and for a score of other purposes for which the utmost exactness is required. Here are kept the purest gold, silver, platinum, iridium, rhodium and other metals in the world—the standards of purity. Here is the purest water in the world, and the finest glass, and the most perfect weighing machines. Here can be produced and measured every temperature from that of liquid air to that of the electric arc light . . . Does the famous German thermometer-maker wish to know if his thermometers or his barometers are absolutely correct? He sends them to the Reichsanstalt for testing. . . When the American government wishes to be certain that the incandescent electric lights which it is purchasing, are marked with the proper candle-power, it must needs send them to this distant German institution for testing. There is, perhaps, no other place in the world where it can be done with such certainty. Such a consignment of American lamps had just passed through the Reichsanstalt at the time of my visit."

This wonderful Institution has been established twelve years, but is said to be little known, even in Germany, outside of a limited number of scientific investigators and technicians, and it is probable that only a few hundreds of Americans, excepting a few colleges and manufacturing establishments, have any knowledge of its existence.

The Institute was founded through the foresight of two of Germany's greatest men, Siemens and Helmholtz, the first in engineering, the latter in science. Siemens especially saw the necessity of the greatest accuracy in standards of measurement of temperature, electricity and light, and also knew that Germany's future lay in the development of her manufactures, and that this exactness in technical processes meant not only increase in quantity of product, but also in reputation resulting from perfection in the manufactured article. In order to further his idea Siemens gave the Imperial government a plot of land worth about one hundred and twenty-five thousand dollars only a half hour's drive from the emperor's palace, to which the government added considerable ground, and within three years nine buildings arose out of the sand. "The original cost of the establishment, exclusive of land, was over one million dollars, all paid by the Imperial government . . . Money was not stinted, and it is probable that no other Institution in the world is so thoroughly equipped." For delicate tests of instruments of precision the utmost stability of construction was indispensable. The two main buildings are sunk deep in the ground, set on a foundation of stone and asphalt, the walls being built thick and solid, thus providing for as even a temperature as possible. The writer says—"I was shown the method of con-

struction in the basement, of the physical building, first an outer wall eighteen inches thick, pierced with tight-fitting double windows, then an air-space reaching from floor to ceiling, and wide enough for a man to walk in, then an inner wall of solid masonry two-and-one-half feet thick also fitted with tight double windows and doors. Still inside of this there are rooms enclosed in masonry walls and having thick glass floors and ceilings, glass being the best heat insulator." These rooms are not artificially heated but can be kept at a temperature that will not vary more than two degrees throughout the year, each room having its own ventilation, and all the larger apartments being arranged so that they can be divided into smaller ones should extra space for delicate manipulation be required. These buildings are covered with thick layers of soil thoroughly grown to turf, the writer saying that he saw the grass turning green on them, with a few dandelions shining in yellow patches. One small building on the grounds is set diagonally to be in the line of the magnetic meridian and is built without any iron locks, nails or anything made of that metal, being used for delicate experiments in magnetism. Every precaution has been taken to keep all disturbing influences away from the buildings, even the electric railroad passing the grounds being compelled to bury all trolley wires within a kilometer (five-eighths of a mile), of the Institution. The streets around the grounds are asphalted to make traffic as near noiseless as possible and to reduce the jar to a minimum.

The annual cost of this work to the German government is about one hundred thousand dollars. One department which has charge of testing instruments of precision and measurement receives about ten per cent. of its expense in fees for service rendered, the other, dealing with abstruse scientific inquiries, receives no income whatever. "The chief work of the Reichsanstalt in both of its departments, deals with heat measurements. It is patiently adding figures beyond the decimal point; in its last report there is an account of a series of experiments which had for its sole object the carrying of certain established temperature calculations from the fifth to the seventh figure beyond the decimal, thereby adding just so much to the minute accuracy of determinations in which this calculation plays a part." An interesting and extremely important part of the work of the Institute is testing thermometers. These instruments being constantly used under conditions requiring accuracy of measurement the Reichsanstalt experimented in the endeavor to produce a glass which should be chemically pure and then contracted to the last degree, the resulting thermometer tubes being the most perfect ever made. Then attention was given to securing pure mercury and that the scale of degrees should be accurately marked on the tubes. The thermometers were then tested for variations in situation, horizontal and perpendicular; they are subjected to different degrees of air pressure within and without, the corrections being carefully noted, and the result was the production of instruments that will measure to the thousandth part of a degree. One of them that R. S. Baker touched, carefully enough, he says, indicated in the

upward leap of the mercury the heat of an instant's contact with the hand. These results were obtained in thermometers calculated measure from —30 to 350 above zero, Centigrade, and then efforts were made to make instruments measuring lower than —30 a above 350. Mercury boils at the latter point but if placed under pressure of gas within a tube liquid it can be kept up to 550 degrees this being the limit for thermometers as usually made, as the glass softens at this temperature. Beyond this point heat is measured by what is termed a thermo-electric junction; two fine wires of some infusible metal, usually platinum, iridium and rhodium, connected and the junction heated, when electric current is sent through them, and the current being measured the temperature the junction can be closely calculated. This arrangement has been successfully used in measurements as high as 1,775 degrees, Centigrade, but as platinum melts not far from this point an end was put to the experiment. Temperatures as low as 190 below zero, Centigrade, or over 300 below, Fahrenheit, were measured by a thermometer filled with ethyl petroleum ether, the first result of distilled crude petroleum and hitherto a waste product, which does not freeze at the temperature boiling liquid air —192, C., although it comes of a molasses consistency a few degrees lower.

In 1899 over seventy-seven thousand physicians' thermometers were tested at the institute, with thousands of other kinds. We tested the tubes are marked with the initials of the German name of the Institute, P. T. and a certificate given, printed in nine different languages, showing what corrections necessary for accurate readings. For a service a small fee, fourteen to twenty cents for each instrument, is charged, merely nominal sum.

The improvement of the existing measuring light is another department of the useful institution's work, and the United States government has submitted electric lamps for testing, and our manufacturers repeatedly have had standard lamps sent to Charlottenburg to furnish a basis of measurement for their own product.

The Institute has become a final authority for the measurement of all kinds of electric currents, strong and weak; in electrical measuring meters, dynamos, and other electrical devices, having a laboratory with a cumulative battery producing twelve thousand ampere of current, devoted entirely to testing instruments of every sort. It has standard instruments for determining the purity of substances, measuring the accuracy of all sizes of testing safety valve caps, and for magnetic determination. There are now wherein the experiments are so extremely delicate that visitors are required to leave knives, keys and all articles of iron or steel behind before entering; there are mechanisms for balancing the delicate galvanometer, they will not be disturbed by opening or closing doors or the tread of feet; you see scales which weigh in water, and near by are the most delicate balances in the world, the weights made of aluminum, the heaviest one gramme, about a quarter the weight of a copper cent, while on these scales, which

osed in an air-tight case, one may accurately weigh a hair from the eye-lash. The most remarkable part of all this scientific work is that it is doing almost without exception, excepting some small fees, to any person or corporation needing the Institute's assistance, and while this is the case, this Institute is sneered at as "paternalism," there are many ways in which public funds are spent in the United States for less useful purposes than would be the cost of an institution like the Imperial Physical and Technical Institute of what has been hitherto considered a phlegmatic Germany.

Science and Industry.

Travellers in Siberia have noticed with surprise the ability of the native camels to withstand, without protection, the greatest extremes of heat and cold.

In winter the thermometer on the Mongolian plateau sometimes drops to -40° Fahrenheit, yet the camels wander about with no sense of suffering. On the other hand, the Russian explorer, Prejevalski, found the temperature of the ground in the Gobi Desert summer to be more than 140° Fahrenheit; the camels are apparently as indifferent to this degree of heat as they are to the winter.—*Youth's Companion*.

PARADISE FOR SERVANTS.—Australia, especially New South Wales, may be regarded the paradise of household help. Not only are wages high, but household labors are performed under conditions much more favorable than those which prevail in this country. Members of the Australian houses are of one opinion only, and few exceed two. Excepting the towns, where there is often a good deal of dust but very little smoke, the air is pure and clear, and there is relatively very little cleaning to be performed. For seven or eight months in the year there are no fires kindled except for domestic purposes, and in principal cities the gas stove is beginning to supersede the kitchen range. There is no piping downstairs in the cold and darkness of a winter morning, with blue fingers and freezing limbs, to light a fire, thaw the frozen water pipes and clean a night of front steps, while everything is icy to the touch and gloomy to the vision. Moreover, there are few of the restraints, wholesome or otherwise, which are imposed upon the freedom of the domestic in most well-ordered households. In Australia the mistress's authority is exercised on sufferance, as it were, she is obliged to temper it with extreme leniency, lest her cook or housemaid should actually leave her.

DO THEY KNOW?—Do animals know how to find their way? Some instinctive consciousness of time? Naturalists believe that they do, and many well known facts observed in different men in different places lend color to this view.

AN ORIOLE ARRIVES IN MASSACHUSETTS every year about the tenth day of Fifth Month. He pays little attention to differences of weather. He may have his late seasons and early seasons, but the very large number of years in which his arrival has been noted on the tenth day indicates that his chronolog-

ical machinery, like that of a cuckoo-clock, brings him into view at a given moment.

Birds which migrate southward early, not waiting for frost or cold winds, also seem to be aware when the date has arrived for their departure. Many king-birds, for instance, may be seen in Massachusetts on the last day of Eighth Month, but very few are ever seen after the first day of Ninth Month.

The wood-chuck knows when the time has come for him to "den up." He not only feels the necessity of rolling himself up in his own sustaining fat and going to sleep for the winter, but he feels it at a particular time, quite regardless of the state of the weather. Wood-chucks have been domesticated, and allowed to sleep in a warm place, with all the food they needed, yet they "denned up" when the regular time came for them to do so.

They awake in the spring with much the same regularity. The "ground-hog day" is ridiculous. It is of course, unreasonable to suppose that in a country like ours, with a range of climates from the semi-tropical to the completely arctic, a creature will come out of his hole everywhere on the second day of Second Month and then regulate his future conduct according to the weather on that day, staying out if it be bad, and going back if it be good. But the legend belongs properly not to the woodchuck but to the badger, and to the European badger, at that; and moreover, the Germans give us a version exactly opposite to that which is most current. They say that the badger peeps out of his hole on Candlemas day and draws back when he finds no shining—not the sun. The persistence of the woodchuck legend may thus be traced to the regularity of the chuck's European relative.

A naturalist who has studied this interesting characteristic of animals tells a story, from his own observation, which seems to show that some creatures may have a still more exact sense of time than is indicated by the regularity of their migrations and hibernations. He once enjoyed the acquaintance of a mouse which, at exactly a quarter before four o'clock every afternoon, was in the habit of coming out along a wainscoting and making its way to a pot of paste on the table, the crust of which he then proceeded to nibble.

No "suburbanite," having his train in mind, could be more regular in arriving at his breakfast table than this tame mouse was in coming for his daily nibble of paste.

How did the mouse know when it was a quarter before four? The naturalist could not answer the question, but he is certain that the little creature had some way of measuring time.—Adapted from the *Youth's Companion*.

RECENT investigations made by the Department of Agriculture show that mushrooms are about equal to potatoes in the element of nutrition that goes to make flesh and blood, but that, on the other hand, they do not hold much of the fuel stuff required to keep the body machine running.

NO ABIDING BLESSING.—"Without Christ and vital fellowship with Him, there may be activity enough to churn an ocean and work that can be piled mountain high; and yet no abiding blessing would be with it all."—*The Moravian*.

Peculiar Names.

English proper names are often a snare to the unwary. In Germany and on the continent generally, a business education is not complete without a training in their pronunciation. It was from a German officer that the writer first learned the correct sound of many of the names which follow. As all of them occur in English history and English literature, they are here offered to the American school girl for her study and observance:

Abergavenny	Abergen'ny.
Acheson	Atch'son.
Adey	Ay'dy.
Alcester	Aw'ster.
Alington	Allington.
Ayscough	Ask'ew.
Bagehot	Bag'ot.
Beauchamp	Bee'cham.
Beaulieu	Bew'ly.
Bellingham	Bel'injam.
Belvoir	Be'veer.
Bertie	Barty.
Bethune	Be'ton.
Blount	Blunt.
Boisragon	Bor'ragon.
Boulger	Boal'jer, Bolejer.
Bourchier	Bow'cher.
Bowker	Bark.
Caillard	Ky'ar.
Cassals	Cassels.
Cheyne	Chay'ney.
Cholmondeley	Chum'ly.
Claverhouse	Clay'verse.
Colquhoun	Choon.
Creighton	Cry'ton.
Crichton	Cry'ton.
De L'Isle and Dudley	De Lyle.
De Moleyns	Demmoelens.
De Salis	De Sal'is.
Dumaresq	Doo'mer'rick.
Dymoke	Dim'mak.
Farquhar	Far'kwer, Farker.
Farquharson	Far'kwer, Park'werson.
Foljambe	Fool'jam.
Foulis	Fowls.
Pontefract	Pomfret.
Marleybone	Mar'fban.
Pall Mall	Pel mall.

FOR "THE FRIEND."

EARLY FRIENDS AND MODERN PROFESSORS, AND THE DIFFERENCE BETWEEN THEM, CLEARLY SEEN BY OTHERS.—An estimable Friend, a minister, was lately traveling in a coach, and had an interesting conversation with a fellow passenger, who began by speaking of the many leaving the Society, and said, he greatly approved of our sentiments in many respects, and wished there might never cease to be such a people—that we were raised up for a good purpose, to bear a peculiar testimony, and wished that it might never be suffered to fall to the ground, but, said he, it must be upheld in its ancient purity."

He then remarked how greatly we were gone from our primitive simplicity; that we were an industrious people, blessed in our trade, some got rich, and then got out into the worldly spirit—but that he trusted a little remnant would be preserved faithful, making a stand against these things, and then, although, from these siftings that are come upon us, we may be reduced to be few in number, yet we should shine forth more brightly, and others would flock to us. P. H.

INFIDELITY AND BELIEF.—"Infidelity expends its strength in fighting and trying to destroy Christianity. Christianity expands its strength in reforming, ennobling and elevating the human race."—*Religious Telescope*.

Reminiscences.

(continued from page 170.)

Under date of First Month 2nd, 1838, Joseph Scattergood thus writes to his brother William. "The more I reflect on the nature of true religion, the more I know the corruption of my own heart, the more fully sensible I am that the work of regeneration is a deep spiritual work, and in order that we may experience it, watchfulness unto prayer must be maintained. I am well aware that a rational understanding of the doctrine of Christianity, and a faculty of writing and speaking on religious subjects may be obtained, and may be passed off with the superficial as true religion, indeed is too often passed off as such, and much to the reproach of Truth; but "such draweth nigh unto me with their mouth, and honoreth me with their lips, but their hearts are far from me," the faith of such I have no doubt will be found to stand in the wisdom of man and not in "the power of God" by which alone we can withstand the "fiery darts of the wicked one." While expressing these sentiments I am reminded of the tone and character of the preliminary observations with which John Barclay prefaces the lives of Joseph Pike and Joseph Oxley. They are worthy of all acceptance, and I most sincerely hope may be read with the life of Joseph Pike by every Friend in the country.

"So far as I am capable of judging of the state of our Society no remarks could be more appropriate at the present juncture and with the salutary advice and earnest exhortation with which the journal of Joseph Pike abounds, I think all who desire to be rightly directed would wisely profit."

The following is a memorandum made by Joseph Scattergood, Third Month 21st, 1848: "This day moved into the bookstore with a view of becoming acquainted with the duties to be performed as caretaker of the book room, etc.

"For the past week I have been much engaged in assisting in the examination of proof sheets of Robert Barclay's Apology, a new edition of which from stereotype plates is about being printed at the expense of the Yearly Meeting. William Evans, Henry Cope, Daniel B. Smith, Charles Evans, Nathan Kite and myself met almost every afternoon and frequently in the evening. One reads the impressions from the new plates while the rest of us examine the several editions of the work which have been printed, and when discrepancies occur reference is made to the Latin and other early editions. It appears likely that it will require two or three weeks more to finish the examination. We hope to make the new edition a very correct one."

By the Yearly Meeting of 1848, Joseph Scattergood was appointed a member of the committee having charge of the Boarding School at Westtown, and was at once entrusted with the responsible duties of the treasurer-ship of that committee. This trust he occupied until 1862, when he was succeeded by Charles J. Allen. During the greater part of this period Joseph Snowden and his wife (Hannah Ecroyd Snowden) were superintendent and matron, and in the course of the intimate relations into which they were placed, the friendship which had previously existed ripened into a strong attachment, which con-

tinued during the remainder of their lives. Many important changes in the interior arrangement of the school, and in the buildings were determined upon by the committee, and carried into effect under the oversight of Joseph Snowden, in which he was efficiently assisted by the treasurer, and a constant intercourse, chiefly on the affairs of the institution, was carried on by frequent letters. In these letters there are references to passing events which have an interest at the present time.

Joseph Snowden, writing Twelfth Month 7th, 1848, observes:—"Thy grandfather, whose preaching made more lasting impression on my mind than any other, said 'Westtown was a plantation the Lord would bless'; may we all who are charged with the care of it, so live in the Divine fear as to witness the prediction to be more and more fulfilled. I cannot but believe with all the failings and had conduct of the boys, the moral standing of the school is better than it was some years ago. Still there is ample room for further improvement and a great deal will depend upon having religious, well qualified teachers and caretakers."

As essential now as it was a third of a century ago.

Somewhat similar to this expression of Joseph Snowden was the experience of Joseph J. Lewis, who, when young, resided with his father, Enoch Lewis, at Westtown, the latter being a valuable teacher there for some years. J. J. L. after arriving at manhood, became a prominent member of the Bar of Chester County, was nominated by the Republican party as Judge of the Supreme Court of this State; also holding a responsible office at Washington City, under President Lincoln. When a young man, he married a daughter of Charles Miner, of West Chester, who was not a member of the Society of Friends (though a most amiable and intellectual woman), by which he lost his right of membership. After a period of some time, perhaps more than fifty years, and drawing near to the close of a long and somewhat turbulent life as a politician, office holder, etc., he felt that he could no longer delay making an effort to regain his membership in the Society of Friends.

An application to effect that object was made to Birmingham Monthly Meeting, by which he had been disowned. A committee was appointed to have an interview with him, one of whom was a great-grandson of Thos. Scattergood. In the course of the interview he said to him that the preaching of his great-grandfather to him when a boy at Westtown eight years old, had never been effaced from his mind, and the Lion became the Lamb, and he was reinstated.

W. T.

FOR "THE FRIEND."

A Beautiful Letter.

Among the large number of letters written by early Friends to Margaret Fell, and preserved in the Swarthmore collection of manuscripts, at Devonshire House, London, there are few more beautiful than one written by Thomas Lawson (numbered 1—245), who was educated at Cambridge and convinced by Geo. Fox, while holding a living at Ramside, in Lancashire. After leaving the profession of preacher he taught a school at Great Strick-

lan, and was especially noted as a botanist. George Fox writes of him in his Journal, and date 1652: "Some rude people cast scandal upon him and had thought to have done him a mischief, but he was carried over all a griev in the wisdom of God mightily." I died in 1691. The letter, which is here copied from the original, slightly modernized spelling, is written in an even hand on both sides of a sheet $7\frac{1}{2}$ inches by 6 inches, and endorsed "from Thos. Lawson to M. F." on it are added in George Fox's own well known handwriting, "read over 1653."

"Dear hearte

my love in the spirit of peace salutes thee where in my measure I witness thee and with thee where all the body is knit and united together in unfeignedness. Deare heart there is a pure and heavenly cry in me dwell out of time in that which was before time, out of willing and running, and when am kept still and quietly in it, I finde joy a peace. Now the enemy envies this union a is still tempting till the union be broken a my minde gone into time, into willing a running, where the snares of the fowler be and deare hearte I cannot conceale it from thee, only here doth the enemy prevail a me, in thoughts and imaginations, image pictures, likenesses, idolls, which the enim subtilly gets sett up in my minde and w^d ha me to bow unto, and the lord in his deare love still cries after me when I am here, w^d nestles against this spiritual idolatry, cry within me not to have any fellowship wth strangers nor to enter into covenants wth the inhabitants of the land, now here they come to vanish and passe away and are seen and secret joy springs up in me to see pictures, images, and imaginations cutt down which are as thorns in my side and as per in my eyes and here a pure resolution com to be set up in me all the days of my appoint time to waite on the lord for I see the do of pure wisdom, riches and ever fadel treasures set open and light springing u^p that the enemy cannot be concealed nor h^{is} himselfe from the candle of the lord in n^o but this the subtil serpent envies, willing th^{at} I be anywhere but in the light, w^h lays of his wiles. Dear hearte, pray for me unto I Father, y^t I may be kept in his counsell his feare unto eternal life, fare the well, w^h art beloved of the lord with everlasting love

"THO: LAWSON."

Then follow eleven lines as a postscript, respecting the reports put about concerning him. Though written under very different outward circumstances from the present, the heart man is much the same to-day as aforesaid a there is much in the letter of teaching for in this day, when so many things tend to dr the soul out of its hiding-place in God.

NORMAN PENNEY.

TOTTENHAM, England, Eleventh Month 30, 19

In temporal affairs, "no man can get son thing without earning it, unless some one e earns it without getting it."

"OUR TIMES," says Bishop Haygood, "h developed ten times as much genius for gting money as conscience in the use of i And the result is, as he sees it, a tendency Paganism.—*Evangelical Messenger*.

PATIENCE WITH THE LIVING.

Sweet friend, when thou and I are gone
Beyond earth's weary labor,
When small shall be our need of grace
From comrade or from neighbor;
Passed all the strife, the toil, the care,
And done with all the sighing—
What tender ruth shall we have gained,
Alas! by simply dying?

Then lips too chary of their praise
Will tell our merits over,
And eyes too swift our faults to see
Shall not defect discover.
Then hands that would not lift a stone
Where stones were thick to cumber
Our steep hill path, will scatter flowers
Above our pillowed slumber.

Sweet friend, perchance both thou and I,
Ere Love is past forgiving,
Should take the earnest lesson home—
Be patient with the living.
To-day's repressed rebuke may save
Our blinding tears to-morrow.
Then patience, e'en when keenest edge
May wretch a nameless sorrow!

'Tis easy to be gentle when
Death's silence shames our clamor,
And easy to discern the best
Through memory's mystic glamour;
But wise to be for thee and me,
Ere Love is past forgiving,
To take the tender lesson home—
Be patient with the living.

—Boston Watchman.

The One Sacred Book of the East.

In the discharge of my duties for forty
years, as Professor of Sanscrit in the Univer-
sity of Oxford, I have devoted as much time
my own living to the study of the Sacred
Books of the East, and I have found the one
note—the one diapason, so to speak of all
the so-called sacred books, whether it be
the Veda of the Brahmans, the Puranas of
the Hindus, the Koran of the Mohammedans,
the Zend-Avesta of the Parsees, the Trika
of the Buddhists—the one refrain
through all—salvation by works. They all
claim that salvation must be purchased, must be
bought with a price, and that the sole price,
sole purchase money, must be our own
labors and deservings. Our own Holy Bible,
the Sacred Book of the East, is from the be-
ginning to the end a protest against this doc-

trine. Good works are indeed enjoined upon
all, but the Sacred Book of the East far more
than in any other sacred Book of
the East; but they are only a thank-offer-
ing of the fruit of our faith. They are never
ransom money of the true disciple of
Christ. Let us not shut our eyes to what
is excellent and true and of good report in
the sacred books, but let us teach Hin-
dus, Buddhists, Mohammedans, that there is
one sacred Book of the East whose gos-
pel is their mainstay in that awful hour
when they pass all alone into the unseen world.
The Sacred Book of the East which contains that
fulfilling saying, worthy to be received by all
women and children, and not merely by
Christians, that Jesus Christ came into the
world to save sinners."—Max Muller.

EVER trusted Christ but I found Him
ul, nor my own heart, but I found it
—Vavasor Powell.

Items Concerning the Society.

A private letter from our friend J. Francis
Mather, of Hobart, Tasmania, gives some idea of
the distances Friends in Australia will have to
travel to their "General Meeting," which is to be
held at intervals at Sydney, Melbourne, Adelaide
and Hobart. We may, he says, roughly indicate
the distances thus:

Hobart may be represented by Tunis.
Melbourne may be represented by Rome.
Adelaide may be represented by Toulouse.
Sydney may be represented by Vienna.
Brisbane may be represented by Berlin.
Rockhampton may be represented by Gothen-
burg.

Auckland may be represented by Odessa.
Dunedin may be represented by Tarsus.

He also mentions that none of the possible rep-
resentatives are in easy circumstances, many are
not their own masters, and most have difficulty in
leaving their homes and businesses. We trust that
the enthusiasm which has led our Friends forward
in spite of such obstacles will be richly rewarded.
—British Friend.

The question of the connection of the Society of
Friends with the Free Church Council was brought
before the London Meeting for Sufferings by Caro-
line E. Stephen, who objected to any meeting offi-
cially sending delegates to the Councils. Her appeal
to Friends to refrain from officially uniting them-
selves with the Free Church Councils, was given with
much feeling and under a manifest sense of duty.
She felt that it was inconsistent in Friends to
contenance or support the Catechism issued by
the National Council, as it expressed sentiments on
the ordinances and other matter which we as a
Society could not accept. She reminded Friends of
their unique position, and feared they would lose
their influence for upholding spiritual ideals by
taking part in the work of Free Church Councils,
especially where this was in the direction of op-
position to the Church of England. She suggested
that a minute on the subject should be sent to the
Yearly Meeting. The discussion was a useful one,
and we fully understand the feelings of those who
dread lest we should compromise our spiritual
freedom, or lose, in uniting ourselves to a militant
party among the Christian bodies, that influence
which our very detachment has given us. After
considerable expression of sympathy with her desire
for the maintenance of loyalty to our spiritual in-
heritance, some explanations were made repudi-
ating the idea that any Society by sending dele-
gates to a local council made itself responsible
for the catechism. It was purely optional with any
Church to adopt it, or not, as it liked. There was
but little in the work of the Councils that was in
antagonism to the Church of England. Several
Friends who have taken part in this work stated
that the Catechism referred to had never come to
the front in any form, whilst they had found that
co-operation made for brotherliness, and afforded
opportunities for spreading the influence of higher
spiritual ideals, and for imparting a Quaker tone
to methods of Christian work. Though the Meeting
did not see its way to take any action, it was felt
that useful service had been rendered in directing
attention to the need for faithful adherence to
principle.—British Friend.

The statement is published that during Kansas
Yearly Meeting on First-day morning, a well-
known speaker "preached for an hour and forty-
five minutes. His subject was, 'Ye are a Royal
Priesthood'."

In this day of postal cards and condensed mes-
sages, and claims for everything to be said or
written "short, pithy, and to the point," such an
occurrence as the above seems remarkable enough
for us to have opportunity to quote it from English
and from Australian sheets. But we remember

the late John S. Stokes remarking that in con-
siderable journeys which he took as companion to
Joseph Hoag, he never heard Joseph preach in any
meeting for a shorter time than an hour and a
quarter.

Notes From Others.

Theodore L. Cuyler, the venerable preacher, says
that when little boys bring him an album and ask
for his autograph, he writes: "No man was ever
lost in a straight road."

"It has been said that every war leaves three
armies behind it—one of mourners, one of cripples,
one of unemployed men, ready to commit crime."

The "Saturday half-holiday" is older than is
commonly supposed. King Edgar (A. D. 958) or-
dered that work should stop "from Saturday noon
till Monday daylight." King William of Scotland
(A. D. 1203), determined in council that Saturday
after the twelfth hour "shall be kept holy." In
"Divers Crab Tree Lectures," published in 1639,
occurs the couplet:

"On Friday it is too late to begin to spin,

The Saturday is half holiday again."

And there is an unrepented law of King Canute
which ordains: "Let every Sunday's feast be held
from Saturday's noon to Monday's dawn."

In regard to liquors among the Indians of our
own country, and the exportation of these to races
abroad, the President said: "In dealing with the
aboriginal races few things are more important
than to preserve them from the terrific physical
and moral degradation resulting from the liquor
traffic. We are doing all we can to save our own
Indian tribes from this evil. Whenever by inter-
national agreement this same end can be attained
as regards races where we do not possess exclusive
control, every effort should be made to bring it
about." The reference in this was no doubt to the
effort that has been made to have the leading na-
tions of the world unite in an agreement to pro-
hibit the importation of liquors to the New He-
brides and other places. Great Britain and other
nations have already agreed to this, and our Gov-
ernment has been asked to join them in this laud-
able movement. A bill to this effect passed the
last House of Representatives, but failed to receive
the sanction of the Senate in the hurry of the last
hours of the sessions. Senator Lodge has already
introduced such a bill this winter.

A venerable lady, eighty-one years old, living
in New Bedford was asked not long ago if she
could go over to a neighbor's to tea. "Wait a mo-
ment," she replied, "and I will ask mother."
Which she did—her own mother still being the
competent head of the household.—Springfield
Republican.

The Church was built to disturb the peace of
man; but often it does not perform its duty, for
fear of disturbing the peace of the Church.

Me is a most exacting personage, requiring the
best seat and the highest place for itself, and
feeling grievously wounded if its claim is not re-
cognized. Most of the quarrels among Christian
workers arise from the clamoring of this gigantic
ME. How few of us understand the true secret of
taking our seats in the lowest rooms.—Every-day
Religion.

The China Inland Mission, whose missionaries
(we understand), are without guaranteed salaries,
and are poorer than most other missionaries, and
which has now some six hundred missionaries in
the field, has refused to touch the compensation
money extracted from the Chinese Government on
account of the Boxer riots.

PERU'S HISTORY.—The shortest history on record, probably, has been written by Carlos Escribana, a Peruvian. It is only one hundred words in length. Following is the English translation: "The Asiatic origin of the primitive Peruvians admitted, their rudimentary civilization ended with the appearance of Manco Capac, founder of the Inca empire. His thirteen successors, continuing his policy, constituted that vast theocratic and communistic monarchy which astonished the world. Conquered by Pizarro (1538), it became a Spanish colony, whose fourteen viceroys kept it in mediæval darkness, and whose heavy yoke provoked the independence proclaimed by San Martín (1821), supported by Bolívar and Sucre at Junin and Ayacucho. The republic established, anarchy superseded, presidents rapidly succeeded, until the disastrous war with Chile, which, chastening minds, has prepared the future."

SUMMARY OF EVENTS.

UNITED STATES.—By the completion of the Yakon telegraph line there now exists continuous telegraphic communication from Dawson in Alaska, to Vancouver, a distance of over two thousand miles.

The Pennsylvania Railroad Company has announced its intention of carrying out a plan to extend its railroad into New York City, and to make a through underground connection between the Long Island Railroad and the Pennsylvania lines in New Jersey, and to construct a proper and commodious joint underground terminal station in New York City for the Pennsylvania and Long Island roads. The line as adopted will traverse the city of New York from the Hudson River to the East River and be underground throughout, and at such depth as not to interfere with future construction of subways by the city on all its avenues. Electricity is to be the motive power, and it will be necessary to tunnel also under both the North and East Rivers, and the plans provide for two tunnels under the former, and three under the latter. It is also advanced that the Pennsylvania Company contemplates making Montank Point a steamship terminal.

It is said that there is not a railroad company in this country which does not make temperance among its employees an absolute condition. This is also true of some other industrial and commercial companies.

A despatch from Washington, says: "Russia, Germany, Italy, France and Austria have informed the United States that they view with especial satisfaction the President's discussion of the subject of anarchism in his annual Message, and the authorities understand that these Governments are prepared to take action when Congress gives the Executive the necessary authority."

A despatch from New York, says: "Dr. George D. Barney, of Brooklyn, who inoculated Emma H. King, a trained nurse, with tuberculosis germs from an infected cow, has on hand a clearly developed case of consumption. Dr. Barney is a disbeliever in the theory of the German bacteriologist, Dr. Koch, that tuberculosis in cattle is non-communicable to human beings, and the result in this case, says the despatch, is that Koch's theory is all wrong, and that the inspection of infected cattle should be more rigid than ever, instead of being relaxed."

The native population of the Aleutian Islands is reported to be rapidly dying out. It is said that the inhabitants formerly numbering from 1500 to 2500 are now not more than 1000, of whom about 700 only are Aleuts. Meres appear to have unusually fatal results among them.

Eighteen miles is said to be the longest distance on record at which a man's voice has been heard. This occurred in the Grand Canon of the Colorado, where one man shouting the name "Bob" at one end his voice was plainly heard at the other end, which is eighty miles away. Dr. Young records that at Gibraltar the human voice has been heard at a distance of ten miles.

Georgia has only twenty counties in which saloons are permitted, and 117 counties in which the sale of liquor is prohibited.

There are 10,697 miles of railroad in the State of Pennsylvania. The number of passengers carried in whole or in part in the State for each Sixth Month 30, 1901, was 216,903,748.

President Roosevelt has received a letter from Andrew Carnegie, in which the latter offers to make a donation of \$10,000,000 to the United States, for the purpose of establishing in Washington a university for higher educational origin.

Jane L. Stanford has given to the Stanford University, in California, \$30,000,000 as an addition to its endowment fund.

The Georgia Legislature has passed a bill, giving the sanction of the State to certain grants of land lying in Northeast Georgia to the United States for the purpose of establishing a park, to be known as the Appalachian National Park.

Justice Jerome, in a public address, has lately said: "There are 130,000 persons," he had ascertained, "connected with the liquor business in New York City, and these are all deprived of self respect by laws which make their business odious. Their wives and children are a line drawn against their society, and their children suffer from it in the schools."

It is stated that 20,000,000 tons of iron ore will have been moved this season from the lake ore region. The extraordinary demand for iron ore is stimulating boring on all the ranges and far into British America. Steam shovels of 100-ton capacity handle this ore with great ease.

The total catch of whales this year is stated to be only twenty-eight, and the industry seems to have almost ceased. Half a century ago the American whaling fleet consisted of over 700 vessels. The catch of 1846 was valued at \$21,000,000.

A rainstorm of almost unprecedented violence swept the Wyoming, Lackawanna and Lehigh Valleys on the night of the 7th inst., flooding collieries, paralyzing railroad traffic and resulting in property losses which in Schuylkill County alone are estimated at \$1,500,000. On portions of the Pennsylvania, Reading, Jersey Central and Lehigh Valley systems there was to train service, bridges having been swept away and the roadbed damaged by washouts and landslides.

There were 455 deaths in this city last week, reported to the Board of Health. This is 15 more than the previous week and 86 more than the corresponding week of 1900. Of the foregoing, 255 were males and 200 females; 57 died of consumption of the lungs; 70 of inflammation of the lungs and surrounding membranes; 14 of diphtheria; 19 of cancer; 13 of apoplexy; 7 of typhoid fever; 6 of scarlet fever, and 8 of small pox.

COTTON closed on a basis of 8½c. per pound for middling uplands.

WHEAT.—Winter, super, \$2.60 to \$2.80; Pennsylvania roller, \$3.45 to \$3.60; Western winter, straight, \$3.50 to \$3.65; spring, straight, \$3.75 to \$4.00.

GRAIN.—No. 2 red wheat, 75½ to 77c.
No. 2 mixed corn, 67 to 67½c.
No. 2 white oats, clipped, 54c.

BEEF CATTLE.—Best, 5½ to 6½c.; good, 5½ to 5½c.; medium, 5 to 5½c.

PORK.—Choice, 3½ to 3½c.; good, 3 to 3½c.; common, 1½ to 2½c.

LAMBS.—3½ to 5½c.
HOGS.—Western, 8 to 8½c.

FOREIGN.—The American Board of Foreign Missions, in its ninety-second annual report, says: "There is good reason to think the disastrous events in North China, so far from being the destruction or even the permanent injury of the missionary work in China, will prove the overthrow of seemingly insurmountable obstacles to the opening of all doors of access to the Chinese people."

The German Emperor after an inquiry into the effects of beer drinking, regards the beer now drunk regularly on ordinary premises as especially injurious, both as to accuracy of workmanship and amount of product. A movement is on foot to exclude beer from the factories.

An American firm making electrical apparatus, has kept records of the work done before and after the prohibition of beer. The result is 10 per cent. increase in product a man. Part of the increase is due to the time saved.

The stationary character of the population of France is shown by the last census. Out of 38,000,000 inhabitants 21,000,000 live in the towns or villages in which they were born and 30,500,000 have not moved out of their native departments. Only 1,500,000 have emigrated to France from colonies or foreign countries.

The Imperial German Board of Health, Berlin, has recently issued the statistics for the year 1899. The total number of smallpox deaths in all Germany, with a population of 54 millions, is 28, giving a rate per million of 0.52. In 1898 the rate was 0.28; in 1897 it was 0.09; in 1896, 0.19. The 28 deaths belong to 21 different places in Germany. The extremely low mortality of smallpox in Germany is not an occurrence of one year only; it has been low ever since their law of 1874 made the vaccination of all school children compulsory and abolished epidemics of smallpox.

The American Bible Society has issued a report, based on the recent visitation of its agencies in the Levant, by its Secretary, which shows that there has been a steady increasing demand for the Scriptures in the more than twenty languages spoken by the people along the eastern shores of the Mediterranean. The

principal circulation is in Armenian, Greek and Arab. The Arabic issue during the past year were over 40,000. The distribution of the Scriptures in the Nile Valley to the Soudan is also a part of the work of the American Bible Society in the Levant agency.

In the island of Batavia where the cinchona bark largely cultivated, a recent sale at auction of a lot 12,500 pounds of sulphate of quinine took place at about \$3.88 per pound.

At St. John's, Newfoundland, Marconi has received electrical signals across the Atlantic Ocean from his station in Cornwall, England. He says the system is yet in infancy, but the possibility of its ultimate development is demonstrated by the success of the experiments with incomplete and imperfect apparatus. The Cornwall code is 1700 miles from St. John's.

The Nicaraguan Minister of Foreign Affairs and the United States Minister to Nicaragua, Salvador and Costa Rica have signed a treaty, by which Nicaragua agrees a lease of a section of Nicaraguan territory six miles wide which includes the route of the Nicaragua Canal, to United States perpetually.

C. S. Hunter, Government Metallurgist of Vancouver's states that among the Yukon gold brought to him for purchase by the Government this season was an abundance of platinum, unknown to the miners. Hundreds of nuggets of platinum were mixed with the coarse gold. The Dominion Government is now sending an expert the Klondike to investigate the matter.

It is said that one of the richest sulphur deposits the world has lately been discovered in Transcaucasia, Russia. The geological formation is very similar to that in which the Sicilian deposits occur. It is only in recent years that sulphur has been found in Russia.

Berlin pays a salary to a professional bird catcher, keeps scientific and educational institutions supplied with birds, birds' nests and eggs, and he is the only man in empire permitted to do so.

It is estimated that there are fewer than 10,000 elephants left in all the countries on the globe, and that it is a matter of only a few years when the last must die.

The British Government has decided to break up unhealthy concentration camps and remove the over-crowded of the South Africa to the coasts, where there would be made to provide them with more permanent shelters. This step has been taken in consequence of fearful mortality which has taken place in these camps amounting during the past six months to 12,441, of which 10,113 were children.

NOTICES.

WANTED—A young woman Friend to assist in household duties in country town.

Address E., Office of FRIEND.

RACHEL G. HALL, plain milliner, 1958 N. Camac between Twelfth and Thirteenth Streets, will receive orders after Twelfth month 9th, 1901.

FUND FOR ORPHANAGE AND BLIND ASYLUM IN CAIRO, EGYPT.—Subscriptions and contributions, names and addresses, may be sent to the President and Trust Co., 409 Chestnut St., Phila.

JOHN S. FOWLE

WESTTOWN BOARDING SCHOOL.—Applications for admission of pupils to the school, and letters in regard to instruction and discipline should be addressed to WILFRED WICKERHAM, Principal.

Payments on account of board and tuition, and communications in regard to business should be forwarded to EDWARD G. SMEDLEY, Superintendent.

Address, Westtown P. O., Chester Co., Pa.

WESTTOWN BOARDING SCHOOL.—For convenience of persons coming to Westtown School, the stage will run to Philadelphia 7.16 and 8.18 A. M., and 4.29 and 4.32 P. M. Other trains are met when requested to stop at Westtown, after 7.30 P. M., leaving the cars each way. To reach the school by telegraph, West Chester, Phone 114.

EDWARD G. SMEDLEY, Sup.

DIED, at her late residence, Frankford, Philadelphia, on the sixteenth of Third Month, 1901, HANNAH WEBB, in the ninety-third year of her age; a member of Friends Monthly Meeting of Friends.

WILLIAM H. PILE'S SONS, PRINTERS.

NEW YEAR'S WISHES.

What shall I wish thee?

Treasures of earth?

Songs in the spring-time,

Pleasures and mirth?

Flowers on thy pathway,

Skies ever clear?

Would this ensure thee

A Happy New Year?

What shall I wish thee?

What can be found

Bringing the sunshine

All the year round?

Where is the treasure,

Lasting and dear,

That shall ensure thee

A Happy New Year.

Faith that increaseth,

Walking in light;

Hope that aboundeth,

Happy and bright:

Let this be perfect,

Casting out fear;

These shall ensure thee

A Happy New Year.

Peace in the Saviour

Rest at his feet,

Smile of his countenance

Radiant and sweet,

Joy in his presence!

Christ ever near!

This will ensure thee

A Happy New Year!

—Frances Ridley Havergal.

Books on the Holy Spirit.

There are many books written about the Holy Spirit, and they are so profound in phrase, so scientific in their systemization of Scripture, so logical in their inferences from the text, so theological in their library is deemed complete to them. So that on the same day one may graduate from the study of the Holy Spirit knowing many things about the Holy Spirit, while another, unlearned and illiterate, who obediently runs may read of his life and work, and not that he who reads sound shall run. So that, were there no

vaunting in it, one might say, "Show me thy learning about the Holy Spirit without thy obedience, and I will show thee my knowledge of Him by my obedience."

One school holds that Christ would say, "Take treatises and learn concerning me;" and the other, "Take my yoke upon you and learn of me." One aims to be "well-read on the Holy Ghost," perhaps that he may discourse intelligently thereon; the other seeks to be well learned in the Holy Ghost, that he may have fellowship with Him, even if public praying and preaching in the Spirit has to be a part of that fellowship. But whatever the service, it is always that same obedience in which the witness of the Spirit first began to be learned. The one law and ladder of learning the things of the Spirit is always this:

"We are his witnesses of these things, and so is also the Holy Spirit, whom God hath given to them that obey Him."

Much sympathy is felt by some of us with those servants whose "reading up on things" is much frustrated. But "Seek ye out of the book of the Lord (which is found in obedience to the secret manifestations of his will), and read" in the lines of a witnessing experience. That will be a reading of truth as founded on the Rock, so much better than men's opinions built upon the sand. Such books as are written by the Spirit teach truly of the Spirit. They are profitable for doctrine and for thorough equipment of the man of God unto works of obedience. We are confident of no other treatises on truth divine, and neither of our reading of these out of the Spirit in which they were written. They read best who obey best. And they read best all books that are in the mixture, all unspiritual books also, who obey the Spirit best. "He that is spiritual judgeth all things, and He himself is judged of no man." Man's diversions of his mind with ancient phases of thought, or with the latest thought, have their uses for the teacher, but they easily spoil the seer, or seduce from the simplicity that is in Christ. The simplest eye has the straightest access to the Father of lights. The reading of the Book of Life is open to all as they are open to the Life; but the books of literature to much fewer. The question was asked how did Christ know letters "having never learned?" The Life behind the letter is the letter's essential. We might in some such way ask, How does Electricity

know telegraphy, having never been taught our books on the subject? Or how does Heat know the motion of engines, having never our schooling in thermo-dynamics? Such things we might ask, if we can question how does the testimony of Jesus know the letter of prophecy, when it is itself the spirit of prophecy? So he that hath the Son, though he may not have literature "hath Life," the Fountain of all the True, the Beautiful, and Good that literature gropes at expressing; but he that has literature may not have Life.

But thanks be unto Him for letters and for standing behind letters, as in the synagogue, to bless them and avail his cause of them! Thanks also that when He the Opener gives the scroll as a closed book to the servant, He, himself the Word, stands forth as the fulfillment of the letter, to supersede it before the assembly and to teach his people Himself. We are not concerned to disparage books or literature. It would be slighting Him to slight the reading or the possibilities of literature which He has put into our hands for the development of man. Only let Him be the indispensable Word, whatever becomes of the words. Repine not that certain masterly books are inaccessible, when the authority of living Truth is made so accessible, and thou mayst learn the Holy Spirit from the Fountain Himself by obedience, better than from the more distant reports of religious philosophers. Even if they get their views not from study, but from direct revelation, so must thou, to know them confirmed as Truth.

THE MEETINGS AT WESTTOWN.—We apprehend it will be a relief to the caretakers at Westtown School and other such institutions if we here re-echo the concern expressed by Joseph Snowdon in his letter to Joseph Scattergood (to be given on another page), speaking of Samuel Cope's exhortation in the school meeting:—

"It seemed to remind me a little of old times, the days of thy grandfather; who, I well remember, frequently in meeting told me of some of my secret sins. I wish some of our rightly concerned Friends could be stirred up to come and do likewise, and not be putting aside little openings of duty, which I am afraid is too much the case. We have a very interesting family here this session, and an open field for labor. Truly 'the harvest is plenteous but the laborers are few.'"

Truck Farming.

No longer ago than 1847 a clerk on a Charleston boat chanced to speak to some friends in New York of the fresh vegetables to be had in the Southern city. It was winter, and his statement was challenged by one of the listeners. On his next trip North, therefore, he brought a basket of vegetables, including two boxes of strawberries. They were placed on exhibition in a shop window, and attracted much attention.

This was the beginning of the business of truck farming in the United States. Until the middle of the century the fruits and vegetables raised on nearly all farms were intended for home consumption or for sale in markets close at hand. To-day California fruit and vegetables go all over the world and the Northern cities consume all winter garden produce raised in Florida or the Gulf States.

Many of the improved facilities now offered by the railroads are directly due to the handling of perishable agricultural products. Routes have been shortened, cars ventilated, refrigeration provided, and the number and speed of trains increased, until vegetables are now landed in good condition a thousand miles from where they were raised. Intensive rather than extensive farming is the watchword of the producer of garden truck. The average size of the farms is only about fifteen acres, but some of the ten-acre plots are so well cultivated that they produce two thousand dollars' worth of truck in a season.

In the neighborhood of Boston much of the land used for this purpose is under glass, and the soil in which the vegetables are started is carefully sterilized by steam. The expense is, of course, great, but the extra quality of the product and the higher price at which it sells make the profits larger than in any other part of the country. The services of electricity have been enlisted and many of the green-houses are lighted at night by large arc lamps, by which an improvement of fifteen per cent. in the growth of the plants and of ten per cent. in the quality, is secured.

To the money value of the truck farms must be added the greater service they perform in placing fresh vegetables within the reach of almost every family, even in winter. That is a contribution both to general comfort and to public health.—*Youth's Companion*.

It is true that God is found in our homes and our offices as much as in meetings for worship; but it is also true that if we do not yield reverent worship to Him in meetings we shall not see Him, still less worship Him anywhere else.

THE INFLUENCE OF THE CHURCH.—"Go out on the frontier, five hundred miles beyond any church. Enter one of those new towns, the upgrowth of a night. See the devil's chapels that line the street—brothels, gin mills and gambling dens. Observe the residents: every man a walking arsenal, belted with bowie knives and revolvers. Then mark how, a little later, with the advent of churches, those walking arsenals are reduced to a peace basis—how those devil's chapels one by one withdraw into back streets and screen themselves from public view. Is not this a striking tribute to the police power of religion?"—*From Morals and Manners, St. Louis Republican*.

For "THE FRIEND."

A Great Achievement in Engineering.

The near completion of the new Delaware Breakwater below Philadelphia, has been the occasion of a noteworthy statement from General Gillespie chief of the Corps of Engineers of the United States Army which we find in the columns of the Philadelphia *Public Ledger* of Eighth Month 29th, and the substance of which we here condense.

The old Delaware Breakwater is about one mile long, contains 1,231,587 tons of stone, was seventy years (1828 to 1898) under construction, cost about \$2,807,000, and created a limited and shallow harbor of refuge, now used by small coasting and fishing vessels. In building it the greatest amount of stone deposited in any one year was about 32,000 tons.

The new breakwater, designed in 1892, is about 1.5 miles long, covers an area of 552 acres, with minimum low-water depth of 30 feet, besides 237 acres with 24 feet depth; contains 1,464,410 tons of stone, which have been placed in position in forty-four working months, the average per month being 32,800 tons, the maximum per month 62,719 tons and the maximum year's work 450,460 tons. The work has thus been done about twenty-five times as rapidly as that of the old breakwater.

As to its cost, a direct comparison based upon its length would not be fair. A better measurement is found in the circumstance that in 1892 a commission of engineers basing its calculation upon the experience gained in the building of the old breakwater estimated the probable cost of the new one at \$4,665,000; whereas it will be fully completed in Eleventh Month at a cost of about \$2,230,334, or slightly less than half the estimate.

This surprising result has been partly due to the very low price (\$1.183) per ton at which, by the use of powerful machinery at both breakwater and quarry, the contractors have been able to put the rock in place; but it is also largely the result of the great saving of at least 500,000 tons in the amount of stone required, which has been effected by the new method of construction employed. Without going into a detailed description of this method, we may say that it consists essentially in adopting for the submerged portion of the breakwater a cross-section determined by the action of the sea itself, instead of a much flatter slope, such as was previously supposed (without experimental reason) to be necessary. Lieutenant Colonel Charles W. Raymond, the engineer in charge, is entitled to the credit of having proposed this bold innovation, secured for it, by his arguments and experimental proofs, the approval of the Board of United States Engineers, and supervised its execution with vigilance and intelligence. In the words of General Gillespie, the work "is a monument to his efficiency and skill as an engineer."

During the progress of its construction the new Delaware Breakwater has been visited by many engineers and has been watched with great interest, as certain, if successful, to mark a memorable advance in the methods of harbor engineering. Thus far the minutest observations have failed to detect the least sign of weakness or inadequacy in the novel submarine section employed. For the local conditions there is no doubt that the plan is successful. Whether it can be employed, and

how it would have to be modified for other localities and conditions remains to be determined. The theory of it, namely, that in a locality the sea itself should be allowed to determine the submerged section for a breakwater, or, in other words, that the talus the broken stone should be that which the sea has been found to form, and the after not to disturb seems to be universally applicable.

At all events, no great structures of this class will be undertaken hereafter in the civilized world without careful consideration this new American precedent.

Crab Apples and Choice Fruit.

Early in the present year when President Gilman in an address declared that one of evils of the age was too much reading, statement was very generally criticized, he stood by his opinion. He thought that young man who gave himself to constant delving into periodicals and books was wasteful of his time and his energy. Recently Lord Rosebery said about the same thing. He believed that there were many books, even books which might be called wholesome and unobjectionable, which could well be dispensed with. He calls them "mense fens of stagnant literature which produce nothing but intellectual malaria," he wanders in this mighty maze "wholly without a plan, without discrimination and without knowledge." And he added, "He spends time munching crab apples, unconscious of the immediate neighborhood of the choicest fruit of the tree of knowledge."

In the mass of printed matter that comes from the presses, direction is absolutely necessary. Corps of experienced editors must of the hours of every day of the week even keep up with the works worthy of notice that come from the recognized publication offices. How idle is it, therefore, to expect any man who has a calling or who works for wages outside of editing, to know what is being done in book publishing unless he is very enough to use the work of those who give their time to selecting the good from the bad, the worthy from the useless? It is by expert labors of the specialists that each department of effort and activity in this modern life of ours is developed, while at the same time the results are made available to those of all other interests and enterprises.

The enlightened reader makes use of these aids. He asks the advice of librarians and men who know books better than he does. He reads the reviews. He collects the information about books from the right sources; then he chooses his books according to his knowledge, and what he reads becomes valuable to him. All this is vitally necessary, for purposeless reading is worse than the drifting of a rudderless bark in the open sea.

It is not necessary to munch crab apples. They put the mouth awry, injure the digestion and affect the spirit. But the choice fruit in the orchard nearby make the eye bright, renew the soul and add to the joys of a world that needs all the cheerfulness it can get.

—*Late Paper*.

"It is not necessary to be popular; it is necessary to be pure."

FOR "THE FRIEND."

The Simplicity That is in Christ.

Paul, II Cor. XIII, 3

Can any of our young people tell me how it is that the aged Christian pilgrim, who it may be has been brought through many trials, who has received much grace, becomes so humble, more childlike, more loving and more lovable. Is it not owing to the power and to the simplicity of the gospel, which such precious fruits are brought forth in him? How is it, that the illiterate tribes exemplify in their daily life a stronger more lively faith than the learned and the wise? Surely it must be, because the gospel, in saving power to change, to bless, and to form the character, is more readily laid hold of by the poor of this world, than it is by the rich and the learned. These are engrossed in their own busy thoughts, and filled with their sufficiency, whereas the former feel their need, and are more readily drawn to the source of all supply. Still it has ever been true and is so, as He who was, and is, the wisdom of God, in his prayer said as regards the mysteries of godliness, "I thank thee, O Father, Lord of heaven and earth, because thou hast hid these things from the wise and prudent, and hast revealed them unto babes. In me, so, Father; for so it seemed good in thy will" (Matt. xiii, 25-26). Now wherefore is truth so? But that no flesh nor fleshly wisdom should find place wherein to glory, nor must every one, be he learned or unlearned, glory in the Lord alone, in that he has and savingly knows the Lord, and has the aid of the long-suffering, loving kindness, mercy, of God in Christ Jesus to his own soul. He knows that God is true, for he has proved Him to be so in fulfilling all that has been promised. He knows the Lord to be faithful, for hath not the Lord time and again forgiven him his transgressions? He knows the Lord is omnipresent and omniscient because that He hath heard the desires of his heart and hath answered his supplications. The fountain of all truth, is himself witness to his own truth in the heart of man. Nor can there be any greater nor more reliable witness than He. It is on this foundation on which these build, which is Christ, who, inwardly revealed, himself the Word the Truth of God, the life and the light of the world. Their faith is divested of all the many trappings, turnings and inventions of man, by the power of error, wherein the enemy of souls would lead aside from the way of life those who are simple souls, who in sincerity would, and do, follow the Lord. Untrammelled by these, in their faith, the poor in spirit find Him to be, their needy, panting souls, all that they require. Like lambs of the fold they lie down peacefully, abiding in and trusting to the Shepherd's care. And God's work with the worldly is often first to divest him of this wisdom, so that he may come to know the hidden Son of God, hidden in Christ, and revealed in the flesh. These, born of the life-giving Word of Christ, which is one not only of power and of knowledge, but one of prayer, lay forth their desires to Him who through His Son hath begotten them to Himself; and these desires of the soul at all times necessarily clothed in words, for the

omniscient God, grants the desires of the humble, contrite, believing soul. These soon come to hear, to know and to understand his voice. God himself now teaches them by the Spirit of promise, and by this Spirit, through Christ the Mediator, communion with God is again restored to man. Taught of God, they know his will as regards themselves, and receive power through faith to do that will, and walking therein they please God, and find acceptance with Him. This will may be so simple and so easy to do, that the child hears and obeys. So easy is it at times, that the worldly wise one, looking like Naaman for some great thing to do, overlooks the command, and fails to receive the promise to the obedient. God really needs nothing of the creature's hand, for all created things are his. Yet he asks obedience of us, as children; and his reward to those who are so, is peace. The much or the little, is from the creature's standpoint, not from God's, who judges in equity according to the uprightness and sincerity of the heart. The widow's mite in the balance of the sanctuary outweighed the golden treasures of the rich. Truly none are so poor, but that they can offer something of God's own giving, on God's altar, his Divine will; none are so rich, but they stand in need of God's blessing to appear before Him with acceptance. Here at God's footstool of mercy, the rich and the poor, the learned and the unlearned, meet together on equal terms.

Truly we owe all we are, and all we hope to be, to Christ, who, one with the Father, in love to his poor creature man alienated through sin from God, stooped from his throne on high, took our form upon himself, and became obedient unto death, that in accord with the Divine will, he might become a propitiation for the sin of the world. He died that we through Him might live. We are made partakers of this promised life as we take up our daily cross, and come into the Divine will. He died for our sins; we then must forsake that for which he died, and live in obedience and righteousness to Him who died for us, that we through Him might live. As we come into and abide in this will, we come into the love of God. We come to fulfill the purpose of his death, and of his coming in power and in spirit to redeem us from sin, and to purify our souls. He gives to us of his power, and enables us to come out from the bondage of sin and serve Him in the beauty of holiness.

Nor is a mere knowledge of doctrine, though good in itself, the one essential which God requires of us. For truly many, like Cornelius, having but little knowledge, yet a fullness of love and obedience, are accepted of God; and on the other hand the Lord Jesus has left on record that many who have deemed themselves to be ministers of Christ, will be rejected.

It is the willing and the obedient whom God is pleased to favor. It is they who cease from their own will, corrupted by the flesh, and who, through the Spirit, seek to know and to do the Divine will, obtain favor from God. These are taught by Him, and hearing his word obey and do his will. In Christ Jesus, the Word, as he tabernacled in the flesh was life, and this "life was the light of men." His own testimony is "I am the light of the

world." This "Word" which "was God" was in the beginning. Its light shone upon the world of souls, as many as received it, received "power to become sons of God." Nor did it ever cease to shine. The same Word divine now speaks to us. The fountain from whom it flows is this same Christ Jesus, once crucified, now sitting on his throne of glory, having all power in heaven and earth to save. He is the Son of Lighteousness, the breaking forth of whose light chases the dark shades of sin away. "He is the true Light, that enlighteneth every man that cometh into the world." God's word to us makes manifest God's will. In his shining, in his light, we behold and believe in Him from whom that light of truth comes. This is God's gift of grace to every man to lead man out of the paths of sin and transgression into the path of holiness and obedience. Those who hearing this inexpressible word and obey, are brought into the kingdom of God, for God himself rules here by his Spirit, that is his grace, and as Jesus Christ said, "the kingdom of God is within you." These are the true Israel of God, to whom are all God's promises in Christ. Christ Jesus is to them the King of Israel. The Lord now as truly leads them by his Spirit as he did his Israel of old in the wilderness. He tabernacles among them, God's blessing and peace rest upon these throughout time into eternity. W. W. B.

TRIALS may be our Master's testimony to our strength.

TRUE WORSHIP.—"God calls for soul worship. David felt this when he said, 'To thee, O Lord, do I lift up my soul.' . . . When, then, we put our soul into our prayers and duties, we render Him an acceptable service, or offer Him the 'cup of spiced wine and the juice of the pomegranate,'—the very best at our command. A religion without soul is a mere bodily exercise that 'profiteth nothing,' in which God receives only a worthless carcass and is robbed of the life-service which is his due."—*The Presbyterian*.

PHENOMENAL MEMORIES.—Many of the greatest men have had phenomenal memories, says Professor E. S. Holden, in *Harper's Magazine* for Eleventh Month. Caesar knew the names of thousands of soldiers in his legions. A modern man of science often has a prodigious memory for special terminology. Professor Asa Gray asserted that he could at once recall the names of something like twenty-five thousand plants; Professor Theodore Gill can do the same for fishes. Our memory for mere words is itself much more extensive than is generally admitted. The average well to do child of two years has a vocabulary of some five hundred words, and its father may have the command of some twenty thousand more. The ten thousand verses of the Rig Veda have, for three thousand years, been accurately preserved in the memories of the Brahmins. Not one Brahmin alone, but thousands, can to-day recite it word for word. Thousands of Mohammedans, likewise know the Koran by heart, as all learned Chinese know their classic books. The chiefs of Polynesia can and do repeat hundreds of thousands of words in their genealogies—taking days and even weeks for the recitation.

CRYING ABBA, FATHER.

From a dainty little volume, in which William Canton has told the story of his three-year-old daughter, under the title of "W. V., Her Book," is taken the poem given here. Its tender feeling will touch every motherly heart, and since no one wishes to destroy a book by cutting out a favorite poem to send away to a friend, this has been thought a convenient form of making such a gift possible without the labor and time needed to copy the lines.

Abba, in Thine eternal years,
Bethink Thee of our fleeting day;
We are but clay.
Bear with our foolish joys, our foolish tears,
And all the willfulness with which we pray.

I have a little maid, who, when she leaves
Her father and her father's threshold, grieves;
But being gone, and life all holiday,
Forgets my love and me straightaway;
Yet, when I write,
Kisses my letters, dancing with delight,
Cries, "O Dearest Father!" and, in all her glee,
For one brief living hour remembers me.
Shall I in anger punish or reprove?
Nay, that is natural; she cannot guess
How one forgotten feels forgetfulness;
And I am glad, thinking of her glad face, and send
her little tokens of my love.

And Thou—wouldst thou be wroth in such a case?

And crying Abba, I am fain
To think no human father's heart
Can be so tender as Thou art.
So quick to feel our love, to feel our pain.
When she is forward, querulous or wild,
Thou knowest, Abba, how in each offence
I stint not patience, lest I wrong the child.
Mistaking for revolt defeat of sense,
For willfulness mere brightness of mind;
Thou knowest how often, seeing, I am blind;
How when I turn her face against the wall
And leave her in disgrace,
And will not look at her or speak at all,
I long to speak, and long to see her face;
And how, when twice, for something grievous done,
I could but smite, and, though I lightly smote,
I felt my heart rise strangling in my throat,
And when she wept I kissed the poor, red hands.

All these things, Father, a father understands;
And am I not Thy son?

Abba, in Thine eternal years
Bethink Thee of our fleeting day;
From all the rapture of our eyes and ears
How shall we tear ourselves away!

At night my little one says "Nay,"
With prayer implores, entreats with tears
For ten more flying minutes' play;
How shall we tear ourselves away?
Yet call and I'll surrender
The flower of soul and sense,
Life's passion and its splendor,
In quick obedience.

If not without the blameless human tears
By eyes which slowly glaze and darken shed,
Yet, without questioning or fears,
For those I leave behind when I am dead.

Thou, Abba, knowest how dear
My little child's poor playthings are to her;
What love and joy
She has in every darling doll and precious toy;
Yet, when she stands between my knees
To kiss good night she does not sob in sorrow,
"O father, do not break or injure these!"
She knows that I shall fondly lay them by
For happiness to-morrow.
She leaves them trustfully. And shall not I?

Whatever darkness gather
O'er coverlet or pall,
Since thou art Abba, Father,
Why should I fear at all?

Thou'st seen how closely, Abba, when at rest
My child's head nestles to my breast;
And how my arm her little form enfolds,
Lest in the darkness she should feel alone;
And how she holds
My hands, my hands, my two hands in her own.

A little childish sighing
And restful turning round,
And I, too, on thy love relying,
Shall slumber sound.

CRITICS.—"The banner over all those who sit in chairs of criticism must be love, not love in a negative sense, or of the complacent sort alone, but strong, active love for all that has beauty and truth and goodness."—*Christian at Work*.

FEELBENESS OF FAITH.—Feelbessness of faith is owing to the lack of nutrition. We do not inwardly digest the word, and by the law of assimilation utilize the productive power that is resident in it, hence we become as weak as other men. We have the form, but are destitute of the power which alone is derived from the holy living. If we do not know the will of God there is no hope of our doing it, or knowing the doctrine, which is not only an inspiration but an incentive to action, for if any man will do God's will he must know the mind of God, which is revealed in Him, and which is to demonstrate by obedience to the Divine requirement. Therefore every man should be fully persuaded in his own mind by an intelligent apprehension and comprehension of things concerning his spiritual development, for God works in us to will and to do. —*Philadelphia Methodist*.

DON'T FORGET TO WRITE HOME.—This whisper is for those who are living away from home, for the girl at school, for the girl who has her own studio or flat, for the girl who is employed in some one else's house and for the one who is helping her husband to create a centre that will be home in years to come to a future generation. It concerns the writing of letters. So many people in these days of telegrams and telephones adopt the practice of inditing only the scappiest and most abbreviated of epistles, even to those they love, epistles that don't contain a bit of their real selves, nor give any sort of an intelligent or intelligible account of what they are doing, enjoying or suffering.

The old folks at home crave for good long letters. It is as the breath of life to them to feel they are in the very presence of their children when they open the weekly epistle that should let them into the veriest details, but too often merely skims the surface of events.

They may not say much; possibly they never complain; but they just ache for sheets of news concerning little things as well as great, the color of the autumn frock just ordered, the name of the book last read, the impression created by the entertainment lately attended.

Even those who write regularly—once a week or oftener to their parents, do so in such a perfunctory spirit that, but for the satisfaction of knowing they are alive and gleaming that they are well, the letters give little satisfaction to their recipients. Yet, how those recipients yearn for more than is given them. —*Ledger*.

FOR "THE FRIEND"

A Spiritual Experience.

"I overcame the wicked one through a patient waiting in the light and keeping close to the power of God, waiting upon Him in silence among his people, in which exercise soul delighted.

"Oh, the comfort and Divine consolation we were made partakers of in those days; in the inward sense and feeling of the Lord's power and presence with us, we enjoyed another, and were near and dear one unto another. But it was through various trials; deep exercises, with fear and trembling, it thus we were made partakers. Blessed; happy are they who know what the truth cost them, and hold it in righteousness.

"Waiting diligently in the light, and keeping close to the power of God; which is the received, I came to experience the will thereof in my heart, in order to effect freedom from bondage, which by degrees won and prospered in me and so I gained more and more against the enemy of my soul through faith in the power of God; with which no victory is obtained.

"My prosperity in the Truth I always was by being faithful to the Lord, in what manifested, though but in small things; faithfulness in which is the cause of loss of hurt to many in their growth in the Truth.

"After I had passed through great tribulation, weeping and mourning in woods and solitary places, alone, where I often desired he, I came to more settlement in my spirit and peace began to spring in my soul, my trouble and sorrow had been. Then at times I would be ready to think that I should again meet with such combats and besetments by the enemy of my soul, as I had passed through. But the more I grew in experience of the dealings of the Lord with me, so the more did the enemy transform himself, and as he could not prevail by his former representations, so in his subtlety he would invent new ones. Thus I came clearly to see that was not safe for me to sit down satisfied with what I had passed through, or the victory had already obtained; but to travel on, faith and patience, and watch diligently the light of Jesus Christ, where the truth's power is still received. For notwithstanding the many deliverances, and strength and victory I had experienced, the Lord, according to the greatness of his wisdom, was pleased to make me sensible of my own weakness, so that there was no strength to stand, no place of safety for me to abide in, but in his power, and under a sense thereof I was humbled and laid low.

"Wherefore I took up a godly resolution, his fear, 'I will rely upon the sufficiency of thy power, O Lord, forever.' About six years after I had received the Truth, through great exercise and godly sorrow, I came to be settled in the power of God, and made weight in my spirit thereby, and had some opening from the Spirit of Truth, in silent waiting upon the Lord, which tended to minister comfort and satisfaction to my soul, in a renewed experience of the dealings of the Lord with me; and the Lord opened my mouth with testimony in the fresh spring of life, that was to give forth to his children and people.

Having been himself taught in the school

st, John Banks was prepared to point out others the way to the kingdom of Heaven, to speak of those things which his own hands had handled of the Word of life. A extracts from his writings will show the method and practical, yet wise and spiritual character of his advices to those who were seeking deliverance from the power of sin.

"an epistle to the people of Carlisle he said: 'This, the Light of Christ, the Grace of God, the Spirit of Truth will do for thee, if thou lovest it and believest in it; when thou art united to sin, power from God will be given thee through it which thou has not of thyself, to overcome the wicked one in his temptations. . . . Thus power is given over temptations, and so over sin; in one temptation and sin after another is gradually overcome; for as many as believe in Him, who says, 'I am the light,' to them He gives power so that they may be the sons of God. . . . Is He not at the door of your hearts, to call you to repentance? by his light, grace and Holy Spirit. . . . If there be not a believing in Him by which the same, what availeth his death and shedding of his blood for you, if sin be not finished here, transgression put to an end. (Eph. v: 5, the 21st verse.) No unclean thing can enter into the kingdom of Christ and of . . .

Was not sin the cause wherefore He suffered? and if the cause through faith in Him be taken away, how shall the effect cease? If the cause through faith in Him be taken away, then the effect ceaseth, and everlasting life, world without end, ensueth. . . . 'Extracts from the writings of John Banks.]

R.

RUPTURE.—After a large meeting for business in Concord Quarter, wherein some proposition was frustrated, which had been warmly debated by many individuals, a number of persons dined at the house of C. N., who was a member, as was also one of his visitors. The contention soon turned upon the events of the meeting with an evidence of dissatisfaction at the issue of the business; C. N. remarking, it might have passed but for the scruples of my friend present, adding "What is a scruple? it is nothing at last." An aged woman who had, until then, been a silent listener replied calmly. "A scruple is a scruple, if it cannot be weighed in the miller's balance, it can in the King's balance!" With the millers engaged in this conversation, the matter was carried away in the separatist defec-

P. H.

THE SPEED OF SHIPS IS MEASURED.—The speed of a ship is measured by a long line, knotted every fifty-one feet; one knot and twenty of these lengths make a nautical mile. At one end of the line is attached a piece of flat, light wood, generally circular, and weighted along one edge, so that when thrown overboard it floats vertically with its flat face to the ship, and theoretically stationary. The number of knots in the cord is equal to the number of half minutes in the hour, it follows that as many knots as pass the stern every half minute, so many nautical miles—or knots—are being made per hour.

The Tagals of Louisiana.

The fact that several thousand Tagals, constituting the major portion of the population of three counties, known as parishes, in one of the richest states of the Union, have been living in Southern Louisiana since 1781, practically unknown and without attracting attention since 1898, demonstrates in striking fashion the vast number of curious things hid away in the nooks and corners of this broad domain.

The first French settlers of Louisiana established themselves on the coast and sea islands of lower Louisiana in 1699. Subsequently a storm such as the one which demolished Galveston, the like of which occurs on the Gulf of Mexico, and with greater or less severity, on or about the coming of the fall Equinox, arose and so devastated these islands that the Norman and Breton colonists removed to higher land, above New Orleans, leaving the lower coast deserted. In later years, when Louisiana came under Spanish rule the successor to "Bloody O'Reilly," the Baron de Galvez, being a man of foresight, enterprise and judgment, and having in his lifetime served in the Philippines, turned his attention to colonization, and imported from Luzon two shiploads of Tagals. These colonists did not arrive as slaves, although force was employed to recruit their number, but as settlers and farmers. They reached the "lower coast" by way of Acapulco and Vera Cruz, a total of one hundred and some odd families, the head of each receiving from the Spanish Governor a tract of land for rice culture. This was the introduction of rice culture in Louisiana, for the Tagal colonists found the "lower coast" congenial, and, in many respects, like the land of their birth, so that from the start the scheme was a success.

These Tagals multiplied, and to-day their descendants form the major portion of the population of the parishes of Plaquemine, Jefferson and St. Bernard, in Lower Louisiana, where they are known locally as "Malays." They have at all times held aloof from the negroes, refusing to intermarry with them, and voting the Democratic ticket by way of demonstrating their social and political position.

Many of them still speak the Tagal language, while all speak the Spanish tongue and a few a very bad French, but the writer in all his experience with this strange people never found one of them who could speak other than broken English. The descendants of these Tagal colonists are engaged in rice culture and in fishing, and this is the only quarter of the United States where the Malayan idea of a house on stilts is carried into practical effect. The chief centres of this strange population are the towns of Proctorville and St. Malo, on the southern shore of Lake Borgne, an inlet from the gulf, and by reason of these strange East Indian houses they have been able to bid defiance to the equinoctial hurricanes and high tides that render this region unfit as a residence for the whites.

The descendants of these Tagal colonists are the greatest stay at homes on earth; more so, in fact, than the Acadian or Cajien, settlers of Western Louisiana, and for this reason have escaped notice. Since 1897, and all during the troublous in the Philippines the fact that a considerable body of Tagals were citizens

and voters of the United States escaped completely the attention of the press. The literature of this people is also very scanty. Geo. W. Cable makes no mention of them in any of his works. Grace King seems also to have forgotten them, while the works of Judge Gayarre, Father Charlevoix and Le Page du Pratz deal only with the French domination of Louisiana and not the Spanish, so that consequently these people are neglected. The Marquis de Larke-Marbois wrote his "Histoire de la Louisiana" in Paris and from the standpoint of politics, so, that, aside from some old records and documents on the subject, these Louisiana "Malays" remain a people without a history. Charles Dudley Warner wrote them up for *Harper's Weekly* some fifteen years after the war, but the article was very brief and unsatisfactory, and so were similar articles published in the New Orleans *Picayune* written by Catherine Cole in 1880 and 1881. Lafcadio Hearn, in his charming romance, "The Legend of Lost Island," published in 1885, devotes several pages to these people, with whom he had an intimate acquaintance.

Satisfied with their surroundings and condition, devoted to their homes and home parishes and dwelling in a region (around the mouths of the Mississippi river) without railroads and out of the beaten track of travel and commerce, these so-called "Malays" have lived apart and unknown to the world about them to an extent unequalled by that of their fellow race members in the interior of Luzon. Even in New Orleans it is only occasionally that one sees or notices them.

Louisiana is a strange State, and attracts strange colonists, and of late years Chinese have settled in considerable numbers along the Southern Louisiana coast, where they, too, are engaged in fishing. While in some of the upper coast parishes a few of the East Indian coolies imported from Calcutta shortly after the Civil War to work on sugar plantations in Jamaica and Louisiana have remained, the majority of their countrymen returned home after the experiment had proved a failure, but these Chinamen and coolies are not to be confounded with the "Malay," who is separate and distinct from both. The South Louisiana Tagal is a Catholic and speaks Spanish, while the more recent Chinese settlers and coolies are Buddhists and Joss worshippers, speaking the language of either China or India.

It is not remarkable that lower Louisiana, resembling in so many respects parts of the East Indies, and being so well adapted to rice culture, should attract an Oriental population. Taking the train from Washington, reaching New Orleans, and going from there to St. Malo, the stranger would find it difficult to convince himself that he was still in the United States. Clothing of the kind worn all over the United States is sold in lower Louisiana, as elsewhere, but the Malays of St. Bernard parish manufacture hats of their own out of Palmetto leaves and rice straw, and have ways of making up and wearing their clothing that give the whole a decided East Indian effect. Their houses, built on piles, the Spanish language, the brown colored, oblique eyed, straight-haired people combine to give the town a decidedly un-American appearance.

The descendants of these Tagal colonists inherit the Malay fondness for gambling, and

their chief sport here, as in the East, on holidays is cock fighting.

The descendants of the Tagal colonists whom Baron Galvez brought over to Louisiana do not differ in appearance from their brethren in Luzon. All throughout the parishes of St. Bernard and Plaquemine the same square headed, oblique eyed and square jawed Tagal type is noticeable. As citizens these Malays are peaceful, industrious and decidedly unprogressive and conservative.

Since the beginning of the war in the Philippines the writer has frequently had his curiosity excited to know what effect it was having on the Louisiana "Malays," and on one occasion wrote to a friend in New Orleans who makes frequent trips into this region to inquire concerning public opinion at St. Malo. In reply he received the following:

"You might know what the Malays think of the war without asking. They are about this war just as father tells me they acted and thought during the Civil War—that is to say they don't read anything about it, don't know anything about it, and don't care a picayune how it results, so long as it does not affect their rice crops."

Such is, without doubt, the truth. The fact that many still speak the Tagal language is sufficient evidence of their isolation, conservatism and stay at home qualities. They are densely ignorant, and although preserving traditions of their immigration to America from Luzon, they doubtless pay small attention to the woes of their fellow countrymen in Luzon.

A small herd of water buffaloes, or caraboes, and some East Indian humped cattle accompanied the settlers on their journey from Manila to Acapulco, Mexico, thence overland to Vera Cruz, and from there re-embarked for the mouth of the Mississippi River; but the buffaloes died from some cause, while the Zebu cattle survived. The result has been that to-day lower Louisiana is full of cattle, the descendants of the crosses between the cattle brought over by the French and the Zebu cattle of the East Indies. Many of these cross breeds have humps, showing a large percentage of Zebu blood.

The "Malay" stands in the same relation to the whites of South Louisiana as the Chinese of Washington do to the local Caucasians, with this difference—that in the former locality the Malay endeavors to exaggerate and magnify the cordial relations existing between himself and his white brother by way of showing off his superiority over the negro. The negro population of these three parishes is not, however, as large as one might suppose, while in St. Bernard the "Malays" form at least one-half of the population.

In his book, "The Legend of Lost Island," Lafcadio Hearn describes the women and young girls of the "Lower Coast Malays" as being decidedly handsome and even beautiful, but this is an exaggeration. They have fine forms, but that is about all that can be said of their beauty, unless one admires almond eyes, high cheekbones and lank, wiry black hair.—*Washington Post*.

MARTIN LUTHER said: "I see that which the blessed Augustine saw not, and those that come after me will see that which I see not."

Parents and Schools.*

BY GEORGE C. MCGRAIL.

The relationship which exists between parents and schools is very close and intimate and is one of vital importance. Without parents and children the doors of the school house would rust on their hinges, and the places now so full of life and interest to all of us would become desolate. Without schools the home and society in general would be without one of their most efficient helpers.

The Church, the home and the school are the pillars upon which civilization and our modern social fabric is built. As long as they are kept pure and strong, society is secure; but when they become effeminate, civilization itself is imperiled.

The sunshine seems bright over those pathways where the little feet go on their way to school. I could not picture anything much more sad than those pathways becoming grass grown and choked with weeds. Let us keep the way bright and smooth that leads from the doorsteps of home to the threshold of the school. Let the homes multiply! Let the schools flourish! May it be our part, whether we are parents, or teachers or learners, to keep the light to shine on the paths that lead upward.

There is too much destructive criticism abroad to-day. If any of us have fault to find, let us do so tenderly, that ours may be criticism not destructive but constructive, building upon the foundations already laid, the better superstructure due the world from those who have the light and knowledge of a true faith.

In the discussion of our subject, perhaps, we may be allowed to name a few of the many ways in which parents may hinder or help the school, and suggest some of the ways in which schools ought to help and supplement the work of the home.

Parents sometimes hinder the work of a school by expecting too much. We are always on the lookout, with eyes wide open, for the perfect teacher. We want our teacher to be a good scholar, a good example, a good hand at government, both in school and out; and if there be any other goodness we want it in our teacher. Of course, for such a work, the training of the young immortals, we need the very best. But teachers, being only human, like ourselves, sometimes fail in one or more points to live up to the ideals we have set for them; they may not always be able to live up to their own ideals, and they and we are sometimes disappointed. We may easily be too hasty in telling our fears to our friends and neighbors, and the wrong heaven begins to work and we hinder the work and the progress of the school, when it would be so easy to be quiet and hide our fears, or to pour oil on the troubled waters.

Then I believe we often expect too much from our children, and think their advancement is too slow, and we are apt to say something to discourage them, when if we would but remember the long, long, years it took us to climb the hill to where we now stand, and see in the infinite distance its summit, where we must arrive before we know it all;—if we

*Address before the Ohio Friends' Teachers' Association, 10th mo., 1st, 1901.

would only think, it might moderate our expectations somewhat, and serve to inspire us speak words of encouragement and help.

Parents sometimes hinder the work schools by getting behind the times and persistently staying there. We may hang at the tail end of every improvement in method and in thought, and raise our voices in the suggestion that children did not do so our day,—when our right place is in the forefront of the advance column, in order to know a good thing when we see it and adopt it and in order that we may point out the wrong thing and side-track it.

Parents sometimes retard the good work the schools by being too one-sided. It is, often, the old controversy over again, why one man looking only from his own viewpoint thought the shield was all gold, when other side seemed to him who saw it, only baser metal. So, many a child has been started out by loving and partial parents, seemed, in their eyes all gold, and yet teacher and classmates may be compelled to see the other side and reluctantly discover that our darlings are only common clay. So various phases of school life develop the need of patience and everyday wisdom and an abundant supply of good common sense. I have heard President Marsh say that "no one any business to be a teacher who had not patience," that seemed to put some teachers in a close place,—but he went on to say that "no one had any business to be a parent without patience." That placed us all on equal footing. They who would educate young, whether as parent or teacher, must have, to be successful, not the patience of difference and unconcern, but the patience of a persistent purpose, to inform and uplift help.

Parents, I think, set a higher value health and some other things than teachers, apt to do. Perhaps teachers sometimes overvalue the student of brilliant intellectual abilities, when the honest plodder, the patient and persistent worker is just as likely to be the more useful and the more successful of the two. I am glad to see such changes appearing in schools in relation to marking per cents. Let the dull pupil be almost as good a register at the end of a month as the brilliant one, if the two have been equally honest and equally industrious. Results ought to count only for what they worth in view of the conscientious effort forth. So I would say, let there be less weight given in grading a student to his recitation and more to general habits and character. Grades are an essential to school life, let the teacher mark with the whole work and effort of the pupil open as a book before him.

The certificate of graduation is not the thing of supreme importance. Good health is more important. The ability to do the worthy of one's effort is more important. The ability to write a good letter is more important. To converse intelligently and fully upon everyday subjects is more important. Good principles as to beliefs and actions are more eternally important. When one seeks a place among the world's workers, a prospective employer has his own way of measuring men. He may not place as much value upon our diplomas as we could

may want to know whether we are reliable
ult solidly and well from the foundation

He may want to know whether we are
ified to do the special work he wants per-
med. He may want to know, not only, that
are well-educated but that we show it by
all-ordered life and conversation. He sees
s much more than the diploma may tell.
parents have little ways of their own of
suring the work of a school upon their
ren when they come home after the close
he term. Happy should the homes be
to the boys and girls come back, after
uation or even before it, if they come
better through and through—more
ving but more humble, more loving, more
being well grounded in those things
h make them substantial and true. An
ent teacher once said, "The first object of
action is character, its second object is
acter, and its third object is character."
nk most parents would rather know their
ren possessors of those sterling qualities
ind and heart which are the foundation
s of character, than that they should
all the sciences taught in the schools.
knowledge should not be rated at more
its true value; should never be allowed
rank heart knowledge. The symmetrical
ing, with powers of body and intellect
pirit, developed through exercise and use
s the desirable attainment. Let us seek
omote that education which teaches the
s to do, the intellect to know and remem-
ber the soul to comprehend and grow and
e. We grow through exercise, and we
ble and get weak from the lack of it.
rms of those who labor grow strong and
heels of the world's varied industries go
l. The mind follows the same law and
s with the exercise of thought. A
mind in a sound body seems a desirable
ng. If that blessing be ours we can be
thankful enough for it. Victor Hugo
aid "There are moments when the soul
ses the attitude of prayer." Perhaps
ost earnest prayers of concerned parents
t their children may be diligent learners
school of Christ, and thus become par-
of life's blessings in all their fullness.
ould not have any become a giant in
tal strength at the expense of loss of
l power; neither would we have any
e an intellectual giant and through lack
ercise or unconcern become a spiritual
ling. Let each God-given power grow
for use in the work of the world's bet-
nt. Those who conduct schools may be
to keep the physical natures of those un-
large, active and healthy and strong;
much to train the mind in habits of
ut; may do much to encourage the
al part to love and aspire and grow
ward, that the child may become, in
e, full grown.

thought which should animate and bind
er teachers, parents and pupils in every
s co-operation. No one lives to him-
e. No one succeeds or fails alone.
er we rise or fall. Mutual helpfulness
be the constant care and endeavor of
e of us. Luther's school teacher stood
before his pupils because he could not
e the possibilities buttoned up under a
coat. If we feel and understand that

thought, let us, each in our places, endeavor
to lead gently but surely the feet of every
learner in those paths that lead upward. If
teachers and parents realize their privilege
and live up to their best light, theirs is a no-
ble calling. There is one thing yet unmeas-
ured, and that is influence. Men may com-
pute the distance of the unnumbered worlds,
but the influence of a mother or a teacher,
who can measure that? Who can drop the
plummet line of thought down the dim future
and know one good influence cease to act? I
wonder we do not oftener cooperate in the
works that really count, not only in Time but
throughout Eternity.

Reminiscences.

(Continued from page 182.)

Joseph Snowdon, under date of Ninth Month
2nd, 1850, from Westtown, writes as follows:
"Fifth Day afternoon. We had Samuel
Cope at meeting with us this morning very
acceptably. His communication was excel-
lent, well adapted to the state of the meet-
ings, attended, I thought, with the baptizing
power of Truth, by which we were made to
drink together a little of the same cup and to
realize that declaration of the Apostle to be
true, 'that we being many are one bread and
one body, for we are all partakers of that one
bread.' The burden-bearers were strength-
ened and comforted together while the state
of some of the naughty boys, of whom we
have six or eight among the smaller boys, was
very fully spoken to, and the alarm sounded
in their ears by the revival of the Scripture
declaration, 'if the righteous scarcely be
saved, where shall the ungodly and the sinner
appear?' which was very appropriately en-
larged upon and their conduct set forth in a
way which I hope may be remembered by at
least some of them. It seemed to remind me
a little of old times, the days of thy grand-
father, who, I well remember, frequently in
meeting told me of some of my secret sins.
I wish some of our rightly concerned Friends,
could be stirred up to come and do likewise
and not be putting aside little openings of
duty, which I am afraid is too much the case.
We have a very interesting family here this
session and an open field for labor. Truly the
harvest is plenteous but the laborers are
few."

The same to the same.

"WESTTOWN, Third Month 1, 1852.

"With respect to this place being more
sickly than it used to be, from all I can learn,
I do not think it is the case. Mary Passmore,
who was a teacher here some years ago, says
there were fifty girls out of school sick and
some of them very ill, while she was here; and
they had to turn all the school rooms into
nurseries and the teachers turned nurses; and
I believe one or two died; and Abigail Wil-
liams (afterwards Hall) says while she was a
teacher here, which was not very long, there
were three deaths and on one occasion the
school was broken up on account of scarlet
fever, and on another, a large portion left on
account of dysentery prevailing, so that I do
not know that there is much more sickness
now than theretofore. Dr. Thomas* says we

*Dr. Isaac Thomas, a most valuable practitioner, of
West Chester, and amiable and useful citizen.

are more healthy here now than the commu-
nity at large."

The same to the same.

"WESTTOWN, Eighth Month 2, 1852.

"We had the company of Hannah Gibbons
at meeting to-day, who was excellent in testi-
mony, such preaching as I used to hear when
a boy. She seemed like one of a former gen-
eration and of the excellent of the earth." Hannah Gibbons was then in her eighty-second year and retained her mental faculties until her death in the ninety-eighth year of her age, and remained truly green in old age.

Joseph Snowdon writes to Jos. Scattergood, Westtown, Third Month 20, 1854, in reference to some improvements then being made near the present pumping station in the meadow: "They have had quite a serious time of it, having had to go through solid rock some feet; but have been amply compensated by coming to a large spring issuing out of a sandstone rock, clear as crystal, quite sufficient to run the pump and amply large to supply the school with water.

W. P. T.

For "THE FRIEND."

Augustine on Preaching.

Augustine was a powerful and also a very diligent preacher; often preaching five days in succession, sometimes twice a day. The fire which burned in his own soul kindled a corresponding flame in the soul of his hearers. Like all true Christian preachers, he depended for success on the help of the Holy Spirit. He wrote: "The Christian orator will succeed more by prayer than by gifts of oratory. Before he attempts to speak he will pray for himself and his hearers. And when the time is come, before he opens his mouth, he must lift up his thirsty soul to God to drink in what he is about to pour forth, and to be filled himself with what he is about to dispense. For who knows what it is expedient at any given moment for us to say, or to be heard saying, except God who knows the hearts of all. He therefore who would both know and teach, should learn all that is to be taught, and acquire a faculty of speech suitable to his office;* but when the hour for speech arrives let him give heed to our Lord's words, 'Take no thought how or what ye should speak, for it shall be given you in that same hour what ye shall speak; for it is not ye that speak but the Spirit of your Father that speaketh in you. If the Holy Spirit speaks thus in those who are delivered to the persecutors, why not also in those who deliver Christ's message to those who are willing to learn."

Augustine's practice agreed with his precepts. "One day he had prepared an eloquent discourse, designed to produce a strong impression on cultivated minds. Suddenly in his preaching he broke the thread of his argument, and turned abruptly to a more simple and popular subject. On his return home he related how he had yielded to an impulse of the Holy Spirit which had driven him to set aside the original plan of his sermon. Hardly had he spoken, when a man knocking at the door, entered bathed in tears. He had been arrested by the directed portion of the discourse, and now confessed himself to be won over to the Gospel."

*"The Preacher sought to find out acceptable words"
—Eccles. xii. 10.

FAITHFULNESS BY LITTLES.—There was once a stupendous apartment without supports in the great cave of Kentucky. But following the upheaval that formed the cave, water began to percolate through the dome and fall drop by drop to the floor. An invisible sediment of carbonate of lime was left by each drop on the ceiling and where it fell on the floor. Nature's workmen had begun to pillar that mighty dome. By day and by night, without let or hindrance, the work went on. At last the stalactite began to hang from the vault and the stalagmite to rise from the floor, and long before the eyes of man looked into that little world, the pillars from above and the pillars from below had met and a thousand columns supported the overhanging roof, until now all the railroads in the State might roll their cars over the place, and it would not yield an inch. Thus character is always stalactite in its formation, begun in a moment, but running on through a lifetime and coming to an absolute permanence. Never a drop of truth percolates through the heart that it does not leave a sediment of strength. Never a thought, word or deed that does not leave some eternal effect.—*Gerard B. F. Hallock.*

It is one of the fine sayings of Dr. South that "though idleness be a sin which the devil loves to tempt men to, yet he is never guilty of it himself."

SUMMARY OF EVENTS

UNITED STATES.—The treaty concluded with England in reference to the Nicaragua Canal, has been ratified in the Senate by a vote of 72 to 6. It is expected that a bill will soon be passed authorizing the President to conclude agreements with the republics of Costa Rica and Nicaragua in behalf of the United States for acquiring the territory belonging to these countries on which to locate and construct the canal, with all the necessary commissions and powers for controlling, policing and protecting the work.

A legal decision in Chicago has been lately reached by which various large corporations who hitherto evaded taxation are now obliged to comply with the law, and several millions of dollars will probably be added yearly to the revenues of that city. The action which has brought this about was begun by two young women school teachers, whose salaries, with those of other public school teachers, had been reduced from time to time on account of a want of funds to pay them by the Board of Education. The most powerful corporations and trusts in the State combined against complying with the law, and appealed from court to court and from the Supreme Court of Illinois has ruled that they must pay the tax.

The general committee which was chosen by the conference called to consider plans for healing the differences between the capitalistic and labor interests of the country, has organized. The following is the statement given out by the committee: "This committee shall be known as the Industrial Department of the American Federation. The scope and province of this department shall be to do what may seem best to promote industrial peace, to be helpful in establishing right relations between employers and workers; by its good offices to endeavor to obviate and prevent strikes and lockouts; to aid in renewing industrial relations where a rupture has occurred." The Chairman, Mark Hanna, has said: "I consider the conference the greatest step for speedy settlement of disputes between labor and capital ever taken in this country." "We do not expect to put an end to strikes, but we expect to diminish them."

A recent legal decision in the United States Court at Ardmore, Indian Territory, against the persons doing business in the Territory, must pay tribal taxes, or be subject to expulsion as intruders, and their places of business closed. The decision affects hundreds of non-citizen merchants and means increased revenue to the tribal government.

Of 4,670,000,000 pounds of sugar imported into the United States in 1891 more than 4,000,000,000, or fully 85 per cent., is cane sugar from the tropics. The remainder is chiefly beet sugar, chiefly from Germany and

Austria-Hungary. Of the cane sugar imported during the year about 30 per cent. comes from Cuba, about 15 per cent. from the East Indies and the remainder chiefly from the West Indies and Central American countries. The total production in the United States for the year is presumably about 600,000,000 pounds.

State Forestry Commissioner Rothrock is quoted as saying he has found Resaca, a place on the Pocono Mountain, where the climate is beneficial to consumptives, basing his belief on the result of an experiment with a patient.

For the first time in seven years it is said imported potatoes have lately been brought to New York. An importation from Belgium of 90,000 bushels is soon to be followed by importations from Scotland and France.

It is supposed that there are still 150,000 deer in the forests of Maine.

It is said to have been the coldest day in this month throughout Northern Florida for over twenty years.

The State Agricultural Department is advised that no serious damage will result to orange and other fruit groves in the Florida Peninsula, as the sap has been driven from the trees by the cold weather of the past month.

The recent cold weather has made Chicago apprehensive of a coal famine in that city. Great suffering has resulted from the cold among the recent settlers in Oklahoma, and many deaths of children have occurred there from exhaustion and exposure.

The use of the magnet in lifting, and handling masses of iron soil to effect an average economy in time and cost of handling of between fifty and seventy-five per cent. The magnets used in some of the larger American works have a lifting capacity of five tons.

A Washington despatch says: By a special act of legislation, the Philippine Commission has created a Bureau to take up the work of studying the various pagan tribes in the archipelago, and gather information to aid the Government in gradually civilizing and governing these people. This Bureau of non-Christian Tribes will, by organizing tours of inspection and by means of correspondence, ascertain all the conditions of slavery among the native tribes and the extent of the practice. The Philippine Commission does not advise stringent measures to free the slaves in the islands, as it would no doubt cause a fierce and prolonged war. They say that by preventing slave hunting and refusing to recognize existing slavery the evil will in a few generations remedy itself.

There were 432 deaths in this city last week, reported to the Board of Health. This is 23 less than the previous week, and 10 less than the corresponding week of 1900. Of the foregoing, 210 were males and 222 females; 46 died of consumption of the lungs; 68 of inflammation of the lungs and surrounding membranes; 10 of diphtheria; 10 of cancer; 20 of apoplexy; 5 of typhoid fever; 5 of scarlet fever, and 10 of small pox.

COTTON closed on an basis of 8½¢. per pound for middling uplands.

WHEAT.—Winter, spring, \$2.60 to \$2.80; Pennsylvania roller, straight, \$3.45 to \$3.60; Western winter, straight, \$3.50 to \$3.65; spring, straight, \$3.60 to \$3.80.

GRAIN.—No. 2 red wheat, \$1.40 to \$1.50. No. 2 mixed corn, 67 to 67½¢.

CATTLE.—No. 2 white oats, clipped, 54¢.

BEEF CATTLE.—Best, 6 to 6½¢; good, 5½ to 5½¢; medium, 5 to 5½¢.

SHEEP.—Choice, 3½ to 3½¢; good, 3½ to 3½¢; common 1½ to 2½¢.

LAMBS.—4½ to 5½¢.

HOGS.—Western, 8 to 8½¢.

FOREIGN.—An attempt was made on the 18th instant to burn the British consulate in Birmingham, England, by David Lloyd-George, a member of Parliament, whose utterances in favor of the Boers and against the war policy of the Government had awakened hostility. Many thousands persons collected, a riot followed, and the attempt to address the meeting failed.

On account of the refusal of Venezuela to pay certain claims due to the Berlin bank of Hamburg to \$10,000,000, Germany is reported to be preparing to take possession of Laguayra and perhaps other ports in order to compel payment.

A Washington despatch says that no opposition will be made by the United States to prevent the collection of the debt, but anything approaching permanent occupation of Venezuelan territory that may follow the seizure of custom houses will not be permitted. The situation is further complicated by an outbreak in Venezuela against the administration of President Castro.

Following is the language of President Roosevelt in his late message, referring to such a case: "We do not guarantee to any nation punishment, if it misconduct itself, provided that punishment does not take the form of acquisition of territory by any non-American Power."

It is hoped at Washington that the Government of Venezuela may provide for the payment of the debt, with compulsion from abroad.

A despatch from London of the 16th says: "The fall snow in Scotland is heavier than at any time in fifty years. Several gamekeepers and shepherds are missing, and destruction of sheep in the snowdrifts, which range from ten to twenty feet deep, is unprecedented. The roads are impassable. Parts of England are suffering all equally from the heavy fall of snow."

The great radio-telegraph officials at St. John N. F. Marconi said: "If my system of wireless telegraph can be commercially established between different parts of the earth, the possibility of which I have not slightest doubt, it would bring about an enormous cheapening of the methods of communication at present existing. The system would be reduced to the day-day demands of communication to a great extent. But the great cost of the cables themselves, and their working expenses, causes the existing method to beyond the reach of a majority of the peoples inhabiting the various countries of the world. But could this method be applied, I believe the cost of what we now call telegraphing to England might be reduced at least twenty per cent. The present rates are 25 cents a word. I do not see eventually, with the wireless system, this cost should be reduced to one cent a word or less."

A Dresden inventor has found a method to use compressed air in glass blowing. By this means it is possible to blow vessels as large as tubs and bottles—without the use of any machinery, and the labor of the glass blowers depended altogether upon their lungs.

At a recent staidedoff at Dooly in Wales, one of the principal speakers stated that in 1871 as many as 1,100 persons spoke Welsh, but in 1891 the number had fallen to 911,280, a decrease of 95,811, though the population had meanwhile increased.

Mount Ilich, a volcano in Kamchatka, has lately begun in eruption. A despatch of Eleventh Month 16th says: "A terrible roaring underground noise that was heard nearly one hundred miles round, preceded the eruption. The lava continued to flow for several days, and emission of large columns of vapor then began. Lava has flowed into the rivers, poisoning the water and killing thousands of fish. A volcanic dust covered all trees and undergrowth in the whole of the Southern Kamchatka, and the inhabitants, through breathing this have become affected with a peculiar cough. A series of earthquakes has felt throughout Kamchatka, but no life was affected."

The Daily Telegraph publishes a despatch from its Cairo correspondent to the effect that a working for two years at Geb-el-Geir, near Suex, Egypt, employed by the Petroleum Syndicate have entered petroleum, in the sand, at a depth of 2,155 feet, terrific flow of gas followed the discovery and caused explosion which wrecked the boring plants and blew up the well. This discovery is considered important, and correspondent continues, as pointing to the existence of oil fields in Egypt.

NOTICES.

WANTED—A young woman Friend to assist in household duties in country towns.

Address E., Office of FRIEND.

WESTOWN BOARDING SCHOOL.—Applications for admission of pupils to the school, and letters in regard to instruction and discipline should be addressed to WILFRED WICKERSHAM, Principal.

For particulars as to board and tuition, and examinations in year of his year, a pamphlet and card of Upper Evesham Monthly Meeting of Friends.

—, in Haddonfield, N. J., Seventh Month 23d, 1891. LYDIA SHARPLESS COPE, in her ninth year, daughter of Oliver W. and Sarah Ballinger Cope, both deceased.

Prayerful Preaching.

It was lately remarked that Jesus never taught his disciples how to preach,—only how to pray.

But in that very thing was wrapped up how to reach. The living qualification for true preaching is the one and the same Spirit with living experience of true prayer. In both is the touch and inbreathing of the Holy Spirit.

The special steps of authorized preaching were doubtless among the "many things" which Jesus said He had to tell, but they were not heard then. So these details were left, in each instance, to the Spirit of God, when He should come and teach to discern "all things," including each special exercise of preaching.

Power to have power with God is a larger and more solemn gift than to have power with men, but the greater ministry includes, in its exercise, the less, and will help determine for each one the "manner" incumbent on himself for this manner therefore preach ye,"—the means for some the vocal delivery, for others the savor of a life kept hallowed in prayer, for others a prophetic word of faithful labor of love in the language of conduct. Praying in the Divine communion is the foundation of rightly dividing the words, "as every man hath received a gift." He preaches best, who prayeth best.

But the "model prayer" was not matched by a sample sermon, unless that simple service was given as a model which Jesus first taught to preach, that comprehensive sermon which, were its contents observed in modern times, so much of their failure would not be getting chronicled of late in the public press,—that first of the sermons of Jesus which consisted of these words: "Repent, for the kingdom of heaven is at hand!"

But what slaves to a prescription one set formula for preaching would have made! A free gospel ministry would have been foreclosed, as we fear many a free gospel prayer has been, by regarding a set form as obligatory. But now "the word of God is not bound," neither is the statement of a prayer blocked up in a stereotyped set once for all. Not after this form, but "after this manner pray ye," was the gracious counsel;—and what spiritual impressiveness He gave has not been left in words, but the words show a manner brief, direct, simple, expressing felt praise and felt needs, no more and no longer. Nor was it understood by the disciples that a form was prescribed,—for throughout all the prayers delivered afterwards on the New Testament pages, the so-called Lord's prayer is not once repeated. Its manner is repeated, the wording is left for the freedom and working of the Spirit. "For we know not what to pray for, (nor how to preach) as we ought; but the Spirit itself maketh intercession (and inspiration) for us."

Let our unceasing attitude and breathing of prayer be pure and in the Spirit, and each one's special ministry will be under the same anointing, and so will be effective. He need not be careful for effects; but to be careful that access to the throne of grace be kept open,—that indeed, he needs. "Be careful for nothing, but in everything, by prayer and supplication, with thanksgiving, let your requests be made known unto God; and the peace of God which passeth all understanding shall keep your minds and hearts by Jesus Christ."

Reminiscences.

(Continued from page 191.)

Joseph Scattergood to Joseph Snowdon:

PHILADELPHIA, Ninth Month 14, 1849.

I have just learned that our dear friend, Margaret Hutchinson, has been released from the trials of time and has doubtless realized the promise to the "pure in heart." She will be much missed in our meeting, as her solid weighty deportment and lively communications had a tendency to increase the solemnity of them. She was one of the few of the true cross bearing humble followers; with great propriety we may say she was an Israelite indeed in whom there was no guile.

Joseph Snowdon to Joseph Scattergood:

WESTTOWN, Fifth Month 25, 1855.

I thought I would inform thee that Henry Gibbons, of Salem, N. J., died this morning.

His end was very peaceful. The last words he was heard to say were, "Peace and Heaven," having previously repeated part of the tenth chapter of Matthew. Henry, during the latter part of the term he was here, was a very studious, orderly boy, and we trust through the mercy of his Crucified Redeemer has been received into the arms of everlasting rest. I think I never witnessed a death here which seemed to have such a solemnizing effect on the children, the girls particularly. It fell to my lot to announce it to them in the collecting room and we had quite an affecting time. Many of them sobbed aloud. How important for us all to bear in mind the injunction of our blessed Lord, "Be ye also ready, for at such an hour as ye think not, the Son of Man cometh."

Joseph Snowdon to Joseph Scattergood:

WESTTOWN, Second Month 14, 1856.

We had quite a good Quarterly Meeting to-day (at Concordville). Morris Cope* and Abigail Hutchinson† were with us and had good service. After the business was nearly through Phoebe W. Roberts‡ requested that the shutters might be opened, which was fully united with.

It was done and I have not heard a communication for a long time, that has so reached the land of my captivity and so evidently bore the marks of the King's signet as this. It was indeed a memorable time and seemed like a brook by the way.

Joseph Snowdon to Joseph Scattergood:

WESTTOWN, Sixth Month 14, 1856.

This is a splendid morning. Thermometer fifty-six degrees, it is delightful to rise these fine mornings at from 3.30 to 4 o'clock and enjoy the country. The air is so redolent with sweets. These long days are delightful: it would do the treasurer good to be here and take a good long walk, he would get rid of his dyspepsia.

WESTTOWN, Twelfth Month 5, 1855.

"I thought we had quite a good meeting to-day. Samuel Bettle, the elder, was very much favored to unfold our peculiar testimonies to the children, and some of our doctrines, particularly that of baptism, which seemed to have a solemnizing effect upon them. I never heard our ancient Friend when

* A valued minister of London Grove Monthly Meeting who deceased Seventh Month 7th, 1892, aged nearly ninety-two years.

† A beloved minister of Philadelphia Monthly Meeting, deceased Sixth Month 16th, 1890, in the ninety-third year of her age. For further interesting accounts of both of these worthy Friends see Memorials of Deceased Members of Philadelphia Yearly Meeting.

‡ Whom to know was to love. A member and minister of Goshen Monthly Meeting, deceased Eighth Month 17th, 1893, in the eighty-third year of her age, of whom also a Memorial was published by Philadelphia Yearly Meeting.

I thought he was more favored. I hope it may have a lasting effect upon the children. Samuel, the younger, appeared in supplication near the close of the meeting."

The name of Samuel Bettle appears on the records of Westtown as a member of the committee in charge of that institution as early as 1804. He continued as a very useful and benevolent member of the Committee until his decease in 1861. It is understood that the two nurseries annexed to Old Westtown were erected very much, if not entirely, at his expense; also Friends' Book Store, No. 304 Arch street. He was an esteemed minister of the Gospel of Christ, and was regarded as one well acquainted with the discipline and usages of our Society. Samuel Bettle, Junior, was appointed a member of the Westtown School Committee in 1849, and continued to serve in that capacity until his death in 1880.

He was a man much beloved by his intimate friends. Both father and son were acceptable ministers of our Society. W. P. T.

Remote Newfoundland.

It is probable that no English speaking people is at this time so utterly isolated from all things of advanced civilization as the folk who fish from the little harbors which lie along that stretch of the east coast of Newfoundland between Cape John on the south and the Straits of Belle Isle on the north. There are no roads, no paths, leading from harbor to harbor. The land is a wilderness, dense, trackless, infested with black flies and mosquitoes, which brave men dare not challenge for many days in hot weather, for fear of their lives. Shore fishermen would rather take their little punts through forty miles of tossing sea than suffer the fatigue and terrors of a two mile tramp inland. Communication, indeed, is only by punt and skiff; and so rarely do the people go from place to place that a woman, who went from home with her husband to settle in a harbor five miles distant, did not see her relatives again for fifteen years. Moreover, the mail steamer touches at but two of the more important settlements, and that only at fortnightly intervals in summer months. The news of the world, in distorted forms, is passed along by word of mouth, long after it has ceased to be acutely interesting to the people of more favored lands.

"Tis said," said an old man of Round Harbor, who had heard of the first British defeats in South Africa, "that the English do be beaten. Do the Boers be after capturing 'T John's yet? Do they be fighting there, tell me?"

One meets such absurd misconceptions upon every hand. To many of the men of that coast, the world, which is flat and almost circumscribed by the horizon, is a world of sea and rocks and punts and fish. Their imagination carries them no farther, and they come into touch with the things of other places so rarely that they cannot comprehend the information which the new and passing association has brought to them.

"Does they catch fish with squid or caplin for bait in New York 'arbor?" was a boy's question at Englee.

Until we cease to live for self, we have not begun to live at all. J. R. MILLER.

The Cure for Anarchy.

By Henry Sablin.

It is said President Roosevelt believes that Congress has power to deal with anarchy in such a way as to crush it out. It would be a good plan for the governor of each state in his next annual message to call the attention of the legislature to the necessity of enacting laws for that purpose.

It is of little use, however, to cut the tree down if the roots are left to send up noxious sprouts all over the land. All the checks which the law may devise will be but temporary unless we can reach the hidden spring from which anarchy has its life and strength.

In the first place, it is self-evident that no anarchist can be a law-abiding citizen. The converse is also true that no law abiding citizen can be an anarchist.

The only good citizen is the man who recognizes the majesty of the law and the heinous crime of trampling upon it. Whenever a citizen makes up his mind that he will obey such laws only as commend themselves to his self-interest, and that he will disobey such as interfere with his pleasure, or with his plans for the acquisition of wealth, he becomes an anarchist at heart, and by his example promotes the growth of anarchy in the community in which he lives.

Dr. Harris says: "Every case of vagabondage has its root in a neglected child." That is true. Sarah B. Cooper once said: "The state begins too late when it permits the child to enter the public school only when it is six years of age. It is locking the stable door after the horse is stolen."

Every child who is allowed to grow up in habits of disobedience is an anarchist in embryo. This morning's papers contain the announcement that a teacher in a neighboring state was stabbed to death by pocket knives in the hands of four pupils, one of whom he had found occasion to reprimand. The spirit of anarchy was in that deed as much as in the assassination of McKinley.

It becomes of interest to know where anarchy breeds; where it has its spawning places. We are accustomed to say in answer to such questions,—in the slums or among the ignorant and vicious classes of society. We associate anarchy with dirt and rags and hunger; with ignorance and poverty. This is a mistaken view, and if persisted in, it will prove a fatal error. There is as much lawlessness, as much disobedience and opposition to wholesome restraint among the children of the wealthy and well-to-do as among those of any other class. Sometimes the most difficult boy to control, who occasions the most trouble, is the one who comes out of the brownstone front, imbued with the idea that his family's position in society places him above all restraint in school. He has already imbibed the idea that laws were not made for him, but for somebody else.

With others the thought prevails that the wrong doing is not in the deed itself, but in being detected. While the fault is undiscovered, conscience sleeps, and it becomes active only when detection is feared or punishment is threatened.

I have just re-read with much interest the prize essay by Cyrus Peirce on: "Crime; its Cause and its Cure," read before the Ameri-

can Institute of Instruction in 1854, at 1 Haven. At the time it brought down to the head of the author much bitter criticism. He nowhere asserts that education the productive cause of crime. He does, however, assert, and he proves it, that intellectual education alone is no security against an increase of crime. The increase or prevalence of juvenile crime is because the common education of our schools has too little of the rect, strong, positive moral element in Cultivating the head does not rectify cleanse the heart. And lastly he calls upon parents, teachers, all true friends of education to make a larger outlay for moral instruction, assigning to it in our schools the high place its importance demands. The passage fifty years has demonstrated the wisdom of counsel, and as we look over the field to we are struck with the truth of his words. No one claims that public school education productive of crime. I do not hesitate, however, to make the assertion that the education prevalent among us is not acting as a prevention of crime and sin in proportion to the increasing cost of our schools and to the great attention which is paid to the professional education of teachers and to the adoption of scientific methods of instruction.

In other words, "morals and manners" have been relegated to the rear of the procession while instruction in the branches which constitute the curriculum is always given the precedence. . . .

To go back to our starting point, neither the school nor in the family are we doing duty in the attempt to crush out anarchy to render it impossible for it to exist among free people.

There is a place in the education of child for the coercive power of restraint, the directive power of authority. Even I myself, as a governing force, is based upon authority of some one who possesses power to enforce law. No one ever depended more than Horace Mann at Antioch upon the help of the student under his charge; yet he did not hesitate to make the way of the transgressor hard. It is said with truth that riotous student, no debauchee, no habit user of stimulants, in fact, no candidate for degree whose life and conduct during course had not been upon a high moral plane, ever received a diploma signed by Horace Mann.—*Journal of Education.*

Christopher Wynn, a minister among Friends in Yorkshire, England, and who died in 1722, in speaking of his friend, Gilbert Thompson, says: "I had true fellowship with him, being sensible in our communication that Jesus drew near." Oh what a blessed char would be manifest in mankind generally their intercourse with one another partake more of this holy union!

He also observes, "I am fully of the mind that whenever it, may please God to redeem and recover his Church out of her perishing languishing condition, the line of discipline must be vigorously stretched over all transgressors. For unless the hidden things of Achan and Esau be destroyed, as well as covered, the Israel of God can neither go forward, nor stand before their enemies." P. H.

SONG OF THE SPINNING WHEEL.

in the attic stowed away,
t of the light of the golden day,
in a cob-web mantle drest,
and a spinning-wheel stands at rest.
It round with a motion strong,
and loud it singeth an old-time song ;
Round and round,
Round and round,
drowsy droning with dreary sound ;
Ready motion the spindle keeps ;
Lead smooth while the baby sleeps ;
Baby sleeps !
It round again and the wheel will tell,
In happy days to the old home fell,
And children played all the cottage o'er,
Till dark and forth on the sandèd floor
And a grandma stepped in her golden spring,
And this is the song that the wheel will sing :
Round and round,
Round and round,
And laughing with blithesome sound ;
Lead like gold in the sunlight's ray ;
And whirling while the children play ;
Children play !
It round again and the song flows on ;
To some of its merriment is gone ;
Singeth now in a sadder key ;
Tells of the children, one, two, three,
Fast growing from day to day,
And to wander from home away :
Round and round,
Round and round,
And lagging with lonesome sound ;
Lead runs slow to the whirling spool ;
Happy children are gone to school ;
Gone to school !
It round the old wheel a few quick turns—
The kettle sings and the back log burns—
The old log cabin looms up to view ;
And a grandma, loving, true,
Sit for the boys to come back again,
And this is the old wheel's sad refrain :
Round and round,
Round and round,
And singing with solemn sound ;
We alas ! all the children gay,
Gone to manhood and gone away :
Gone away !
It round more turn at the droning wheel,
To more glimpse of the past to steal ;
The grown aged, all far away :
In fallen to sad decay ;
The old graves on the neighboring hill—
It will do—let the wheel be still ;
Round and round,
Round and round,
And sighing with sobbing sound ;
In childhood, youth, gray head ;
It comes softly and snaps the thread—
Snaps the thread !
—*Markheead Messenger.*

THE LIFE SCHOOL.

A little boy came from his school to-day
With his heart in a flurry of glee :
" And I ! " they've taken out pencils away,
And I'm writing with ink," said he,
His breast is filled with a manly pride,
Or it joys him much to think
As he laid his pencil and slate aside,
And is writing his words in ink.
" Innocent child ! Could you guess the truth
You would ask of the years to stay
The slate and pencil cares of youth
At a tear will waste away ;
Out in the great, wide world of men
We wrongs we may do or think
Never be blotted out again,
Or we write them all in ink,
As in " *A Book of Verses,*" by Nixon Waterman.

For "THE FRIEND."

Nothing Fortuitous in Nature.

A chemist named Mendeleeff, born in Tobolsk, Siberia, in 1834, and who for many years has been a professor in Russian colleges, several years ago constructed a chart of all the elementary bodies which were then known, showing that there was a regular gradation in their atomic weights and other characteristics from one end of the series to the other. It was observed however, that there were gaps in this series, and Mendeleeff predicted that three new chemical elements would be discovered with atomic weights approximately 44, 69, and 72 respectively, and that these elements would be found to have certain properties which were clearly stated at the time. Subsequent discoverers found all three of these elements and ascertained that their properties agreed very closely with the descriptions which had been predicted respecting them. Mendeleeff named the three elements to be discovered, scandium, gallium and germanium. The discoverers found five new bodies instead of three and gave them other names than those proposed by Mendeleeff. An account of these researches as follows is taken from a recent number of *The Christian* published under the above title.

" A recent illustration of the support that modern science gives to the 'argument from design' as the argument in favor of a belief in the universe as the work of an intelligent Creator is called, is furnished in the department of chemistry, by the investigations of two Scotch scientists."

The Hartford Times thus describes these discoveries:

" The discovery by Sir William Ramsay and Lord Rayleigh of five unknown elements in our atmosphere, by completing the series called for by Mendeleeff's law, strengthens the conviction that nature is an ordered system showing no gaps or 'missing links' in any part of the line. The seventy odd elements before known, differ from one another by certain uniform or nearly uniform gradations of quality from the highly active and electro-positive potassium and fluorine to the comparatively inert and electro-negative nitrogen. The new gases seem to be absolutely inert or incapable of combining with other elements, and therefore represent the zero of a scale of differences. The line of elements now presents a set of bodies in nearly uniform gradations; there is nothing fortuitous in the elemental constitution of the material world. This is of course an evidence of an underlying intelligence or mind, for if the qualities of the elements were determined by chance it is a million to one that they would not have formed an orderly series." "Evolution has nothing to do with atoms, and when we find that the atoms of the various elements represent a series, we can say with conviction here is evidence of purpose and design."

" These two Scotchmen who have completed this evidence have shown themselves to be mechanics of the highest order, for before the proof of the existence of the new elements was complete it was necessary to invent processes and delicate apparatus and to use them with the greatest patience and precision. First they repeated Priestley's method of determining the constitution of the atmosphere,

first made a century ago. They found, after abstracting the water, the carbon dioxide, the oxygen and the nitrogen in succession, a residue which could not be absorbed. They called this 'argon' or the unenergetic substance, because it seemed inert even in the presence of the active agents, fluorine and potassium. They examined a number of rare minerals, some forty-five, in the hope of discovering argon in the earth, but in vain, though they discovered helium in fifteen of them, an element which had previously been known to exist only in the sun. Suspecting that their new substance was not a simple substance, they subjected it to a very low temperature and discovered that as it thawed it gave off five different gases at different temperatures. These they named respectively 'argon' proper, 'helium' (already known), 'crypton' or the concealed gas, 'neon' or the new gas, and 'xenon' or the stranger. The atomic weights of these proved to be precisely what they should be to make good the gap in the list and complete it according to Mendeleeff's law. That page in 'Nature's book of infinite secrecy, is read and proves to be a symmetrical method.

" In an ordinary room twelve feet square and eight feet high there are about one hundred and sixty pounds of air. In this there is not far from a pound of these new gases. As far as we know they do no good and no harm, they simply round out the list of elements supply 'missing links.' They may have functions in the great scheme of life which we can never comprehend. But just at present they strengthen the basis of a rational faith in an underlying plan of the universe."

WHEN a man is running for office to-day we call him a "candidate"; that is to say, "dressed in white." Although it is true that the reputation of such persons is frequently whitewashed by their friends on such occasions, the etymology is not obvious. It is explained, however, when we know that it was customary at Rome for a man to wear his freshest robes when asking the suffrages of the people. (An interesting survival of this tradition persists to-day at Oxford, where a white tie is required to be worn at all examinations). "Tally" was originally a cutting; then a cutting of notches to keep an account, finally an account whether kept by notched sticks or otherwise. "Score" has passed through similar changes. "Cheater" meant at first an officer who attended to escheats, i. e., who looked out for lands that might revert to the king in default of heirs. Sharp practice was so common in this occupation that it ultimately came to mean a dishonest person.

These examples, which are only skimmings from one of the shortest and least interesting chapters, will give some suggestion of the resources offered not only to special students of the English language, but also to any personal reader who has a wish to become more familiar with the history of the most common words in everyday use.

For the sake of the children, let never a tone
Of anger from lips of yours be known ;
Let them hear no sound of the terrible strife,
Of the fearful and clangorous battle of life,
For it is right
That life be bright
To the child.

Athletic Games and Public Morals.

"The Morals of Athletics" was the subject of a recent address by Henry C. McCook.

"Bodily exercise profiteth for a little time, but godliness is profitable unto all things," St. Paul, he said in writing to his young disciple, Timothy, distinctly asserts that there is advantage in bodily exercise. Athletics thus has the sanction of the great Apostle to the Gentiles. But he is careful to limit his appropriation to the present time. He draws a comparison between physical vigor and skill and spiritual attainments to godliness.

The former has advantage for a little time. When the body is dissolved its advantages cease. The latter has promise of the life that now is and of that to come. This strikes the keynote of the relation of the church to athletics. Bodily exercise is recognized to be profitable just so far as it is limited to the development of the physical. When it hinders the growth of godliness and tends towards destruction of morals it ceases to be profitable.

"The problem before us as Christians," continued H. C. McCook, "is the encouragement and production of a form of athletics which tends equally to the development of the highest spiritual and intellectual and physical manhood.

"The love of sport is inherent not only in man, but in the lower orders. Play is nature's method of developing their bodies and training their crude intellects. Men are but children of a larger growth and it takes the hardest buffeting of a long life to get that spirit out of the ordinary man. Indeed, there are some men and women in whom the childhood of playfulness remains even to the end. The Bible takes notice of this natural tendency and it is mentioned in several parts of the Scripture. The three great festivals of the Hebrews served to give that natural recreation which other nations of that period sought.

"Let us note some of the advantages of athletics. Athletics tend to secure vigorous and wholesome bodies. The man whose body is thoroughly disciplined, who is wearied by athletic sports or by work, is not likely to have much surplus vigor for rowdiness or dissipation. Athletic exercises tend to temperate habits, 'for every man that striveth for the mastery,' says St. Paul, 'is temperate in all things.'

"Athletic games tend to maintain a sense of honor and obedience to law—a lesson which our generation needs.

"Athletics tend to develop pluck and a high fixed purpose in duty and service, in all fields of business life it is profitable, as also in professional life. Such games also require the utmost self-control. All the powers of the body and mind are kept in command. Self poise, self command, self control are high qualities necessary in athletic games. One of the profitable lessons is that individualism which must be controlled by a sense of dependence upon associates.

"We now turn to the other side. It cannot be denied that there are certain tendencies which, if they may not be called immoral, look strongly toward immorality. One of the distinguished spectators at the Army-Navy football match was heard to remark, 'I think I can understand how the gladiatorial fights of the ancient Romans could have awakened such

an intense interest in the results as to silence the voice of pity in the human breast, and cause spectators to look upon the shedding of blood and the taking of life with complaisance.' Certain persons become so wrought up in the exciting contest and so carried away by the desire to win, especially if heavy money stakes are fixed upon the results, that the suffering of the competitors becomes a minor matter. It was this element in the ancient public games which evoked the strongest protest from the primitive Christians.

"It is certain that foot-ball as now played in America is attended by a startling amount of suffering, mutilation and death. Any person familiar with the facts can readily cite a number of examples where bright, promising youth have been damaged for life, and every year a number of deaths occur, to say nothing of those minor hurts which leave no serious results.

"The time has come when the public conscience should be awakened to this evil. If it is necessarily associated with this game as now played, the cry of pity should clamor to those who are in authority, and are, therefore, responsible until the game should cease or shall be modified within the limit of reasonable safety. The friends of profitable athletics believe that there is no need that such costly sacrifices should every year be made to a form of bodily exercise which might readily be modified and thus placed within the range of Christian approbation.

"Another evil tendency is the development of partisanship at the expense of fairness and the honorable applause of real merit.

"One of the most immoral adjuncts of public athletic competitions is the pernicious development of the betting habit. This spirit is everywhere in society. The impression is that the betting upon the success upon one side is a species of loyalty that cannot be held as immoral. The demoralizing influence of such a habit must be felt in future life and widely extended. The young fellows struggling in the arena are regarded, as the Roman matrons and men looked upon the gladiators, as so many agents not only for their amusements but for their profit. This spirit is everywhere in society. A ministerial friend informed me that his two sons, boys just in their teens, came back from a foot-ball match between the lads of their own school and another school, with the information that all the boys of their side had been betting their nickels and pennies upon the result, and that some of them had won as much as a half-dollar. The demoralizing influence of such a habit must be felt in future life, and, widely extended as it is, will affect the community. All betting is sin; and as it is practised, much of it is criminal—contrary to the law of the land.

"Again an immoral adjunct of these intercollegiate games is the indulgence in liquors on the part of the spectators and associates. A victory nearly always means, on the part of many of the victors, a debauch. We have learned by a few years' observation to predict a condition of things in this vicinity after a defeat, namely, the quietness of streets and freedom from shouting from gangs of half intoxicated men about 'dear old Penn.' There are advantages in defeats, although most of us give our strongest wish for success.

"There is a manifest deficiency in our games as football, for out of nearly ten thousand students in the University there are perhaps not three hundred, certainly not five hundred who even occasionally receive a profitable bodily exercise of a spirited game of foot-ball. Indeed, the conditions of the play are such that it would be impossible for more than a few persons to get any physical advantage from it.

"One reason these young fellows become successful players at field sports and can indulge in them with apparent safety as compared with other institutions is that they become physically hardened by constant drill. Gymnasium exercises should be placed upon the curriculum of every college and every student should be marked for his efficiency there precisely as he is in ordinary studies. Then the benefits of athletics be made general and the highest results attained. It is a disadvantage that the great body of students suffer for the excessive development of a few.

"Thus we come to the last disadvantage, athletics as now conducted. It makes a large draft upon the time and energy of a student to allow, at least for the ordinary mind, a proper proportion of intellectual discipline. No one who has had long and close intercourse with the great body of students has failed to observe this fact. Moreover the absorbing interest of the annual public contest is so great that the value of intellectual development seems to be put entirely in the background. You can get ten, fifteen, twenty, thirty thousand people to attend foot-ball match between Yale and Princeton or Pennsylvania and Cornell, but how many can you assemble at the annual debating contests of these colleges? Last week occurred the annual debate between Yale and Princeton. A paragraph or two was all that the public prints could give to the incident. Broad-sides of all newspapers scarcely suffice to satisfy the interest of newspaper readers the reports of a foot-ball game. Is a university meeting the demands of the twentieth century by stimulating physical exercise to this extent, and awakening no corresponding interest in intellectual competitions?

"Surely, we are not keeping up the proportion between the higher and lower form of discipline. We are forgetting the Apostolic words: 'Bodily exercise profiteth for a little time, but godliness is profitable for all things!'

THE OLDEST EGG ON RECORD.—A remarkable discovery was made by Dr. Peters while excavating at Nippur, an ancient city of Babylonia. While the workmen were clearing away the debris from the walls of the temple of Ishtar they discovered in a hole which had been closed up with sun-dried bricks a large goose egg on a mat of reeds. Why the egg was placed there is a mystery, as it has no connection with any known Babylonian custom. The temple was built at a very remote time, probably in the reign of Akur-gal (B. C. 2200) or even earlier, so that the egg is over four thousand years old.

It is not the estimated usefulness . . . which we may be rendering to ourselves or to society, by taking up this or that course of life, but it is being in our right places that is acceptable.

JOHN BARCLAY.

CONTENTMENT.

ow truly blest is he who knows content !
 Life is calm and peaceful, and the light
 sweetest happiness shines warm and bright
 o'er his path. His mind is not intent
 what God grants not, nor is his time spent
 vain complaining, but he finds delight
 in heaven's gifts, and walks with face as bright
 as gleams as the sunlit firmament.
 tastes life's sweetness, but avoids its gall ;
 envies no one, nor is he oppressed
 by those dull cares and sorrows that befall
 one who murmurs and that wild unrest
 which makes men's soul's dissatisfied, can ne'er
 dim of sleep, nor dim his eyes with care,"

—Boston Ideas.

FOR "THE FRIEND."

A Few Observations.

The phenomenon of high church officials ad-
 vertising the opening of the saloons of New
 York City on the First-Day of the week, is one
 of the stupidest of all persons interested in the
 moral, physical and spiritual welfare of the
 race.

In passing it may be well to observe that
 they do not show church dignitaries so
 very always right as to make it best to
 follow their lead without an individual inquiry
 into the soundness of their teaching.

Their argument for legalizing First-Day
 drinking seems to be founded on their be-
 lief that selling on that day can not be
 stopped, and that it is better to make bad
 money to suit bad men than good laws that had
 no chance to obey.

The enforcement of any law seems to de-
 pend largely upon public opinion. An over-
 whelming public opinion in favor of First-Day
 drinking makes First-Day prohibition difficult
 enforcement.

It has occurred to these church digni-
 taries, and college presidents and senators,
 that their published opinions become a large
 of public opinion, and that their influence
 exerted may be the deciding force in the
 selection of opinions.

All Christianity publish abroad that it is
 wrong to protest even one day in seven
 in the infamies of the saloon and thus make
 a condition that it detests?

When the Bishop said that saloons could not
 be closed on First-Day and therefore must be
 legalized, there was great rejoicing among
 brewers and distillers, and those who make
 money by liquor selling. If they are made
 shall the followers of Christ be pleased?

What folly to be more afraid of violated
 than of corrupted law, and to spend the
 strength of the State to make laws to accom-
 modate crime and to perpetuate institutions
 that breed criminals; and bow down our re-
 ligion and our politics so low as to encourage
 and of stamping out the official anarchy
 refuses to enforce any law that the low
 politicians do not like.

Ever since Moses wrote his great prohibi-
 tions against theft and lust, and covetous-
 ness, falsehood and false gods, the laws have
 been violated constantly by part of all people,
 some times a large part, but the eter-
 nal truth that made the laws right, has not
 changed. Yea, God stands just, though all
 men deny it. Aaron helped the people
 to make a golden calf to worship, because pub-
 lic opinion demanded it; but the worship of
 a calf did not make it God, and notwith-

standing its violation, the law against idolatry
 stood, and Aaron soon saw the sad sight of
 a stricken people whom he had helped to bring
 to their miserable condition.

"Prohibition does not prohibit." This sa-
 loon born sentence is prompted by cupidity
 and put forth by the father of lies. When
 ever any state has a law prohibiting the sale
 of liquor, thousands of dollars are spent in
 subsidizing the press to make the people be-
 lieve the sentence true. The power of evil
 always works by deceit, and it is only fit that
 the liquor traffic, being the visible agency that
 produces the greatest misery in the world,
 should work by the greatest deceptions.
 Promising law and order it breeds anarchy;
 promising health and long life it begets sick-
 ness and early death; promising delight, it
 ends in misery. The riches it heaps up are
 also as a broken promise both to the individ-
 ual and to the state. It curses him that gives
 and him that takes. The cost of its crimes
 always overbalance the license fees. I was
 in the State of Iowa when the people voted by
 thirty thousand majority to outlaw the saloon.
 The liquor men and their sympathizers were
 always saying, "your prohibition law will
 not prohibit," "a license law would be bet-
 ter." But they were false, as always. At
 the end of four years of prohibition, sixty per-
 cent. of the jails were entirely empty—the
 population of the penitentiary had fallen from
 over eight hundred to less than six hundred,
 and Iowa had soon paid all its bonded debt.

The liquor men would give hundreds of
 thousands to have Maine given over to license,
 and fearing the force of truth as to the effect
 of the Maine law, are industriously spreading
 falsehoods as to the success of its working.
 Maine has an average of over ninety dollars
 per person in savings banks, while licensed
 Pennsylvania has less than seventeen dollars
 per person. Railroads have learned that a
 drinking man is not a safe man. Insurance
 companies have learned that he is not a long-
 lived man. Banks are learning that he can-
 not be trusted, and it is time that Bishops had
 learned that what is bad policy for these is
 neither good for religion nor morals, and the
 statesman that what is bad for business and
 length of life and morals and religion is not
 good for the state. And the voter should see
 to it (he being the source of political power)
 that his vote shall float as speedily toward the
 righteous side, as the saloon keeper does
 toward the unrighteous mammon, and "judge
 not according to appearances, but judge right-
 eous judgment."

WALTER E. VAIL.

MOORESTOWN, N. J., 12th Month 22, 1901.

CABLE STEAMERS.—There are over forty
 steamers afloat whose sole work is the laying
 and maintenance of the world's vast system of
 telegraph cables. Seven of these belong to gov-
 ernment administrations, and the remainder
 to manufacturing and cable-operating com-
 panies. Ten of the cable-laying ships are
 owned by the three largest English cable
 manufacturers. One of the largest of these
 cable ships is of about five thousand tons dis-
 placement, with a carrying capacity of eight
 thousand tons, and has carried two thousand
 five hundred nautical miles of deep-sea cable in
 one trip.

What is Right for Individual is Right for
National Conduct.

This conception of national conduct is abso-
 lutely certain to prevail. It must be talked
 and written into the consciousness and the
 conscience of the world. Here lies our first
 international duty. We ought to promote in-
 ternational travel, international trade, relig-
 ions, scientific, and literary fellowship be-
 tween nations. But most of all the peoples of
 the earth must be taught that it is their duty
 to feel and act toward one another as brethren
 and friends and not as haters, thieves, robbers,
 and cut-throats.

To say that the Golden Rule is inapplicable
 to nations is to reach the limit of moral absurd-
 ity, and to charge God with supreme folly.
 Ruskin once wrote: "I have met men who
 have boldly said, 'There is no God,' but
 never till I began to move among English
 Christians did I ever conceive that men lived
 who with unblushing effrontery could say,
 'There is a God, but He is a foolish God. He
 has put us under laws that are unworkable.'
 God's Golden Rule is man's Golden Rule,
 wrought out, not in some far away heaven,
 but right in the structure of his individualis-
 tic and social nature; and it is just as work-
 able between nations as between individuals
 as any two nations would speedily find out
 which had the good sense and courage to put
 it to the test. Emerson once said that love
 as the basis of a state had never been tried,
 and that it was folly to say before the experi-
 ment had been made that it would not work.
 The Golden Rule has never been tried between
 nations except in tid-bits possibly. We must
 insist that it have a full and fair trial; and
 until that time the skeptical croakers have no
 right to croak.

Nations have the same sense of what is just
 toward themselves as individuals have. No na-
 tion believes it right for another to make war
 upon it, to blockade its ports, to invade its
 territories, to kill off its young men, to break
 up its homes, to paralyze its industries, to re-
 duce it to vassalage, to slice off its territory,
 or to extinguish its independence by force. No
 nation in our day believes it right for another
 to exclude its upright citizens of whatever
 class, to make their entrance into its borders
 and their residence there hard and annoying,
 or to interfere with its trade by exacting and
 crippling tariffs. No nation believes it right
 for another stronger than itself to lay upon it
 any demands however small, which are dic-
 tated simply by superior might. What nation
 is there whose people believe it right for
 those of another to malign or ridicule them,
 to misrepresent their motives, to depreciate
 their manners and customs, and in general to
 belittle them? How sensitive nations are, in
 all these respects to what justice demands to-
 wards themselves. The most elementary sense
 of fairness ought to lead them to do in all
 these matters as they would be done by, and
 any nation which does not do so is condemned,
 not by others but by its own standards of
 right. If the nations half lived up to their
 light in this direction, there would not be half
 an hour's fighting among them in a century.

"The modesty of true worth is only equalled
 by the work of true modesty."

Perseverance—A Chapter for Boys.

"Thirty years ago," said Judge P., in about 1830—"I was standing in a bookstore in Cincinnati, when my attention was attracted by a little boy inquiring the price of Geographies. 'One dollar,' was the response. 'I did not think they were so much,' said the boy, shrinking back; and then he began counting some pennies and little silver pieces he held in his hand. Presently he came forward again. 'I have only sixty-one cents, could you let me have one and wait awhile for the rest?' How earnestly he seemed to await the answer and how he seemed to shrink back into his ragged clothes as the storekeeper kindly enough said he could not. The boy looked up at me with a very poor attempt at a smile and went out. "Something in his appearance interested me and I followed him. 'What shall you do now?' I said. 'Try another place, sir.' 'May I go with you and see how you make out?' 'O yes, sir; if you want to.' We went together into three more stores, in all of which he was refused. 'How about it now,' I said. 'I shall try them all, sir, or I should not know whether I can get one.' At the fifth store he went up manfully and told what he wanted. 'Do you want a geography very much?' 'Yes, very much.' 'Why do you want it so very much?' eyeing him curiously. 'I can't go to school now and I want to study at home and keep up with the other boys. Besides I want to learn about the places my father used to sail to.' 'Does your father sail to them now?' 'My father is dead. I intend to be a sailor myself some day.' 'Do you, though?' 'Yes, if I live.' 'Well, my lad, I will let you have a new geography for one dollar and wait for the change, or I will let you have one that is not new for fifty cents.' 'Are all the leaves in it the same as the new ones?' 'Yes, just the same.' 'It will do just as well—to me—I am glad they did not let me have one at the other places, for now I will have eleven cents towards another book.' I now told what I had seen, and when the book was brought along I saw a lead pencil and quire of paper in it. 'A present for you, my lad; always have perseverance like that and you will make your way in the world. What is your name?' 'William Haverly, sir.' 'Do you want any more books?' I asked. 'Yes,—looking around—more than I can ever get.' I gave him a note. 'It will buy some for you.' 'May I buy anything I want?' 'Yes.' 'Then I will buy one book for mother,—and I left him looking so happy that I almost envied him. Last summer I crossed to Liverpool on one of the finest vessels that ever sailed out of the port of New York. We had favorable weather until near our journey's end when there came on so furious a gale that our noble ship was reduced to an almost perfect wreck. The water gained on us so in spite of the best exertions in pumping that the sailors refused to continue their exertions. The mates were strong, willing men, but they could not control the crew. At this time the captain was below examining the chart. When he came on deck and saw the state of things, in a voice heard above the roaring of the tempest he ordered every man back to his work. It was wonderful to see how they all bowed to his strong will, and hurried back to the pumps. Three times during that fearful day did the men through despair refuse to

pump, and as often the captain's iron will and dauntless resolution brought them back to their work. As the captain passed me I asked if he had any hope of saving the vessel. With a look almost of reproach—"so long as I can see one foot of this deck above water I shall hope. When I can see none, then, and then only, will I give up; nor shall one of my men, sir. Bear a hand, every one of you, at the pumps. I will land you all safe at Liverpool if you will only be men." And he did land us there, though the ship sank at the wharf. I was the last to leave the deck. As I did so, the captain said 'Do you recollect me, Judge P.' I replied that I was not aware that I had ever seen him before coming aboard. 'Do you remember a boy looking for a geography in Cincinnati. God bless you, Judge P.' 'And may God bless you, noble Captain Haverly!' —*Baltimore American* (about 1860).

FOR "THE FRIEND."

Providential Direction.

Our late friend, Thomas C. Battey, related that while he was at one time residing in Canada, a minister of their meeting felt a concern to appoint a number of meetings in the neighborhood of his place of residence. Obtaining liberty for this purpose, and time being set to go forward and make the appointment, he unexpectedly found such a stop in his mind as obliged him to lay the matter by, and thus it rested for some months. At length the concern reviving, the meetings were appointed, greatly in the cross—to this Friend, both as he was not of ready utterance and his gift small. On the first-day before these meetings were to be held, Thomas said he noticed a stranger come into the house rather late, enveloped in rather strange looking fur habiliments—for the weather was bitterly cold. After divesting himself of his outer garments he appeared dressed in a plain, though coarse, suit of clothes. He stood by the stove for awhile warming himself, and then looking around for a seat, the Friend in the second gallery making room; he sat there, and at length arose and gave them a very instructive and edifying discourse. At the close, Friends gathering around and making inquiries, he told them where he belonged, and then stated that he had had a concern on his mind for some time to have some meetings appointed in that neighborhood, but that after obtaining the needful credentials, severe sickness in his family had prevented him from attending at that time to the concern; that his son being about to remove to a distance, it seemed best for him to take a load of goods, etc.; that the before-mentioned concern continuing and reviving with might, he had concluded to take that place on his return, and see if any way would open for the accomplishing of his prospects. He was told that the meetings were already appointed; accordingly he remained, and as Thomas said, had nearly all the service in them, much to the relief of the first proposer, and greatly to the satisfaction of Friends there.

A certain man, being confined in prison, in Burlington County, New Jersey, under sentence of death, in an aggravated case of murder; our late friend, E. Redman, was under a concern to visit him. This was approved by her meeting and two Friends ap-

pointed to accompany her. When they can for that purpose, she told them that the concern had passed away, and that she could no go. In about a week after she sent to them saying she now felt ready. The remarkable part of it was that they found upon arriving there, that the prisoner had broken jail on the day she had first proposed going, and that if he had been captured and reconfined on the day before she got there. This showed close attention to pointings, and it would have been sad fault had she found the cell empty. Somewhere about 1836, E. Redman found her engaged to go to Baltimore and endeavor to find a man towards whom her mind had been drawn. Calling some Friends of that city to gather she made known her concern, and to them that passing through their city some five years previously, her attention had been attracted to a man she saw in the street. Whether he was a resident or merely a passing stranger, she knew not, but felt she must make an effort to find him, believing that she succeeded in doing so, he would be found in great distress of mind. The description of his appearance as she remembered it was striking that it was at once recognized as being a slave-trader noted for his inhumanity his specialty being "to break in and South" refractory slaves. The man was found upon what proved to be his death bed, and great darkness and horror of mind. E. h. much to communicate, saying that though I state was an awful one, she believed that rightly sought for, Divine Mercy yet await his acceptance. It was believed that before his close he was favored with a more satisfactory state of mind.

Those who are familiar with Thomas Shilb's journal may remember the very remarkable account he gives of a visit—when in Baltimore some six or seven years before this—to a slave trader and how wonderfully he was brought down, and remarking that he had never witnessed anything so comparable to the lion and the lamb lying down together. The account, though exceedingly interesting is too long for even a summary of it, only remark that he said his mother had been a very pious woman, through whose influence I father had manumitted a large number of slaves. Doubtless her piety and fervent concern for him was a means towards a visitation being extended even at the eleventh hour.

When on a religious visit at one time, Redman was impressed, upon being driven past a field where hay-making was going on with a feeling of duty to stop and address one of the men upon the importance of a preparation for death. The singularity of the impression unhappily caused her to put it by. Reaching the house to which they were bound, they had not been there more than an hour before we was brought that this man had lost his life by a fall from a loaded wagon. Short as a time was, there can be no question that if earnestly sought for, due preparation might have been experienced. T. Scattergood used often to say he believed many a poor sailor clinging to a wreck had sought and found mercy. We felt this omission so deeply that she immediately returned home without finishing I visit.

"RELIGION is the Life of God in the human soul."

Science and Industry.

CONDENSED MILK A TRAVELER.—*Ainslee's Magazine* says: "There is no wilderness where a discolored milk tin does not glitter in the sun. It has spread the way across Africa; it has been very near to the Pole. In the fastnesses of northern Canada, where an American face had never been seen, General Young's soldiers found tins of the condensed milk with the brand of an American. It can be found all over Mongolia and Mantria, and even in Tibet. The Chinese, who do not take milk in their tea, use the condensed kind of food, chiefly for their children. In India also it has a large sale for that purpose, and it is not much to say that the product of the American factory has been the pabulum of millions of natives."

WHAT BECAME OF THE INHABITANTS OF POMPEII?

Max Nordeau raises an interesting question concerning Pompeii. He writes as follows to the *Neue Presse* (Vienna): "One thing has always puzzled me. Here was a flourishing city about thirty thousand inhabitants, most of whom evidently were well to do. A few hundreds, at least, lost their lives in the destruction of the city; the rest escaped. The eruption of Vesuvius continued only a few days, after which the district returned to its usual placid condition. In many cases the deposit of ashes and lava was only a few inches thick, and it was not more than three yards thick at any point yet excavated."

How did it happen that these thirty thousand helpless persons showed no desire to return to their beautiful houses, so well built that they are standing to this day, and which could have been repaired, at the time, with very little labor? Why did they not make the slightest attempt to regain their valuable property in land and buildings, furniture, bronze, marble, gold, silver and jewels? The men of that time have so little love of the things that they could leave it without a backward glance at the first unpleasantness? Were the Pompeians so rich that the loss of their perfectly adapted homes appeared trivial to them, so that they preferred settling elsewhere for restoring their property? Or did superstition prevent the attempt? Indifferent renunciation of their patrimony? Or whole city itself is to me an insoluble enigma. I have forces itself on me more strongly upon my attention as I walk along the finely paved streets between houses which need only new roofs to make them again habitable."—*Translation made for the N. Y. Digest.*

UNDER QUICKSAND.—The practicability of sinking salt through quicksand has been demonstrated on Weeks Island, in Iberia parish, and the success of the undertaking opens up a great industrial possibility for Louisiana. For more than twenty years efforts have been made to reach the salt beneath the quicksand, and now the difficulties have been overcome by the Myles Salt Company by sinking a caisson and the application of other methods.

The process by which this caisson for the shaft was sunk and secured is interesting in many ways. The caisson is composed of circular steel bands, each eighteen inches in height, and as one is sunk the next is riveted to it, with pitch paper between each one airtight, the earth being taken out as the caisson sinks down. It took forty-three feet of salt sinking and mining to reach the quicksand, and the water was forced back by the application of compressed air, the caisson meanwhile being capped by an airtight. The pressure of the salt below the surface was from eighteen to twenty pounds per square inch, so a very powerful pressure was necessary to keep the shaft clear of water, but this was done, and, passing through a layer of clay overlying the salt stratum, the water of the caisson finally rested on the salt bed and was sunken some feet further into it.

Below that the salt was penetrated, and a wooden caisson, running from the water line, fifty feet above, to a present depth of ninety-three feet below the surface was put in, and then the process of cementation began. First the rock salt was smoothed off and cut in, when it was heated to an intense heat by the flames from compressed air blow-pipes, and the cement, consisting of pitch and asphalt, was poured over, filling up the interstices and sticking to every crack and cranny. Over this was laid a covering of cement, the whole not only securing the caisson, but making it absolutely air- and water-tight, and permitting uninterrupted work of the miners.

But the mining will not stop at this depth of ninety-three feet. Instead, it will be sunk to a depth of three hundred to four hundred feet, while tunnels will be run out and big chambers will be blasted and mined, and the pure rock salt brought to the surface for distribution all over the United States and Canada. For this purpose the Southern Pacific Railroad Company has already begun the construction of a spur some three miles out from its main line.

By the sinking of rods at various points surrounding the shaft it has been ascertained that the salt strata is a mile or more in width, while the bottom has never been reached, affording what is practically an inexhaustible supply of the finest salt in the world.—*New Orleans States.*

DESPISE NOT THE EARLY OPPORTUNITY.

As she passed beyond the edge of the woodland, on her way into its depths, where she expected to find the choicest treasures and to hear the sweetest secrets in the stillness, Sylvia noticed a fine spray of goldenrod, the first of the season. "How beautiful that is!" she exclaimed. "When I come back I will gather it and take it home." But the wood-pilgrim wandered about, and in and out, following beguiling little paths that seemed to go everywhere and led nowhere after all, and when she turned her face homeward she came out of the wood a long distance from where she had entered it. The place was not very familiar; and Sylvia, while thinking that she knew where she was, searched everywhere about for the goldenrod left. She could not find it, nor any like it, and went home without the coveted bloom. "The next time I'll take it as I pass, and not wait until I come back," she resolved, with wisdom born of disappointment. "The safe way is to take such things when you see them first, otherwise you may miss them altogether." There is a little sermon wrapped up in this reflection about the goldenrod. Expand it and it may prove practical. Learn to take the little sweetnesses and pleasant things of life as you go, and do not be in haste to go farther, promising to enjoy the first things upon the edge as you return. It may be impossible to find them again. And when a bright little opportunity blossoms as you pass, stop to pluck and use it. You may not pass that way again.—*Bright Threads.*

NEED OF THE RELIGIOUS PRINCIPLE.

I confess I look round on civilized society with many fears, and with more and more earnest desire that a regenerating spirit from heaven, from religion, may descend upon and pervade it. I particularly fear that various causes are acting powerfully among themselves to inflame and madden that enslaving and degrading principle, the passion for property. This peril is increased by the spirit of the times, which is a spirit of commerce, industry, internal improvements, mechanical invention, po-

litical economy and peace. There is danger that these blessings may by perversion issue in a slavish love of lucre. I am no foe to civilization. I rejoice in its progress. But without a pure religion to modify its tendencies, to inspire and refine it, we shall be corrupted not ennobled, by it. It is the excellence of the religious principle, that it aids and carries forward civilization, extends science and arts, multiplies the conveniences and ornaments of life, and at the same time spoils them of their enslaving power, and even converts them into means and ministers of that spiritual freedom which, when left to themselves, they endanger and destroy.—*William Ellery Channing.*

The Grandmother's Place.

She was a dear, white-haired old lady—the very ideal of a grandmother, and she sat by the fireside rocking slowly, but with a sad look on her gentle face.

"No, dearie, I'm not sick, but I do feel lonely sometimes."

But why should she be lonely? She was in a family of well-bred young people—son and daughter and grandchildren of various ages. To be sure, many of her dear ones had gone across the river to the Father's house; but she was not of a melancholy temperament, so she did not brood over that.

She loved the young people. She would have liked to join in their merriment; she would have gone with them to some of the lectures and other places, if she had been asked. But they in their thoughtlessness never imagined that grandmother cared for such things, and so they sat talking over their plans, telling merry tales and jokes, but leaving grandmother out of the conversation altogether.

They were never unkind to her. She had the best room in the house. Her bodily comfort was attended to first, her wishes were immediately carried out. But she would gladly have given up all this to have one of those bright-faced boys or girls for a companion. If they would only have sat down and told her some of their stories and plans, how glad she would have been; and she had pleasant stories to tell, too, if there were some one to listen and care.

But she sat by the fire with a shadow on her lovely old face, and said, "I am so lonely sometimes." I wish they could have all heard it, and understood the pathos of it. It will not be long till grandmother's chair will be vacant. She has spent her life in ministry for others. Common gratitude would demand that her last days should not be lonely and companionless. Love the grandmother; give her a place in your heart as well as your home, and make her closing hours her happiest.—*Selected.*

THERE are schools in Germany for farmers, gardeners, florists, fruit growers, foresters, blacksmiths, carpenters, machinists, cabinet makers, bookkeepers, tailors, shoemakers, druggists; there are cooking schools, institutes for training servant girls, barbers and chiropodists. One can find a school in Germany for teaching anything one wants to know; and it is usually supported by the Government and free to all comers, or perhaps only a nominal tuition is charged.

Items Concerning the Society.

William C. Allen was at Downtowntown Friends' Meeting, Twelfth Month 15th, and at an appointed meeting in the Y. M. C. A. Hall of Downtowntown in the afternoon; at New Garden Friends' Meeting Twelfth Month 22nd, and at an appointed meeting in the afternoon for the public in the Kennett Friends' meeting-house. The appointed meetings have generally been largely attended.

The only regret which the [Peace] Conference left in our minds was that so few of the Christian ministers and other members of the city churches were present at the sessions. Twelve hundred ministers were personally invited, and one looked almost in vain for any of them in the audience. Yet it cannot be doubted that a real force has gone out from the work of these three days, and we believe there will be good returns for the expenditure of effort.—*American Friend.*

SUMMARY OF EVENTS

UNITED STATES.—Governor Leslie M. Shaw, of Iowa, has been appointed Secretary of the Treasury, to succeed Lyman J. Gage.

A committee of 36 capitalists, labor leaders and distinguished citizens has been selected, most of whom have accepted the invitation, to deal with questions between the employers and employed. One of the members is S. Strauss, of New York, says: "All realize the supreme importance of this committee to the future welfare of the country: The plans are in no sense visionary or theoretical. They have been made by practical business men to effect practical results. Conciliation and mediation will be the great work of this committee. Our plan is to prevent industrial disturbances before they have reached an irreconcilable stage. Should they reach the irreconcilable stage between workmen and employers, this permanent committee is there to bring this stage to an end by the use of all the forces and influence at its command. Ex-President Cleveland is one of the committee.

A Washington special despatch intimates that if Germany may force in collecting the claims of her subjects in Venezuela, France, Great Britain and, perhaps, other nations may take similar action for the settlement of similar claims in the republics of Central and South America.

The colored population of Philadelphia, according to the twelfth census, was over 64,000. The increase for the year ending 1900 was 23,654. The colored population of the State of Pennsylvania, before the Civil War, from the fourth to the eighth census, was almost stationary. The increase in the State of Pennsylvania during the last ten years is nearly as great as the whole colored population of that State was at the close of the war. The colored population in the North is not only being rapidly increased from the South, but it is said that the very worst of the colored people of the South are coming North, so that the moral status of the people is much lower in the North than it was before the Civil War.

The number of sailors and others whose business is on the high seas, is estimated at 3,000,000. Last year more than one-tenth of this ocean population of sailors and men, of 4243 vessels, entered the port of New York.

A writer from Los Angeles, Cal., says: "In no locality has modern steam farming machinery been applied with such effectiveness as upon the grain ranches in Southern California. On one ranch the engine used to draw the machinery is of 50 horse power, and has a drive of 100 feet. In plowing fifteen five-furrows are turned over at one time, covering a breadth of forty feet. The average capacity of the machine is the plowing of 110 acres per day. The use of this machine is not an experiment. On a ranch of 1,000 acres it is an economic investment, but a smaller acreage would not warrant the outfit."

The rock-salt mine near Lyons, Kansas, has been worked but a few years but its output is nearly 500,000 barrels yearly.

According to a compilation made by Director Merriam, of the Census Bureau, it appears that there is a total of 27,605 persons resident in the District of Columbia, employed by the Government in its various departments, including the two House of Congress. Of this number of citizens, about one-fourth are females their number being 7,496. The summary does not include officers of the army, navy and marine corps on duty in Washington. Formaldehyde, as a disinfectant of houses visited by smallpox, has been used with excellent results in Cleveland. According to news reports from this city, a small pox epidemic has been recently indicated by a system of disinfection with formaldehyde as the agent.

In reference to the spread of this disease, Dr. Benjamin Lee states: "The present epidemic is of long growth. The year ago the disease was brought to Florida from Cuba. From Florida, in the intervening time, we have traced its progress northward State by State. Before any case of smallpox appeared in this State, the State Board of Health sent out warnings—more than 600 of them—to all the local Boards of Health, notifying them that the disease was coming, and calling upon them to prepare for it by vaccination and the establishment of emergency hospitals. At first its form was mild, and widely diagnosed as chickenpox. The percentage of deaths was small. But in our colder climate the virus waxed strong, and now the death rate is high." In Boston vaccination has been made compulsory.

The Secretary of Agriculture, speaking of the growing of tea in South Carolina, which has been going on for several years, recently said: "The production of several kinds of tea in the United States is now assured, and in addition to this, it is encouraging to note that experts who have examined the tea produced here pronounce it equal in flavor and aroma to the best imported from the tropics. The profit in the crop raised last year averages from \$30 to \$40 an acre. In 1900 about 4500 pounds of high grade tea were produced, and a ready market was found for all of it in South Carolina."

The annual report of the Philippine Commission gives a summary of the legislation desired from Congress. The Commission wants its present authority continued for the year 1901, and in the plan of civil government proposed provides for a popular Assembly. It is proposed to issue bonds to buy out the agricultural holdings of the friars and to make improvements in Manila. Plans are also provided for granting franchises, in order to develop the business resources of the islands, principal among which will be the mining of coal.

The mining of phosphate rock is one of the important industries in Florida and South Carolina. It amounts to 1,500,000 tons a year, valued at \$5,360,000 at the point of production.

The steam railways of the United States now aggregate practically 200,000 miles, and those of the entire world nearly 500,000 miles. This is an heretofore does not run on the railways operated by electricity, of which the mileage, exclusive of street and suburban roads, is considerable and rapidly increasing.

There were 476 deaths in this city last week, reported to the Board of Health. This is 46 more than the previous week and 7 more than the corresponding week of 1900. Of these 476 deaths 7 were from typhoid fever, 10 from typhoid of consumption of the lungs; 69 of inflammation of the lungs and surrounding membranes; 20 of diphtheria; 8 of cancer; 16 of apoplexy; 3 of typhoid fever; 9 of scarlet fever, and 19 of small pox.

COTTON closed on a basis of 54c. per pound for middle-lingers.

WHEAT.—Winter, spring, \$2.75 to \$3.00; Pennsylvania roller, straight, \$3.50 to \$3.70; Western winter, straight, \$3.50 to \$3.85; spring, straight, \$3.75 to \$4.00.

GRAIN—No. 2 red wheat, \$4 to \$4.10.

No. 2 mixed corn, 66c. to 66c.

No. 2 white oats, clipped, 55c.

BEF. CATTLE.—Best, 64 to 64c.; good, 54 to 54c.; medium, 5 to 51c.

SHEEP.—Choice, 34 to 34c.; good, 34 to 34c.; common 14 to 24c.

LAMBS.—44 to 44c.

HOGS.—Western, 8 to 8c.

FOREIGN.—A dispatch from Washington of the 24th ult., says: China will be relieved of the payment of \$18,000,000 to the United States for the Boxer revolt of 1900. The action will be taken because the Administration, after consideration of all the claims filed by Americans who suffered injury or whose property was damaged, and the expenses incurred by the United States army and navy, has concluded that \$7,000,000 will certainly be paid by the American bill. In justice to China, therefore, the Administration believes she should be relieved from the payment of the remainder, or that it should be restored after the United States receives its share of the bonds to be issued to the Powers. At the same time, the authorities have no objection to the permission being given to the United States to refuse to accept. China, and not the Powers, is to be the beneficiary.

A waterspout is reported to have burst over the town of Safie, Morocco. It inundated the lower part of the town for the space of twelve hours, sweeping everything into the sea. Two hundred persons are reported to have been drowned.

Strained relations have existed for some time past between Chili and Argentina, in reference to a question of boundary, and both nations have been preparing for war.

The Government at Washington has been using its influence in the interests of peace. On the 24th ult., however, when the two countries were adopted, it is believed, will settle the controversy, at least for present.

Official reports show that in India the number of people has grown from 753 in 1856 to 29,122 in 1891 and that the number of pieces received by the post-office increased from 75,000,000 in 1788 to 483,000,000 in 1891. The total number of pupils in the schools of India is now nearly 4,500,000, against about 3,500,000 in 1881 and the expenditure for public instruction was in 1891 36,215,000 rupees, against 394,000 rupees in 1858. Additional evidence of the general intelligence will be found in the fact that the number of vernacular newspapers published in India in 1891 was 758, and the number of books and magazines published in 1893, 7437, of which 6236 were in the native language.

Arrangements have been entered into between Marconi Company and the London and Brighton Rail and the corresponding French Railway Company to have an installation of a permanent chainway between the seven and Dieppe across the English Channel. The departure of boats will be signalled, with instructions as to the amount of luggage, number of passengers and of useful information.

The British population working underground in mines 578,000.

Siberia contains about 9,000,000 people, 97 per cent of whom are natives or voluntary emigrants.

Severe fighting is reported from South Africa, and London newspapers express the belief that it is hoped to expect peace in the immediate future.

Havana, which was formerly one of the unhealthy cities in the world, has now become one of the healthiest. The death rate in 1897 was 106 per thousand. Since sanitary improvements have been introduced by Americans it has been reduced to 21 per thousand in 1900. In 1901 it was 19.58 per thousand.

During the Eleventh Month there were no cases of deaths from yellow fever. This can be said of no previous Eleventh Month since 1762. During the last 46 years the average number of deaths from this disease in Eleventh Month has been 48.

A substantial agreement on the subject of arbitration has been practically reached by the several delegates to the Pan-American Conference. The basis of agreement is simply The Hague convention.

Botanists of the New York Department of Agriculture are reported to have found several new varieties of one mountain in St. Christopher, W. I.

NOTICES.

WANTED.—A young woman Friend to assist in household duties in country town.

Address E., Office of FRIEND.

WESTTOWN BOARDING SCHOOL.—A stated meeting of the general committee will be held in Philadelphia, Month 10th, at 10.30 a. m. The committee on Instructions will convene at 9 o'clock same day.

WM. B. HARVEY, Clerk.

WESTTOWN BOARDING SCHOOL.—Applications for admission of pupils to the school, and letters in regard to the same, should be addressed to Wm. F. WICKESHAM, Principal.

Payments on account of board and tuition, and communications in regard to business should be forwarded to EDWARD G. SMEDLEY, Superintendent.

Address, Westtown P. O., Chester Co., Pa.

WESTTOWN BOARDING SCHOOL.—For convenience of persons coming to Westtown School, the stage will leave trains leaving Philadelphia 7.16 and 8.18 A. M., and 4.32 P. M. Other trains are met when requested. Stage fares, fifteen cents; after 7.30 P. M., twenty cents each way. To reach the school by telegraph to West Chester, Phone 114x.

EDWARD G. SMEDLEY, Secy.

DIED, at his residence in Media, Pa., on the sixth of Ninth Month, 1901, JOSEPH PARRISH, in the eightieth year of his age; a member and elder of the Monthly Meeting, Pa. Having submitted in early life to purifying baptisms of the Holy Spirit he became known for usefulness in the church, and was highly valued by his judgment in many important stations. He was brought under humbling contrition and conviction of sin, and his friends have the comforting belief that the mercy of God in Christ Jesus has been received, and blessed reward promised to the poor in spirit.

THE FRIEND.

Notes on Tuskegee and the South.

George Vaux, Jr., David H. Forsythe and J. Ry Bartlett have recently made the trip to Tuskegee, and at our request have furnished these notes for THE FRIEND.—Ed.

Tuskegee is about nine hundred miles from Philadelphia. We think of it as being due south, —as far west, perhaps, as Cincinnati, that the Tuskegee clocks are all set to central time, making our Philadelphia watches hour fast. One can leave Philadelphia at ten in the evening, on the luxurious South-land Limited, and if the train keeps to its schedule can reach Tuskegee by 10 o'clock of the evening of the next day. The route carries by Washington and through eight States. Save for some elements of novelty in the open fields and rude log cabins, one is little affected by the scenery. In the part of the trip through which we passed, the surface is somewhat broken, and later it becomes more mountainous. The railway line twists its way among these mountains in seemingly endless curves, and the swift train is affected with a complexity of motion not unlike that of a ship in a storm. The soil for the most part is intensely red, and washed into nature gulches and glens on the hillsides. The farmer gives rise to a peculiar method of tillage, by circular terraces about the hillsides near the banks of the Rhine in appearance. One sees there vestiges of cotton waved by the flag of truce from the dead cotton stalks, and with the deep red ground ground with the thoughts of the carnage that had desolated these fields.

Our train was late, southern trains are apt to be late, and at Atlanta we found we had about two hours. Chehaw is the station on the main line for Tuskegee, which is reached by a branch road at a distance of five miles. We realized that we might easily be lost in the wilderness without resources of shelter or comfort for the night, and at a station of the ticket agent at Atlanta we were told Tuskegee that we were late and asked for conveyance from Chehaw. The train conductor from Atlanta, however, was reassur-

ing. He would wire for the connecting train to wait and we need have no fear. So we were whirled on through the moonlight to the unknown Chehaw. It was about ten-twenty when this stop was announced and we were put down to find no connecting train and no conveyance for Tuskegee. A Railroad station, with the inevitable, "For White People," "For Colored People" over the doors of the waiting rooms, a very modest cottage for the station agent, and at some distance a colored man's cabin, seemed to make up the entirety of the settlement of Chehaw. The station agent was civil. He knew something of Tuskegee, had some appreciation of it, but evidently felt he had been at much pains in coming so far to pay our respects to the work there. He thought we might walk the five miles if we were good walkers, but finally suggested that Bob Beesley, the colored man who had been a silent spectator of our dilemma, might take us over.

In the moonlight—fortunately the moon was at its full—"Bob" Beesley presented the appearance of a typical Southern negro. He used the characteristic dialect to perfection and manifested his fund of good nature by frequent outbursts of "Ya, ha" in inimitable fashion. He had a "hack and hosses" and would take us to the school for a dollar a piece. We also learned from him that we could find accommodations "at a hotel" on the school grounds and that our midnight arrival would not be disconcerting. Evidently "Bob" had a high opinion of the school and of its resources. In something less than a half hour we were packing ourselves into the "hack." Two of us sat on the back seat and the third faced us on the broad seat occupied by the driver and his brother Hugh Edward. They told us that they had had a good Christmas—"Never so good a time in all my life," was Bob's exclamation. They had feasted on "possum" and goose and had had turkey and a good sized shote besides. To the query in regard to drinking they confessed that it had not been absent, but that it had not reached the danger-point. With this introduction, we turned somewhat aside from the beaten road and took a short cut through the wood for the school. The station agent had assured us of the honesty and reliability of our escort, and our first ten minutes with him had been reassuring. Hugh Edward, in the meantime, had shown himself very merry and the "get up Fanny" and "come here Selam" only served as a picturesque background for a dialogue that was wholly without parallel in our experience. Gradually the road got worse, and finally, as we were ascending a little hill, two of the traces broke. This was but the beginning of ills. "Fanny" began to balk and with a balking horse and breaking traces we spent more than an hour on the two miles of sandy

woodland road, getting in and out of the rickety carriage quite a dozen times. In the very midst of the woods a moving object proved to be a person on horseback, and our preconceptions in regard to Ku Klux gangs seemed to have reality. The situation anyway was doubtless serious enough, but was wholly redeemed from seriousness by the un-failing good nature of the colored men and their absolute freedom from impatience or profanity. We all gladly acknowledged that they were a lesson to us and an example to many who might easily feel superior to them.

It had passed the hour of midnight, but we were at last out on the open road and dark objects before us assumed the shapes of buildings and houses and spires that might be Tuskegee. The horses were in the spirit of triumph after labor, and very soon we turned into the school grounds, and driving past several buildings stopped before a frame structure where stood a guard. Eight of these faithful fellows, we learned, watch the place every hour of the night. And now after midnight, without previous notice or introduction, we were turned over by "Bob Beesley" to the tender mercies of these young colored boys. They made no protest at our late arrival, they regretted the inconvenience we had had, but evidently did not think for one minute of the trouble we might give them. To accommodate the three of us in the emergency, required that a room should be furnished in part and a bed made. They went about this with all despatch and at 1.15 A. M. we were preparing for bed.

Very early the next morning the bell began to ring in good Westtown fashion, and the two of us in the newly furnished room were sensible for a few short moments, that the activities of the day had commenced. An hour later a friendly knock on the door aroused us and we found a young man prepared to show us to breakfast. He awaited our convenience and nearly an hour late we were taken to the dining-room. Nowise disconcerted with our tardiness, the indulgent housekeeper proceeded to have us a fresh breakfast prepared and made us feel a comfortable sense of welcome in the hospitality of the school. Breakfast over, the sun had sufficiently dispelled the mists to give us a good view of the forty or more buildings that are included in the school plant. Perhaps a dozen of these are of brick and are in every particular worthy of the noble uses to which they are assigned. The buildings are grouped about the crest of a somewhat irregular X shaped ravine. The Industrial Buildings, the Agricultural Hall and the chapel are at one end, the Hospital and some of the girls' dormitories are on one side, the Administration building, Science Hall, Boys' dormitories, president's and teachers' houses and new

Carnegie library are on the other, while Alabama Hall is somewhat in the centre. When one reflects that these fine buildings are practically all the product of student labor a sense of the presence of a great work is quite overpowering. The Carnegie library is just getting the roof, but one sees at a glance that it will be an imposing structure in the best colonial style. The plan, we learned, was drawn by the teacher of drawing, the bricks were burned by students and the whole structure is the product of home labor. When finished the building will be a fitting monument of the triumph of Booker T. Washington's noble ideas.

(To be continued.)

Testimonies for Truth Still in Force.

The following editorial has appeared in the Evening *Bulletin*, of this city, concludes with an appreciation of the public value of our religious Society to the country, wherever we will maintain our wholesome testimonies for truth. There are several such testimonies which would bear their moral and spiritual teaching, preaching, or protest to any "crooked and perverse nation," among whom they would "shine as lights in the world, holding forth the word of truth." The article is entitled "Shaw and 'your Excellency,'" and is as follows:—

"General attention has been directed to the telegraphic despatch in which Governor Shaw informs President Roosevelt that he will accept the post of Secretary of the Treasury. The Iowa Governor says with great deference that 'if it will please Your Excellency,' etc., he will take the place. Where did Governor Shaw learn this form of lowly salutation to the President? 'Your Excellency,' which has no official standing whatever as a ceremonial title, went out of vogue long ago in this country in addressing the executive, although still used in one or two States in the formal designation of a Governor. Besides, how is it that a man in a democratic commonwealth like Iowa pens an informal personal communication with the words 'if it will please' after the European manner of addressing a royal sovereign. It certainly looks as if the Governor were oppressed with a reverence for the greatness of Mr. Roosevelt or his office or both. It is a little thing, of course, but is one of those little things which often go a long way in giving the country an idea of a public man's calibre.

"On the same day that President Roosevelt received Governor Shaw's telegram, a committee of Friends in this city, of which President Isaac Sharpless, of Haverford College, is chairman, forwarded to him a formal letter on the subject of their peace conference. They addressed it 'To Theodore Roosevelt, President of the United States: Honored and Respected Friend.' What better example could there be than they offer of a salutation which combines at once simplicity of expression, personal courtesy, official respect and the democratic spirit?"

To be faithful in outward things is the direct way to be entrusted with spiritual things; whereas if we neglect the first, under the plea that they are lower or of less moment, we cannot have the true riches committed to us.

"My Lord and I."

BY L. SHOREY.

[An authorized and corrected reprint of the poem which appeared in our issue of Eleventh Month 23, entitled "My Lord and I," is necessarily given below, now that we are informed by Walter Morice, of England (a companion of our friends Samuel Morris and Thomas P. Cope on their visit to Denmark and Norway), that the author was his next door neighbor when he lived at Leytonstone. She continues to find time amidst urgent household duties to write several such poems and other articles. The words of this poem were composed by L. Shorey, while busy in the kitchen one morning. Their having been handed in for THE FRIEND as of Huguenot authorship, has its only basis in the old Huguenot tune in which they have been set to music. The author has received many thanks "from the most out of the way places, for the help and blessing which her simple poem has been to weary souls."—ED. FRIEND.]

I have a friend so precious,
So very dear to me,
He loves me with such tender love,
He loves so faithfully:
I could not live apart from Him,
I love to feel Him nigh,
And so we dwell together,
My Lord and I.

Sometimes I'm faint and weary,
He knows that I am weak,
And as He bids me lean on Him,
His help I gladly seek:
He leads me in the paths of light
Beneath a sunny sky,
And so we walk together,
My Lord and I.

He knows how much I love Him,
He knows I love Him well;
But with what love He loveth me
My tongue can never tell;
It is an everlasting love
In ever rich supply,
And so we love each other,
My Lord and I.

I tell Him all my sorrows,
I tell Him all my joys,
I tell Him all that pleases me,
I tell Him what annoys;
He tells me what I ought to do,
He tells me what to try,
And so we talk together,
My Lord and I.

He knows how I am longing
Some weary soul to win,
And so He bids me go, and speak
The loving word for Him;
He bids me tell his wondrous love,
And why He came to die,
And so we work together,
My Lord and I.

I have his yoke upon me,
And easy 'tis to bear;
In the burden which He carries
I gladly take a share;
For then it is my happiness
To have Him always nigh:
We bear the yoke together,
My Lord and I.

So up into the mountains
Of heaven's cloudless light,
Or away into the valleys
Of darkness or of night,
Though round us tempests gather

And storms are raging high,
We'll travel on together,
My Lord and I.

And when the journey's ended
In rest and peace at last,
When every thought of danger
And weariness is past,
In the Kingdom of the future,
In the Glory by-and-by,
We'll live and reign together,
My Lord and I.

Reminiscences.

(Continued from page 194.)

Samuel Cope, referred to in a previous number, as being acceptably engaged in the ministry at Westtown in 1850, was a member of Bradford Monthly Meeting in Chester county, Pa., and was not only highly esteemed for "work's sake," but as a private citizen in thickly settled neighborhood.

This was attested by the very large attendance at his funeral. He was a man of fine personal appearance and commanding presence. An uncompromising lover and defender of the Truth.

Fearless alike of friends and foes
As right and left he dealt his blows;
But when sickness and sorrow came to be,
Gentle as a lamb was he.

His last public appearance in the minister was at Downingtown meeting, when nearly blind and spoke clearly and impressively from text, "Before I was afflicted I went astray but now have I kept thy word."

He died Eleventh Month 11, 1871.

In number twenty-six of the present volume, mention of our beloved friend Hann Gibbons was made, but no allusion to the humble and true Christian courtesy that were marked a feature in her character. She was an example to all; and furnished a strong evidence of the power of Divine Grace in the soul of man to bring into exercise those Christian graces that make the society of those who possess them, so attractive to others. Even to old age she was remarkable for her consideration of the comfort and happiness of her friends. She died in West Chest. Fourth Month 2nd, 1868, in the ninety-eighth year of her age, and sixty-third of her ministry. "Blessed are the pure in heart, they shall see God."

The same characteristic which distinguished her were conspicuous in her faithful daughter Jane Gibbons, who also attained the age ninety-four years, of both of whom memoirs were issued by Philadelphia Yearly Meeting.

"God calls our loved ones, but we lose not who
What He hath given;
They live on earth in thought and deed truly
As in his heaven."

Joseph Snowdon, under date of Twelfth Month 6, 1856, writes to Joseph Scattergood from Westtown: "Samuel Bettle staid at attended meeting on Fifth-day and was largely engaged in explaining to the children our testimonies on various subjects, that plainness of dress, silent waiting, against hiring ministry, music, etc., which I hope will have a useful effect."

WESTTOWN, First Month 19, 1857.

Joseph Snowdon to Joseph Scattergood: "We have had one of the most unprecedented

low storms since we have been at Westtown. The thermometer stood at zero and below most of yesterday; it commenced snowing in the afternoon and continued all night. The roads are completely blocked up in places. There has been no intercourse with West Chester to-day. We had some difficulty in getting the grass front doors open, the snow was so drifted against them. The pipes in our room are frozen and not yet thawed at 4 o'clock, P. M. John Benington is out with several yoke of oxen to break the road from here to the farm. Truly I am almost overcome with having so many things to do, and it is high time we are released. I have several men out trying to make a road to the woods, as we have not much wood on hand. I suppose we use from five to five cords per day these windy days. We have had to keep some of the water pipes running constantly to keep them from freezing. The house ought to be heated all over with steam or hot water.

The same to the same, First Month 24, 1857: "I have written thee a telegraphic spatch, requesting thee to send us fifteen barrels of flour immediately, and to see that it put on the cars. The miller has just been here and said they cannot grind at all. The roads are much unbroken. Samuel Alsop informs, his thermometer was twenty-two degrees below zero. I believe there has not been a single person here this week, except one man on foot. John Benington himself went to West Chester this morning in a one-horse sleigh. It is really a very trying time.

WESTTOWN, First Month 27, 1857.

Anthracite has been used very freely indeed and the circular saw cutting twelve days per day, has also been used with the least freedom. I expect the temperature this month has been lower than it has been in the last one hundred years, at least. Who has heard of seventeen, twenty, twenty-two or thirty-two degrees below zero in this section of the country?

Under date of Westtown, Seventh Month 8, 1857, Joseph Snowdon writes: "Thy letter the seventh was received last evening, conveying the sad intelligence of the death of Benjamin Warder. He was one of my oldest friends. He will be greatly missed.

W. P. T.

No one follower of Christ should condemn another because the other's spiritual life is of the same stamp as his own. Let not Martha, busied with her much serving, running everywhere to missionary meetings, or visiting the sick and poor, find fault with Mary in her quiet devotion, peaceful, thoughtful, gentle, loving, because she does not abound in the same activities.

Nor let Mary in her turn, judge Martha, and be herself superficial. Let her honor it rather as the copy of another feature of the exquisite loveliness of Christ. The Marys are very lovely; and every woman should have the very spirit of peace, and should set much store, like, at the Master's feet to hear his words, in order to be fitted for the best service. But Martha's work must be done too; Christian woman will neglect her duties of service in her privileges of devotion.

J. R. MILLER.

FOR "THE FRIEND."

Orson Douglass and John D. Bemo, the Indian.

In a stray copy of a serial leaflet, "Good News for Sea and Land," printed about two years ago, the writer of this read a brief sketch of the life of Orson Douglass, a Presbyterian minister, who died half a century ago in Philadelphia. The sketch was written by Martha D. Foulks, a daughter.

Orson Douglass was born about 1798 in Vermont, near Middlebury, his father being a miller. He early studied law, but his health being impaired he went South for a year, becoming a Christian, and, following a call to the ministry settled first in Marietta, Pennsylvania, and, fourteen years later, came to Philadelphia, where at the age of forty years, he interested himself in the "Mariners' Church," near the Delaware River front. The Sailors' Home was largely started through his endeavors, also the plan of forecastle libraries for the sailors. The daughter referred to remembers the first bookcase her father had made, how he solicited money with which to buy suitable books to fill them, and how she looked over bundles of pamphlets, papers, etc., for distribution to the seafaring men, who were told to hand them to others when they had read them. Orson Douglass was much interested in the promotion of temperance. With John Chambers, an earnest Presbyterian minister (whom I remember, when in my teens, hearing spoken of as taking a special interest in the spiritual welfare of the University students), he was the first in Philadelphia to take John B. Gough by the hand after his "fall" in New York city. The following incident, very nearly as narrated, concerning saving a drunkard, is worth preserving:

"There was one family, the husband a sailor—an oysterman—a drunken fellow, as was the wife's father, also. The husband, under father's preaching, was converted. One day father called at the house, saw the old man, ninety years old, sitting by a table in the corner with a jug of whiskey near his hand. He was trembling, his eyes red, his hearing defective. Father went to speak to him. His daughter said, 'You can't reform him. He was in Washington's army; has been a drunkard for seventy-five years.' But he did talk to him and prayed that the Lord would open his eyes to see his danger. He did not visit that section again for two weeks, I think. He was then standing on the other side of the street, and he heard some one call him; he turned and saw the old man at the gate; crossed over and called loudly in his ear, 'You need not do that,' said the old man. 'See, I've got my hearing and my legs, too, and I've not touched a drop of the liquor since I saw you.' They went into the house together, the daughter meeting him with joyful face, saying 'Oh, Mr. Douglass, our house used to be a hell upon earth but now it's like heaven!' Cheerfully acquiescing in the invitation to come to a place of religious worship he was not long afterward received into membership continuing steady, while manifesting a good religious spirit to the end. He died at the ripe age of one hundred and two or one hundred and three years."

A personal letter from the inditor of the above account, written from a temporary rest retreat away from her Maryland home, con-

tains some interesting and stimulating information concerning a Seminole Indian, John Douglass Bemo, who had been helped upon his course in the narrow way through acquaintanceship with Orson Douglass. The writer says:

"Although I have been confined to the house by sickness for several months, I feel I can still be of some use in the Master's vineyard. I know the account of John D. Bemo's conversion was published in the report of the Seamen's Friend Society of, I think, 1840 or 1841; still I can give some facts in his life while with us. When John was a growing lad, his father with several other Indians, went down to St. Augustine to sell furs, etc., taking him with them. After the sale they became intoxicated, quarreled, and John's father was killed. His companions fearing detection, made their escape, leaving the lad among strangers. Eventually he went to sea, at one time with a good captain who influenced his whole life. One night, when in his bunk, he was surrounded by a light and heard the 'Good Spirit' calling him to follow Him, to give Him his heart—which he did. In a short time he came to Philadelphia, was taken to the Sailors' Home, and thus became acquainted with my father. He found John was anxious to obtain an education, and return to preach the news of salvation to his people, who had then removed to the Western reservation.

"Father took him into our own family that he might the more closely observe him, and found his conversion genuine. He was then admitted into membership of the Mariners' church. Father interested the members of the Ladies' Seamen's Friend Society in his behalf, and others of his acquaintances, enabling him to go to school, but he always made his home with us. I never met a more lovely Christian character than John's, 'coveting earnestly the best gifts,' which Paul speaks of in 1 Cor. 13th chapter. He slept in a room over mine, and I would often be waked up at night by hearing him wrestle in prayer with his God, for himself and his people. He went to Easton to finish his studies. He was a nephew of the celebrated chief, Osceola, and he thought if he could go back to his people, dressed as his uncle did, they would be more willing to receive him. So a handsome embroidered garment was made by a number of lady friends, taking as a pattern the likeness of the chief, by Catlin.

"On his return he was welcomed by the tribe, especially when they found he did not aspire to the chieftanship, only seeking to be their spiritual leader. After he had been at home a short time, a band of chiefs, old M'keno-py, Tiger Tail, Tusternugger, the afterward celebrated Wild Cat, and a colored interpreter, came on to Washington on business for the tribe; from there to Philadelphia to see the friends of John, and know if he had told them the truth. Father found a suitable boarding place, and took them round to visit places of interest; had meetings in their behalf, collecting various articles as presents. The last evening of their stay, the interpreter spoke of the kindness of their white brothers, and what a wonderful people they were, they could do everything but put life in the body; he thanked them for their many gifts, but [added], when they went home and showed

[the presents] to their wives and children, they would say, 'What did they send us?' So, of course, their departure was delayed until something could be collected for the women folks, and they went away rejoicing. John was active in his work and successful. He married one of his tribe, and had a family, which were educated at the Hampton Indian School.

"While John was at school, the government sent another young Indian to our house. He was very smart, different from John, however, so full of mischief mother could not keep her help; he would run into the kitchen brandishing his knife, telling our colored cook he would scalp her. At last father sent him to board with a widow lady who taught school, friend Howard. There he soon learned to read, but was of a roving disposition, so cleared off. Just before father's death, a young man in sailor's garb accosted him in the street, saying, 'Don't you know me, Mr. Douglass?' As he did not, he added, 'I am Indian Tom. I am mate of a vessel, and, more than that, am a Christian, all owing [under Providence] to your prayers and teachings.' So the seed sown in weakness brought forth fruit to the honor and glory of the good Lord."

M. D. Foulks says more particularly of her father: 'He said when [he was] young he had a high temper, but when he was converted he made it a rule never to answer when angry until he repeated the Lord's prayer. He said he was never sorry he studied law, for he could settle the disputes of the people in an amicable manner.' He died in 1852, aged about fifty-four years. J. W. L.

"HE BELIEVES IN ME."—There is nothing which quite takes the place, in a boy's life, of the consciousness that somebody—his teacher, brother, sister, father, mother or friend,—believes in him.

One of the most discouraging things to a youth who is apparently dull, yet is conscious of real power and ability to succeed, is to be depreciated by those around him, to feel that his parents and teachers do not understand him, that they look upon him as a probable failure.

When, into the life of such a boy there comes the loving assurance that somebody has discovered him, has seen in him possibilities undreamed of by others, that moment there is born within him a new hope, a light that will never cease to be an inspiration and encouragement.

If you believe in a boy, if you see any real ability in him (and every human being is born with ability to do some one thing well) tell him so; tell him that you believe he has the making of a man in him. Such assurance has often proved of greater advantage to a youth than cash capital. There is inspiration in "He believes in me."—*Success*.

ONE who has very notably been guided in material things remarked: "I seek to get my heart into such a state that it has no will of its own in a matter. Nine-tenths of the difficulties of Divine guidance are overcome when our hearts are ready to do his will. The distance to the knowledge of his will is very little."

The following lines, written by Fannie H. Marr, a Southern woman, are expressive of the feelings of many who have been enabled to say, "Not my will but Thine be done."—J. C. M.

Can we, remembering what the year hath brought us

Of grief and woe, can we lift up to Thee,
Without hypocrisy, which Thou abhorrest,
"Thanksgiving and the voice of melody?"

Yes, from the depths of sorrow-stricken spirits,
From homes whence earthly joys have fled away;
From pathways Death makes desolate and lonely,
We can be thankful with Thy saints to-day.

Not for the sorrow, Lord; (our hearts are human);
Not for the loss—tho' from its gain were shown;
Not for the void—tho' Thy great love can fill it;
And not for Death—but for Death overthrown;

And for Thy Presence that through deepest darkness

Kept and sustained, and left us not alone;
And for Thy wondrous, perfect sympathy
That without sorrow we had never known.

We can be thankful for the good and faithful
Who walked with us awhile—then joined the
train

That evermore from earth is upward wending,
Perfect through suffering, purified through pain.

Wherefore through tears Thy pitying heart ne'er
censured,

With psalms and hymns that o'er the wide world
ring;

With all the saints on earth, and saints in heaven,
Praise and thanksgiving to our God we bring.

DEGENERACY OF THE PULPIT.—Considerable attention has recently been called in the columns of both the religious and secular press to the devices adopted by some ministers to fill the churches, which are considered by the unthinking to be so "up-to-date." On a recent occasion, we were tortured by being compelled to listen to an address intended for children, which consisted in telling the story of the prodigal son and illustrating it with dolls and toy houses and other gee-gaws considered appropriate. While we grant that this may have been an extreme case, we cannot but remark how no opportunity seems to be missed by some ministers to cheapen the Gospel, which they profess themselves called to preach. Strange robes, chemical experiments to illustrate truth, exhibitions of pictures, and the use of stereopticon views, may appeal for a week or two to the vulgar-minded but they certainly belittle the man who uses them, and put to shame the Gospel of God's grace. There is no doubt but that each new age is reached by a new method of appeal. The appeal so powerful at the beginning of the century may have lost its force by the end; but in its essence the appeal is the same. Men are still sinners, and they need forgiveness and the implanting of the Divine life just the same as they ever did. To awaken a soul-bunger for the things of the Spirit, and then to satisfy it with the declaration of the great provision made by the Gospel of reconciliation—this is the work of the pulpit, and every attempt to cheapen it will bring disaster upon all, and the record of any such ministry will be written in the well known words, "The hungry sheep look up and are not fed."—*Episcopal Recorder*

Science and Industry.

IN CASE OF FIRE.—Quick, intelligent work is imperative when a person's clothing becomes ignited. Your first move should be to get the person at length on the floor. The easiest and safest way to accomplish this is by tripping. Then roll him over and over. This alone will go a long way toward smothering the flame but at the same time lay hold of a rug, coat or anything thick with which the operation can be more speedily and effectually completed. A pailful of water will answer for purpose, perhaps, but do not take even a second to obtain it. It is of vital importance that you make use of the nearest means. Strive to keep the flames away from the upper half of the body, for that is the most vulnerable portion of the human anatomy.

Should your own clothing catch fire, it will require all your courage and training to enable you to act rationally. The natural and almost overpowering impulse is to run. Don't; only makes a bad matter rapidly worse. I down at once and roll yourself up in anything which will assist in smothering the flame. Fire has a strong upward tendency, and it will soon envelop your whole body if you remain on your feet.

The danger of your inhaling the flames is also greatly increased, and internal burns are pretty uniformly fatal.

So far I have used the masculine pronoun but all of my directions apply with even more force to women. It is a sad fact that three-fourths of those who suffer from burns belong to the fair sex. This is ascribable in a large measure to the inflammable nature of their dress.—*Good Housekeeping*.

NEED OF A FOREIGN PARCELS POST.—A foreign parcels post is a growing necessity, the manufacturers of the United States. I present the regulations of the postal service, reject any packet of samples of merchandise having a salable value. No complete article can be sent as a sample; only one glove or pair, or one shoe. The postage rate amounts to \$1.60 for a pound package, or \$16 for five pounds. Mr. Winters reports the case of a company, which received a small order from a correspondent in the Argentine Republic. The packet weighed only three pounds, the express charges were \$6.30. The British postal guide shows that, under the British flag, this package could have been sent to the same party for fifty-seven cents. Another case was that of an English merchant, who ordered a bill of goods from an American house in Minneapolis. The purchase price was \$9.30, the transportation charges \$14. "Need any one wonder then that the American control of the foreign markets of the world is slow, when such obstacles as these are to be met?" At present we are not able to reach the interior towns of South America by means at our command. In other words, we must send our goods to a town on the coast, and the consignee, in the interior, must send them to the coast to get them. This is practically a prohibition of all trade between the two countries, in small packages. Give us a foreign parcels post, similar to that enjoyed by the European competitors, and we can rapidly enlarge our trade with South America.

The Postmaster General, by and with

ment of the President, has power to negotiate a parcels post convention with any foreign government at his own discretion. We have negotiated such conventions with Mexico and some of the Republics of Central America, and the West Indies. There is also in operation a treaty with Germany, involving a parcels post; very much to the advantage, however, of Germany.—*New York Independent.*

Few readers are aware of the amount and value of the gold leaf which is used on the binding of books. A recent visitor to the bookbinding of Harper & Brothers was informed that so rich in value is even the waste of this flimsy material that the "planing off" is furnished with a sort of wooden paper covered with a wire screen through which the tiny particles of gold used in the decorations of the book covers sift and are carefully collected. This costly waste is then sold to regular brokers, who deal with jewelers and bookbinders for such material. The waste, on the average, comes to about thirty per cent. of the entire amount of gold used, so that it will be seen that the gold saved in an extensive bindery must amount to a large sum in the course of a year. It was told in reply to a question that the waste gold on the cover of "The Right of Way," which is not at all garish in appearance, had amounted to several thousand dollars.

A ROMAN STATION IN ENGLAND.—A most interesting memorial of the Roman occupation of England has just been sold under the auctioneer's hammer. This is the Roman station of Ambogianna, the largest on the famous wall which marked the limit of the Roman province. After an existence of eighteen hundred years, the walls of the station, five feet thick, are in a wonderful state of preservation. The gateways are noble specimens of Roman work; some of the wedge-shaped piers used in the arches are still to be seen on the ground. The interior of the camp is crisscrossed with lines of streets and the ruins of buildings. The estate which claimed this ancient memorial of the past, was sold for thirty thousand pounds.—*London Chronicle.*

BEES NOT USING THEIR STINGS.—There are a number of honey-making bees which apparently do not use their stings, or in which the stings are atrophied and too blunt to hurt. These are very small, so diminutive that they are called mosquito-bees. They gather quantities of honey, of which Bates, in one of his expeditions on the Amazon, took two quarts from the nests. In Jamaica, where some of the most amiable bees are also found, they are called "angelitos," a name given to them by the original Spanish settlers in honor of their docile temper. Some Australian dwarf bees—also called "angelitos" so far as human beings are concerned—do not use their stings, perhaps because they are not sharp enough to hurt. They deal with their enemies something after the manner of the Quaker on board ship who, when used to use a gun, but threw the Frenchman overboard. An enemy is held down by a pile of the bees, who gradually put him on his back by pulling his limbs out tight and keeping them so, for as long as an hour, by which time the prisoner "dies a natural

death." Bumblebees are popularly supposed not to sting. The males have no stings, but the females have, at any rate in the common bumblebee. There are so many sizes in a bumblebee's nest, large females, small females, and males, that it is a safe speculation not to take the risk, though bumblebees are very easy going creatures and only sting when pressed or hurt.—*The Spectator.*

"Conscience, Not Thine Own, but the Other's."
1 Cor. x: 29.

The following characteristic passage, from Count Tolstoy's diary, has been published by Vladimir Tcheretkoff:—

"The other day a girl came asking the question (so usual, so artificial) what she must do to be useful. Talking with her, it became clear to me that the great evil from which millions suffer is not so much that they live in positive wickedness as that they do not live according to their own conscience. Instead of their own conscience, people take some other person's conscience higher than their own, and obviously being without power to live according to this other conscience, they conform neither to that nor to their own, and so live without conscience. I advised this young lady to live not by my conscience, as she wished, but by her own. But she, poor girl, does not even know whether she has a conscience of any kind or not. This is a great evil, and it is most important that men should develop, make clear to themselves, their conscience, and then live according to conscience."

If for "conscience," which is largely a product of education and environment, we substitute the Quaker term "the Light within," we could hardly have a better statement of that which has made us what we are. George Fox's words to William Penn about his sword, "Wear it as long as thou canst," show that he expected others to experience what he himself knew, a personal touch with the Spirit of Truth, which went deeper than human authority, deeper than any arguments of reason, giving the individual a certitude in which he would, if needful, stand up and say "yes," in face of a whole world that said "no."

The difficulty is, of course, that such claims to individual certitude savor of infallibility, and, if made too freely by those who "have the treasure in earthen vessels," tend direct to anarchy. The remedy will be found in the thought of the Unity of the Spirit under all manifestations; and in that respect for authority, whether of Scripture or of the Christian consciousness, which comes of the realization that *my* Light is only after all a little piece of that one Light which enlightens every man who is obedient to it. It is as we are taken out of ourselves, as self is lost in union with God, that His humanity and harmony manifests itself through us. In spite of failures, we may fairly claim that this unity has been and is in some real measure known among us.—*British Friend.*

MODERN LITERATURE.—The present supply of literature has a great tendency to diminish the appetite for, and the real search after knowledge. Even the bee, it is said, gives over collecting when it finds there is no winter. Knowledge is now served up in many dishes; and it is so pushed upon men at every turn, that they are ever tasting, and so rarely

come to that healthy appetite and vigorous search which strengthen the intellectual muscles.—*Samuel Tuke.*

Sin and the Law.

"Sin is the transgression of the law."—1 John 3:4.

The new revision reads "Sin is lawlessness," violating law, that is acting without law, that is acting as though there were no law. The text does not state that the law violated is God's law. It does not state that, because that is always understood. "Law" in the mouth of Christ or on the pen of an apostle always means God's law. And that is a meaning of the word that it is not well, is not safe, to let slip away.

As much as that, at any rate, is meant by Moses when he says of the Ten Commandments that they were "written with the finger of God." To-day, as four thousand years ago, the supreme significance of those commandments as moral motives lies man's inward witness of them as an outcome from God, God's mind written down, the will of the Eternal put in black and white.

What the Bible intends by law, is not a manufacture, is not an improvisation, not a human notion set in the judgment hall and clad in judiciary robes, but an ordinance that does not have to be made, that is from everlasting and will continue to everlasting and that is righteous with all of God's holiness and instinct with his authority, so that in obeying law we are keeping step with God's intention and in transgressing it we are fighting at his holy omnipotence.

It is this that comes out in the cry wrung from David after Nathan had completed with him the probing process "Against thee, thee only, have I sinned." Of course, in a sense he had sinned against Uriah; he had killed Uriah, and therefore in a wholesale way trampled upon him and all his rights. In a sense he had sinned against Bethsheba; he had wronged her and contemptuously disowned all the claims made upon him by her exalted womanhood. In the ordinary sense of the term he had also sinned against the whole Hebrew people. No man can do that which is an offense to the general conscience or which can have a tendency to lower the tone of the general life without therein violating the rights of all with whom his act comes into any kind of relation near or remote. And then also he might have gone no farther than to realize that he had sinned against two of the commandments of the decalogue, which he certainly had done, the sixth and the seventh. And perhaps in the majority of cases that is as far as a transgressor of the law does go—he thinks of the law he has broken, of the ordinance he has violated, but without thinking back to the Being whose authority and purpose of righteousness comes to expression in that law.

As soon now as we recognize in this way that a sin is not so much an act of stepping off from a moral chalk-line as it is an act of running against and trying to run over, the great God that drew the line, it becomes apparent that there is not so much real difference in the amount of sinfulness in the different sins as is liable to be imagined. Perhaps we derive our idea that some wicked things are a great deal more wicked than other wicked things, from

the fact that some offenses the state punishes more severely than it does others. But the state does not punish crimes because they are wicked, but because they militate against public interest, and therefore, naturally and properly grades its penalties to match the amount of public injury which the several classes of crime may respectively entail. But a sin is not a sin because it hurts the community but because it is rebellion against a Holy God, and there is just as much of the genius of such rebellion in doing one thing that we know displeases Him as in doing anything else that we know displeases Him.

This which we have been illustrating is stated directly by James in the passage commencing, "Whosoever shall keep the whole law and yet offend in one point, he is guilty of all." That means that if you have broken one commandment you have wrecked the whole Decalogue. The first impression is that James's statement is an extravagant one and to be accepted only under reservation, and is likely to be resented by a man who breaks some of the commandments but keeps himself cheerful and expectant by reminding himself that there is a majority of them that he does not break or that he is not aware of breaking.

Scripture puts side by side, as of equal significance, sins that the common habit of our thinking distributes into distinct classes, tagging one class "permissible," another "repensible," and a third "awfully wicked." By such an arrangement we contrive to keep clear of unpardonable sins and lay our depravity out in iniquities considered to be so minute that it makes no particular difference whether they are pardoned or not.

And as already implied it is not individual sins so much, after all, that Scripture is thinking about, and particularly is this true of Scripture in its later portions, as it gets on and deals with the race in its course of mental and moral development, it less and less interests itself in the forms of things and gets down closer to their realities. So that as we come on to the ground traversed by Christ and his apostles, the matter we are taught to bend our attention to is not sins, but sin; not the iniquity there is in a specific act, but the iniquity that there is in the heart and of which specific acts, called sinful, are merely the sign, the advertisement.

The enmity toward God that we have to get rid of, the indifference or even antagonism to his holy will that we need to be delivered from, is not in what we do, but in what makes us do it. We judge them by what they do, for if we are going to judge men at all that is the only ground we have to go upon. Some process of discernment, as an ethical X-ray, may be revealed eventually by means of which we can skip men's behavior, and get a straight look into their interior. It is bad enough that the doctors can look straight into our bodies, and it would be intolerably embarrassing if any scheme of moral perforation should ever be able to turn a man's heart and conscience inside out, going right through clothes, flesh, bones, clear to a man's ethical marrow. And the embarrassment we should experience under those circumstances means what our acts tell our neighbors about ourselves is only very distantly related to what our hearts tell us about ourselves.

And it is the "us" that counts. There are a great many people who would not object at all to going before God at the day of judgment if what they had been doing and saying through life were the only things that would come into the account. The men and women that you and I know behave as a rule very well. Neither our acts nor our words, generally speaking, are of a kind to make us ashamed of them. But how many of us would be out of jail if we did all the things that we should like to do, and that it is very probable we should do if it were not for hell or Sing Sing? Now it is only when you get to that spot in a man where he does his desiring, that you reach the real ground of what a man is. A man is morally to be measured not by what he says or does or even thinks, but by what he wants, by his likings. It is not pleasant territory, comfortable territory, that we are traversing just now, but it is good for us. Going over ground of this kind may not in itself make us any better, but there is something at any rate to be said for preaching that does nothing more than serve as a broom to sweep out of the dusky corners of men's souls the accumulated cobwebs of misconception. And for a man who behaves very well, but who would not behave nearly as well if it were not that something or other makes him afraid to behave badly, for such an one to claim that because he behaves well he is therefore a good man, is a piece of transparent evasion; he is lying to himself and he knows he is lying to himself. Whether the Day of Judgment is going to be in all respects what was pictorially represented to us in our primers when we were children I cannot say; but every once in about so often there drifts through our soul's atmosphere a rather dense and murky cloud of suspicion that at one time or another and in one way or another that which is now concealed in men's hearts is going to be revealed, and that there is a certain residue of solid fact denoted by the Bible's reference to "the day when God shall judge the secrets of men." So that this whole serious matter of what a man is inwardly in his unacted impulses and in his unspoken desires and passions, it is kind and considerate to keep faithfully opened up.

It is a thing to think of, that man, the most wonderful of God's creations, the one that is most like Him, is the only one that does not get along well with Him, that quarrels with Him and makes sport of Him and of his ordinances; and not only the only thing that does rebel against Him, but the only thing that knows how to rebel against Him. Law is everywhere; there is no form of existence, elevate or insignificant, that is not created into a realm or ordinance. The whole universe is tracked with divinely ordained lines of procedure. Everything has its way to go, and goes there, its things to do and does them, its manner of revolving or manner of growing, and it revolves in that manner and grows in that manner—always.

When you come into the sphere of animal life it is not so easy to forecast behaviour because it is not so easy to define all the laws that are in force there and the relations in which the several classes of law operating there stand to each other. You cannot always tell what a bird will do, but you could if

you understood all the divinely originated chances that are applicable to the bird's existence. The bird never transgresses those laws never wants to, never can. All those things work exactly as God is minded to have them work. They do what is expected of them. The flowers have their Ten Commandments they never break them. The stars have their Sinai and keep to the decalogue divinely delineated there. There is no morality in the obediency any more than the smooth running of a finely built and well lubricated machine, which does not disobey the law of structure and cannot disobey it. The power, the wicked is the most awful power we have. To stand before Almighty God on his throne and say, "I won't," all the stars in the heavens, ranged in solid phalanx couldn't do that. I can. It is a great thing to be a man; it is awful thing to be a man.

Now the fact that everything in this universe, from a dewdrop to a star, from a grain of protoplasm to a Socrates, has its law down for it and that, with but the single exception of man, the laws laid down are obeyed with an obedience that is constant and pitiful, is sufficient to show us what is the whole attitude in the matter, and that the rebellion against Him which exists in the human corner of the universe is something which He cannot permanently tolerate. It is rebellion against God. You might bear a rebellion for a season, just as for a season parent, no matter how self-respecting, might bear with a rebellious child. Parental leniency and even justice, might prompt a parent to postpone harsh measures till a gentler and long-suffering ones had shown themselves ineffective. But to talk about a parent's permanent endurance of rebellion or talk about God's permanent endurance of rebellion is a distinct matter; and I am content of expressing the sense of every earnest man and of being true to the spirit of Scripture when I say that sooner or later the universe can no longer have in it either sinners, and that eventually, if God is to preserve Himself the absolute sovereign of our universe all will have yielded themselves to his will—heart-submission, or will have gotten themselves out into outer darkness.—C. H. Peckham in *Brooklyn Daily Eagle*.

EVERY one carries some burden. It may be an affliction in the home. It may be a lurid disease, known only to the sufferer and a intimate friends, silently making inroads on his system and bringing the end near every day. It may be a wandering son, who way the father deplores, and whose doom dreads. It may be a financial calamity, which has swept all away. But whatever the trouble, there is a message in the Gospel to the case. There is a bright promise for the darkest day. God has not forgotten the troubled soul. He has remembered him in will, saying, "Call upon Me in the day of trouble, and I will deliver thee, and thou shalt glorify Me."—*Christian Advocate*.

SALVATION, like air and sunshine, cannot be confined to frescoed walls. Many a church whose only organ is the wind whistling between the cracks, is a temple of God, where many a costly edifice is a rendezvous of clean birds and an ill savor to God.

the weather in Philadelphia for the year 1901: "Taking the year as a whole, the mean temperature was fifty-five degrees, or a little less than one degree below the average for the past thirty-one years. The most remarkable feature in the temperature was from Sixth Month 26th to Seventh Month 6th, inclusive, when the most remarkable 'hot spell' on record occurred. For eleven consecutive days the temperature was above ninety degrees, and the temperature record for the extreme was broken. As a result of this protracted spell a great number of deaths and prostrations occurred. The rainfall for the year was 45.54 inches, which is very nearly 5.00 inches above the average."

The Engineering and Mining Journal states that "Summing up the history of the year, we may say briefly that the total production of the mining and metallurgical industries of the United States considerably exceeded the enormous total recorded in 1900, while there is every prospect that a still further advance will be made in 1902."

An increase of over 9,000,000 in the fish and eggs distributed by the Government throughout the country, and a marked decline in lobster fishing, are shown in the annual report of the United States Commissioner of Fisheries Bowers for the last fiscal year. The total fish and eggs distributed was 1,173,833,400, the principal species being shad, salmon, lake trout, white fish, pike, perch, lake herring, cod, flat fish and lobsters. The Government-owned fisheries of the Mississippi and its tributaries have developed to such a degree that in 1899 they exceeded in quantity and nearly equal in value the entire yield of the remaining interior waters of the United States, except the Great Lakes. Mussel shells, extensively used in the manufacture of pearl buttons, were a valuable article in 1900, the Government gathering 1,000,000 of which the fishermen obtained \$247,000.

Test cards have been designed for the examination by teachers of the eyes of children in the public schools of Philadelphia. On the back of the cards are printed instructions of the method to be pursued in making the tests, and principals are directed to at once notify parents where the tests show defective sight, and have their child examined by an eye physician be promptly summoned. The measure has been adopted by the Board of Education on the recommendation of its Committee on Hygiene in the interests of the children. A communication to the teachers over the signature of Dr. Samuel G. Dixon, chairman of the committee, says: "It is well known that many children are handicapped in their school life by defective vision; that many of them suffer from headache and other nervous symptoms which make them restless and difficult to control, because of their eye strain; moreover, that these defective eyes are liable to permanent and more or less serious injury by their school work. The majority of these defects can be corrected by proper professional attention."

The term "aerogram" has been given to messages transmitted by wireless telegraphy.

The advancement of business during the year 1901 is regarded as phenomenal. It is said that never in the history of this or any other nation has such development occurred within the space of a twelve month. The expanded methods of work and organization were conspicuous, wise economies were introduced, but, more than all other factors that made for permanent prosperity, was the conservative resistance to price inflation.

The farm products of the United States this year are worth \$400,000,000 more than last year's outcome. The result of the general prosperity, the great transportation industry has reaped unprecedented profits.

On the farm of David Samuels, near Hamilton, Wis., a cave has been discovered and in it crude drawings, trinkets and pottery, which it is believed is the work of cave dwellers or prehistoric races of people. The cave is a natural formation of solid white sandstone, and upon its walls pictures and historical characters of a very ancient type were found. One of the carvings represents what appears to be a mastodon, while another is thought to represent a hippopotamus.

Near Parna, Ill., farmers have lately been engaged in destroying the English sparrows, and during one week killed 24,000 of these troublesome birds.

The United States has had disgraceful eminence for mob violence, and many of the lynchings have been accompanied by revolting scenes of savagery, such as are rarely reported from the other nations of Christendom. The crime does not seem to be on the wane, inasmuch as there were twenty more lynchings in 1901 than in the previous year. The brutal method of punishing crime degrades the communities where it is frequent and retards their material advancement.

In his message to the Legislature of Porto Rico Governor Hunt says: "Tranquillity and contentment prevail in Porto Rico; schools have multiplied; railroads are

being constructed; the commerce of the island has been developed and exports have increased; agriculture has become more profitable, roads are being built and debts are being paid. Tolerance of opinion has become more common, former antagonism being forgotten." Governor Hunt's report said further that 885 schools were open throughout the island, 934 teachers were employed in them and 45,000 pupils attended them.

There were 488 deaths in this city last week, reported to the Board of Health. This is 12 more than the previous week and 35 more than the corresponding week of 1900. Of the foregoing, 263 were males and 219 females: 63 died of smallpox, 17 of typhoid fever, 77 of inflammation of the lungs and surrounding membranes; 13 of diphtheria; 15 of cancer; 21 of apoplexy; 6 of typhoid fever; 6 of scarlet fever, and 16 of small pox.

COTTON closed on a basis of 8½¢ per pound for middling uplands.

FLOUR.—Winter, spring, \$2.75 to \$3.00; Pennsylvania roller, straight, \$3.50 to \$3.70; Western winter, straight, \$3.60 to \$3.85; spring, straight, \$3.75 to \$4.00.

GRAIN.—No. 2 red wheat, 85¢ to 85½¢.
No. 2 mixed corn, 67¢ to 67½¢.
No. 2 white oats, clipped, 54¢.

BEEF CATTLE.—Best, 6 to 6½¢; good, 5½ to 5½¢; medium, 5 to 5½¢.

Swine.—Choice, 3½ to 4¢; good, 3¼ to 3½¢; common 1½ to 2½¢.

LAMBS.—4½ to 6½¢.
Hogs.—Western, 8 to 8½¢.

FOREIGN.—The statement recently made from Washington that the United States would reduce its claim upon China to \$3,500,000, is stated to be a fabrication. The Secretary Hay says that the American claim was moderate and just, yet that the United States was willing to waive its pro rata share if necessary. Arms and materials for their manufacture it is said are being imported into China, and a great quantity, it is alleged, comes from the United States. Government factories in China are working over time to turn out arms and ammunition, and the material is imported.

European nations claim that the several Governments, signatory to the protocol, in order to make effective the provision relating to the prohibition of the importation of arms, are bound to restrain their exporters from continuing this trade.

According to the statistics of the Paris Institute for the treatment of hydrophobia ninety-seven lives out of the hundred of patients bitten by mad dogs are saved by the marvellous discovery of Pasteur. About the same results have been reached by the New York Pasteur Institute, which has been in operation for perhaps twelve years.

A method of curing diseases by light has been devised by Prof. Finson, of Copenhagen, which has been successful in certain cases of consumption and of cancer, and of some minor diseases. The rays of the sun or of the electric light are passed through a lens of quartz crystal in order to deflect the heat rays from the beam to which the diseased part is then exposed for longer or shorter periods. A celebrated Russian surgeon announces that he has used it with success as an anesthetic for surface operations, and to assist healing of burns, wounds and sores. But it is as a germicide that it is considered most likely to be helpful.

In Robemia the sickle and fall have not yet been superseded by American machinery.

The ratio of population per square mile for Japan is about 286, or more than ten times that of the United States by the census of 1900, which was only 25.6 per mile. Only two States of the American Union, Massachusetts and Rhode Island, show a more dense population than this.

Catholicism has been issued by the Census Bureau, giving the population of Montreal, Toronto and Ottawa by religious denominations. The Roman Catholics far outnumber the leading denominations combined, the totals for the three cities together being: Roman Catholics, 322,423; Church of England, 96,358; Presbyterians, 68,582; Methodist, 62,206.

Thousands of locusts recently caused considerable trouble in the Orange River Colony. They settled down so thickly in some parts of the country that they were ankle deep. A mail train was delayed for five hours because the locusts covered the tracks and made the progress of the train almost impossible.

King Edward's funeral plans have been placed at King Edward's disposal for charitable or utilitarian purposes, according to the *Daily Mail*, by Ernest Cassel, a merchant and financier. King Edward has decided to devote this gift to a sanitarium, which will accommodate one hundred patients. Twelve of the beds are to be reserved for wealthy sufferers, while the remainder will be for those who are only able to afford a small fee. It is in-

tended to employ the open air treatment for consumption the success of which is now considered established.

Official returns show that the Boer losses by killed and surrendered during 1901 amounted to 887 men. The total number of British troops who were killed or who have died from the effects of disease since the war began is reported to be 19,430.

NOTICES.

A meeting of the Friends' Educational Association will be held in the lecture-room of Friends' Select School, N. Sixteenth Street, Philadelphia, on the afternoon of Seventh-day, First Month 11th, 1902, at 2.30 o'clock.

PROGRAM:

English Work in Primary and Secondary Grades illustrated by Exercises with a class of Children. F. A. Elliott and Gertrude Roberts, of Friends' Select School, Philadelphia; Naturalness in Writing. English, Alfred Haines, Westtown Boarding School; Supplementary Writing for College Preparation, John A. Lester, Penn City School; The Choice of Reading in the Home, Ann Cadbury.

The attendance of all persons interested is invited.

NOTICE.—A meeting for Divine worship is invited by the Quarterly Meeting's committee, to be held in meeting-house at Fourth and Arch Streets, on Fourth evening, First Month 15th, at 7.30 P. M. All who are interested as attenders or members are invited to be present.

WESTTOWN BOARDING SCHOOL.—A stated meeting the general committee will be held in Philadelphia, Month 10th, at 10.30 A. M. The committee on Instruction will convene at 9 o'clock same day.

WM. E. HARVEY, Clerk.

WESTTOWN BOARDING SCHOOL.—Applications for admission of pupils to the school, and letters in regard to instruction and discipline should be addressed to Wm. F. WICKESHAM, Principal.

Payments on account of board and tuition, and endorsements in regard to business should be forwarded to E. G. SMEDLEY, Superintendent.

Address, Westtown P. O., Chester Co., Pa.

WESTTOWN BOARDING SCHOOL.—For convenience of trains coming to Westtown School, the stage will leave Philadelphia 7.15 and 8.15 A. M., and at 12.30 and 3.30 P. M. Other trains are met near Stage fare, fifteen cents; after 7.30 P. M., twenty cents each way. To reach the school by telegraph, West Chester, Phone 114x.

EDWARD G. SMEDLEY, Sup.

MARRIED, at Friends' Meeting-house, Haddonfield, Jersey, Eleventh Month 14th, 1901, John H. BURCH and RACHEL EVANS BARTON, both of Haddonfield.

DIED, in Earlham, Iowa, Ninth Month 16th, 1901, RICHARD COOK, in the seventieth year of his age; a member of North Branch Monthly Meeting of Friends. This man of few words, he often expressed a living concern that the principles and testimonies of the Society which he had been a life-long member might be upon their ancient purity by all those professing the name of Friends. He bore a lingering illness with fortitude, saying he saw nothing in his way. We reverently trust he has joined the just of all generations, in the realm of peace.

—, at the residence of her son-in-law, Elwood P. Gock, Des Moines, Iowa, Fifth Month 23rd, 1901, NANCY PEACOCK, in the seventy-seventh year of her age; a devoted minister of North Branch Monthly Meeting of Friends. Having passed through much affliction in the last few months of her life, she looked forward to her release as a desirable change. She often expressed a concern to those about her that she might abide in patience to the end, feeling her unworthiness, and an entire dependence on the mercy of her blessed Saviour. We do trust she has entered into eternal rest.

—, Twelfth Month 9th, 1901, at his late residence, West Grove, Chester County, Pa., after a short illness, SAMUEL COOPER, in his sixty-ninth year; a member of New Garden Monthly and West Grove Particular Yearly Meetings. "Be ye also ready; for in such an hour as ye do not the Son of Man cometh."

—, at his late residence in Philadelphia, Pa., on the twentieth of Eleventh Month, 1901, CHARLES W. WARRINGTON, in the forty-eighth year of his age; a member of Western District Monthly Meeting of Philadelphia.

Making Selections for The Friend.

Some of our readers have expressed a little uneasiness of representatives of other denominations being exhibited as advocating, here and there another, of our distinctive doctrines. But most seem to rejoice over it. Statements of Truth from various quarters look very much as if our religious Society not lived in vain. They certainly show Christ has not died in vain. And if even "athens" may be quoted in testimony of his eternal and saving light, it is confirming all rather than encroaching, when a professional Christian seems to agree with us.

Our own desire, in quoting Friend-like extracts from various exchanges, has been to affirm the young or the wavering, by availing our cause of any testimony from others which would herald our views as of universal saving Truth, and not as merely sectarian statements;—to the end that, out of the mouth of many witnesses, every word of our Society's vital concern might be established.

Each man, however, sees in part, and knows part only, and may be very imperfect in all. Now if we quote one good thing in a man, the undiscerning youth may think we are endorsing him throughout. Some do not outgrow this. But ought indeed to be careful of publishing names that are equal authorities on truth. Honesty seems to require accrediting a sentiment or an article to its author; but perhaps an author who is inconsistent with his sentiment deserves no notice with it. We were much impressed in our youthful days with the old Spanish proverb: the counsel be good, no matter who gives it. Yet we see there is peril in advertising an author who is prevaillingly unsound, as sound spots. These good parts may serve as baits of the tempter to lure the unwary into

the unsoundness of the whole. He usually wants goodness enough mixed with badness to color it and carry it.

And where the mind of the selector of an extract has been taken up with its main lesson, imperfections of statement in other features may have escaped his scrutiny, only to be detected in print when too late. These overlooked imperfections may be accepted by the undiscriminating as conveying truth as held by Friends, and so will be misleading. We desire wisdom to be watchful of errors on the right hand and on the left, but can rightly give out no hope of being found infallible.

The assistance of readers of the rich approved literature of our religious Society in furnishing us with extracts that are pithy, lively and unquestionable, as also the assistance of more original writers among us, would relieve the editor, whose time is but fragmentary, of being driven much to current periodicals for matter expressive of religious or useful truths. Yet it may still be due to our readers to give them some outlook upon the thoughts and doings of others, for a help in discerning the signs of the times, and our proper attitude thereto.

Probably no feature is more sought after by some readers, or more left by them to take care of itself, than our "Items concerning the Society." Many bits of information of more than local interest must be going on concerning meetings, public Friends, and events affecting the Society, which call for but a postal card in order through THE FRIEND to reach an appreciative membership at large. It may not be found expedient to publish all that is offered; but the supply for that department must seem meagre, so long as the editor's hearing of information is left to accident.

Fellowship in a Good Cause Without Compromising Other Good Causes.

Our readers seem to have appreciated with becoming charity that in our allusions to the recent Peace Conference held in this city by members of several bodies under the name of Friends who could not be in mutual unity on certain other grounds, it was a delicate matter with us how to express our sympathy with their main purpose—and no further.

But letting the correction of misunderstandings of our words now go, we here with a sense

of unity print the following portion of a letter from a well-concerned Friend:

"I have all along hoped and still do, that THE FRIEND will be preserved, as it has been in a good degree in time past, in defence of consistency in our Society, against the tide of worldliness that seems to be gradually but surely spreading its mantle over us; as well as from compromising with, and excusing the unfriendliness in general enacted by so many of the organized bodies under our name, even though it should be in the furtherance of an object most desirable of attainment by all, and on which all the bodies under our name seem professedly to unite, that of universal peace. 'There is that that is cheering and encouraging in the various movements peaceward, which seem likely to operate toward checking the effusion of blood, with the other awful and distressing accompaniments of actual carnal warfare. But unless the promoters are actuated and controlled in their movements by the Spirit of the Prince of Peace, it seems it can avail but little toward the final consummation the supreme attainment, when according to ancient prophesy 'The earth shall be filled with the knowledge of the Lord as the waters cover the sea,' when there will be no need for swords and spears, as there will be none to use them.

"The little stone which the Prophet Daniel saw cut out of the mountain without hands (human help) and which went on increasing until it filled the whole earth, is doubtless representative of the rise, progress, and final development of Christ's kingdom on earth—in the hearts of the children of men. Now we may see that all elements of power were in that power to overthrow opposing kingdoms and all that stood in the way of its full and final supremacy. So we must conclude that man has no part or lot in the great work, but as he experiences the good Master to put him forth and go before. This I am constrained to believe is the true, spiritual ground, the ground that consistent Friends have ever held, and as we keep to it, we will doubtless be preserved from presumptuous sins, as in going forward or putting forth the hand, as it were, to steady the ark, or carry it forward unbidden, or in meeting together for Divine worship on any other ground than as empty vessels to wait upon the Lord in the silence of all flesh, with our mouths in the dust, if so be there might be hope. For thus only it is apparent that we shall be in the way to experience a being filled, refreshed in his presence, drawn forth in his service, or sent empty away, as He in his wisdom sees will best advance his cause, and promote our soul's best welfare individually. Thus only is it likely we shall be preserved from spiritual pride gaining the ascendancy in our hearts, and pluming us with real, or imagined attainments, or deservings;

a state to be greatly deplored, and assiduously avoided, and in comparison of which the state of spiritual poverty often clothing the mind of the humble devoted Christian is a jewel.

DAVID HOLLOWAY.

COAL CREEK, IOWA.

For "THE FRIEND."

Reminiscences.

(Continued from page 203.)

For some time Joseph and Hannah Snowdon had desired to be relieved from their responsible and onerous positions. The former now mentioned to his friends their conclusion to provide themselves a home in New Jersey to which they should retire upon leaving Westtown. The home they selected and purchased was a tract of land about two miles from Haddonfield, on which was a well built house.

Joseph Snowdon to Joseph Scattergood:

WESTTOWN, Eighth Month 4, 1857.

As we passed Everett Passmore's on our way home we met Thomas Passmore who stopped us and informed us of the decease of Pennock Passmore. He died on Second-day and is to be buried this afternoon; he was at Monthly Meeting on Fifth-day but was seized with violent pain on First-day; was relieved by something the doctor gave him. When the doctor first saw him on Second-day, they thought him better, but on feeling his pulse he called Joseph out of the room and told him he could not last long; he departed in about fifteen minutes after. Thus one after another seems to be going—Truly "Here we have no continuing city."

This appears to be Joseph Snowdon's last letter from Westtown, which has been preserved.

How many in these circling years have found Health and instruction, Westtown, in thy bound. How many a heart tossed on life's stormy sea, Reverts to days of innocence with thee. How many a one drawn by redeeming love, That trod these halls, now treads the courts above.

Joseph and Hannah Snowdon were Superintendent and Matron at Westtown from Fourth Month 1848, to Tenth Month 1858, very acceptably. Joseph Snowdon was a man of unusual intelligence and what is of far more importance of deep religious experience. In manner courteous, both he and his amiable companion were well calculated for and did fill with becoming dignity and propriety their responsible positions as head of that interesting seminary from which have gone forth some eleven thousand pupils we hope, to fill many stations of usefulness in the world. Many yet living will remember Hannah E. Snowdon's genial smile and affable manners. They removed to their farm near Haddonfield, N. J., in 1858—where his beloved companion died in Second Month, 1869, and he in Eighth Month, 1873.

It is understood he passed away very quietly and peacefully as he was sitting in his chair, expressing it is said, "If this is death, I can say 'Oh, death where is thy sting; oh grave where is thy victory.'"—"Surely the last end of a good man is peace. How calm his exit! Night dew fall not more gently to the ground, nor weary worn out winds expire so soft."

Joseph and Hannah E. Snowdon had three children—a son, Leonard, and two daughters.

One of the latter married Joseph Rhoads, then of Marple, Delaware county, Pennsylvania, with whom it was the writer's privilege to be on intimate terms of friendship, and he had cause to love him, for

None knew him but to love him,
Nor named him but to praise;

in his life and death leaving behind him a luminous path of faithfulness to apprehended duty for others to follow: An unreserved submission to the appearance of Divine Grace in the heart does confer upon the Christian not only humility but a dignity that "secretly ministers grace to the beholder." W. P. T.

We here present the following communication from a correspondent.—Ed.

"I have been much interested in reading the letters of J. Snowdon and J. Scattergood, in THE FRIEND and especially so of the former as he was Superintendent at Westtown when my dear brother and I were pupils there. I remember him and dear Friend Snowdon with fond affection. The point most striking to me was in the last number wherein he speaks of the death of Henry Gibbons, which occurred the year previous to my entering there. On my entering the school the sad occurrence was still fresh in the minds of the old scholars, and one of the large girls, who was acquainted with him at his home, composed a poem in memory of him, and I had the privilege of procuring a copy of it, and have preserved it all these years, and although not personally acquainted with him have always prized it. And now as dear J. S. speaks as he does, it occurred to me to send a copy of the poem."

PHEBE A. PYLE.

WEST GROVE, Pa.

ON THE DEATH OF HENRY GIBBONS, WHO DIED AT WESTTOWN, FIFTH MONTH 25TH, 1855.

His brow was clothed in beauty,
And his clustering raven hair,
And intellectual brightness,
Shed its fair gleaming there.
He came in youth and beauty
To the halls of study here,
To climb the hill of science
With schoolmates young and dear.
His youthful form was hallowed,
By a brightness found within,
Which seemed to tell a heart most pure,
And free from worldly sin.
He bade adieu to home and friends
A few short weeks ago,
Thinking not it was the last,
"Ere death should lay him low.
With brilliant hopes and prospects bright,
And flashing eye he came
To store with useful worth his mind
Of learning's sacred flame.
But little knew we what shall come,
Or of our future days,
But gilded o'er with hope's bright glow
They seem as fancy plays.
And we forget we should prepare
For a brighter, happier sphere,
Where shadowing clouds are never seen,
But skies are always clear.
A few short weeks sped quickly on,
When wildly throbb'd his brain,
And he was laid in agony,
Upon a couch of pain.
A hasty summons called his friends,
His nearest, dearest ties,
To come 'ere his pure spirit fled
And death should close his eyes.

They miss his light and manly step,

They miss the joyous tone,
Which ever gladdened with its light,
And cheered their happy home.
The vacant chair is ever there—
A sad and speaking token,
Memorial of the golden chain
Round friends circle broken.
Why should we mourn the dearest hopes
And earth's fair flowers be blighted?
Dear ties are broken here on earth
In heaven to be united.

The Silence of Jesus.

"Accused. . . He answered nothing," (Mt. xvi: 3.)

"As a sheep . . . dumb, so He openeth his mouth," (Isa. liii: 7).

The Lamb life is characterized by silence. "A lamb led to the slaughter," is the term of the true Christ-life lived again in Silence in our lowly service among others not seeking to be "seen of men."

Silent over the glory of the hours on Mount, lest others think of us above which is written.

Silent over the depths of the Calvary path that led us to God.

Silent over the human instruments permitted of God to hand us over to the judgment bar and the forsaking of our dearest and our nest.

Silent whilst we stoop to serve the ones who have betrayed us. Silent over deep things of God revealed in the seclusion of the Most High, things "impossible to utter" to those who have not yet been baptized, with that baptism.

Silent over questions only to be answered by God the Holy, when "that day" dawns the questioning heart and silences all done by the glorious revelation of Him, who is answer to all our need.

Silent when forced by others to some position where apparent rivalry with one another much used servant of God seems imminent only to be hushed by utter self-effacement or silent withdrawal without explanation, respective of our "rights."

Silent, in the judgment hall of our co-reigns, when criticized and falsely accused many things.

Silent when our words are misquoted.

Silent when the character of our accusers would not bear the light if we were but speak, yet silent like Him, for He "opened his mouth."

Oh, thou Anointed Christ the Lamb of God Thou alone canst live this life of silent self-effacement in a world of self assertion and self-love.

Live Thou this life in me.

"These are they which follow the Lamb whithersoever He goeth." (Rev. xvi: 4). Penn Lewis.

THE word rival at first meant a brook, it was applied to the persons who lived in opposites and quarrelled about the water, and later it was understood as applying to contestants for any desired object.

WE count that day lost which records victory over some fault or secret sin, no gain in self-discipline, in the culture of spirit, no enlargement of the power of service added feature of likeness to the Master J. R. Miller.

Notes on Tuskegee and the South.

(continued from page 202.)

Our first concern was to pay our respects to officers of the school. The President, as knew, was absent, and his wife, as we soon learned, was starting by an early train for a trip to Mississippi; but the Treasurer, Warren Logan, and the Secretary, Emmett J. Pratt, received us most cordially. They impress us instantly as men of extraordinary dress and personality. We learned from them that our letter from Philadelphia and telegram from Atlanta had not arrived, as they both reached the school at ten o'clock that morning. From the President, however, we had heard of our intended visit and they were prepared to give us every facility for investigation and study. We were shown the reports that are forwarded to Booker T. Washington in his absence. They are the attendance rolls with special reports of absences, receipts of cash, the returns from the two marts, including quantity of milk separated, number of pounds of butter made, eggs collected and number of hens not laying, and, finally, the daily bills of fare in the teachers' students' dining rooms. In the Administration Building a regular banking business is conducted, most students having accounts and checks circulating in the outside world as easily as checks on a regular banking institution would. We were shown the books, and the machinery of the bank was explained to us. A pair of the Administration Building throughout is that of modern business methods, the men in charge have a business manner, but all tempered, here as elsewhere, with a degree of Christian courtesy that appeals at once to our admiration. The treasurer quickly argued for one of the officers, J. H. Palmer, a capable man, to devote his entire time to us, and under his intelligent care we entered upon our days of unflagging interest.

We began our inspection in the saw mill and carpenter shop. Great logs are brought in adjoining woodland, and lumber in every form is prepared for the building operations constantly in progress. One section of men are working on window frames, another on doors, a third with lathes on table legs, and the young men in the department would be training over a wide range of carpentry. A machine shop was in an adjoining building, and the chief machinist took delight in telling how with student labor, the steam-heating and electric plants had been installed, and in showing us pieces of expert work produced by the young men. Across the way we entered the pattern-making shop and foundry and were surprised to find that the necessities of the school in castings were here provided. A fine range from a weight for window cord to a five-fire-place plate with the faces of McKinley and Roosevelt beautifully reproduced. At the other end of the campus we entered the Agricultural Building and met with the Director G. W. Carver. He has the Master's tree from the Iowa Agricultural College and does credit to it. He exhibited the laboratories and lecture rooms, and with an enthusiasm that was quite contagious, gave us the details of his efforts to increase crops, improve the soil and elevate the farmer to a standpoint of intelligent activity. In every case he makes it a point to start with that which the

ordinary benighted farmer has at hand. This was well illustrated in the chicken ranges, an industry exclusively assigned to the girls. Common fowl found in the average barn-yard were taken and bred up to a surprising standard of excellence. The incredulous farmer, therefore, who came to see the experiment was not treated to theory but to fact, and might go home intent on improving his own stock. In this way also the Institute has dealt with swine and with cows, and Professor Carver had no little pride in showing us the Dairy and the barns and later the four hundred swine at their evening meal. The Dairy is a model of cleanliness and business management. The work is shared by boys and girls and the adjoining class room is arranged so that the live cow can be used for demonstration before the class. Over in the fine new barns about seventy-five cows are milked at this season. The yield from each cow is tabulated and each day Professor Carver knows how "Beauty" or "Jennie" or "Cow-slip" is acquitting herself and in the event of any sudden change of yield he is quickly to the rescue. A system of Nature Study, much like that inaugurated by Professor Bailey at Cornell, but suited to the rural schools of Alabama, is also a product of Professor Carver's fertile brain, and the idea of elevating the moral sense of the children through a love of nature breathes in the leaflets that we carried away.

The girls' Industrial Building is appropriately named the Dorothy Dix Hall. Here we saw interesting work in sewing, in millinery, in laundry work, in housekeeping and cooking, in mattress making and basket weaving. The teacher of millinery showed us an elaborate hat,—one of those indescribable creations said to be stylish. To the question whether they would sell this to a girl she quickly replied that it would be very unsuitable for a pupil or teacher of the Institute. This Industrial building is the special province of the President's wife.

The general superintendent of Industries is J. H. Washington, a brother of the President. He escorted us through the Slater-Armstrong building in which printing, tailoring, shoemaking, tinning and smithing are taught and where the famous Tuskegee wagons and harness are produced. At this time of year considerable stock is in hand, but as spring approaches a ready sale is found for all. This building is already one of the largest, but eventually the saw-mill and other adjoining shops will be combined with it and the result will be quite impressive. At the Industrial end of the campus there are two considerable barracks for the boys. They are one-story structures with double fronts, and a simple veranda running around them upon which the rooms open. Some steam pipes supply heat and while many of the rooms are sparsely furnished they are clean and comfortable with signs here and there that the aesthetic nature has been stimulated.

So far nothing has been said of the scholastic side of the institution. It is needless, perhaps, to go into so much detail in regard to it as to the Industrial features which are by no means exhausted in the foregoing recital. We saw some excellent teaching. There

is no Latin or Greek in the course, but the elements of English and mathematics and history are given with thoroughness. In one class there was a study of "Snow Bound," and the class enjoyed the spectacle of a Friends' coat that was exhibited to them. It is needless to add that the Friend who wore it did not enjoy the exhibition. One section of the school with a special memorial building, is devoted to Bible work. There is no sign of denominational bias and a devout spirit of piety pervades the place. The night guards were from this building and they had already given a splendid exhibition of practical Christianity upon our midnight arrival. There are night schools for the students who are forced to work all day for their support and day pupils devote the evening hours to study under supervision. The course of study includes some High School work. We found Seniors reciting Psychology, but the work is given from the teacher's standpoint and not for flourish or effect.

At 8.30 in the evening we had the pleasure of seeing the whole family, about twelve hundred in all, in the chapel. The religious exercises were simple—a Bible reading, some singing and an impromptu prayer by the Treasurer. The spirit of worship seemed over the company. At the conclusion, the Philadelphia visitors were introduced, beginning with "the venerable member" and so had an opportunity to express their obligation for such large-hearted hospitality, and their impressions of the great work at Tuskegee. With one or two of the old plantation melodies the company dispersed. In the audience one might recognize several Cubans and on the front row a son of the well-known Gomez had his seat. In talking with him it was a pleasure to find that he had learned that he was in a community where merit only would give one position and influence.

To be concluded.

A WORD FITLY SPOKEN.—A youth in New Hampshire, the son of a Methodist minister, left his father's house and went to live with an uncle. He forgot the God of his father, and lived a careless life. One [First] day morning he took his gun and started out to a neighboring mountain to spend the day in pleasure and sport. On his way he met a Christian woman going to church, who looked on him with feelings of pity and tender compassion. But she did not rebuke him in her own words, well knowing that one word from the Bible is worth a hundred words of man. She recited in his hearing the warning of the wise man: "Rejoice, O young man, in thy youth, and let thy heart cheer thee in the days of thy youth, and walk in the ways of thine heart and in the sight of thine eyes; but know thou, that for all these things God will bring thee into judgment." With this she went on her way. The young man also went his way, but not to shoot or to find pleasure. That word took hold upon his heart. He went out to the mountain and spent the day in prayerful reflection. The words of Solomon kept ringing in his ears, "God will bring thee into judgment." He left off sinning, and gave his heart to God. For more than thirty years he was an official member and teacher in a leading Methodist church. He lived a pure, godly, and beautiful life, and a few months ago died in the faith. That good woman never

knew how much good she did that morning.—

FOR "THE FRIEND."

Spreading Religious Books.

The following unusually interesting and striking account was published in THE FRIEND more than fifty years ago. The writer is not aware that any allusion to the circumstance has ever appeared in print since that time; he felt that it might be an encouragement as well as incentive to the committees charged with the distribution of our approved writings, as also to other Friends who are likewise more or less so engaged, not to slacken our hand, but be diligent to embrace every right opening to place our books wherever there seems a reasonable prospect that they will be appreciated. It is also hoped that it may tend as a check to any of our own members in search of religious instruction from books, who may be so inclined to turn from our own publications to those of other professions. For, aside from the danger of becoming bewildered and irretrievably unsettled, there is abundant evidence that the sincere seeker after truth will not be benefited thereby. How strikingly exemplified in the following account is the superiority of that outward teaching which directs man for enlightenment to the witness for God—the Holy Spirit within him, and the utter fallacy of all his attempts through his own wisdom, and intellectual endowments by study and research, truly and savingly to find out God.

D. H.

COAL CREEK, Iowa, Twelfth Month 31, 1901.

In a recent correspondence between a Friend in Philadelphia and a teacher of another religious society, which commenced on the subject of raising and forwarding relief for the sufferers in Ireland, we have some interesting evidence of the convincing effects which the approved writings of our religious Society have, at times, upon the minds of strangers. In the reply to the first letter written by the Friend who sent him a paper on war, the stranger says: "A paper, the *Christian Volunteer*, arrived by the same mail, doubtless from you; for which most sincerely do I thank you; because living in a community excellent in many respects, yet blind to the atrocious evils of war, there is no sympathy for me, but what I find in the New Testament, and in such writings as Dymond's *Essays*, etc. The course of your Society on all these subjects, its history exemplified in acts, has since the first dawn of religious life in my soul, given me a yearning towards Friends, that is daily augmenting. Our prevalent religions are of the earth, earthy, and adapt themselves to its interests—its views."

After speaking of the principal object of his letter, the transmission of funds to Ireland, respecting which he says, "We are ashamed to be outdone by generous Friends who have acted merely from the impulse of Christian charity,—but your record is on high, your spirit has already told upon our earth,—your testimony has already startled the despotism of man, and in the efforts you are now making in the cause of poor Ireland, you have given a beautiful testimonial to the integrity and purity of your principles;" he asks of the Friend the loan of Barclay's *Apology*, a copy of which he had long sought in vain to ob-

tain. This, with other of Friends' works and some tracts, were promptly forwarded, for which he acknowledges the kindness of his unknown correspondent, and gives him some account of the impressions made on the first reading of the valuable sentiments which appear to be new to him. He says: "Yours of the 3rd ult. was duly and very gratefully received. A reply would have been returned by me, but I thought you expected me to read the books first. Well, the books came to me ten days ago—next day and the following, I distributed nearly all the tracts." Of the books sent, he says, "I do not know whether you meant to present all these books to me, I think I must misunderstand your letter. So much kindness from an entire stranger is a novelty in my experience. If I have misunderstood you, let me know, and I will return them, or the price; such was my design at first. I did not know where to get the books, and thought I might make free to borrow them, for a season, from you."

"I have been studying the Scriptures for fifteen years; the better to succeed I have learned Hebrew, Greek, Latin, German and French—some hundreds of books on the subject in those languages, and some of them of great antiquity, are now lying round me in this room—and yet I can say with entire truth, that Barclay's *Apology* has cast more light into my mind, than I ever had before. I was in the middle of a learned study of the dipping and sprinkling 'baptisms,' examining the words in Scripture and the classics, to which the disputants refer. When the books came, after looking over them, I took up 'Phipps on Man' to glance at; it so interested, that I put by my baptist study for that evening. When retiring to bed I felt a strange and solemn sobriety, never before felt, [and that night] I felt for the first time in my life, the terrors of the Lord. Next morning after a most solemn season of inward searching, I determined to spend all the day in my Quaker reading. Not to be tedious, I finished Phipps,—then took up Penn's 'No Cross, No Crown,' and read it with devouring eyes, and a gluttonous appetite. Yesterday I finished Barclay and commenced 'Fox's Journal.' Barclay's work is (some few things excepted) the best book I ever read. After I have gone through the Journal and tracts, I will study Barclay, proposition by proposition. Every thing else shall be laid aside by me in the way of study, but my Bible, and these books, until I have settled two questions: first, whether man can entirely extirpate the seed of sin from his heart, and secondly, how it is done." After mentioning that he joined the religious society to which he is now attached, "because they preached that man could live without sin, and professed to teach how," yet he had never gained that ascendancy over it, notwithstanding he had attended upon all the means which their system and mode of worship require, and such was his despondent condition, that at times he was brought almost to disbelieve the truth and efficacy of the Christian religion. "But," continues he, "it would be tedious and impertinent to open my mind more to you now; suffice it to say, that I find in these books the very thing I wanted as regards the outward guidance, and that I find in my heart (bless the Lord) the answer of the

Spirit, weak, but plain; solid, but consolatory. I know that my religion hitherto has been old testament life struggling with the new; but that now it is the new life that is struggling with the old. Glory to God! I will not give the experience of this last week all my previous religion."

It is very proper to keep in view the junction of our blessed Lord, "Let not thy hand know what thy right hand doeth—thy alms may be in secret: and he who seeth in secret shall reward thee openly"—and in relation to any good effects which may be produced by the labors of his anointed servants written or oral, they are to be attributed to his Grace and to be spoken of to his glory. There is, however, a possibility of undervaluing the extraordinary gifts and degrees of Divine light, which in his wisdom He has descended to confer upon a religious Society and upon chosen men and women. Not met for their particular benefit but to make them instrumental in spreading his truth in earth, and turning sons and daughters to Christ Jesus the captain of salvation. ought therefore to place the candle upon a candlestick, and to spread abroad the clear views of Gospel truth as set forth in the approved writings of the Society. W. George Fox's earliest addresses were brought to London from the north of England to were eagerly taken hold of by serious people and no doubt were very instructive and forming to them. There are doubtless many now seeking the Lord, but who are brought into the right way, owing to the prejudices of their education, to whom clear positions of his dealings in the work of generation might be of great benefit. There is reason to believe Friends have been remiss in circulating the valuable doctrinal and biographical works written by their fathers in the Truth.

In a discourse on the Bible, Bishop Pott of New York City, recently said: "Nothing was more natural than that the people of the Reformation should have substituted for the conception of an infallible man the conception of an infallible book. Nothing was more evitable than that this literal interpretation of the greatest masterpiece of literature should be subjected to the same scrutiny as all great masterpieces of literature, and that its writings should be collected and collated precisely in the manner that all other ancient writings are. In the beginning it was natural that inaccuracies should creep into the books that went to make up the religious writings of the times, but even this did not prevent the Bible from being a Divine and infallible book. People have looked to the Bible in the hour of greatest need. They have found comfort in it that could be found nowhere else. There something about the Bible that no other book possesses. Ask the child of to-day if he has read Dickens or Scott, and the general answer will be that he has not, and what is more, that the books of those authors do not appeal to him. That is because in all modern literature there is the time note, but the Bible above all other books, is perennial in its interest. It answers the yearnings and gives the man of to-day courage and inspiration as it did in the past, and you and I and every one would be better for its closer perusal."

Athletic Sports.

The boisterous games of college students supply a large share of the public attention. It is acknowledged that some of them verge on brutality. Orderly people are considering whether they may be restrained or modified, but it seldom we find the objections against them used on the most solid ground.

It is a point of so much importance that our physical energies should be trained in childhood, that there is a standing occasion for gymnastic exercise of some sort at our schools. Therefore in treating this subject we anticipated spiritual development in view, and must speak considerably. In this article is my concern to encourage all the bodily exercise needed for health, but to eliminate the "athletic" idea.

THE FRIEND quotes from an address by H. McCook in regard to the "morals of athletics." In this address the author cites Paul's advice to Timothy in regard to bodily exercise, and then says, "Athletics thus has the sanction of the great apostle of the Gentiles." Paul's hands could administer to his necessities and to the necessities of others, but who can imagine this pillar of the Church in its infancy mingling in the heathen games of Sparta?— games purposely designed to train soldiers in whose hearts the benign feelings of the awakened Christian should have no place. And further who can imagine that Paul ever encouraged any brought to Christ by his ministry, to participate in amusements whose very life is religion?

"Play is nature's method of developing the bodies and training the crude intellects of children." But the Apostle says "when I became a man I put away childish things."

McCook gives several reasons why football should occupy less place in the public mind; but the great, the overmastering reason why it should if practised be done in private obscurity, is left out of sight.

"Amusement reigns man's great demand," and it is with sorrow we confess, that the trend of thought of the present day is to tone down the requirements of a religious life to tolerance of all creaturely enjoyments.

"If any man be in Christ, he is a new creature"—he is a changed man. Many things which formerly delighted the mind, do so no more. Enough remains to promote happiness, to make the new life more enjoyable than a life "without God in the world." That large class of entertainments that may be characterized by saying that Satan leads them on, offer no attractions to the mind thus turned heavenward. We cannot draw a distinction that will meet every case, but each must consult its own conscience in regard to the proper employment of time.

There is a large field for exercise for the man of sedentary life without going into exciting contests. It was the practice of Adoniram Judson to walk some miles every morning. Several years of his life were spent in burmah, in translating the Bible into the language of that country. His daily exercise instead of dissipating his thoughts afforded the opportunity to gather fresh strength for his work. Few may be situated just as he was, but all may find bodily exercise that does not enslave the mind.

L. B.

[NOTE.—Exercise, and not contests, was our interpretation of "athletics."—ED.]

Science and Industry.

PRODUCTION OF ARTIFICIAL SILK.—For the production of artificial silk it is necessary, first, to destroy the fibre and to reform it afterward. The process of mercerization, introduced of late years, has developed a very important industry, which avoids this destruction, producing results in a silk-like lustre by simple treatment of cotton yarns or piece goods. The process is very simple. Fabrics or yarns made of long staple cotton when subjected to mercerization, that is, treatment with strong caustic alkali solution, will shrink. If this shrinkage is recovered by stretching, and the goods while in the stretched condition are washed free from alkali, they will not shrink any more, and will show after drying a beautiful silk-like lustre, which is permanent, whatever operation—washing, bleaching or dyeing—the goods have to undergo. They show at the same time the other remarkable properties due to mercerization, again from twenty to thirty per cent. in strength and a better attraction for coloring matters and mordants. The success of the process depends on the following facts: Yarns have to be selected spun from long staple cotton. They have to be double yarns, and the more slackly they are doubled, of course, within limits, the finer the lustre. If piece goods are subjected to this process they have to be woven from such kinds of yarns. The reason for this remarkable improvement is to be found in the change of the structure of the fibre.

For the practical performance of the process it is quite indifferent whether the goods are mercerized and washed in a stretched condition or whether they are first mercerized and then stretched and washed. Piece goods are treated with caustic soda, in an ordinary pad, the excess of the alkali removed by mangling, and after this they are stretched on a stentering machine to the original length. They are washed with cold, then with hot water, finally with dilute acids. One patented process uses centrifugal force as a stretching power to counteract the shrinkage due to mercerization. The yarn is packed into a hydro extractor which is put in motion. Caustic soda is forced through the yarn, afterward water for washing, the hydro extractor being rotated all the time. A machine is exhibited in Paris for mercerization which sucks the caustic solution through the stretched cloth by means of a vacuum. The principle has been adopted, with good results, for piece goods and yarns. Metallic mordants or direct-dyeing colors may be mixed with the mercerizing liquid, and cotton may be mordanted and mercerized, or dyed and mercerized, in one operation. If dyed cotton is boiled in water the lustre of the yarn suddenly disappears.—*Boston Journal of Commerce.*

THE ONLY FOUR CORNERS.—It may seem a broad statement to one who hears it for the first time that the only place where four States, Territories or provinces join is that point where Colorado, Utah, New Mexico and Arizona meet. Not only is this the only "four corners" in the United States, but it is the only "corner" of its kind in the world.

Although the locality is unique in this respect, it is not often visited, as it is not easy of access. Few tourists care to endure the

hardships of a pilgrimage to see the monument which marks the spot. The stone was erected by the United States Government surveyors, and is similar to those used to mark other boundary lines. On a simple shaft in the centre of the rocks are inscribed the names of the States and Territories which touch the spot.

The monument is reached by a trail which leads from the road between Navajo Springs and Aneth, Utah. The trail leaves the road near Scott's trading post, close to the Utah line, and crosses the San Juan River. Then its course is along a spur of the Corraza Mountains until it comes to the top of the spur, where the shaft is situated. It is in the midst of a country once densely populated by the cliff dwellers. The ruins of their homes are all about this section. The point is nearly one hundred miles from Mancos, Col., the nearest railroad town. Were it not for the rocks, a wagon could be placed so that the four wheels would be in as many different States.

This monument was destroyed a few years ago by the Navajos, but was rebuilt last summer.—*St. Louis Republic.*
